FEDERAL-STATE JOINT BOARD STAFF RELEASES MONITORING REPORT

Comprehensive Report Tracks Trends Related to Universal Service

Washington, D.C. – The staff of the Federal-State Joint Board on universal service has released its most recent Monitoring Report on Universal Service. This report reflects information on the telephone industry filed with the Federal Communications Commission (FCC) through April 30, 2002.

The report released today addresses the various universal service support mechanisms, which amounted to about \$5 billion in 2001. The report presents current data in eleven categories:

- 1) **Industry revenues and contributions** – Total industry revenues for telecommunications services provided to end users in 2001 were about \$234 billion, compared to about \$229 billion in 2000. Revenues for fixed local service providers remained virtually the same at \$91 billion, while for wireless service providers they increased from \$57 to \$68 billion, and for toll service providers they decreased from \$81 to \$75 billion. 56.7% of the support mechanism disbursements in 2001 were for high-cost support, 30.6% were for schools and libraries support, 12.6% were for low-income support, and 0.1% were for rural health care support.
- 2) **Low-income support** – Total low-income support increased from about \$519 million in 2000 to about \$584 million in 2001.
- 3) **High-cost support** – In 2001, total high-cost support amounted to over \$2.6 billion, an increase from nearly \$2.3 billion in 2000. This increase is primarily due to the implementation of the new interstate access support mechanism, which began in July 2000.
- 4) **Schools and libraries support** – Schools and libraries are making substantial use of their available support, with commitments as of February 2002 totaling about \$1.8 billion for the fourth year of the program (July 2001 - June 2002).
- 5) **Rural health care support** – The demand for rural health care support has remained at a modest level, with commitments of less than \$11 million for the third year of the program (July 2000 - June 2001).
- 6) **Subscribership and penetration** – The percentage of households subscribing to telephone service reached an all-time high average of 94.9% in 2001.

- 7) **Rates and price indices** – The price index of overall telephone rates increased 1.3% in 2001 (compared to the general rate of inflation of 2.0% for all goods and services).
- 8) **Network usage and growth** – Total telephone usage grew steadily through 2000. In 2000 there were nearly 5 trillion minutes of use, an increase of 13% from the previous year. Local calls grew by 16% in 2000, compared to a 5% increase in toll calls (both intrastate and interstate).
- 9) **Quality of service** – The data show noticeable differences in the quality of service among carriers. For example, complaints per million residential access lines in 2001 varied from 31 for SBC Pacific Telesis to 587 for SBC Ameritech.
- 10) **Infrastructure** – The most rapid growth of infrastructure has been for fiber digital carrier terminations (working channels grew from over 42 million in 2000 to nearly 74 million in 2001).
- 11) **Revenues, expenses and investment** – For the larger local exchange carriers in 2001, 39% of net income was interstate, 30% of revenues was interstate, and 27% of expenses was interstate.

A monitoring program was established in the mid-1980's, at the recommendation of the Separations Joint Board, to track trends related to universal service and related matters. Since then, Joint Board staffs have prepared Monitoring Reports at least once a year -- a compendium of hundreds of pages of statistical data on subscribership and penetration, loop costs, separations factors, universal service fund payments, etc. The report is unique in that it is the only document that includes information on every incumbent local telephone company in the nation. In 1998 the publication of this report was moved from the Separations Joint Board staff to the Universal Service Joint Board staff. This is the sixth Monitoring Report from the Universal Service Joint Board staff.

The full text of this document is available for public inspection and copying during regular business hours at the FCC Reference Information Center, Portals II, 445 12th Street, SW, Room CY-A257, Washington, DC 20554. This document may also be purchased from the Commission's duplicating contractor, Qualex International, Portals II, 445 12th Street, SW, Room CY-B402, Washington, DC 20554, telephone 202-863-2893, facsimile 202-863-2898, or via e-mail at <qualexint@aol.com>. The report may also be downloaded from the **FCC-State Link** Internet site, which can be reached at <www.fcc.gov/wcb/iatd/stats.html>. It is available in both page image (.pdf) format and in a compressed (.zip) format, which, when unzipped yields text and spreadsheet files.

Universal Service Monitoring Report
CC Docket No. 98-202
Summer 2002

Introduction and Summary

This is the sixth report in a series of reports prepared by federal and state staff members for the Federal-State Joint Board on Universal Service in CC Docket No. 96-45 (Universal Service Joint Board).¹ This report is based on information available to us as of April 30, 2002. These reports contain information designed to monitor the impact of various universal service support mechanisms, and the methods used to finance them. These mechanisms were adopted by the Federal Communications Commission (Commission), based on recommendations from the Universal Service Joint Board. These reports are part of a monitoring program created by the Commission in 1997² to replace a similar program in CC Docket No. 87-339 that resulted in a series of nineteen *Monitoring Reports*. The current program incorporates most of the information that was collected under the previous program, and also new materials from the reports of the administrator of the universal service support mechanisms, the Universal Service Administrative Company (USAC). To enhance our monitoring ability, we have created an open docket,³ which allows data, materials, comments, and studies to be submitted by any interested party at any time.

The monitoring program has proven to be valuable, not only as a report on the effects of the Commission's regulatory policies, but also as a complete census of all incumbent local exchange carriers. Because smaller carriers generally are exempt from most Commission reporting requirements, the *Monitoring Report* incorporates data from several sources, including the National Exchange Carrier Association (NECA) and USAC. USAC collects information from all eligible carriers to administer the universal service support mechanisms. NECA, at the direction of the Commission, collects information in order to administer the access charge pools and also provides information to USAC that is utilized in administering the Universal Service Fund. The *Monitoring Report*, therefore, contains the only available comprehensive data on all incumbent local exchange carriers, containing data on such matters as the number of telephone lines, calling volumes, and certain types of costs.

This report presents data for the eleven subject categories selected for monitoring. The first section provides information on the contributions to the universal service support mechanisms and industry revenues, on which those contributions are based. The next four sections provide information on the various support mechanisms: low-income support; high-cost support; schools and libraries support; and rural health care support. The remaining six sections provide information on matters that might be affected by the support mechanisms: subscribership and penetration; rates

1 The last report was released on November 6, 2001. *Universal Service Monitoring Report*, CC Docket No. 98-202, October 2001 (Data Received Through April 2001), prepared by the Federal and State Staff for the Federal-State Joint Board on Universal Service in CC Docket No. 96-45.

2 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Report and Order*, FCC 97-157, para. 869 (released May 8, 1997).

3 CC Docket No. 98-202.

and price indices; network usage and growth; quality of service; infrastructure; and revenues, expenses, and investment.

Henceforth the *Monitoring Report* will be published once a year and all tables will be published in every issue. The following are highlights of some of the material in this report. Section 1 provides an update on industry revenues and the universal service program requirements and contribution factors. Section 2 includes the latest data on the Lifeline and LinkUp America programs. Section 3 includes the most recent projected payments for all of the high-cost support programs, based on the quarterly reports from USAC. It also includes information from the latest filing by NECA for the high-cost loop fund. Section 4 includes updated data on the schools and libraries support. Section 5 includes updated data on the rural health care support. Section 6 includes the most recent Census data on subscribership from the Current Population Survey. It also includes data on telephone penetration by income by state and a discussion of the impact of Lifeline programs on penetration. Section 7 includes updated Consumer Price Index and Producer Price Index data and other updated rate information. Section 8 includes the latest NECA data on access minutes, dial equipment minutes, and separations factors. Section 9 includes updated data on the quality of service from the Commission's Automated Reporting Management Information System (ARMIS) reports. Section 10 includes updated data on infrastructure from the ARMIS reports. Section 11 includes the latest information on revenues, expenses, and investment from the ARMIS reports.

This entire report is available electronically through the **FCC-State Link** Internet site, which can be reached at <www.fcc.gov/wcb/iatd/stats.html>. It is available in both page image (.pdf) format and in a compressed (.zip) format, which, when unzipped yields word processing and spreadsheet files. In addition, information received well in advance of the next *Monitoring Report* will be made available on an interim basis in separate staff reports or in raw data files (such as most NECA filings used in the *Monitoring Report*) on the **FCC-State Link** Internet site. In addition, the ARMIS data are available on the ARMIS Internet site, which can be reached at <www.fcc.gov/wcb/armis/db/>.

For ease of public reference, parties submitting materials for this docket should provide a duplicate copy to the FCC's Reference Information Center,⁴ where copies of all materials filed in the docket are available for public reference.

This report has been prepared by the federal staff listed below and reviewed by the state staff listed below. These staff members can be contacted for further information:

1. Industry Revenues and Contributions

This section provides a general overview of the revenues of the U.S. telecommunications industry, and the contributions to the universal service support mechanisms that are based on these revenues.¹ Most of the data for 2000 are taken from filings of annual Telecommunications Reporting Worksheets (FCC Form 499-A) made with the Universal Service Administrative Company (USAC) on April 1, 2001.² Revenue data collected on these worksheets are utilized in the Commission's administration of the universal service fund (USF). Form 499-A data are also used for the Telecommunications Relay Service (TRS), North American Numbering Plan (NANP) and local number portability (LNP) programs, and used to calculate common carrier regulatory fees.³ Data presented for 2001 are taken from May 1, 2001, August 1, 2001, November 1, 2001, and February 1, 2002 filings with USAC of quarterly Telecommunications Reporting Worksheets (FCC Form 499-Q).

Revenue Information

Universal service requirements include several mechanisms that help ensure that all Americans have access to affordable telecommunications service. In section 254(d) of the Telecommunications Act of 1996,⁴ Congress mandated that "[e]very telecommunications carrier that provides interstate telecommunications services shall contribute, on an equitable and nondiscriminatory basis, to the specific, predictable, and sufficient mechanisms established by the Commission to preserve and advance universal service." The Commission implemented this mandate in a 1997 *Report and Order*.⁵ The Commission subsequently selected USAC as the

-
- 1 Portions of this section are based on Industry Analysis Division, Common Carrier Bureau, Federal Communications Commission, *Telecommunications Industry Revenues 2000* (January 29, 2002).
 - 2 These filings are subject to subsequent revisions and are not made available to the Federal Communications Commission until several months later, after most of those revisions are made.
 - 3 Much of the information filed on FCC Form 499-A is proprietary. Publicly available information on individual carriers is contained in Industry Analysis Division, Common Carrier Bureau, Federal Communications Commission, *Telecommunications Provider Locator* (November 2001). See also <gullfoss2.fcc.gov/cib/form499/499a.cfm>.
 - 4 Pub. L. No. 104-104, 110 Stat. 56 *codified* at 47 U.S.C. §§ 151 *et seq.*
 - 5 *See Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Report and Order, 12 FCC Rcd 8776 (1997) (subsequent history omitted).

administrator. Telecommunications providers currently file FCC Form 499-A (Telecommunications Reporting Worksheets, due each April) and FCC Form 499-Q (Telecommunications Reporting Worksheets, due one month after the close of each calendar quarter.)

Virtually all providers of telecommunications must file FCC Form 499-A each year.⁶ Telecommunications Reporting Worksheets are not filed directly with the FCC but rather with USAC, which serves as the data collection agent. The annual worksheets were due April 1, 2001, but some providers filed late or updated their filing after that date. Information from filings received after October 1, 2001 and from filings that were incomplete has been excluded from year 2000 data.⁷

FCC Form 499-A asks each filer to report total, interstate and international revenues in two broad categories: those billed to Universal Service contributors for resale (carrier's carrier revenues); and, those billed to *de minimis* telecommunications providers and end users (end-user revenues). Filers must provide further breakdowns of local, wireless, and toll services.⁸ The form also asks each filer to choose the communications business that best describes its operations.⁹

- Competitive Access Provider (CAP) or Competitive Local Exchange Carrier (CLEC)

6 There are certain exceptions. Providers that offer telecommunications for a fee exclusively on a non-common carrier basis are not required to file if their total annual contribution to universal service would be less than \$10,000. Government entities that purchase telecommunications services in bulk on their own behalf, public safety and local government entities licensed under Subpart B of Part 90 of the Commission's rules, entities providing interstate telecommunications exclusively to government or public safety entities, broadcasters and various non-profit entities are not required to file. Finally, systems integrators that derive less than 5% of their systems integration revenues from the resale of telecommunications and entities that provide services only to themselves or to commonly owned affiliates need not file.

7 The information in Tables 1.1 through 1.8 use year 2000 data because 2001 data from Form 499-A were not yet available to us as of April 30, 2002, the cut-off date for information contained in this report.

8 Telecommunications providers are considered *de minimis* and thus are not required to contribute to universal service (or file Form 499-Q) if their annual contributions to universal service would be less than \$10,000. For universal service purposes, any underlying service providers treat *de minimis* firms as end users.

9 The detailed definitions of the filer categories are contained in section III.A of the *Instructions to the Telecommunications Reporting Worksheet, FCC Form 499-A* available at www.fcc.gov/Forms/Form499-A/499a.pdf.

- Cellular, Personal Communications Service (PCS) and Specialized Mobile Radio (SMR) Wireless Telephony Service Provider
- Incumbent Local Exchange Carrier (ILEC)
- Interexchange Carrier (IXC)
- Local Reseller
- Operator Service Provider (OSP)

- Payphone Provider
- Private Service Provider
- Prepaid Calling Card Provider
- Satellite Service Provider
- Shared-Tenant Service Provider
- Specialized Mobile Radio - Dispatch
- Toll Reseller
- Wireless Data Service Provider

Filers are instructed to report amounts actually billed to customers. This means that filers should report revenues net of discounts, but without making adjustments to reflect uncollectible revenues or international settlement payments or receipts. Most filers should be able to report revenues in this manner using information contained in their corporate books of account. Some service providers, however, have no business or regulatory requirements to record intrastate or international revenues separately from interstate revenues, or to use the detailed revenue categories contained in the worksheets. Many wireless providers therefore use the interim safe harbor percentages to estimate the interstate portion of their revenues.¹⁰

Form 499-A filings sometimes contain mistakes. Initial examination of the data occasionally reveals carrier types, revenue amounts and/or revenues reported in service categories inconsistent with the known operations of the filer. Some corrections have been made based on supplemental filer information. Nonetheless, disaggregated data are likely to be less accurate than industry totals.

Table 1.1 shows the major components of telecommunications revenues for 2000. This table was created by simply aggregating the revenues in the major classifications designated on Form 499-A.

Tables 1.2 and 1.3 provide a look at annual industry revenues over time. Generally, Form 499-A revenue data can be tabulated in two distinct ways: by type of service provided and by type of business. Table 1.2 categorizes revenues by type of service and shows, for example, that carriers

10 See *Instructions to the Telecommunications Reporting Worksheet, FCC Form 499-A* section III.C.3. available at www.fcc.gov/Forms/Form499-A/499a.pdf

reported \$62.0 billion in wireless service revenues for 2000. This total includes wireless service revenues from some carriers that are not identified as wireless carriers. In contrast, Table 1.3 shows that wireless service providers reported total revenues of \$63.3 billion, including some revenues for fixed local and toll services.

Revenue data shown for 1992 through 1996 were derived from information filed on TRS worksheets. Revenue data for 1997 and 1998 were derived by combining TRS worksheet and Universal Service worksheet data. 1999 revenue data come from Form 499-A, which replaced both the TRS and Universal Service worksheets. Because of reporting changes, data for 1997 through 2000 are not entirely consistent with data for prior years. For example, special access revenues were included with other access revenues prior to 1997 but have been included with local private line services since then. Similarly, through 1996, filers reported as other local and mobile revenues substantial amounts of customer premises equipment, billing and collection, and other types of revenues that are excluded from contributions to universal service. These revenues are now reported as non-telecommunications revenues. Both tables contain estimates of non-telecommunications revenues that had been reported in prior years. Based on staff estimates, the 1996 telecommunications revenues reported on TRS Worksheets would have been \$10.5 billion lower if revenues had been reported using current instructions.

Some inconsistencies exist in the 1997 - 2000 period. For example, filers were required in 1997 to include inside wiring maintenance revenues as part of local exchange revenues. In 1998, filers were instructed to report these revenues as non-telecommunications service revenues. The local exchange service revenue data in Table 1.2 would show a greater increase from 1997 to 1998 if the same reporting instructions had been used for each year.

Note also that each year, many filers erroneously report substantial amounts of switched toll revenues as other long distance revenues. The data are examined and some revenues are reclassified based on staff research. Even so, the other long distance category of Table 1.2 probably continues to contain some switched toll revenues, perhaps significant amounts in some years.

Table 1.4 illustrates how data from the Form 499-A are used to develop the funding base for the USF.¹¹ As noted above, providers are considered *de minimis* for USF purposes if their annual contribution is expected to be less than \$10,000. Otherwise, only those providers that are not carriers are not required to contribute.

Revenue data for individual filers are not available to the public. However, Tables 1.5 through 1.8 present detailed industry roll-ups by type of revenue and type of filer. Table 1.5 provides a detailed breakout of revenues for each of the Form 499-A revenue categories used to report services provided to other filers for resale. Table 1.6 displays similar detail for each of the revenue categories used to report telecommunications service provided to end users. Table 1.7

11 See *Telecommunications Industry Revenues 2000* for a comparison with the funding bases used for TRS, NANP, and LNP.

combines data from Tables 1.5 and 1.6 with data on non-telecommunications revenues to develop total industry revenues. Table 1.8 provides more aggregated revenue information by type of filers. The revenue categories presented in Tables 1.5 through 1.7 are explained in the Form 499-A filing instructions.

Table 1.9 presents data from quarterly filings of FCC Form 499-Q for 2001. Each page of this table displays one quarter of data in a manner analogous to Table 1.8. FCC Form 499-Q is far less detailed than Form 499-A. Since Form 499-Q filings do not include a business type, filers were categorized based on the business type selected on their Form 499-A filings. The quarterly form asks filers to identify revenues as carrier's carrier, contribution base end-user, or non-telecommunications and to indicate the interstate and international shares of each category. Unlike Form 499-A, the quarterly form does not require filers to attach revenues to the provision of specific types of services. Also, international-to-international revenues are included with non-telecommunications revenues rather than with end-user revenues. For presentation purposes, individual filer revenues were allocated between fixed local, mobile, and toll using the more detailed information collected on the 2000 Form 499-A.

The universal service rules prohibit the fund administrator from releasing company-specific information contained in Form 499-A and Form 499-Q worksheets.¹² Revenue data for individual filers are not available to the public.

Program Requirements and Contribution Factors

Carriers make payments into the universal service mechanism based on their interstate end-user revenues. Carriers report their revenue data to the Universal Service Administrator, which tabulates the data, and reports it to the Commission. The Commission reviews program requirements and revenue data, and then determines the appropriate contribution factor. The Commission's Wireline Competition Bureau (formerly known as the Common Carrier Bureau) then releases a public notice stating the proposed contribution factor for the upcoming quarter. If, after 14 days, the Commission takes no action regarding the proposed contribution factor, the factor becomes final.

On March 9, 2001, the Commission adopted a plan that modified the methodology used to determine payments that carriers make to the federal universal support mechanisms.¹³ The revised methodology requires carriers to file revenue information quarterly rather than semiannually.¹⁴ The

12 47 C.F.R. §54.711(b).

13 *See Federal-State Joint Board on Universal Service, Petition for Reconsideration filed by AT&T*, CC Docket No. 96-45, Report and Order and Order on Reconsideration, 16 FCC Rcd 5748 (2001).

14 Before the change, carriers filed revenue information twice a year. Carriers filed first half-

Commission sets the contribution factors based on the quarterly revenue information. Contribution factors are based on revenue information from the quarter that was half a year prior to the upcoming quarter. Accordingly, the interval between the accrual of revenues and assessment of contributions based on those revenues is approximately 6 months.¹⁵ Prior to the adoption of the revised methodology, contributions were based on revenues from the prior year, resulting in an average interval of one year. Thus, the new methodology cut in half the interval between accrual of revenues and assessment of contributions based on those revenues. In addition to the quarterly revenue filings, carriers also file whole-year revenue information on April 1 of each year. This filing is used as an annual true-up.¹⁶

In order to accommodate the change in methodology, carriers were directed to file their calendar year 2000 revenue information as scheduled on April 2, 2001, and were then required to file their first quarter 2001 revenue information on May 11, 2001. Based on that information, the Commission set the contribution factor for the third quarter of 2001. In general, revenue data for the first through fourth quarters of each year are due the following May 1, August 1, November 1, and February 1, respectively.

Table 1.10 shows the program funding requirements for 2001 and the first half of 2002. For each program and for each quarter, the table lists projected program demand, administrative costs, interest income, and periodic true-ups. The table also shows the revenue base and contribution factors for each quarter. The Commission reduces the amounts in the contribution bases by 1% to reflect the fact that some contribution assessments may prove uncollectible. As mentioned above, the first two contribution factors in 2001 were based on revenues from the first half of the year 2000, but subsequent contribution factors are based on revenues filed two quarters prior.

Table 1.11 shows universal service disbursements on a mechanism-by-mechanism basis for 2001.¹⁷ The schools and libraries mechanism and the rural health care mechanism operate on a school year basis rather than a calendar year basis, so for the purposes of Table 1.11, Funding Year

year revenues on September 1, and then filed whole-year revenues the following April 2. The first half-year revenues were used to determine the contribution factor for the first two quarters of the following year. The second half-year revenues (which equaled whole-year revenues minus the first half-year revenues) were used to determine the contribution factor for the last two quarters of the following year.

- 15 For example, the second quarter revenues will be used to calculate the fourth quarter contribution factor, and so on.
- 16 True-ups enable carriers to correct their revenue filings, if necessary.
- 17 Figures in Table 1.11 are lower than those in Table 1.10 due to the difference between projected demand and actual disbursements.

2000 (July 1, 2000 through June 30, 2001), disbursements were used for these two mechanisms. For these two mechanisms, the bulk of Funding Year 2000 disbursements were made in calendar year 2001. Chart 1.1 shows the same information graphically.

Table 1.12 shows, on a state-by-state basis, the total amount of funding disbursements for each of the universal service mechanisms, estimated contributions towards universal service, and the net estimated dollar flow (disbursements less estimated contributions).¹⁸ This table represents an aggregation of the information in Tables 2.13, 3.19, 4.4b, and 5.3b.

Technical Appendix

Carrier revenue information is not reported on a state-by-state basis. Therefore, it is necessary to estimate revenues per state in order to derive contributions made per state.

The nationwide sum of contributions to support universal service is equal to the payments made from USAC to carriers for universal service mechanisms plus administration costs. Contributions on a per-state basis are computed by multiplying nationwide contributions by the ratio of interstate end-user revenues in each state to nationwide interstate end-user revenues. Estimates of interstate end-user revenues for 2000 by state are reported in Table 1.13. Each state's share of interstate end user revenues is reported in Table 1.12.¹⁹

The remainder of this appendix provides a detailed description on how revenues are allocated to the states. Tables 1.5 and 1.6 present nationwide data on telecommunications revenues derived from information filed on Form 499-A Telecommunications Reporting Worksheets. Nationwide (cumulative) telecommunications revenues from these tables are divided into categories. These categories are incumbent local exchange carriers' (ILECs) local exchange service revenues, CLEC revenues, subscriber line charge revenues, access revenues, mobile wireless revenues and toll revenues.²⁰ Table 1.14 presents telecommunication revenues for each of these categories at the nationwide level.

As set forth below, once the revenues are divided into categories, we use data from several sources to estimate each state's telecommunications revenues. Data from the *Statistics of Communications Common Carriers* are used to estimate on a state-by-state basis incumbent local

18 For a discussion of the methodology used to estimate contributions per state, see the Technical Appendix below and Table 1.13.

19 State's share of interstate end-user revenues are reported under the heading percent of total estimated contributions.

20 The notes in Table 1.14 discuss how revenues from Tables 1.5 and 1.6 are assigned to categories in Table 1.14.

exchange carriers' (ILECs) local exchange service revenues, access revenues, and toll revenues.²¹ Data from tariff access filings with the FCC are used to estimate subscriber line charge (SLC) revenues. CLEC revenues and mobile wireless revenues are estimated on a state-by-state basis using data from FCC Form 477.

Table 1.15 shows intrastate carrier's carrier, end-user and total telecommunication revenues by category for ILECs' local exchange service, CLECs, wireless, access, ILEC toll, and non-ILEC toll.²² Components of interstate carrier's carrier, end-user and total telecommunications revenues are presented in Table 1.16. These components include ILECs, CLECs, wireless, SLCs, access, and toll.²³

Data from the most recent *Statistics of Communications Common Carriers* are adjusted prior to allocating nationwide revenues to the states. Data compiled in the *Statistics of Communications Common Carriers* include those incumbent local exchange carriers (ILECs) with annual operating revenues over \$114 million for year-end 1999. The *Statistics of Communications Common Carriers* revenue data represent approximately 93 percent of the local telephone industry based on USF loops. Here, data from the *Statistics of Communications Common Carriers* are expanded to include the entire ILEC industry based on USF loops. Column 1 of Table 1.17 shows USF loops at year-end 2000. Column 2 shows the percent of the ILEC industry that is included in the tables in the *Statistics of Communications Common Carriers*. It is the average for year-end 1999 and 2000 data.²⁴ The adjustment formula in Column 3 is (100/Column 2).

In Table 1.18, ILECs' local exchange revenues are allocated based on local exchange service and miscellaneous revenues from Table 2.13 of the latest *Statistics of Communications Common Carriers*. Local exchange revenues for allocation are the product of reported ILECs' local exchange

21 Revenues for Alaska, Guam, the Northern Mariana Islands, and the Virgin Islands are not estimated using data from the *Statistics of Communications Common Carriers* because these jurisdictions have no telephone companies subject to the FCC's Automated Reporting Management Information System (ARMIS) 43-01 and 43-08 reporting requirements.

22 Estimated intrastate telephone revenues for Alaska, Guam, the Northern Mariana Islands, and the Virgin Islands are determined by multiplying the nationwide average intrastate telephone revenues per loop by number of loops in the jurisdiction.

23 Estimated interstate telephone revenues for Alaska, Guam, the Northern Mariana Islands, and the Virgin Islands are determined by multiplying the nationwide average interstate telephone revenues per access minute by number of access minutes in the jurisdiction.

24 See Table 5.1 of the Industry Analysis Division, Common Carrier Bureau, *Statistics of Communications Common Carriers, 2000/2001 Edition*, for year-end 1999 data.

service and miscellaneous revenues and the adjustment formula in Table 1.17. Allocation percentages in each state are the ratio of the state's allocation revenues to nationwide revenues. Local exchange revenues by type are determined by multiplying the allocation factor by the type of revenues. (See Table 1.14).

In Table 1.19, we allocate interstate and intrastate CLEC revenues on a state-by-state basis by multiplying national revenues (See Table 1.14) by an allocation percentage. For those states with publicly available data on CLEC lines, the allocation percentage is determined by dividing the number of CLEC lines as reported in FCC Form 477 by nationwide CLEC lines.²⁵ It is more difficult to determine the allocation percentage for states for which CLEC line counts are withheld to protect firm confidentiality. For these states, the allocation percentage is the product of the following two percentages: 1) the percentage of nationwide CLEC lines that are in states in which CLEC line totals are not reported, and 2) the ratio of personal income in the state as compared to personal income in all states in which CLEC lines are not reported. Data on personal income is from the 2000 *Statistical Abstract of the United States*.²⁶

In Table 1.20, we allocate interstate and intrastate mobile wireless revenues on a state-by-state basis by multiplying national revenues (See Table 1.14) by an allocation percentage. For those states with publicly available data on mobile wireless subscribers, the allocation percentage is determined by dividing the number of wireless subscribers as reported FCC Form 477 by nationwide wireless subscribers. It is more difficult to determine the allocation percentage for states for which wireless subscriber counts are withheld to protect firm confidentiality. For these states, the allocation percentage is the product of the following two percentages: 1) the percentage of nationwide wireless subscribers that are in states in which wireless subscriber totals are not reported, and 2) the ratio of personal income in the state as compared to personal income in all states in which wireless subscribers are not reported. Data on personal income is from the 2000 *Statistical Abstract of the United States*.²⁷

SLC revenues are allocated by state in Table 1.21. The sum of residential non-lifeline lines (including both primary and non-primary lines) and single-line business lines are estimated by multiplying residential non-lifeline lines and single-line business lines from Table 2.19 of the latest *Statistics of Communications Common Carriers* by the adjustment factor from Table 1.17. Column

25 See <www.fcc.gov/Bureaus/Common_Carrier/Reports/FCC-State_Link/IAD/CLEC_Aggregate_June_2001.xls>.

26 See Tables 726 and 1339 of the Bureau of the Census's, *Statistical Abstract of the United States: 2000*.

27 See Table 10 of Wireline Competition Bureau, Industry Analysis Technology Division's, *Local Telephone Competition: Status as of December 31, 2001*, and Table 726 of the Bureau of the Census's, *Statistical Abstract of the United States: 2000*.

1 shows primary residential lines and single-line business lines which is the difference between total residential and single-line business lines, and non-primary lines. Non-primary residential lines are estimated by multiplying the percentage of non-primary lines by the sum of residential non-lifeline lines and single-line business lines reported in Table 2.19 of the *Statistics of Communications Common Carriers*.²⁸ Multiline business lines (Column 3) are estimated for the industry by multiplying the number of lines in Table 2.19 of the *Statistics of Communications Common Carriers* by the adjustment factor in Table 1.17.

Primary residential and single-line business lines SLC rates per month, shown in Column 4 are the weighted average of rates filed in the Tariff Review Plan (TRP) for price-cap carriers from the January 2000 and June 2000 filings and from NECA pool and rate-of-return carriers.²⁹ Non-primary SLC revenues per line per month for price-cap companies, shown in Column 5, are the weighted average of rates filed in the TRPs from the January of 2000 and July of 2000 filings. Multiline business SLC rates per line per month in each state, shown in Column 6, are estimated based on the rates in the January 2000 and July 2000 TRP filings for price-cap companies and from NECA pool and rate-of-return carriers.³⁰

Revenues used for allocating SLC revenues by state are determined by the following formula: $12 * [\text{primary residential and single-line business SLC per line per month} * (\text{primary residential lines and single-line business lines}) + \text{multiline business SLC per line per month} * (\text{multiline business lines}) + \text{non-primary lines} * \text{non-primary SLC per line per month}]$. Allocation percentage in each state is the ratio of the state's allocation revenues to nationwide revenues. SLC revenues are determined by multiplying the allocation factor by the type of revenues. (See Table 1.14.)

In Table 1.22, interstate access revenues and private line revenues are allocated on a state-by-state basis based on net access revenues. Gross access revenues for allocation are the product of interstate access revenues from Table 2.13 of the latest *Statistics of Communications Common*

28 Carriers that are not subject to price-cap regulation charge the same rate for a customer's first line as they do for additional lines. Staff estimated the percentage of non-lifeline residential and single-line business lines that are charged the non-primary access rates based on data that the Commission receives from access filings from price-cap carriers. Our estimates of non-primary lines are computed using data from the Tariff Review Plan (TRP). Thus, our estimates assume that the percent of BellSouth's non-primary lines are the same in each of its states.

29 Carrier USF loop counts are used as weights. We assume that the residential SLC for NECA pool and rate of return carriers is \$3.50.

30 The rates of NECA pool carriers and rate-of-return carriers are assumed to be \$6.00 per month per line.

Carriers and the adjustment formula presented in Table 1.17. Revenues for allocation are the difference between gross access revenues for allocation and subscriber line charge revenues. Allocation percentages in each state are the ratio of the state's allocation revenues to nationwide revenues. Access revenues by type are determined by multiplying the allocation factors by the type of revenues. (See Table 1.14.)

In Table 1.23, intrastate access revenues are allocated between states based on intrastate access revenues from Table 2.13 of the latest *Statistics of Communications Common Carriers*. Intrastate access revenues for allocation are the product of these access revenues and the adjustment formula in Table 1.17. Allocation percentage in each state is the ratio of the state's allocation revenues to nationwide revenues. Access revenues by type are determined by multiplying the allocation factor by the type of revenues. (See Table 1.14.)

Table 1.24 shows ILEC toll revenues of large ILECs reported in Table 2.13 of the *Statistics of Communications Common Carriers*, and ILEC intrastate toll revenues.³¹ ILEC intrastate toll revenues are the product of ILEC reported revenues and the adjustment formula in Table 1.17.

Table 1.25 shows how non-LECs' intrastate toll revenues are allocated between states based on intrastate access minutes and intrastate access revenues.³² Non-LEC toll is the difference between intrastate toll revenues and LEC toll revenues.³³ Intrastate toll revenues are reported in Table 1.14, and LEC toll revenues are reported in Table 1.24. Column 1 shows access minutes for allocation. Access minutes for allocation are the product of intrastate-interLATA access minutes from Table 2.5 of the latest *Statistics of Communications Common Carriers* and the adjustment formula in Table 1.17. Column 2 shows each state's percentage of intrastate access minutes. Column 3 shows each state's percentage of intrastate access revenues.³⁴ The allocation percentages for non-LECs' intrastate toll revenues, presented in Column 4, are $(75\% * \text{Column 2}) + (25\% * \text{Column 3})$. Intrastate toll revenues by type presented in Columns 5 and 6 are determined by multiplying the allocation percentage by the type of revenues.

In Table 1.26, interstate toll revenues are allocated on a per state basis by interstate access minutes. Access minutes for allocation are the product of interstate-interLATA access minutes from Table 2.5 of the latest *Statistics of Communications Common Carriers* and the adjustment formula in Table 1.17. The allocation percentages are each state's percentage of interstate access minutes.

31 ILECs' toll revenues are assumed to be intrastate revenues.

32 Intrastate access revenues are a proxy for intrastate toll rates.

33 We assume that all LEC toll revenues are end-user revenues.

34 Intrastate access revenues are reported in Table 1.23. Non-LEC toll is the difference between intrastate toll revenues and LEC toll. LEC toll is assumed to be end-user toll. Intrastate toll revenues are reported in Table 1.14 and LEC toll in Table 1.24.

Interstate toll revenues by type presented are determined by multiplying the allocation percentage by the type of revenues. (See Table 1.14.)

Table 1.1
Total Telecommunications Industry Revenues: 2000
(Dollar Amounts Shown in Millions)

	Carrier's Carrier Revenues 2/	End-User Revenues 1/ 2/	Total
Local Service 3/ Wireless Service	\$36,621	\$84,526	\$121,147
Toll Service	5,144	56,857	62,000
	21,849	87,767	109,615
Total	63,613	229,149	292,762
Service Revenues Reported as:			
Intrastate	25,553	147,465	173,018
Interstate and International 4/	38,060	81,685	119,745
Total	\$63,613	\$229,149	\$292,762

Note: Detail may not add to totals due to rounding.

- 1/ Data include revenues for *de minimis* filers as well as for other filers who are exempt from universal service contribution requirements.
- 2/ Carrier's carrier revenues are reported on FCC Form 499-A as sales to other universal service contributors for resale. This includes, for example, access services that local exchange carriers provide to toll carriers. Sales to *de minimis* resellers, end-user customers, governments, non-profits and any other non-contributors are treated as revenues. Filers contribute to the universal service funding mechanisms based on their end-user revenues.
- 3/ Payphone revenues are included with local service revenues in this table. Tables 1.5 through 1.8 show detail for payphone providers and payphone services.
- 4/ Revenues from calls that both originate and terminate in foreign points are reported as end-user revenues, but are not included in the universal service contribution base. Tables 1.5 through 1.8 show breakouts between interstate and international revenues based on Form 499-A filings. Section 43.61 international traffic data reports appear to provide more reliable data for international revenues but do not provide the type of breakouts found herein.

See notes on next page.

Notes for Table 1.2.

Note: Detail may not add to totals due to rounding.

- 1/ TRS filers generally reported pay telephone revenues as local service revenues, access revenues or operator toll revenues. The Universal Service and Form 499-A worksheets contain a separate category for payphone coin revenues. Starting in 1997, payphone revenues include payphone compensation received from toll carriers.
- 2/ TRS Worksheet filers generally reported special access revenues as access revenues. Reporting changes implemented with the Universal Service Worksheet explain the increase in local private line revenues and the fall in access revenues shown for 1997. TRS Worksheet filers included subscriber line charges with other access charges. Universal Service Worksheet filers report subscriber line charges in a separate category. The increase from 1997 to 1998 represents PICC charges levied by ILECs as well as \$1.2 billion of PICC pass-through charges levied by toll carriers.
- 3/ Significant amounts of enhanced services, billing and collection, CPE and other non-telecommunications revenues were reported in the TRS mobile and other local service categories through 1996. Universal Service Worksheet filers report these revenues in the non-telecommunications category. For prior years, the amounts of non-telecommunications revenues reported as mobile and other local revenues were estimated as 70% of the amounts that Tier 1 ILECs reported in ARMIS as miscellaneous and nonregulated revenues (currently account 5200 + account 5280) and 10% of amounts reported as mobile service revenue.
- 4/ Charges on end-user bills identified as recovering state or federal universal service contributions are reported separately from local, wireless and toll revenues. Reported amounts are apportioned between local, wireless and toll service based on the proportions of local, wireless and toll intrastate and interstate revenues by type of carrier.

Source: Industry Analysis Division, Common Carrier Bureau, *Telecommunications Industry Revenues* (January 2002).

Data for 1992 through 1996 summarized from FCC Form 431 TRS Worksheets. Data for 1997 and 1998 primarily based on FCC Form 457 Universal Service Worksheets, with data from 1997 TRS Worksheets used for service providers not required to file a Universal Service Worksheet. Starting in 1999, data summarized from FCC Form 499-A Telecommunications Reporting Worksheets, which replaced both FCC Form 431 and FCC Form 457.

Non-Telecommunications Revenues in Prior Year Data 2/	(6,944)	(7,518)	(8,324)	(9,071)	(10,474)				
Other Adjustments 3/	(248)	2,693	(461)	280	187	0	0	0	0
Total Telecommunications Revenues	\$153,409	\$165,342	\$174,890	\$190,076	\$211,782	\$231,168	\$246,392	\$268,505	\$292,762

1/ Filers are asked to select for themselves a service provider category that best describes their operations. The choices have changed over the years. For example, most satellite service providers identified themselves as other toll carriers in their 1997 Form 431 TRS worksheets because there was no separate category for satellite service providers.

2/ Significant amounts of enhanced service, billing and collection, CPE and other non-telecommunications revenues were reported on TRS worksheets by incumbent local exchange carriers (ILECs) and wireless carriers through 1996. Universal Service Worksheet filers report these revenues in the non-telecommunications category. For prior years, the amounts of non-telecommunications revenues reported as mobile and other local revenues were estimated as 70% of the amounts that Tier 1 ILECs reported in ARMIS as miscellaneous and nonregulated revenues (currently account 5200 + account 5280) and 10% of amounts reported as mobile service revenues.

3/ Other adjustments include some amounts withheld to preserve confidentiality and revisions made after the initial publication of the data.

Source: Industry Analysis Division, Common Carrier Bureau, *Telecommunications Industry Revenues* (January 2002).

Table 1.4
Contribution Base Revenues By Program 1/: 2000
(Dollar Amounts Shown in Millions)

		2000
Revenues subject to universal service contribution		
	Interstate and international end-user revenues	\$81,685
less	revenue for international - to - international service	1,087
less	international revenues excluded where interstate toll represents less than 8% combined interstate and international revenues	1,011
less	interstate and international revenues for 2,570 filers who are <i>de minimis</i> or otherwise exempt from universal service support requirements	609
	equals	78,977

1/ Amounts shown represent the amounts contained in the Form 499-A database at a point in time. The universal service administrator continues to receive additional and corrected filings. Exempt amounts were based on the filer certification statement contained in the Form 499-A filings. The fund administrator uses carrier type, revenue type and from filers to review exemption claims (and in some instances, failure to make claims.) The universal service fund administrator bills delinquent filers based on estimated revenues and therefore can include estimated revenue amounts in contribution base amounts. As a result of these factors, actual contribution bases have been based on slightly different amounts than those shown. Note also that universal service contribution factors are set quarterly based on Form 499-Q filings. Form 499-A data are used for true-up and auditing purposes.

Note: Amounts may not add to totals due to rounding.

* Denotes values greater than \$0 but less than \$500,000.

- 1/ Telecommunications service provided for resale consists of services provided to other contributors to federal universal service support mechanisms. Service provided to firms that do not contribute directly to federal universal service support mechanisms are reported as end-user service.
- 2/ Unlike Table 1.8, toll revenues shown in Table 1.12 exclude revenues from calls that both originate and terminate at foreign points.
- 3/ The total varies from the amount used for calculating the universal service contribution factor for the second quarter of 2002 because data were extracted from the Form 499-Q data base at different points in time and may include amounts for filers that are not required to contribute. Data were estimated for many carriers, including for most *de minimis* carriers.

Notes: Figures may not add due to rounding. Support payments do not include quarterly true-ups. USF is an abbreviation for the Universal Service Fund. Revised as of October 8, 2003.

¹ Estimated contributions include administrative cost of approximately \$41 million. Allocation of contributions among states is an FCC staff estimate.

² Net dollar flow is positive when payments from USF to carriers exceed contributions to USF. Total is negative because of administrative expenses.

³ Total includes disbursements for American Samoa of \$530,000 for high-cost support, \$55,000 for low-income support and \$2.043 million for schools and libraries.

Carriers' Carrier Revenues							
Intrastate	6,315	2,169	4,508	0	8,171	4,391	25,553
Interstate	3,744	1,745	636	0	15,222	16,715	38,061
Intrastate + Interstate	10,059	3,913	5,144	0	23,392	21,107	63,614
Total Revenues							
Intrastate	71,580	6,892	54,145	0	8,171	32,230	173,017
Interstate	3,961	4,054	7,846	11,383	17,565	74,936	119,745
Intrastate + Interstate	75,541	10,945	61,992	11,383	25,735	107,166	292,762

1/ Excludes subscriber line charges.

2/ Intrastate subscriber line charges are included under access.

3/ Interstate access includes switched access, special access and local private line.

4/ Intrastate toll includes both incumbent local exchange carrier (LEC) toll and non-ILEC toll.

Notes: Interstate revenues include both interstate and international revenues.

Information on end-user revenues are from Table 1.6. CLEC revenues include telecommunication revenues provided to end users by CLECs (including local exchange service, mobile wireless, subscriber line charge, access and toll revenues). Revenues in the other categories (incumbent local exchange service, mobile wireless, subscriber line charge, access and toll) include revenues from all filers other than CLECs. Intrastate incumbent local exchange service revenues include fixed local service revenues provided to end users. Interstate incumbent local exchange revenues include interstate revenues from lines 404, 407 and 408. Mobile wireless revenues include mobile wireless revenues provided to end users. Subscriber line charge revenues include revenues from line 405 and 428. Toll revenues include toll service revenues provided to end users.

Information on carrier's carrier revenues are from Table 1.5. CLEC revenues include telecommunications revenues provided for resale by CLECs (including local exchange service, mobile wireless, access and toll). Revenues in the other categories (incumbent local exchange service, mobile wireless, access and toll) include revenues for all filers other than CLECs. Intrastate Incumbent local exchange service revenues include revenues from lines 303, 305, 306, 307 and 308. Interstate incumbent local exchange service revenues include revenues from lines 303, 306, 307 and 308. Mobile wireless revenues include mobile service revenues provided for resale. Intrastate access revenues include revenues in line 304. Interstate access revenues include revenues in lines 304 and 305. Toll revenues include toll service revenues for resale.

NA - Not Applicable.

1/ USF loops, a measure of access lines, are defined in subcategory 1.3 of 47 CFR 36.154(a).

2/ Total includes 9,978 loops in American Samoa.

3/ Includes lines from NECA pool and rate-of-return carriers.

4/ Average percent reporting to ARMIS is based on USF loops.

2. Low-Income Support

Since 1984, the Commission, in conjunction with the states and local telephone companies, has administered a Lifeline program designed to promote universal service by providing low-income individuals with discounts on the monthly cost of telephone service.¹ The Commission also established LinkUp America, a program designed to help low-income individuals pay the initial costs of commencing service.² In May 1997, the Commission adopted the Federal-State Joint Board's (Joint Board) recommendation to expand the Lifeline and LinkUp rules.³ These rules are designed to satisfy the 1996 Act which mandates "affordable" rates for "low-income consumers" in all regions of the nation. The Commission's rules also allow all eligible telecommunications carriers to receive support for offering Lifeline and LinkUp service to qualifying low-income consumers.⁴

In June 2000, the Commission further expanded the Lifeline and LinkUp programs to provide additional discounts to individuals living on tribal lands.⁵ Currently, the Joint Board is examining the effectiveness of the Lifeline and LinkUp programs and will determine whether modifications are necessary to meet the universal service goals of section 254 of the Act.⁶

The LinkUp America program, which supports affordable connection to the network, has added 10.6 million telephone subscribers since 1987. In 2000, an estimated 6.2 million subscribers paid reduced local rates under the Lifeline program.

Eligibility for Lifeline and LinkUp

In states that provide state Lifeline support, Lifeline and LinkUp are available to all low-income consumers who meet the eligibility criteria established by the state. These criteria must be based solely on income or factors directly related to income. In addition, a state must ensure that its qualification criteria are reasonably designed to reach any eligible residents of tribal lands within the state.⁷ To receive Lifeline and LinkUp in a state that does not mandate state Lifeline support, consumers must certify, under penalty of perjury, that they participate in one of the following five federal programs: Medicaid, food stamps, Supplemental Security Income (SSI), federal public housing assistance, or the Low-Income Home Energy Assistance Program (LIHEAP).⁸ In such states, carriers must obtain signed statements from the consumer certifying that he or she receives benefits from one of these programs, identifying the particular program and agreeing to notify the carrier if he or she ceases to participate in the program or programs.⁹

6 Telecommunications Act of 1996, Pub. L. No. 104-104, 110 Stat. 56 (1996 Act), *codified at* 47 U.S.C. §§ 151 *et seq.* We refer to the Communications Act of 1934, as amended, as "the Communications Act" or "the Act" or "the 1934 Act." *See Federal-State Joint Board on Universal Service Seeks Comment on Review of Lifeline and LinkUp Service for All Low-Income Consumers*, CC Docket No. 96-45, Public Notice, FCC 01J-2 (rel. Oct. 12, 2001).

7 47 C.F.R. § 54.409(a).

8 47 C.F.R. § 54.409(b).

9 47 C.F.R. § 54.409(b).

Eligible residents of tribal lands qualify to receive federal Lifeline support if: (1) they qualify under state criteria in a state that provides Lifeline support; or (2) they certify, under penalty of perjury, that they receive benefits from one of the five federal programs listed above, or that they participate in one of the following additional federal assistance programs: Bureau of Indian Affairs (BIA) general assistance, Tribally administered Temporary Assistance for Needy Families (TANF), National School Lunch Program's free lunch program, or Head Start (meeting the income qualifying standard).¹⁰

Lifeline Support Amounts

Under the Commission's rules, there are four tiers of federal Lifeline support. The first tier represents a waiver of the federal subscriber line charge (SLC). On July 1, 2002, the maximum federal SLC was increased to \$6.00 per month.¹¹ In the past, the SLC has ranged from \$3.50 to \$5.00 per month. All eligible subscribers receive first tier support. Second tier support is a \$1.75 per month reduction in the basic local rate, and it is available if all relevant non-federal regulatory authorities approve such a reduction.¹² (All fifty states have approved.)

The third tier of federal support is based on the amount of additional state support mandated by the relevant state or otherwise provided by carriers. Federal support is available to match one half of the non-federal support provided, up to a maximum of \$1.75 in federal support, assuming that the carrier has all necessary approvals to pass on the full amount of this support in discounts to subscribers.¹³

Eligible residents of tribal lands also qualify to receive a fourth tier of Lifeline support if they meet the eligibility standards described above. Tier four support provides up to an additional \$25 per month towards reducing basic local service rates. This enhanced support may bring basic monthly rates down to \$1 for Lifeline customers on tribal lands.

LinkUp Support

The Commission's LinkUp program provides qualified low-income individuals with a federally-financed 50% discount (up to a maximum \$30 discount) on initial connection

10 47 C.F.R. § 54.409(a)-(c).

11 47 C.F.R. § 69.152(d)(1).

12 47 C.F.R. § 54.403(a)(2).

13 47 C.F.R. § 54.403(a)(3).

charges.¹⁴ These subscribers also may choose to schedule deferred payments of up to \$200 over a one-year period, with the customary interest charges paid by federal support.¹⁵

In addition, eligible residents of tribal lands can receive an additional \$70 in support, representing up to a maximum of \$100 in discounts on initial connection charges of \$130 or more.¹⁶

Services

Basic service must include, at a minimum: single-party service, voice grade access to the public switched telephone network, Dual Tone Multifrequency signaling or its functional digital equivalent, access to emergency services, access to operator services, access to interexchange service, access to directory assistance, and toll-limitation. The federal program compensates eligible telecommunications carriers for toll-limitation based on the carrier's incremental cost of providing toll-limitation services.¹⁷

Advertising

Carriers offering Lifeline and LinkUp are required to publicize the availability of those programs “in a manner reasonably designed to reach those most likely to qualify for support.”¹⁸

Support Mechanism

The federal portion of the program is funded by the federal universal service support mechanisms, which include contributions from providers of interstate and international telecommunications services. These carriers and service providers may pass on contribution expenses to their customers.

The FCC monitors subscriber participation and telephone usage to determine program benefits and costs.¹⁹ Historical tables for subscribership and carrier payments by state can be

14 47 C.F.R. § 54.411(a)(1).

19 *1997 Universal Service Order*, 12 FCC Rcd at 9218, para. 869; *see also Common Carrier*

downloaded from the *Monitoring Reports* section of the FCC-State Link website, <www.fcc.gov/wcb/stats>.

Table 2.1 reports Lifeline monthly support by state or jurisdiction as of December 2001. The table shows both federal and state support, and indicates the additional contribution from the federal program to reduce local rates where states have authorized statewide or carrier specific intrastate local rate reductions. Table 2.1 indicates both the federal and state combined "minimum" local rate reduction. This table does not reflect changes in the maximum SLC that may be charged which took effect in 2002.²⁰

Table 2.2 reports low-income support by state or jurisdiction for Lifeline and LinkUp payments between January 1998 and December 2001. Total carrier payments data include local rate reductions for the presubscribed interexchange carrier charges (PICC), and the carrier's incremental cost of providing toll-limitation services (TLS) in each state or jurisdiction.

Table 2.3 reports total Lifeline and LinkUp payments in 2001 by state or jurisdiction at the study area level. Local rate reductions for the PICC and the carrier's incremental cost of providing TLS are reported for 2000 by carrier Universal Service Administration Company (USAC) ID and serving area code identification. The serving area codes identify where more than one carrier provides Lifeline and LinkUp assistance in the study area. American Indian and Native American tribal data are also reported.

Table 2.4 provides annual support estimates for low-income programs for 1998 through 2001 and quarterly support estimates for the first two quarters of 2002. The low-income support components include: Lifeline Assistance, LinkUp, Incremental Toll-Limitation, and Prior Period Adjustments. Also shown are Administrative Expenses and Interest Income.

Bureau Seeks Comment on Program to Monitor Impacts of Universal Service Support Mechanisms, CC Docket No. 96-45, Public Notice, DA 98-580, IAD File No. 98-101 (rel. Apr. 24, 1998).

20 47 C.F.R. § 69.152(d)(1). *See also Multi-Association Group (MAG) Plan for Regulation of Interstate Services of Non-Price Cap Incumbent Local Exchange Carriers and Interexchange Carriers, Federal-State Joint Board on Universal Service, Access Charge Reform for Incumbent Local Exchange Carriers Subject to Rate-of-Return Regulation, Prescribing the Authorized Rate of Return for Interstate Services of Local Exchange Carriers*, CC Docket Nos. 00-256, 96-45, 98-77, 98-166, Second Report and Order and Further Notice of Proposed Rulemaking in CC Docket No. 00-256, Fifteenth Report and Order in CC Docket No. 96-45, and Report and Order in CC Docket Nos. 98-77 and 98-166, 16 FCC Rcd 19613, 19634, para. 42 (2001) (*MAG Order*).

Table 2.5 reports annual historical Lifeline subscribership data by state or jurisdiction for years 1990 through 2001. Historical data from the inception of the program in 1985 through 1988 may be found on the *Monitoring Reports* section of the FCC-State Link website.

Table 2.6 reports annual tribal and non-tribal Lifeline assistance subscriber data by state or jurisdiction for the years 2000 and 2001, when the expanded Lifeline assistance program addressed the needs of individuals living on tribal lands.

Tables 2.7, 2.8, 2.11 and 2.12 explain National Exchange Carrier Association (NECA) and USAC grand totals. For earlier years, the data represents actual amounts reported by local exchange carriers. These payments are final and not subject to further adjustment. For the latest years, payments are subject to change and reflect the settlements adjustment periods.

Table 2.7 reports annual historical Lifeline payments to carriers in each state or jurisdiction and shows total reimbursements to each state or jurisdiction. The report provides Lifeline support totals for payments made to subscribers through local rate discounts. The payments shown in these tables include TLS and PICC data; however, these tables do not include state or local rate contributions.

Table 2.8 reports historical Lifeline support payments by study area for the years 1990 to 2001. Historical data for years 1984 to 1989 may be found in the *Monitoring Reports* section of the FCC-State Link web site mentioned above. Lifeline support payments between 1984 and 1995 reflect state data where states and carriers offered local rate discounts to low-income households.

Table 2.9 reports historical participation in the LinkUp program. The participant data monitors annual state connection assistance statistics for 1990 through 2001. LinkUp program participation was first certified in 1987. Historical data for 1987 to 1989 are available in the *Monitoring Reports* section of the FCC-State Link web site.

Table 2.10 reports annual tribal and non-tribal LinkUp assistance participant data by state or jurisdiction for the years 2000 and 2001, when the expanded LinkUp assistance program addressed the needs of individuals living on tribal lands.

Table 2.11 reports historical payments to carriers participating in the LinkUp program and reflects reimbursements to carriers in each state. Historical time-series data provide a total of payments made to carriers as a result of rate discounts passed on to subscribers provided by the LinkUp connection assistance programs. The payments shown in these tables for the years 1990-2001 do not include state or local rate contributions. Historical data for 1987 to 1989 are available in the *Monitoring Reports* section of the FCC-State Link web site.

Table 2.12 reports, by study area, annual historical data for the LinkUp connection assistance payments to carriers in each state or jurisdiction. The LinkUp program includes connection discounts reflected in the reimbursements to local carriers. American Indian and Native American tribal data are also reported.

Table 2.13 shows, for 2001, the total amount of funding disbursements, the estimated contributions toward all low-income support, and the net dollar flow for each state in thousands of dollars.²¹

21 This table is based on the payments shown in Table 2.2 and the methodology described in the Technical Appendix to Section 1 of this report.

Note: These dollars represent submitted claims to USAC for the time period January 1998 through December 1998, including true-ups reported to date. Verizon-NJ and Sprint-NJ were granted eligible telecommunications carrier (ETC) status retroactive to January 1998. Nevada Bell did not receive ETC status until December 1998 and began reporting Lifeline starting in January 1999.

1/ Subscriber data were not actually collected in 1997. USAC used an estimated number of subscribers for all states.

2/ Average number of subscribers reported for 2000 and 2001 for companies requesting reimbursement (includes true-ups through December 2001).

Ninety-nine percent of all eligible companies have reported to USAC for reimbursement at this time.

Source: Universal Service Administrative Company (USAC).

Note: The average number of subscribers reported for 2000 and 2001 includes true-ups through December 2001. Starting in October 2000, low-income subscribers are listed as either tribal or non-tribal due to implementation of the *Tribal Order*. Ninety-nine percent of all eligible telecommunications carriers (ETCs) have reported to date.

1/ Payments are final and not subject to further adjustment.

2/ Dollars reported are for companies requesting reimbursement. Approximately 99% have reported at this time. Data include true-ups submitted through January 2002. Lifeline dollars, starting in 1998, include toll-limitation services (TLS) and presubscribed interexchange carrier charges (PICCs). PCCC charges are valid only through July 2000.

NA - Not available.

1/ Participants data were not actually collected in 1997.

2/ Participants reported for 2000 and 2001 include true-ups through December 2001 for companies requesting reimbursement. Approximately ninety-nine percent of all eligible companies have reported at this time.

Note: Participants reported for 2000 and 2001 include true-ups through December 30, 2001. Starting Oct. 2000, low-income subscribers are listed as either tribal or non-tribal due to implementation of *Tribal Order*. About ninety-nine percent of all eligible telecommunications carriers (ETCs) have reported to date.

Notes: Figures may not add due to rounding. Mechanisms include Lifeline, LinkUp and incremental toll limitation. USF is an abbreviation for the Universal Service Fund.

¹ Carriers make payments into the fund based on their end-user interstate telecommunications revenues. The estimates in this column are computed by multiplying the state's share of end-user revenue times the nationwide total contribution at the bottom of this column. The state's estimated share of nationwide end-user interstate revenue is shown in Table 1.12. For the methodology used to derive the state's share of nationwide end-user revenues, see the technical appendix to Chapter 1.

² Net dollar flow is positive when payments to carriers exceed contributions. This column sums to a negative number because of administrative costs.

³ Total includes disbursements for American Samoa of \$55,000.

3. High-Cost Support

The high-cost support mechanisms enable areas with very high costs to recover some of these costs from the federal universal service support mechanisms, leaving a smaller remainder of the costs to be recovered through end-user rates or state universal service support mechanisms. In this manner, the high-cost support mechanisms are intended to hold down rates and thereby further one of the most important goals of federal and state regulation -- the preservation and advancement of universal telephone service. This section of the report outlines the high-cost support mechanisms and provides data for these mechanisms. There currently are six high-cost support mechanisms. These include embedded high-cost loop (HCL) support,¹ long-term support (LTS), local switching support (LSS), forward-looking high-cost model (HCM) support, interstate access support (IAS) for price-cap carriers, and interstate common line support (ICLS) for rate-of-return carriers. Table 3.1 summarizes the annual amounts for the high-cost programs for 1998 through 2001 and the quarterly amounts for the first two quarters of 2002.² It is based on information provided by the Universal Service Administrative Company (USAC).

Historically, HCL support was provided to all carriers based on their embedded costs. Such support provides assistance for non-traffic sensitive (NTS) local loop costs -- a term that refers to the costs of outside telephone wires, poles, and other facilities that link each telephone customer's premises to the public switched telephone network. NTS costs are allocated between the state and interstate jurisdictions because all local loops can be used for making and receiving both intrastate and interstate telephone calls. Historically, the interstate allocation was made using the Subscriber Plant Factor (SPF).³ This factor is now 25% for all companies. Today, carriers are eligible for different forms of interstate high-cost loop support, depending on whether they are considered rural or non-rural carriers.⁴

1 This was formerly referred to as the Universal Service Fund, and still bears that name in the Commission rules. It is now referred to as high-cost loop support to avoid confusion with the new, more comprehensive universal service support mechanisms that the Commission developed to implement the 1996 Act. *See* 47 C.F.R. § 36.601.

2 ICLS is not included because that support mechanism is beginning in the third quarter of 2002.

3 The Subscriber Plant Factor is defined in section 36.154(e) of the Commission's rules. 47 C.F.R. § 36.154(e). It was frozen in 1981 and then transitioned to 25% between 1985 and 1993, subject to the limitations in section 36.154(f) of the Commission's rules. 47 C.F.R. § 36.154(f).

4 *See* 47 C.F.R. § 51.5 for the definition of a rural carrier. Generally, they either have less than 100,000 lines or serve predominantly rural areas.

If a local exchange carrier (LEC) is deemed a rural carrier, it continues to receive HCL support based on embedded costs. The expense adjustment allows those study areas⁵ with an average unseparated cost per loop that exceeds 115% of the national average to allocate an additional portion of their NTS costs to the interstate jurisdiction and to have those costs recovered by HCL support.⁶ Table 3.2 shows the percentages of additional NTS costs recovered by HCL support.⁷ HCL support was implemented during a period in which the basic interstate allocation of loop costs was shifted from a level based on the historical SPF to the present flat allocation factor of 25%. Both of these changes were phased in between 1985 and 1993, during which the HCL support was increased by one-eighth of the formula amount each year.

Table 3.3 shows the payments that have been made through HCL support since its inception. The first column indicates the year in which the NTS costs were incurred. The second column indicates the year in which HCL support payments were made. The third column indicates the amount of those payments, based on the product of the transition factor⁸ shown in the fourth column and the full amounts (calculated from the formulas in Table 3.2) shown in the fifth column.⁹ The last two columns of the table show the annual growth rates in the actual payments and the full transition payments based on the payment formulas.

-
- 5 A study area is usually an operating company's operations in one state. Holding companies may own multiple operating companies and thus have multiple study areas in a state. Study area boundaries were frozen as of November 15, 1984. Any subsequent change requires a Commission waiver of this freeze.
- 6 In January 1988, high-cost assistance was retargeted to increase benefits to small and medium sized LECs. The old and new high-cost formulas are compared in Table 3.1 of the *Monitoring Reports* in CC Docket No. 87-339.
- 7 For example, suppose the national average cost per loop is \$240 and a company with 10,000 loops has a cost per loop of \$420, or 175% of the national average. Then for the portion of their costs between \$276 (115% of the national average) and \$360 (150% of the national average) they would receive 65% of those costs [.65 times (\$360 - \$276) = \$54.60], plus they would receive 75% of their costs over \$360 [.75 times (\$420 - \$360) = \$45], resulting in HCL support totaling \$99.60 per loop, or \$996,000 total support.
- 8 The transition factor represents the proportion of the calculated HCL support that was actually paid during the transition period between 1985 and 1993. This transition was designed to compensate for the allocation of costs to interstate based on the transitional SPF during that period, which on average was greater than the present 25%.
- 9 As discussed below, beginning in 1994 the payments were subject to a cap. The amounts in the fifth column since 1994 represent what the payments would have been if there had been no cap. Payments since 2000 include only hold-harmless support for non-rural companies.

In December 1993, the Commission, at the recommendation of the Joint Board in CC Docket 80-286, imposed a cap on HCL support payments.¹⁰ The cap was indexed to the rate of growth in the national total of working exchange loops. It was implemented by adjusting the national average cost per loop used to calculate each study area's high-cost assistance (using the current formula from Table 3.2) from the true average value to whatever base value is required to achieve the cap. For example, in 1998, the cap was achieved by adjusting the base value cost per loop from the national average of \$247.34 to \$248.82. A further limitation on the size of the fund was implemented on January 1, 1998, by limiting the amount of allowed corporate operations expenses.¹¹ While some study areas had the amount of HCL support payments capped as a condition of Commission approval of mergers or sales or acquisitions of exchanges, the Common Carrier Bureau adopted an order removing all such caps remaining for individual study areas, retroactive to January 1, 2000.¹²

The Commission modified the high-cost support mechanism to provide additional support to rural carriers on May 23, 2001. Implementation of the modified support mechanism began July 1, 2001.¹³ The Commission rebased the HCL support fund for rural carriers, revised the corporate operations expense limitation formula, and modified the indexed cap. Accordingly, beginning July 1, 2001, the caps for non-rural hold-harmless and rural HCL support are calculated separately.¹⁴ For rural carriers, the national average annual loop cost is now frozen at \$240.00 and the cap is indexed to the rate of growth in working loops of rural carriers plus the rate of inflation as measured by the Gross Domestic Product – Chained Price Index (GDP-CPI).¹⁵

10 *Amendment of Part 36 of the Commission's Rules and Establishment of a Joint Board*, CC Docket No. 80-286, Report and Order, 9 FCC Rcd 303 (1993). The amount of the payments for 1996 was below the cap.

11 The limitations are specified in section 36.621(a)(4) of the Commission's rules. 47 C.F.R. § 36.621(a)(4).

12 *Petitions for Waiver Concerning the Definition of "Study Area" Contained in Part 36 Appendix-Glossary of the Commission's Rules*, CC Docket No. 96-45, Order, 15 FCC Rcd 23491(2000).

13 *See Federal-State Joint Board on Universal Service, Multi-Association Group (MAG) Plan for Regulation of Interstate Services of Non-Price Cap Incumbent Local Exchange Carriers and Interexchange Carriers*, CC Docket Nos. 96-45, 00-256, Fourteenth Report and Order, Twenty-Second Order on Reconsideration, and Further Notice of Proposed Rulemaking in CC Docket No. 96-45, and Report and Order in CC Docket No. 00-256, 16 FCC Rcd 11244 (2001).

14 47 C.F.R. §§ 36.602 and 36.603.

15 This replaces the indexing of the cap to the rate of growth of the national total of working

If a carrier is deemed to be a non-rural carrier, it now receives high-cost support based on forward-looking costs, as estimated by an FCC cost model. The Commission adopted a new high-cost support mechanism for non-rural carriers on October 21, 1999, based on recommendations from the Joint Board.¹⁶ This mechanism is based on the forward-looking costs of providing supported services¹⁷ as determined by the Commission's cost model.¹⁸ For each state, the cost model calculates the wire center forward-looking cost per line incurred by non-rural carriers to provide supported services. The statewide average cost per line is then compared to the national average cost per line to determine eligibility for support. The forward-looking support mechanism provides support to non-rural carriers in those states that have a statewide average forward-looking cost per line greater than the national benchmark, which is set at 135 percent of the national average forward-looking cost per line.¹⁹

exchange loops.

- 16 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Ninth Report and Order and Eighteenth Order on Reconsideration, 14 FCC Rcd 20432 (1999) (High-Cost Methodology Order), *rev'd in part and remanded*, *Qwest v. FCC*, 258 F.3d 1191 (10th Cir. 2001). The Joint Board is currently preparing a Recommended Decision in response to the court remand. *See Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Notice of Proposed Rulemaking, 17 FCC Rcd 2999 (2002).
- 17 The services eligible for federal universal service support are listed in section 54.101 of the Commission's rules. 47 C.F.R. § 54.101.
- 18 The cost model consists of: (1) a model platform, which contains a series of fixed assumptions about network design and engineering; and (2) input values for the model platform, such as the cost of network components, e.g., cables and switches, as well as various capital cost parameters. The Commission adopted the model platform in the *Platform Order* released in October 1998. *Federal-State Joint Board on Universal Service, Forward-Looking Mechanism for High-Cost Support for Non-Rural LECs*, CC Docket Nos. 96-45, 97-160, Fifth Report and Order, 13 FCC Rcd 21323 (1998) (*Platform Order*). The Commission adopted input values in the *Inputs Order* released in November 1999. *Federal-State Joint Board on Universal Service, Forward-Looking Mechanism for High-Cost Support for Non-Rural LECs*, CC Docket Nos. 96-45, 97-160, Tenth Report and Order, 14 FCC Rcd 20156 (1999) (*Inputs Order*).
- 19 *High-Cost Methodology Order*, 14 FCC Rcd 20432 at paras. 10 and 55. The forward-looking support mechanism provides support for all intrastate costs that exceed the benchmark. *High-Cost Methodology Order*, at paras. 60 - 63. Intrastate costs account for 76 percent of all forward-looking costs estimated by the model. *High-Cost Methodology Order*, at para. 63. Therefore, the forward-looking mechanism provides support for 76 percent of the forward-looking costs that exceed the benchmark. *High-Cost Methodology Order*, at para. 63.

After determining the total amount of forward-looking support provided to non-rural carriers in a particular state, the support is then targeted to individual wire centers that have forward-looking costs in excess of the benchmark.²⁰ Under the targeting approach, the amount of support provided to a non-rural carrier serving a particular wire center depends on the relative costs in that wire center and the number of lines served by the carrier. By comparing the relative costs in various above-benchmark wire centers, the targeting approach enables the Commission to provide greater amounts of support to carriers serving lines in wire centers with costs further above the benchmark. Thus, unlike providing a uniform per line statewide support amount, the targeting approach provides support in an amount commensurate with the cost of service, thereby encouraging carriers to serve high-cost areas.

The Commission also adopted a transitional “hold-harmless” measure to prevent rate shocks and disruptions in state rate designs when the new mechanism took effect. As adopted, no non-rural telephone company would receive less support than it received under the LTS support plus embedded HCL support mechanisms during the transition period. The Joint Board recommended that interim hold-harmless support be phased down beginning January 1, 2001.²¹ On December 8, 2000, the Commission adopted measures to phase down interim hold-harmless support, through \$1.00 reductions in average monthly per-line embedded HCL support, beginning January 1, 2001, and every year thereafter until there is no more interim embedded HCL hold-harmless support.²²

LTS is related to interstate non-traffic sensitive costs. LTS provides support to the members of the National Exchange Carrier Association (NECA) common line pool, to allow them to charge a below-cost carrier common line (CCL) rate that is uniform for all companies in the pool. Prior to 1989, all LECs were required to be part of the NECA common line (CL) pool, and CCL rates were uniform nationwide. On April 1, 1989, companies were permitted to withdraw from the NECA CL pool and provide jurisdictionally specific CCL access charges; however, carriers must remain in the pool to received LTS.²³

20 *High-Cost Methodology Order*, at paras. 68-76.

21 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Recommended Decision, 15 FCC Rcd 14714 (2000).

22 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Thirteenth Report and Order and Further Notice of Proposed Rulemaking, 15 FCC Rcd 24422 (2000).

23 See previous *Monitoring Reports* for a detailed list of which companies are no longer in the NECA CL pool.

To reduce disparities in CCL rates among LECs after companies were permitted to withdraw from the CL pool, LTS was set up. LTS originally consisted of payments to the NECA CL pool from companies that withdrew from the NECA CL pool. Companies remaining in the NECA pool charge CCL rates, pursuant to the NECA tariff, which were formerly equal to the average CCL rate of the price cap companies. Effective January 1, 1998, the funds for LTS come from the federal universal service support mechanisms. At the same time, the NECA pool rate no longer was made equal to the average price cap rate. Rather, the amount of LTS that a NECA pool member was eligible to receive in 1998 was the 1997 level of LTS (the difference between 1997 CCL revenue requirements and the sum of 1997 CCL revenues using the NECA pool rate and 1997 subscriber line charge revenues) multiplied by the rate of growth of the national average NTS cost per loop. The 1999 level of LTS was similarly adjusted from the 1998 level by the national average loop cost growth rate. Beginning January 1, 2000, LTS is adjusted for inflation to reflect the annual percentage change in the GDP-CPI.²⁴

Nationwide pool results provided by NECA for 2001 are shown in Tables 3.4 and 3.5. Table 3.4 summarizes the CL pool revenues and expenses for the year 2001, as well as a comparison with the corresponding figures for 2000. Table 3.5 has comparable figures for NECA's traffic sensitive pool.

Table 3.6 provides a history of LTS payments. The data are based on the annual NECA NTS pool report (see Table 3.4) from February of the following year and on information provided by USAC.

LSS provides support for traffic sensitive local switching costs. The local switching support is now recovered through the universal service support mechanisms, rather than through higher traffic-sensitive access charges. Until 1997, this support was based on dial equipment minute (DEM) weighting. LSS provides support to LECs with study areas of 50,000 or fewer access lines, to help defray the higher switching costs of small LECs. The portion of these costs that are normally allocated to interstate is determined by the ratio of interstate to total dial equipment minutes, known as the DEM factor. However, LEC study areas with 50,000 access lines or fewer had that portion multiplied by a weighting factor, which was determined by the number of access lines in the study area.²⁵ The resulting weighted DEM factor (which was not permitted to exceed .85) allowed these study areas to recover a greater portion of their local switching costs from interexchange carriers in the form of higher access charges.²⁶

24 See 47 C.F.R. § 54.303.

25 The weighting factors, which became effective in 1993, are shown in Table 3.6 of the December 1998 and June 1999 *Monitoring Reports*.

26 The weighted and unweighted DEM factors are shown in section 8 of this report. The DEM factors were frozen in 2001 for a five year period. See *Jurisdictional Separations Reform and Referral to the Federal-State Joint Board*, Report and Order, CC Docket No. 80-286, FCC 01-162, 16 FCC Rcd 11382 (2001) (*Separations Freeze Order*).

Since 1998, the LSS factor has been calculated as the difference between the 1996 weighted DEM factor and the 1996 unweighted DEM factor. It is subject to the limit that the sum of the DEM factor and the LSS factor shall not exceed .85. Also, if the number of lines has increased since 1996 across one of the limit values of 10,000 or 20,000 or 50,000 lines, the 1996 weighted DEM factor used for computing the LSS factor is adjusted to reflect the weighting factor appropriate for the new number of lines. Table 3.7 provides a history of LSS payments since 1993.

In response to the 1996 Act, the Commission also has removed implicit support from interstate access charges. On May 31, 2000, the Commission established an explicit interstate access (IAS) support mechanism for price cap carriers to replace the implicit support previously collected through interstate access charges.²⁷ Like LTS, the purpose of this new mechanism is to provide explicit support to ensure reasonably affordable interstate rates. This is in contrast to the Commission's other high-cost support mechanisms, which provide support to enable states to ensure reasonably affordable and comparable intrastate rates. The new mechanism provides support to carriers serving lines in areas where they are unable to recover their permitted revenues from the newly revised subscriber line charges. The support is fixed at an aggregate annual amount of \$650 million.²⁸ It is targeted to the density zones that have the greatest need for it. It is provided on a portable, per-line basis. It is available on a competitively neutral basis to any eligible telecommunications carrier serving a supported customer, regardless of the technology used by that carrier.

In November 2001, the Commission created the ICLS mechanism for rate-of-return carriers to convert implicit support in the access rate structure to explicit, portable support.²⁹ ICLS will recover any shortfall between the allowed common line revenues of rate-of-return carriers and their subscriber line charge revenues and gradually replace the carrier common line

27 *Access Charge Reform, Price Cap Performance Review for Local Exchange Carriers, Low-Volume Long Distance Users, Federal-State Joint Board on Universal Service, Sixth Report and Order in CC Docket Nos. 96-262 and 94-1, Report and Order in CC Docket No. 99-249, Eleventh Report and Order in CC Docket No. 96-45, 15 FCC Rcd 12962 (2000) (CALLS Order).*

28 The Commission's choice of \$650 million is currently on remand. *Texas Office of Public Utility Counsel v. FCC*, 265 F. 3d 313 (5th Cir. 2001).

29 *Multi-Association Group (MAG) Plan for Regulation of Interstate Services of Non-Price Cap Incumbent Local Exchange Carriers and Interexchange Carriers, Federal-State Joint Board on Universal Service, Second Report and Order and Further Notice of Proposed Rulemaking in CC Docket No. 00-256, Fifteenth Report and Order in CC Docket No. 96-45, FCC 01-304 (rel. Nov. 8, 2001) (MAG Order).*

charge. Under the *MAG Order*, the ICLS mechanism was implemented beginning on July 1, 2002.

All of the universal service support mechanisms are administered by USAC, an independent subsidiary of NECA. As part of its administration of these support mechanisms, USAC files quarterly reports with the Commission. These reports include quarterly projections of the amounts to be paid for each program, along with true-ups (differences between actual payments and projections) for prior periods, administrative expenses and interest income. The report for the first quarter of 2002 was filed on November 2, 2001; the report for the second quarter of 2002 was filed on January 31, 2002.³⁰ Tables 3.8 through 3.13 provide a summary by state of the total amounts of these projected payments. Each table summarizes the annual amounts for the high-cost programs for 1998 through 2001 and the quarterly amounts for the first two quarters of 2002. Table 3.8 summarizes HCL payments, Table 3.9 summarizes LTS payments, Table 3.10 summarizes LSS payments, Table 3.11 summarizes IAS payments, and Table 3.12 summarizes the non-rural forward-looking high-cost model support mechanism payments.³¹ Table 3.13 summarizes the total of these five payments. The values in Tables 3.8 have been adjusted from the USAC filing to take into account the forward-looking non-rural support mechanisms. Thus, after the implementation of the model, they include only the HCL hold-harmless payments actually made for non-rural study areas.

Tables 3.14 through 3.19 show, by support mechanism, for 2001, the total amount of payments to carriers, the estimated contributions towards high cost support, and the net dollar flow for each state, in thousands of dollars.³² Table 3.14 is for HCL, Table 3.15 is for LTS, Table 3.16 is for LSS, Table 3.17 is for the HCM support, Table 3.18 is for IAS, and Table 3.19 is for all high cost support mechanisms combined.

Pursuant to Part 36 of the Commission's rules, NECA collects certain cost data from LECs that provide service to approximately 98% of the nation's subscribers.³³ Each year NECA collects

30 The filing dates for projections for previous quarters can be found in previous *Monitoring Reports*.

31 These projections for the forward-looking high-cost model support only include payments actually made based on the model. In cases where the HCL hold-harmless payment was made because it exceeded the model amount, the model amount was not counted.

32 These tables are an update of information in Industry Analysis Division, Common Carrier Bureau, Federal Communications Commission, *State-by-State Telephone Revenues and Universal Service Data* (April 6, 2001). The methodology used to estimate state contributions is explained in the appendix to section 1 of this *Universal Service Monitoring Report*.

33 These are the carriers that settle on a cost basis. Costs for the remaining LECs, which settle

NTS cost and loop data from the previous year, and files all such data with USAC and the Commission. USAC, as administrator of the high-cost support mechanism, uses that information to distribute high-cost assistance in the following year. On October 1, 2001, NECA reported new data for 2000, and revised data for the four previous years. State totals, based on that report, covering cost data for 2000, are presented in Table 3.20. This table shows unseparated NTS costs (Revenue Requirement), the number of loops, and costs per loop. It also shows the expected HCL payments for 2002, based on 2000 data, using the high-cost formula and the cap discussed above. The costs shown are embedded costs for all companies, and the payments shown include only hold-harmless payments to non-rural companies.³⁴ The final column shows the percentage of the total payments that go to companies in the state.

Table 3.21 shows the changes, from the revised data for 1999 to the newly reported data for 2000, for state totals, of the unseparated NTS revenue requirement, the number of loops, the revenue requirement per loop, and the HCL payments. The phrase, "payments in later year" in the last column refers to the fact that the payments are made two years after the costs are incurred; in this case, in the years 2001 and 2002. In the payments column in this table, the entry "INFINITE" indicates that the payment was zero in the first year and positive in the second year.

Tables 3.22 through 3.25 present state summaries of the revised historical information filed for 1996 through 2000 in the 2001 filing. Table 3.22 shows the unseparated NTS revenue requirements for each year. Table 3.23 shows the number of loops. Table 3.24 shows the unseparated NTS revenue requirement per loop. Table 3.25 shows the HCL payments for 1998 through 2002.

The next several tables in this section are data for individual study areas. Tables 3.26 through 3.31 are derived from the quarterly USAC filings of projected payments. Table 3.26 has HCL support payments. The values in this table have been adjusted from the USAC filing to take into account the forward-looking non-rural support mechanisms. Thus, after the implementation of the model, they include only the HCL hold-harmless payments actually made for non-rural study areas. Table 3.27 has LTS payments. Table 3.28 has LSS payments. The 1998 amounts in Tables 3.26 to 3.28 are the actual payments after processing the final true-ups for 1998.³⁵ Table 3.29 has IAS payments. Table 3.30 provides estimates, by study area, of the high cost support

on an average schedule basis, are attributed by NECA on the basis of those carriers' average number of loops per exchange.

34 The data submitted by NECA included payments that would have been made if the forward-looking high cost model had not been implemented. These have been replaced for non-rural companies by USAC hold-harmless data.

35 These are from Universal Service Administrative Company, *Federal Universal Service Support Mechanism Fund Size Projections for the First Quarter 2002* (November 2, 2001), Appendix HC7.

using the non-rural forward-looking high-cost model support mechanism, along with the hold-harmless support for the years 2000 and 2001 and the first two quarters of 2002.³⁶ Table 3.31 has the total support payments for all five programs. Each of these tables (except 3.30) contains the annual amounts for 1998, projected amounts for 1999, 2000, and 2001 and the quarterly amounts projected for the first two quarters of 2002.

Table 3.32 contains individual study area data for 2000 for unseparated NTS costs (Revenue Requirement), the number of loops, and costs per loop. It also shows the expected HCL payments for 2002, based on 2000 data, and the percentage of the national total HCL support that goes to the study area. In the second column of Table 3.32, the types are cost (C) and average schedule (A), indicating the form of settlements used by that study area. The third column indicates whether the study area has been designated as rural (R) or non-rural (N). In addition to the name of the study area, the name of the holding company (if any) is also shown. The costs shown are embedded costs for all companies, and the payments shown include only hold-harmless payments to non-rural companies.³⁷ Table 3.33 shows the percentage changes for each of these amounts for individual study areas. In the payments column in this table, the entry "INFINITE" indicates that the payment was zero in the first year and positive in the second year.

Tables 3.34 through 3.37 present individual study area data for the historical information filed for 1996 through 2000 in the 2001 filing. Table 3.34 shows the unseparated NTS revenue requirements for each year. Table 3.35 shows the number of loops. Table 3.36 shows the unseparated NTS revenue requirement per loop. Table 3.37 shows the HCL payments.³⁸

36 The apparent anomaly of Qwest Corp.-Wyoming getting both high-cost model support and hold-harmless support in 2000 is the result of the hold-harmless amount being greater in the first quarter and the model amount being greater for the rest of the year. Similarly, for Verizon South of Alabama, the study area got high-cost model support in the first two quarters of 2001 and hold-harmless support in the last two quarters of 2001. Consequently, separate columns are shown for model support amounts and model payment amounts for these two years. The NA entries for a time period for some companies are due to changes in the rural vs. non-rural status of those companies between the time periods, or to the changes as to which CLECs were competing with the ILECs as eligible telecommunications carriers.

37 The data submitted by NECA included payments that would have been made if the forward-looking high cost model had not been implemented. These have been replaced for non-rural companies by USAC annualized first-quarter hold-harmless data. Also, NECA did not provide data for one company: 220381 Public Service Tel. of Georgia. Data for this company are based on information from USAC on loops and high-cost support, and a cost estimate based on the USAC information and the high-cost support formulas.

38 The differences between the values in Tables 3.26 and 3.37 are due to the facts that the amounts reported by USAC in Table 3.26 are based on quarterly projections, while the

In compiling the historical data, it is necessary to account for changes that have occurred in the study areas over time. These changes are noted in Table 3.38.³⁹ In cases where study areas have merged, the pre-merger data for all of the merged study areas have been combined and reported as the data for the surviving study area in Tables 3.34 through 3.37. In cases where there has been an ownership change resulting in a code number change, the pre-change data is reported under the new code number and name. In the case of newly created study areas, pre-creation data is reported as 0. In Table 3.33, percentage changes in the case of mergers are comparisons of the surviving study area data with the consolidated pre-merger data. No attempt has been made to adjust for sales of exchanges between study areas.

Each year NECA submits detailed account data used to calculate the unseparated revenue requirement per loop for each study area that settles on a cost basis, and total attributed revenue requirements for study areas that settle on an average schedule basis. In their filings since 1993, in addition to submitting such information for the latest year, NECA also submitted revised information for the four preceding years. The detailed account data are not reported here, but the most recent revision of the data for each year since 1988 is available in electronic form on the **FCC-State Link** web site.

amounts reported by NECA in Table 3.37 are based on actual payments for the first quarter of each year, that do not take into account subsequent quarterly updates. Neither can be taken as the amount actually paid during the year, except for the 1998 values in Table 3.26, which have been revised by USAC to reflect actual payments. The data for 2000 to 2002 for non-rural companies have been adjusted to reflect only hold-harmless payments for non-rural companies. For 2000, the payments were changed to zero if USAC reported that forward-looking high-cost model payments were made instead. For 2001, the hold-harmless payments reported by USAC are used.

39 Because the study areas were matched between years by study area code number, changes in only the name of the company are not included in this list. However, for name changes between 1999 and 2000, Table 3.33 shows the old name in parentheses.

Table 3.1
High-Cost Programs Fund Size Projections and Prior Year Actuals
(in Millions of Dollars)

Programs	Total 1998	Total 1999	Total 2000	Total 2001	1st Quarter 2002	2nd Quarter 2002
Embedded High-Cost Loop Support	827.3	864.2	893.9	966.6	243.7	243.0
Long-Term Support	476.3	473.1	479.1	493.0	131.5	133.6
Local Switching Support	390.2	383.1	390.8	398.6	100.0	100.1
Forward-Looking High-Cost Model	-	-	219.6	199.8	53.4	58.1
Interstate Access Support	-	-	283.1	574.4	146.9	148.4
Administrative Expenses	4.8	3.3	2.0	5.2	1.8	2.2
Interest Income	-5.1	-2.9	-10.0	-6.2	-0.8	-0.6
Total	1693.5	1720.8	2258.5	2631.4	676.5	684.8

Table 3.2
Embedded High-Cost Loop Fund Formulas

Cost Range as % of National Average	% Expense Adjustment within Range
Study Areas with Over 200,000 Loops	
0% - 115%	0%
115% - 160%	10%
160% - 200%	30%
200% - 250%	60%
250% and above	75%
Study Areas with 200,000 Loops or Fewer	
0% - 115%	0%
115% - 150%	65%
150% and above	75%

Notes: These values have been used since 1988.

Beginning January 1, 2000, these are only applicable to rural companies and to hold-harmless support for non-rural companies.

**Table 3.3
Universal Service Fund High-Cost Loop Support Payment History**

Year Costs Incurred	Payment Year	Actual Payments	Transition Factor	Projected Payments at Full Transition	Annual Growth In Payments	Growth In Full Transition
1984	1986	\$55,626,903	1/8	\$445,015,224		
1985	1987	\$125,691,874	1/4	\$502,767,496	125.96%	12.98%
1986	1988	\$183,268,189	3/8	\$488,715,171	45.81%	-2.79%
1987	1989	\$264,553,840	1/2	\$529,107,680	44.35%	8.27%
1988	1990	\$339,176,069	5/8	\$542,681,710	28.21%	2.57%
1989	1991	\$484,814,443	3/4	\$646,419,257	42.94%	19.12%
1990	1992	\$609,361,768	7/8	\$696,413,449	25.69%	7.73%
1991	1993	\$705,121,573	1	\$705,121,573	15.71%	1.25%
1992	1994	\$725,434,165	1	\$761,523,851	2.88%	8.00%
1993	1995	\$749,546,328	1	\$805,562,633	3.32%	5.78%
1994	1996	\$762,697,762	1	\$762,697,762	1.75%	-5.32%
1995	1997	\$793,564,270	1	\$816,228,224	4.05%	7.02%
1996	1998	\$827,291,508	1	\$865,779,880	4.25%	6.07%
1997	1999	\$864,183,764	1	\$906,875,403	4.46%	4.75%
1998	2000	\$872,480,703	1	\$1,059,114,693	0.96%	16.79%
1999	2001	\$963,628,116	1	\$1,176,595,947	10.45%	11.09%
2000	2002	\$972,483,263	1	\$1,324,778,001	0.92%	12.59%

Notes: Payments for 1986 through 1999 are final and not subject to further adjustment.

Payments for 2000 through 2002 are as of the May 2002 settlement cycle and subject to change due to the 24-month settlements adjustment window.

Payment amounts for 1994 through 1995 and 1997 through 2002 are limited by the HCL support cap. Amounts shown in the projected payments at full transition column are before application of this limit.

Payments for 1996 were also limited by the HCL support cap. However, since this cap limit was \$776,942,246, there was no impact on actual payments. Amount in the projected payments at full transition column are actual payments.

Payments for 2000 to 2002 are as reported by USAC, including only hold-harmless payments for non-rural companies.

Projected payments for 2000 to 2002 are calculated as if all non-rural companies have only hold-harmless support, and not forward-looking cost support. Projected payments for 2001 and 2002 are without consideration of the phase-down provision of hold-harmless.

2000	\$479.1	1.28%
2001	\$493.0	2.89%
2002	\$532.4	7.99%

Notes: Payments for 1989 through 1992 and 1994 through 1997 are as reported by NECA as of the end of February of the following year.

Payments for 1989 are for nine months only (program began April 1).

Payments for 1993 are as subsequently revised by NECA.

Payments for 1998 and 1999 are latest revisions provided by USAC.

Payments for 2000, 2001, and 2002 are projections provided by USAC.

**Table 3.7
Local Switching Support Payment History**

Payment Year	Payments (\$ Millions)	Annual Growth In Payments
1993	\$311.0	
1994	\$303.9	-2.28%
1995	\$325.3	7.04%
1996	\$348.0	6.98%
1997	\$350.6	0.75%
1998	\$390.2	11.31%
1999	\$383.1	-1.82%
2000	\$390.8	2.01%
2001	\$398.6	1.99%
2002	\$400.2	0.41%

Notes: Payments for 1993 - 1997 are estimates of DEM weighting impacts.

Payments for 1993 are as estimated in the May 1996 *Monitoring Report* in CC Docket No. 87-339.

For companies not in NECA's common line and traffic sensitive pools, an estimate was developed using the study area specific 4th quarter 1998 local switching support amounts. The 1998 levels were reduced by 5% per year to determine the 1994 - 1997 amounts.

Payments for 1998 and 1999 are latest revisions provided by USAC.

Payments for 2000, 2001, and 2002 are projections provided by USAC.

Total⁴	\$906,384	\$57,244	\$963,628	\$0.43	\$963,628	\$0.43	\$0	\$0.00

Notes: Figures may not add due to rounding. Support payments do not include quarterly true-ups. USF is an abbreviation for the Universal Service Fund, which funds the high-cost support mechanisms.

¹ Carriers make payments into the fund based on their end-user interstate telecommunications revenues. The estimates in this column are computed by multiplying the state's share of end-user revenue times the nationwide total contribution at the bottom of this column. The state's estimated share of nationwide end-user interstate revenue is shown in Table 1.12. For the methodology used to derive the state's share of nationwide end-user revenues, see the technical appendix to Chapter 1.

² Net Dollar Flow is positive when payments from USF to carriers exceed contributions to USF. Total is zero because administrative costs are not allocated to individual high-cost support mechanisms.

³ Includes only hold harmless payments to non-rural carriers

⁴ Total includes disbursements to rural carrier in American Samoa of \$59,000.

Total³	\$398,599	\$0.18	\$398,599	\$0.18	\$0	\$0.00

Notes: Figures may not add due to rounding. Support payments do not include quarterly true-ups. USF is an abbreviation for the Universal Service Fund, which funds the high-cost support mechanisms.

¹ Carriers make payments into the fund based on their end-user interstate telecommunications revenues. The estimates in this column are computed by multiplying the state's share of end-user revenue times the nationwide total contribution at the bottom of this column. The state's estimated share of nationwide end-user interstate revenue is shown in Table 1.12. For the methodology used to derive the state's share of nationwide end-user revenues, see the technical appendix to Chapter 1.

² Net Dollar Flow is positive when payments from USF to carriers exceed contributions to USF. Total is zero because administrative costs are not allocated to individual high-cost support mechanisms.

³ Total includes disbursements for American Samoa of \$212,000.

Total³	\$2,629,434	\$1.16	\$2,636,334	\$1.16	-\$6,900	\$0.00

Notes: Figures may not add due to rounding. Support payments do not include quarterly true-ups. USF is an abbreviation for the Universal Service Fund, which funds the high-cost support mechanisms.

¹ Carriers make payments into the fund based on their end-user interstate telecommunications revenues. The estimates in this column are computed by multiplying the state's share of end-user revenue times the nationwide total contribution at the bottom of this column. The state's estimated share of nationwide end-user interstate revenue is shown in Table 1.12. For the methodology used to derive the state's share of nationwide end-user revenues, see the technical appendix to Chapter 1. Estimated contributions include administrative costs of approximately \$6.9 million.

² Net Dollar Flow is positive when payments from USF to carriers exceed contributions to USF. Total is negative because of administrative costs.

³ Total includes disbursements for American Samoa of \$530,000.

4. Schools and Libraries Support

Eligible schools and libraries can receive discounted telecommunications services, Internet access, and internal connections. The discounts range from 20 percent to 90 percent. The level of the discount is based on the percentage of students in the school or school district that are eligible for the national school lunch program (or a federally-approved alternative mechanism), and location in a rural area. There are four types of applicants: schools, school districts, libraries (or library consortia), and other consortia of schools and libraries. Program participants may apply for funds annually. Funding Year 1999 (also known as Funding Year 2) and subsequent funding years run from July 1 to June 30th. The amount of funds available to applicants was capped at \$1.925 billion in Funding Year 1. By Commission rule, the Schools and Libraries program was capped at \$2.25 billion annually for subsequent funding cycles.¹

The Schools and Libraries Division (SLD) of USAC determines the eligibility and discount level for which schools and libraries are eligible based on FCC rules. All eligible applicants must submit certain forms to the Schools and Libraries Division in sequential order to participate in the program. First, eligible schools and libraries must file an FCC Form 470, which describes the services an applicant intends to purchase. Generally, the FCC Forms 470 are posted to the SLD web site for 28 days so that providers have an opportunity to submit competing bids to perform the services.² After selecting a service provider and contracting for services, applicants must file FCC Form 471, which details services for which a contract has been signed. Applicants must then submit FCC Form 486, which informs SLD that services have begun from the named service provider(s), triggering the process for SLD to receive the invoices from the service provider(s). If the service provider provided service to the applicant at a discounted rate, then the service provider submits FCC Form 474 (Service Provider Invoice Form) for reimbursement from USAC. If, however, the service provider billed the applicant for the entire non-discounted amount up front, then the applicant must file FCC Form 472 (Billed Entity Applicant Reimbursement Form), after which the Administrator disburses money to the service provider. The service provider must then reimburse the applicant.

The Commission has established rules governing funding commitments in situations where the amount of requests exceeds available funding. The rules are designed to ensure that schools and libraries receive discounts for telecommunications services and Internet access services before internal connections, and that the neediest schools and libraries then receive funding priority for internal connections.

1 47 C.F.R. § 54.507(a).

2 The posted FCC Forms 470 can be viewed at <www.sl.universalservice.org>. In limited situations, applicants with contracts that predate July 10, 1997 are not required to post an FCC Form 470.

Under the Commission’s rules of priority, when the filing window closes, the Administrator will calculate total requests for support submitted during that filing window. If total requests exceed total support available in that funding year, SLD will: 1) calculate the requests for telecommunications services and Internet access for all discount categories (these services receive first priority for funding); 2) allocate the remaining funds to the requests for support for internal connections, beginning with the most disadvantaged schools and libraries (those eligible for a 90 percent discount); 3) commit remaining funds for internal connections to the applicants at each descending discount level until there are no funds remaining (i.e. 89%, 88%, etc).

If the remaining funds are not sufficient to support all of the eligible discount requests within a particular discount level, the Administrator will divide the total amount of remaining support available by the amount of support requested within that discount level to produce a pro-rata factor. That is, each of the schools and libraries within that discount level will receive the same proportion of the support they requested.

For Funding Year 1999 (July 1, 1999 – June 30, 2000), the \$2.25 billion cap was sufficient to fund all applications submitted before the filing window closed on April 6, 1999. USAC announced it would accept “out of window” year 2 funding applications until March 31, 2000. As of February 26, 2002, USAC had committed \$2.12 billion and disbursed \$1.59 billion of Funding Year 1999.³ As commitments continue to be granted for meritorious appeals, and disbursements made, disbursements will rise.

In Funding Year 2000 (July 1, 2000 – June 30, 2001), also known as Funding Year 3, USAC reported that 36,437 applications were received within the filing window, seeking \$4.721 billion of service discounts.⁴ As of February 26, 2002, USAC had committed \$2.08 billion, and disbursed \$1.422 billion of Funding Year 2000 funds.⁵ As schools and libraries mount meritorious appeals, USAC will make more commitments and disbursements, so these amounts may rise.

USAC reported that for Funding Year 2001 (July 1, 2001 – June 30, 2002), also known as Funding Year 4, more than 36,700 “within the window” applications were received.⁶ These applications requested over \$5.47 billion of service discounts. As of February 26, 2002, USAC had committed \$1.78 billion and disbursed over \$100 million of Funding Year 2001 funds.⁷

3 See Table 4.1a for details.

4 Universal Service Administrative Company, *Federal Universal Service Programs Fund Size Projections and Contribution Base for the Second Quarter 2000*, at 25.

5 See Table 4.1b for details.

6 Universal Service Administrative Company, *Federal Universal Service Support Mechanisms Fund Size Projections for the Second Quarter 2002*, at 23.

7 See Table 4.1c for details.

For Funding Year 2002 (July 1, 2002 – June 30, 2003), also known as Funding Year 5, the filing window opened November 5, 2001 and closed January 17, 2002. USAC reports that over 4400 applications were received.⁸

USAC supplied the Commission with funding commitments and disbursements information as of February 26, 2002. Table 4.1a summarizes the Funding Year 1999 commitments by state and by type of applicant. Similarly, Tables 4.1b and 4.1c summarize commitments for Funding Years 1999 through 2001, respectively. Tables 4.2a, 4.2b, and 4.2c are based on the same data as Tables 4.1a, 4.1b, and 4.1c, and show on a state-by-state basis, funding commitments for the three types of services: internal connections, Internet access, and telecommunications & dedicated access.⁹ The lists of individual funding commitments and disbursements are too lengthy to include in this report, but are available at our web site.¹⁰ Information for Funding Year 1 can be found in the November 2001 edition of the *Universal Service Monitoring Report*.

Tables 4.3a, 4.3b, and 4.3c summarize the fund commitments and disbursements by the nature of how USAC was billed (whether through the school/library, or by the service provider directly), and by type of service provider business. The tables reflect disbursements as of December 31, 2001.

Tables 4.4a and 4.4b show commitments and disbursements on a per-student basis. Although both public and private schools are eligible for Schools and Libraries support, only public school enrollment data were available on a state-by-state basis from the Department of Education.

Tables 4.5a and 4.5b show, for Funding Years 1999 and 2000, the estimated contributions towards the schools and libraries support mechanism, the total amount of funding disbursements, and the net dollar flow for each state.

8 Universal Service Administrative Company, *Federal Universal Service Support Mechanisms Fund Size Projections for the Second Quarter 2002*, at 23.

9 The number of funding commitments in these tables differs from those published in earlier *Universal Service Monitoring Reports*.

10 The spreadsheet is compressed, and can be found on the **FCC-State Link** web site at <www.fcc.gov/wcb/stats>. The funding commitments and disbursements data for all three years are in the file <SLSummer2002.zip >.

Source: Raw funding data provided by the Universal Service Administrative Company, rollups performed by Industry Analysis and Technology Division, Wireline Competition Bureau, FCC.

¹ Because of the appeals process, funding commitments and disbursements have been made after the end of the program year. Also, disbursements may continue beyond the end of the program year in the event of delayed internal connections installation.

² Students enrolled in fall of 1999. Although private schools are eligible for funding, state-by-state enrollment data were not available. Figures do not include any students in Defence Department or Bureau of Indian Affairs schools. Data from the U.S. Department of Education.

5. Rural Health Care Support

The portion of the 1996 Telecommunications Act that covers universal service support for rural health care providers states that “[a] telecommunications carrier shall . . . provide telecommunications services . . . to any public or non-profit health care provider . . . at rates that are reasonably comparable to rates charged for similar services in urban areas in that state”.¹ The Commission's universal service rules permit eligible health care providers² to receive support for any telecommunications service.³ The length of a supported telecommunications service may not exceed the distance between the rural health care provider and the nearest large city.⁴ The Commission defined "nearest large city" as the city located in the eligible health care provider's state with a population of at least 50,000 that is nearest to the health provider's location.⁵ In addition, an eligible health care provider that cannot obtain toll-free Internet access is entitled to receive the lesser of \$180 per month in toll charge credits per month, or the toll charges incurred for 30 hours per month, for telecommunications access to an Internet service provider.⁶

In 1999, the FCC adopted two orders that significantly changed the universal service support program for rural health care providers starting in Funding Year 3 (July 1, 2000 – June 30, 2001). The Fifteenth Order on Reconsideration⁷ 1) removed the per-location funding limit; 2) ended the 1.544 Mbs of bandwidth restriction and authorized support for any commercially available telecommunications service regardless of bandwidth; 3) simplified the application process by allowing discounts to be based on actual long distance charges instead of basing them on a comparison of tariffed rates in urban and rural areas; and 4) affirmed the ability of rural health care providers to join consortia and allowed new members to be added to a consortium at any time after the rural health care provider applies for support. The Fourteenth Order on Reconsideration

1 47 U.S.C. § 254(h)(1)(A).

2 47 C.F.R. § 54.601.

3 A 1.544 Mbps (T1) maximum bandwidth cap was employed in Funding Years 1 and 2. *See Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Report and Order, 12 FCC Rcd 8776, 8952-94 (1997). The Commission removed the bandwidth cap for year three and beyond. *See Federal-State Joint Board on Universal Service*, CC Docket Nos. 97-21 and 96-45, Sixth Order on Reconsideration in CC Docket No. 97-21, Fifteenth Order on Reconsideration in CC Docket No. 96-45, 14 FCC Rcd 18756 (1999) (*Fifteenth Order on Reconsideration*).

4 47 C.F.R. § 54.601(c).

5 47 C.F.R. § 54.605(c).

6 47 C.F.R. § 54.621.

7 *Fifteenth Order on Reconsideration*, 14 FCC Rcd 18756.

eliminated the requirement that rural health care providers receive services from eligible telecommunications carriers.⁸

To apply for funding, an eligible rural health care provider must first submit FCC Form 465 (description of services requested and certification form) to the Rural Health Care Division (RHCD).⁹ If the RHCD determines that the health care provider is eligible, it posts the Form 465 on its Website.¹⁰ After 28 days from posting, the rural health care provider may contract with the most cost-effective bidder. The service provider then fills out FCC Form 468 (verification of services to be provided), and submits it to the rural health care provider. The rural health care provider must then complete FCC Form 466 (services ordered and certification form). The rural health care provider must then submit both FCC forms to RHCD.

Upon receipt and approval of FCC Forms 466 and 468, the RHCD sends a Funding Commitment letter to the rural health care provider that notifies it of the preliminary approval of the request for support, and provides an estimate of the amount of support that can be expected. The rural health care provider must respond by submitting FCC Form 467 (receipt of service confirmation form) to verify that the service has begun. RHCD then sends a Support Schedule to the carrier and the health care provider. The carrier provides support to the rural health care provider, then invoices RHCD for the support, and upon approval, RHCD instructs USAC to reimburse the carrier.

Initially, the Commission established a \$400 million per funding year cap for the rural health care mechanism.¹¹ The Commission later determined that USAC could collect no more than \$100 million for the first funding period.¹² For the second funding period, the Commission established a

8 *Federal-State Board on Universal Service*, CC Docket No. 96-45, Fourteenth Order on Reconsideration, 14 FCC Rcd 20106 (1999).

9 The Rural Health Care Corporation merged into the Universal Service Administrative and became the Rural Health Care Division on January 1, 1999. *See Changes to the Board of Directors of the National Exchange Carrier Association, Inc., Federal-State Joint Board on Universal Service*, CC Docket Nos. 97-21 and 96-45, Third Report and Order in CC Docket No. 97-21 and Fourth Order on Reconsideration in CC Docket No. 97-21 and Eighth Order on Reconsideration in CC Docket No. 96-45, 13 FCC Rcd 25058, 25064-65, para. 12 (1998).

10 The forms may be viewed at <www.rhc.universalservice.org>.

12 *Federal-State Board on Universal Service*, CC Docket No. 96-45, Fifth Order on Reconsideration and Fourth Report and Order in CC Docket 96-45, 13 FCC Rcd 14915 (1998).

\$12 million funding cap.¹³ The third and future funding periods continue to be governed by the \$400 million funding cap that the Commission initially established. For more information on the Universal Service Program for Rural Health Care providers, visit the RHCD Website.¹⁴

On April 18, 2002, the Commission issued a notice of proposed rulemaking seeking comment on several categories of issues.¹⁵ The notice seeks comments on 1) whether otherwise eligible entities that perform functions outside the statutory definition of “health care provider” should be eligible for discounts; 2) whether support should be provided for Internet access; and 3) whether to change the methodology for calculating service discounts. The Notice also seeks comment on 1) how to streamline the application process; 2) how to allocate funds if demand exceeds the annual cap; 3) how to modify the current competitive bidding rules; 4) how to encourage partnerships with clinics at schools and libraries; and 5) how to improve the Commission’s measures to prevent waste, fraud, and abuse.

Nearly \$3.4 million was disbursed for the first funding period (January 1, 1998 through June 30, 1999).¹⁶ For details, see the previous edition of the *Monitoring Report*.¹⁷ For the second funding period, which ran from July 1, 1999 through June 30, 2000, USAC reports that it received 1,234 FCC Forms 465, and that it had committed \$7.12 million.¹⁸ Not all of the rural health care providers used their entire commitments, however. USAC estimates that \$2.779 million of the \$7.105 million will not be used, so disbursements for Funding Year 2 should not exceed \$4.33 million.¹⁹ As of February 26, 2002, USAC had disbursed \$4.30 million.²⁰

13 *Federal-State Board on Universal Service*, CC Docket No. 96-45, Twelfth Order on Reconsideration in CC Docket 96-45, FCC 99-121 (rel. May 28, 1999).

14 See www.rhc.universalservice.org.

15 See *Rural Health Care Support Mechanism*, WC Docket No. 02-60, Notice of Proposed Rulemaking, 17 FCC Rcd 806 (2002).

16 Universal Service Administrative Company, *Federal Universal Service Programs Fund Size Projections and Contributions Base for the Third Quarter, 2000*, at 23.

17 *Universal Service Monitoring Report*, CC Docket No. 98-202, October 2001.

18 See www.rhc.universalservice.org.

19 Universal Service Administrative Company *Federal Universal Service Support Mechanisms Fund Size Projections for the Fourth Quarter 2001* at 17. USAC reported that as of June 30, 2001, of the 1,243 Forms 465 that had been filed, 1,097 were posted, 20 were incomplete, 25 were denied due to ineligibility, and 92 were withdrawn.

20 See Table 5.1a.

The third funding period began on July 1, 2000, and ran through June 30, 2001.²¹ The filing window for FCC Forms 465 opened on March 30, 2000, and closed on June 13, 2000. Because the requests filed within the filing window totaled an amount that was less than the funding cap set by the Commission, USAC continued to receive and process requests for support for year 3 after the window closed. As of December 31, 2001, 1,356 FCC Forms 466/468 packets had been received.²² As of February 26, 2002, \$10.8 million had been committed, and \$5.7 million had been disbursed.²³

USAC supplied the Commission with funding commitments and disbursements information as of February 26, 2002.²⁴ These files are available at the **FCC-State Link** web site.²⁵ These data form the basis for the commitments and disbursements summaries below.

Table 5.1a and 5.1b summarize funding commitments and authorizations on a state-by-state basis. Table 5.1a shows that, as of February 26, 2002, for Funding Year 2 (July 1, 1999 through June 30, 2000) \$7.12 million was committed, and \$4.3 million was disbursed. Table 5.1b shows that, as of February 26, 2002, for Funding Year 3 (July 1, 2000 through June 30, 2001) \$10.76 million had been committed, and \$5.67 million had been disbursed.

The Commission now has data that allows it to publish the service speeds that rural health care providers are acquiring with Rural Health Care discounts. Tables 5.2a through 5.2c show service speed information for the first three funding periods.

Table 5.3 shows, for the second and third funding periods, the estimated contributions towards the rural health care support mechanism, the total amount of funding disbursements, the funding disbursements per person in rural counties, and the net dollar flow for each state.

21 See www.rhc.universalservice.org.

22 Universal Service Administrative Company, *Federal Universal Service Support Mechanisms Fund Size Projections for the Second Quarter 2002*, at 18.

23 See Table 5.1b.

24 Funding authorizations are the step before payment is actually made.

25 Funding commitments and authorizations for disbursements for Funding Years 1 and 2 are available in the file RHCSum2002.zip. The file is located under the “National Exchange Carrier Association Data” link at www.fcc.gov/wcb/stats.

¹ Because of the appeals process, funding commitments and disbursements may be made after the program year ended.

² Carriers make payments into the fund based on their end-user interstate telecommunications revenues. The estimates in this column are computed by multiplying the state's share of end-user revenue times the nationwide total contribution at the bottom of this column. The state's estimated share of nationwide end-user interstate revenue is shown in Table 1.12. For the methodology used to derive the state's share of nationwide end-user revenues, see the technical appendix to Chapter 1.

³ Population in rural counties provided by USAC. USAC did not provide population data for counties where no funding was disbursed. A small number of counties are designated both rural and non-rural. Presumably, most of the population in these counties resides in the non-rural areas, so their population figures were not included here.

⁴ This column sums to a negative number because of administrative costs.

6. Subscribership and Penetration

Background

The number and percentage of households that have telephone service represent the most fundamental measures of the extent of universal service. Continuing analysis of telephone penetration statistics allows us to examine the aggregate effects of Commission actions on households' decisions to maintain, acquire or drop telephone service. This section presents comprehensive data on telephone penetration statistics collected by the Bureau of the Census under contract with the Federal Communications Commission.¹ Along with telephone penetration statistics for the United States and each of the states from November 1983 to November 2001, data are provided on penetration based on various demographic characteristics. This section also updates information on telephone penetration by income by state.² This information is designed to help evaluate the degree of success of making telephone service available to low-income households in each state.

The most widely used measure of telephone subscribership is the percentage of households with telephone service, sometimes called a measure of telephone penetration. Prior to the 1980s, precise measurements of telephone subscribership received little attention. Traditionally, telephone penetration was measured by dividing the number of residential telephone lines by the number of households. Measures of penetration based on the number of residential lines, however, became subject to a large margin of error as more and more households added second telephone lines and more consumers acquired second homes. By 1980, the traditional penetration measure (residential lines divided by the number of households) reached 96%, while the number of households reporting that they had telephones in the 1980 census was 92.9%.

Recognizing the need for more precise periodic measurements of subscribership, the Commission requested that the Bureau of the Census include questions on telephone availability as part of its Current Population Survey (CPS), which monitors demographic trends between the decennial censuses. This survey is a staggered panel survey in which the people residing at particular addresses are included in the survey for four consecutive months in one year and the same four months in the following year. Use of the CPS has several advantages: it is conducted every month by an independent and expert agency; the sample is large; and the questions are consistent. Thus, changes in the results can be compared over time with a great deal of confidence.

1 This information was included in Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission, *Telephone Subscribership in the United States* (May 21, 2002). That report is updated three times a year.

2 This information was included in Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission, *Telephone Penetration by Income by State* (April 23, 2002). That report contains information on the number of households in each state as well as the percentages reported here.

Unfortunately, the results of the CPS cannot be directly compared with the penetration figures contained in the 1980 and 1990 decennial censuses.³ This is due to differences in sampling techniques and survey methodologies, and because of differences in the context in which the questions were asked. For example, the 1990 decennial census reported 94.8% of all households in the United States had telephones, whereas the CPS data showed a penetration rate of 93.3% for 1990. This difference is statistically significant and appears to indicate that the CPS value may be on the low side and the decennial census value may be on the high side, with the most probable value lying somewhere in between. In the 2000 decennial census, the telephone question was changed from asking whether there was a telephone instrument to asking whether there was telephone service.

The specific questions asked in the CPS are: "Is there a telephone in this house/apartment?" And, if the answer to the first question is "no," this is followed up with, "Is there a telephone elsewhere on which people in this household can be called?" If the answer to the first question is "yes," the household is counted as having a telephone "in unit." If the answer to either the first or second question is "yes," the household is counted as having a telephone "available." The "in unit" data and the "available" data are reported in Tables 6.6 through 6.10 and 6.12 through 6.16, and Charts 6.1 and 6.8. All of the remaining tables and charts of this section just report the "in unit" data.

The questions are intended to be neutral as to whether the household has wireline or wireless phones. Beginning with the November 2001 survey, households were also asked which type(s) of phones they had. While the response rate was not sufficient for a complete reporting of the results of this new question, 1.2% of the households indicated that they had only wireless phones.⁴

Although the survey is conducted every month, not all questions are asked every month. The telephone questions are asked once every four months: in the month that a household is first included in the sample and in the month that the household reenters the sample a year later. Since the sample is staggered, the reported information for any given month actually reflects responses over the preceding four months. Aggregated summaries of the responses are reported to the Commission, based on the surveys conducted through March, July, and November of each year. The CPS later provides the Commission with the raw data files containing all of the responses to all of the questions on the CPS questionnaires in those months.⁵

3 Telephone penetration data from the 2000 census are not yet available, but should become available later this year.

4 5.9% of the households failed to answer this question. We are working with the CPS on ways of improving the response rate in future surveys.

5 Tables 6.3 through 6.5, 6.11, and 6.17 of this section are derived from these raw data files.

The Census Bureau data are based on a nationwide sample of about 56,000 households in the 50 states and the District of Columbia. (The CPS does not cover outlying areas that are not states, such as Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Northern Mariana Islands.) Because a sample is used, the estimates are subject to sampling error. For the nationwide totals, changes in telephone penetration between consecutive reports of less than 0.4% may be due to sampling error and cannot be regarded as statistically significant.⁶ As explained below, when comparing the same month in two consecutive years, changes of less than or equal to 0.3% are not statistically significant. When comparing annual averages, changes of less than or equal to 0.2% are not statistically significant. The annual averages are the average of the three surveys of the year in question. For individual states or other subgroups of the U.S. population, the amount of sampling variability is much greater, because the sample sizes are smaller. This will require larger changes to yield statistical significance at the same confidence level.

The data in this section are not seasonally adjusted. After adjusting for the trend over time, there is an average increase of 0.2% between November and March, followed by an average decrease of less than 0.1% between March and July and an average decrease of more than 0.1% between July and November. However, these changes are not statistically significant.

Once a year, in March, the CPS augments its sample with about 2,500 additional Hispanic households, and supplements its survey with additional questions, which include detailed information about income.⁷ The more detailed information from the March surveys makes it possible to adjust the income categories for inflation. In the July and November surveys, only broad income categories are reported. (These are the categories that appear in Table 6.7.)

The Commission's Lifeline program was instituted in 1985 to help low-income households afford the monthly cost of telephone service. Under the federal Lifeline program, local telephone companies offer reduced rates to qualifying households and currently receive reimbursement from the federal universal service support mechanisms. Initially, the program was available only in those states that chose to participate by providing matching assistance.

Effective in 1998, the federal Lifeline program was revised so that a basic level of assistance would be provided in all states. In March 2001, the basic level of federal assistance was \$6.10 per month for each participating household.⁸ Additional federal support is also

6 The determination of the statistical significance of a change over time is discussed below. The critical value is dependent on the sizes of the samples from which the change is computed and by the confidence level, which is 95%.

7 The responses from the additional Hispanic households are not included in Tables 6.6 through 6.10, but they are included in Table 6.11. Thus, in some cases, there may be small discrepancies between the percentages in Table 6.6 and Table 6.11.

8 On July 1, 2001, the maximum residential subscriber line charge (SLC) was increased by

provided wherever a state chooses to provide matching assistance, at a rate of \$1 in federal support for each \$2 of state matching support, up to a maximum of \$1.75 federal support (corresponding to \$3.50 of state matching support). States may provide further support without further matching federal assistance.

Results and Statistical Analysis

Census Bureau figures for November 2001, the most recent data available, show that the percentage of households subscribing to telephone service is 94.9%. This represents an increase of 0.8% from November 2000. This increase is statistically significant. The average penetration rate for the year 2001 was also 94.9%, which is up 0.5% from the 2000 average. This increase is statistically significant, and the annual average for 2000 is the highest annual average ever reported by the CPS. As a result of the increase in penetration and an increasing number of households, 2 million households were added to the nation's telephone system between November 2000 and November 2001.

This section includes figures showing subscribership percentages by state, by the head of the household's age and race, by household size, by income, and for adult individuals by labor force status. The November 2001 data show that 95.6% of adult individuals in the civilian non-institutionalized population have a telephone in their household. This figure is up 0.8% from the November 1999 level. The average penetration rate for 2001 was also 95.6% for adult individuals, which is up 0.5% from the 2000 average. These increases are statistically significant.

This section contains seventeen tables and nine charts presenting penetration statistics for various geographic and demographic characteristics. The charts and the first five tables present summaries of the available information. Tables 6.6 through 6.11 present more detailed information. In Tables 6.6 through 6.10, only the annual averages are included for the years 1984 through 1998. March, July, and November data for those years are available in Monitoring Reports in CC Docket Nos. 87-339 or 98-202. Tables 6.12 through 6.17 provide information necessary to determine the statistical significance of changes in the penetration rates over time.

Table 6.1 summarizes the telephone penetration for the United States, combining information on the number of households with the penetration rates.

Chart 6.1 graphically depicts the nationwide penetration rates for households over time.

\$0.65 to \$5.00 per month. The basic federal Lifeline support level, which is the SLC plus \$1.75, was correspondingly increased to a maximum of \$6.75 per line per month. Thus, the total federal and state support level generally increased by \$0.65 at that time. For some companies with lower costs, the actual SLC and Lifeline support may be somewhat less than these maximums. A further increase in the maximum SLC occurred in 2002. Eligible subscribers living on tribal lands may receive up to \$25 additional Lifeline support as needed to bring their monthly rate down to \$1.

Table 6.2 summarizes the telephone penetration rates by state, showing the average rates for 1984 and 2001, the change between those two years, and an indication as to whether the change is statistically significant. The statistical significance of a change is determined not only by the magnitude of that change, but also by the sizes of the samples used to estimate the change.

Chart 6.2 depicts the states with average 2001 penetration rates (as shown in Table 6.2) more than 1% below the national average, within 1% of the national average, or more than 1% above the national average.

Chart 6.3 depicts changes in household penetration rates by state (as shown in Table 6.2) between the average 1984 and 2001 rates. States with statistically significant increases or decreases are shown, along with other states with increases or decreases.

Chart 6.4 depicts the relationship between telephone penetration and household income, using average 2001 penetration rates for all households and for households headed by white, black, and Hispanic persons.⁹ It is based on data in Table 6.7.

Chart 6.5 depicts the relationship between telephone penetration and household size, using average 2001 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 6.8.

Chart 6.6 depicts the relationship between telephone penetration and the head of the household's age, using average 2001 penetration rates for all households and for households headed by white, black, and Hispanic persons. It is based on data in Table 6.9.

Chart 6.7 depicts the relationship between telephone penetration and labor force status for civilian non-institutionalized adults, using average 2001 penetration rates for all adults and for white, black, and Hispanic adults. It is based on data in Table 6.10.

Chart 6.8 graphically depicts the nationwide penetration rates for civilian non-institutionalized adults over time. It is also based on data in Table 6.10.

Chart 6.9 shows the telephone penetration rates in March of each year through 2001 for each of five income categories, adjusted for inflation, for the entire United States. It is based on data in Table 6.11. The income categories (expressed in March 1984 dollars) are: \$9,999 or less; \$10,000 - \$19,999; \$20,000 - \$29,999; \$30,000 - \$39,999; and \$40,000 or more. These categories were chosen because they are of approximately equal size, both in terms of income ranges and the number of households in each category. The upper limit of the lowest category is also approximately equal

9 The CPS includes three racial categories: white, black, and other. Others, which include Native Americans, Asians, and Pacific Islanders, are not reported separately because of small sample sizes, but they are included in the totals. Hispanics are reported as an ethnic group, and can be of any race.

to the federal poverty line for a family of four. Between 1984 and 2001, there was a statistically significant increase in the penetration rate for all households. There also were statistically significant increases in penetration rates in the two lowest income categories over this time period, with the largest increase being in the lowest income category.¹⁰ For the middle income category, there was no change in the penetration rate between 1984 and 2001, while the two highest income categories experienced small but significant declines in penetration. Not all of the increases in the national total penetration rate can be explained by increases in real income, because real income increases are reflected in the movement of households between categories. Thus, penetration changes within each income category represent changes holding real income constant.

To help evaluate the effect of the federal Lifeline support mechanism, Table 6.3 focuses on changes in telephone penetration rates from just before the program was established to just before it was substantially expanded in 1998, by comparing penetration rates for states with and without state Lifeline programs prior to 1998.¹¹ Briefly, penetration rate increases were greater, on average, in states with Lifeline programs than in states without Lifeline programs.¹² The effect is especially apparent for low-income households,¹³ which are the households primarily affected by the federal and state Lifeline programs. Between March 1984 and March 1997, the increase in the average penetration rate in states with Lifeline programs was 6.5% for low-income households. During this period, the increase in subscribership among low-income households in those states that adopted Lifeline programs was double that of states that did not adopt such programs, although there may have been other factors besides Lifeline that contributed to this result.

Information on all households is also included in Table 6.3. Overall penetration rates are more generally available and more commonly cited as measures of penetration than are rates only for low-income households. Penetration rate increases were again greater, on average, in states that established Lifeline programs. The increase for states with Lifeline programs was

10 See footnote 15 for the critical values for these significance tests.

11 The expanded program was adopted in 1997, and took effect on January 1, 1998. States with Lifeline programs prior to 1998 are identified in Table 6.3 by showing that the year that Lifeline began was before 1998. Prior to the expansion, states participating in the federal Lifeline program were required to match the federal support with their own state support.

12 The averages for the groups of states were computed as weighted averages of the states in the groups, using the total number of households in each state as weights. This was calculated as the total number of households with telephone service in each group of states divided by the total number of households in that group.

13 Low-income households are those with incomes under \$10,000 (expressed in 1984 dollars).

statistically significant,¹⁴ but the increase for states without state Lifeline programs was not. States that adopted Lifeline programs before 1998 generally had lower penetration rates in 1984 than those that did not adopt such programs. By 1997, the difference in the penetration rates for the two groups diminished significantly.

Table 6.4 focuses on the change in penetration rates between March 1997 (before the expansion of the federal Lifeline program) and March 2001. The states are divided into three groups:

- “Full Assistance” states providing sufficient support to get the maximum federal matching support. The total federal and state support in these states was \$11.35 or more;¹⁵
- “Intermediate Assistance” states providing some support, but less than enough to qualify for the maximum federal support. The monthly level of support in such states was more than \$6.10, but less than \$11.35;
- “Basic Assistance” states providing no support, but receiving the basic federal support of \$6.10 per line per month.

On average, for low-income households in those states where the maximum federal support is provided, telephone penetration increased significantly, by 2.4%, between March 1997 and March 2001. In this group of states, there was a small but also statistically significant increase in the overall penetration rate for all households. For states with some, but less than the maximum, matching federal support, there was a smaller (but not statistically insignificant) increase in the low-income penetration rate and virtually no change at all in overall penetration. For states with just the basic federal support, there was, on average, a small but statistically insignificant decline in penetration for low-income households and a smaller statistically insignificant increase for all households. On average, states with greater support had lower penetration rates in 1997. By 2001, the penetration rates for the groups nearly equalized.

Data on individual states are provided in Table 6.5. The support amounts shown in Table 6.5 are the total of federal and state support, as of March 2001.

Table 6.6 shows the CPS responses for the United States and for each state beginning with November 1983. Because the CPS began collecting this data only in 1983, comparable values are not available prior to November 1983. For each of the surveys, the column headed "Unit" indicates the percentage of households for which there is a telephone in the housing unit. The column headed "Avail." indicates the percentage of households which have telephone service available for incoming calls, either in the housing unit or elsewhere (such as at work or at a neighbor's home).

14 See the paragraph describing Tables 6.12 through 6.16 for a discussion of the determination of the statistical significance of a change over time. The critical value is dependent on the sizes of the samples from which the change is computed.

15 Any total support over \$11.35 is not matched by further federal support.

Table 6.7 shows the nationwide penetration rates for households by income and the race of the head of the household. It shows a strong relationship between income and penetration. Caution should be used in comparing these figures over time, because these income levels are not adjusted for inflation. Thus, the same nominal income level at two points in time will reflect different real incomes in terms of purchasing power. Also, the income categories have changed over time due to the changing value of the dollar. Consequently, when evaluating penetration changes by income levels over time, Table 6.11 should be used.

Table 6.8 shows the nationwide penetration rates for households by the size of the household and the race of the householder. It shows that penetration is higher for households of 2 to 5 people than it is for single-person households or those with 6 or more people.

Table 6.9 shows the nationwide penetration rates for households by the age and race of the head of the household. It shows that the penetration rate is lowest for young and non-white households.

Table 6.10 shows the nationwide penetration rates for all persons that are at least 15 years old in the civilian non-institutionalized population by their race and employment status. Since this table is for individual adults rather than households, the total penetration rates are different from those in the previous tables. It shows that penetration is lowest among the unemployed.

Table 6.11 shows the penetration rates for each of the income categories, adjusted for inflation, shown in Chart 6.9 for each state for March of each year. The table shows only five categories, rather than the more numerous categories of the nationwide data in Table 6.7, because the small sample sizes caused by a larger number of categories would result in unreliably large sampling variability for the individual states. The relative levels of the March Consumer Price Index for all items (as reported in Table 7.4) were used to make the inflation adjustment. Thus, for example, \$10,000 in March 1984 dollars had the same purchasing power as \$16,676 in March 2000 dollars. The precise current dollar values in each year are reported at the end of Table 6.11.

Tables 6.12 through 6.16 present the critical values at the 95% confidence level for testing the statistical significance of changes in penetration rates over time in the earlier tables. These critical values are relevant because changes less than or equal to the values shown are likely to be due to sampling error, and thus cannot be regarded as demonstrating that a change in telephone penetration has occurred. In some cases, these critical values are very large because the sample sizes are very small for these subcategories, rendering the changes in estimated penetration rates unreliable. Because there is an overlap of half of the sample from year to year, but no overlap in the sample between surveys that are four months apart, annual changes are less subject to variations in sampling error. Consequently, the critical values should be multiplied by 0.8 when making a comparison for the same month in two consecutive years. When comparing the annual averages, the critical values should be multiplied by 0.5774, since these averages are based on three surveys, and hence have a lower standard error. When comparing annual averages of two consecutive years, the critical values should be multiplied by .46, taking into account both of the above factors.

Table 6.17 shows the sample sizes on which the estimates of Table 6.11 are based. The sampling variability is inversely related to the square root of the sample size. The critical values for individual income categories in Table 6.11 can therefore be estimated by taking the critical value for the state "In Unit" total and multiplying it by the square root of the ratio of the sample size for the state total to the sample size for the income category. In most cases, the critical value for an individual income category will be between two and three times the critical value for the state total.¹⁶ In some cases, these critical values are very large because the sample sizes are very small for these subcategories, thereby rendering the estimated penetration rates unreliable.

16 For example, using this methodology to calculate critical values for comparing the 1984 and 2001 values for the United States Total, the critical values are 0.8% for the \$9,999 or less, the \$10,000 - \$19,999, and the \$40,000 or more categories, 0.9% for the \$20,000 - \$29,999 categories, and 1.1% for the \$30,000 - \$39,999 category. These compare with 0.4% for all households.

Table 6.1
Household Telephone Subscribership in the United States

Date	Households (millions)	Households with Telephones (millions)	Percentage with Telephones	Households without Telephones (millions)	Percentage without Telephones
November 1983	85.8	78.4	91.4%	7.4	8.6%

Comparison of Penetration Rates for States by Level of Lifeline Assistance

Lifeline Category	Low-Income Households #				All Households			
	March 1997	March 2001	Change	Change per Year	March 1997	March 2001	Change	Change per Year
Full Assistance	85.2%	87.6%	2.4% *	0.61%	93.4%	94.2%	0.8% *	0.19%
Intermediate Assistance	86.3%	87.5%	1.2%	0.29%	94.7%	94.7%	-0.1%	-0.01%
Basic Assistance	88.5%	87.7%	-0.9%	-0.21%	95.1%	95.3%	0.2%	0.06%
Average All States	86.0%	87.6%	1.6% *	0.40%	94.0%	94.5%	0.5% *	0.13%

Households with income under \$10,000 expressed in March 1984 dollars.

* Change is statistically significant at the 95% confidence level.

Note: Changes may not appear to be the same as calculated differences due to rounding.

Table 6.5

7. Rates and Price Indices

This section contains information on telephone price indices and rate levels.¹ It describes and presents a series of price indices maintained by the Bureau of Labor Statistics (BLS). It also discusses rate levels and changes in average rate levels.

Telephone Service Price Indices

The BLS collects a variety of information on telephone service as part of three separate programs -- the Consumer Price Index (CPI), the Producer Price Index (PPI), and the Consumer Expenditure Survey. They can be found on the Internet at <www.bls.gov/data>. The monthly price indices represent prices sampled in the middle of the month.

A Consumer Price Index for telephone services was first published in 1935.² Since that time, telephone prices have tended to increase at a slower pace than most other prices. Table 7.1 shows long-run changes in the Consumer Price Indices for all items, all services, telephone services, each of the seven major categories that currently constitute the overall CPI, and several services that are often characterized as public utilities. The price of telephone service has increased less rapidly than the prices of most of these categories when viewed over a long period of time. Chart 7.1 shows the levels of the overall CPI and the CPI for telephone services over time.

The CPI index of telephone services is based on a "market basket" intended to represent the telephone-related expenditures of a typical urban household. It includes both local and long distance services. The annual rate of change during recent years is shown in Table 7.2 for the overall CPI (which measures the impact of inflation on consumers), and the CPI for telephone services. In addition, Table 7.2 shows the Gross Domestic Product chain-type price index (which reflects inflation throughout the economy) prepared by the Bureau of Economic Analysis. Chart 7.2 shows the changes in the overall CPI and the CPI for telephone services over time.

For 2001 the nation's overall level of prices (measured by the CPI for all items) rose by 1.5%. The CPI for telephone services rose by 1.3% during 2001. The CPI for telephone services is composed of three subindices. During 2001, the local service component (including subscriber line charges) rose by 4.5%, while the price index for interstate toll calls fell by 2.0%, and the price index for state toll calls fell by 1.7%. The changes in these subindices over time are shown in Chart 7.3.

-
- 1 For more detailed information, see Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission, *Reference Book of Rates, Price Indices, and Household Expenditures for Telephone Service* (July 9, 2002). Much, but not all, of the material in this section is based on that report.
 - 2 BLS publishes two sets of Consumer Price Indices. The CPI-U, used herein, is based on expenditures of all urban consumers. The CPI-W series is based on expenditures of urban wage earners and clerical workers.

The Bureau of Labor Statistics publishes a number of price indices related to local telephone service, two of which are important to the monitoring program. The CPI index of local telephone charges is based on a broadly defined "market basket" of local services that includes monthly service charges, message unit charges, leased equipment, installation, service enhancements (such as tone dialing and call waiting), taxes, subscriber line charges, and all other consumer expenditures associated with local telephone services except long distance charges. In contrast, the PPI index of monthly residential rates is much more narrowly defined. It is based only on monthly service charges for residential service, optional tone dialing service, and subscriber line charges. It excludes taxes and all other telephone service charges. The annual rates of change for these two indices are presented in Table 7.3.

CPI data are available for intrastate toll and interstate toll services since December 1977. Table 7.3 also presents the annual changes in these series for recent years.

Price indices are less reliable when industries are changing rapidly. For example, in 1992, long distance carriers began to increase basic long distance rates while at the same time greatly expanding their range of discount offerings aimed at medium and heavy users of long distance service. The fixed market basket of toll calls measured for the CPI did not fully reflect these discounts. In 1998, the CPI for telephone services was altered to include cellular telephone services, making the new index not directly comparable to prior years. In 1995, BLS made major changes to the PPI telephone series, and there are no data after July 1995 comparable with prior data. At that time the BLS introduced revenue-weighted telephone price indices. The new indices categorize the telephone industry into much finer detail, though the new series are not comparable to the old in many categories. Because of these sorts of difficulties, measures of average revenues are sometimes used as alternatives to price indices.

Monthly data for the CPI telephone indices are shown in Table 7.4. Monthly data for the new CPI indices are shown in Table 7.5, and the current PPI indices are shown in Table 7.6.³

Information on Rate Levels

Local rates are regulated by state regulatory agencies and vary greatly from area to area. Characterization of any rate as "typical" is therefore difficult. Table 7.7 presents average local residential rates in urban areas. The price indices published by the BLS indicate percentage changes in the price of the telephone services. The BLS does not publish the actual level of rates. The averages shown in Table 7.7 are based on an FCC survey using the same sampling areas and weights used by the BLS in constructing the Consumer Price Index. In October 2001 the national average for the representative total residential service charge was \$21.84 monthly. The average charge for connecting new phone service was \$42.72.

Table 7.8 presents average monthly local rates for single-line business customers in urban areas. Like the residential rates presented above, they are based on an FCC survey using the

3 The discontinued Producer Price Indices through July 1995 can be found in Table 5.6 of the *Monitoring Report*, CC Docket No. 87-339, May 1997.

same sampling areas and weights used by the BLS in constructing the Consumer Price Index. In October 2001, the representative average monthly charge was \$42.18, while the average charge for connecting phone service was \$72.38. Table 7.9 presents comparable data for businesses with a key system line, showing an average monthly charge of \$49.43 in October 2001, and an average connection charge of \$174.85. Table 7.10 presents comparable data for businesses with a PBX trunk, showing an average monthly charge of \$52.90 in October 2001 and an average connection charge of \$174.25.

Basic schedule rates of AT&T, WorldCom, and Sprint for representative directly dialed interstate long distance calls are shown on an annual basis for 1980 through 2000 in Table 7.11 for residential customers and Table 7.12 for business customers. Higher charges apply to other types of calls, such as those using operator assistance. Lower prices are available through calling plans and other volume discounts. In 1993, AT&T first began to charge different rates to residential and business customers. Since 1984, as a result of telephone rates becoming less distance sensitive, basic schedule charges for directly dialed interstate calls have fallen for calls over longer distances and risen for calls over shorter distances.

Table 7.13 contains average revenue per minute for interstate calls. These estimates show that billed revenue per minute has declined over time for both international and domestic services.

Subscriber Line and Access Charges

Long distance companies rely on the loops, switches, and transport facilities of local telephone companies for access to their customers. As a result, local telephone companies recover a portion of their costs from long distance companies accessing their networks. Both the manner in which these access charges have been assessed and the proportion of the costs they have recovered have varied considerably over time.

In the early 1980s, AT&T provided about three-quarters of the nation's local telephone service and almost all interstate long distance service. Because revenue sharing was largely an internal process for AT&T, it was able to charge prices above cost for long distance calls and share the revenues with local telephone companies. These transfers, while reducing the pressures on the local companies to raise monthly local rates, contributed to inefficiently high long distance rates. The high rates were responsible for suppressing demand for long distance calls and inducing large corporations to bypass the public switched network. Moreover, while such revenue sharing arrangements were sustainable in an industry where one firm monopolized both long distance and local service, they were not compatible with a competitive long distance industry.

In mid-1984, the FCC, in cooperation with a Federal-State Joint Board comprised of both federal and state regulators, introduced sweeping changes to the way that local companies charged for their services. The historic method of sharing revenues was replaced with a new system of access charges that provided a uniform method for local telephone companies to charge for the origination and termination of interstate traffic on their local networks. In particular, monthly subscriber line charges (SLCs) were introduced to recover a portion of the fixed costs of the local telephone companies' loops directly from end users on a per-line basis.

Since local telephone companies were required to reduce their charges to long distance carriers -- dollar for dollar -- the introduction of SLCs permitted reductions in implicit subsidies from long distance service to local service. The rebalancing of prices between local service and interstate long distance calls during the 1980s had a fundamental impact on the telephone industry as the price of long distance service fell and the volume of long distance calling surged.

In mid-1997, as part of its implementation of the 1996 Telecommunications Act, the FCC introduced further interstate access charge reform. Presubscribed interexchange carrier charges (PICCs) were created in order to allow local carriers to recover the remaining portion of their fixed loop costs from long distance carriers on a per-line, instead of a per-minute, basis. A further access charge reform was adopted on May 31, 2000, which eliminated the PICC and consolidated it with the SLC. This took effect on July 1, 2000.⁴

Average monthly SLCs and PICCs are shown in Table 7.14 and average per-minute rates charged to long distance carriers are shown in Table 7.15. Both tables report historical averages for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and LECs in the National Exchange Carrier Association (NECA) pool. These LECs control over 98% of the industry's regulated access lines. Current per-line charges and per-minute charges are reported for each of the carriers in Tables 7.16 and 7.17, respectively.

The averages in Table 7.15 clearly illustrate the effectiveness of access reform in reducing the prices long distance carriers pay per minute for access to the local telephone companies' networks. The reductions in per-minute access prices over time have been a major contributing factor to reductions in long distance prices.

4 Although the changes took effect on July 1, some companies made subsequent adjustments to their tariffs, which did not take effect until August 11.

* CPI toll indices represent rates for households. Through 1994, PPI toll indices represent rate changes for both business and residential consumers. Since 1995, PPI indices reflect rates for residential customers.

** The PPI telephone indices were revised in June of 1995. The series are not comparable. Due to substantial month to month variation in the new PPI indices, PPI price levels are determined using a five-month weighted average.

* This table shows average rates (weighted by access lines) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool.

† Prior to 1/01/98 carriers did not charge separate subscriber line charge (SLC) rates for primary and non-primary residential lines. Therefore, the residential and single-line business average SLCs reported prior to 1/01/98 include all residential SLC charges. The average residential and single-line business SLC rate as of 1/01/98 excludes non-primary residential SLC charges. Non-primary SLC charges are now reported separately, except for the LECs in the NECA pool, which continue to charge a single residential SLC. Under price-cap regulation, as of January 1, 2002, the caps on SLCs for primary residential and single-line business, non-primary residential, and multiline business and Centrex lines equal \$5.00, \$7.00, and \$9.20, respectively. For NECA pool companies, the residential SLC cap is \$5.00, while the multiline business and Centrex SLC cap equals \$9.20.

‡ On 1/01/98 price-cap carriers began to charge presubscribed interexchange carrier charges (PICCs). The reported PICCs are averages per line including both price-cap and NECA pool lines. While carriers do not charge different rates for Centrex and multiline business SLCs, they do charge different PICC rates for these lines. Therefore, the average multiline business and Centrex PICC rates are reported separately. However, multiline business line counts, used to compute average PICC rates, include Centrex lines for LECs in the NECA pool, which do not charge PICCs or distinguish in access filings between the two line types. On 7/01/00 price-cap carriers stopped charging residential and single line business PICCs. Therefore, under price-cap regulation, as of July 1, 2000, the caps on PICCs for primary residential and single-line business, non-primary residential, and multiline business lines equal \$0.00, \$0.00, and \$4.31, respectively. Centrex groups of 9 or fewer lines are capped at the multiline business PICC rate of \$4.31 per group. Centrex groups with more than 9 lines are capped \$0.48 per line (1/9th the multiline business rate).

* This table shows average rates (weighted by minutes of use) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool. The average rates reported here do not include the average revenue per minute from subscriber line charges (SLCs) or primary interexchange carrier charges (PICCs), which are reported in Table 7.14.

† Non-traffic sensitive charges include charges assessed on a per-month per-unit basis. Prior to 07/01/94 these charges were included in the average traffic-sensitive rates.

‡ The total charge per conversation minute consists of charges on the originating end of the call, which are adjusted for dialing and call setup time, plus charges on the terminating end. Originating charges per conversation minute equal the carrier common line charge per originating access minute plus the traffic-sensitive charge per switched minute, both multiplied by 1.07 to account for dialing and call setup time, plus the non-traffic-sensitive charge per switched minute. Terminating charges per conversation minute equal carrier common line charges per terminating access minute plus both traffic-sensitive and non-traffic-sensitive charges per switched minute.

* This table shows average rates (weighted by access lines) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool. Rates are composites of all regions and subsidiaries of each local exchange carrier. No information is available for those carriers that are not in the NECA pool, but are subject to rate-of-return regulation.

† Access line counts measure lines that companies report as qualified to receive subscriber line charges (SLCs). ISDN-BRI lines, which are charged non-primary SLC and PICC rates are included in the non-primary residential line counts. ISDN-PRI lines, which are charged rates equal to five times the multiline business SLC and PICC rates, are multiplied by five and added to multiline business counts.

8. Network Usage and Growth

To monitor use of the public switched telephone network, the National Exchange Carrier Association (NECA) provides quarterly reports to the Commission on the volume of interstate access minutes of use (MOU) passing through the local switches. To supplement this information, local telephone companies that settle on a cost basis also provide to NECA, on an annual basis, their dial equipment minutes (DEM) and factors. Much of this information is not otherwise collected by any single entity.

The data reported in this section include new annual data for 2000 and revisions of the data that were contained in our previous reports.¹ Also included are the latest quarterly estimates of industry total access minutes, through 2001. The minutes reported here are those minutes that pass through the incumbent local exchange carriers' switches.

Beginning with data for 1999, local switching access minutes are now reported instead of CCL access minutes for non-participants in the NECA common line tariff. Also, only total minutes are being reported, and we no longer receive monthly data. NECA now reports total local switching minutes quarterly instead of the monthly carrier common line (CCL) access minutes, which were previously reported and shown in prior monitoring reports.²

Table 8.1 presents NECA's latest available information on local switching access minutes for interstate traffic that pass through the ILECs' switches. Quarterly data are shown for totals of the tier 1 carriers, the non-tier 1 carriers, and the industry. These figures do not include the minutes from the closed end of WATS or toll-free (800/888/877/866) calls. Table 8.2 provides quarterly industry total access minutes back to mid-1984.

Table 8.3 summarizes annual data for the total industry for 1980 through 2000 on local, state, interstate, and total DEM minutes. It also shows annual percentage growth rates and the

1 Data for 2001 are scheduled to be submitted by NECA on March 1, 2003.

2 There are three reasons for this. First, access reform changes that were implemented on January 1, 1998, have already caused the CCL rates for some price-cap incumbent local exchange carriers (ILECs) to go to zero, and will eventually cause the CCL rates for all price-cap ILECs to go to zero. Since ILECs derive their reported CCL minutes by dividing the CCL revenue by the CCL rate, this presents a reporting problem where a price-cap ILEC's CCL rates are zero. (Because the revenues are also zero, this calculation becomes zero divided by zero, which is undefined.) Second, the amount of non-premium minutes in the quarterly reports has declined to a level where it is no longer significant. Non-premium minutes for 1984, which was the first period for which data are available, represented 13% of the total access minutes. For 1998, non-premium minutes represented only 0.07% of the total minutes. Third, quarterly data, rather than monthly data, are sufficient and less burdensome for the carriers to maintain.

distribution between categories of usage. Table 8.4 summarizes industry total lines.³ Table 8.5 shows the average daily line usage. It is calculated from the values in Tables 8.3 and 8.4.

The NECA compilation of data provided at the study area level appears in Tables 8.6 through 8.12. These tables provide annual data for the years 1997 through 2000.⁴ The study areas are sorted by state, and state totals or averages (where applicable) are provided. Within each state's listing, the study areas are arranged in numerical order by their NECA study area code.⁵ The second column identifies whether a study area is part of a Tier 1 cost company, a Tier 2 cost company, or an average schedule company (designated by a 1, 2, or A, respectively). The data in these tables are revised and supersede the usage data in previous reports.⁶ Table 8.6 provides data on interstate access minutes of use. This table includes data for the study areas of average schedule companies. Tables 8.7 through 8.10 provide data on dial equipment minutes for cost companies only. Table 8.7 has local minutes; Table 8.8 has state toll minutes; Table 8.9 has interstate minutes; and Table 8.10 has total minutes.

Tables 8.11 and 8.12 present data on interstate separations factors. Table 8.11 presents DEM factors for the years 1997 through 2000. These are the ratios of interstate DEM to total DEM. Table 8.12 presents weighted (or transitional) DEM factors.

In 2001, based on a *Recommended Decision* of the Federal-State Joint Board on Separations, the Commission imposed an interim five-year freeze of the Part 36 jurisdictional separations categories and jurisdictional allocation factors. The freeze is in effect from July 1, 2001, to June 30, 2006, or until comprehensive separations reform is completed, whichever comes first. Under the interim freeze, price cap carriers were required to freeze their Part 36 categories and jurisdictional allocation factors. Rate-of-return carriers, however, were given the

3 These lines are loops reported for universal service high cost loop support. These are from Table 3.23 of this report and equivalent tables in previous reports. The same summary can be found in Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission, *Trends in Telephone Service* (May 2002), Table 8.1.

4 Similar data (for cost companies) going back to 1992 appear in the June 1999 *Monitoring Report*, data going back to 1984 appear in the May 1993 *Monitoring Report*, and data going back to 1980 appear in the January 1992 *Monitoring Report*.

5 A study area is usually an operating company's operations in one state. The first two digits of the NECA study area code identify the state, and the remaining four digits identify the study area. The numerical code for each state is shown in Table 8.13.

6 In cases where study areas have merged, the historical data have been restated to reflect the merger.

option to not freeze the Part 36 category relationships.⁷ In the order adopting the freeze, the Commission also concluded that carriers no longer would be required to perform separations studies, including traffic studies. As a result, carriers will not have the data necessary to calculate or report updated network usage data and therefore the DEM data that currently appear in NECA's network usage report will not be available in the future. We note, however, that carriers will continue to report interstate access minutes and such data will be provided in future *Monitoring Reports*.

Table 8.13 provides a cross-reference table of the NECA state codes that are part of their study area codes.

The following descriptions of minutes of use measures are based on information provided by NECA:

Access MOU are "earned MOU" which are derived by dividing the earned revenues by the corresponding rate. This definition of access minutes is in agreement with the tariff review plan and ARMIS reports. Access minutes of use generating revenues have been discounted, which can produce distortions in revenue amounts. Further, revenues are normalized to include changes in terminating/originating and percent interstate use factors, billing adjustments, and the imputations of access charges (where applicable). Revenues are also calendarized, which will change derived minutes.

Access MOU include only the domestic portion of international calls. Similarly, WATS and toll-free (800/888/877/866) calls are counted only on one end of the call.⁸ Finally, minutes include time for incomplete calls and setup time.

7 See *Jurisdictional Separations Reform and Referral to the Federal-State Joint Board*, CC Docket No. 80-286, Report and Order, 16 FCC Rcd 11382 (2001) (*Separations Freeze Order*).

8 WATS calls generate access minutes only at the terminating end of the call and toll-free (800/888/877) calls generate access minutes only at the originating end of the call; both types of minutes are counted in the terminating minutes.

9. Quality of Service

This section summarizes various kinds of service quality data filed by certain local exchange telephone companies in April 2002 covering the 2001 calendar year. The Federal Communications Commission (FCC or Commission) does not impose service quality standards, *per se*, on communications common carriers. Rather, the Commission annually monitors carrier-submitted data and publishes the most recent quality of service information both in this *Monitoring Report* and in a separate report on recent quality of service trends.¹ The data contained here provides an initial view of 2001 quality of service data including customer-initiated trouble reports and company responses. This section publicizes information about company performance and, specifically, statistics about company responsiveness to network failures and associated consumer complaints. We include, in the tables following the text of this section, company comparison data about various service parameters including installation, maintenance, switch downtime, and common trunk blocking, along with associated customer perception data.

Background

At the end of 1983, anticipating AT&T's imminent divestiture of its local operating companies, the Commission directed the Common Carrier Bureau to establish a monitoring program that would provide a basis for detecting adverse trends in network service quality. The data were received semiannually, typically in March and August, and formed the basis for FCC summary reports published in June 1990 and July 1991.

With the implementation of price-cap regulation for certain local exchange carriers, the Commission made several major changes to the service quality monitoring program beginning with reports filed in 1991. First, the Commission expanded the class of companies filing reports to include non-Bell carriers subject to price-cap regulation.² Second, the Commission included service quality reports as part of the Automated Reporting Management Information System (ARMIS).³ Third, the Commission ordered significant changes to the kinds of data reported.⁴

1 The last report was Industry Analysis Division, Common Carrier Bureau, Federal Communications Commission, *Quality of Service of the Local Operating Companies* (December 5, 2001), which covered data for 1999 and 2000. It includes trended ARMIS data, prepared in graphical form. Other graphs are available on the ARMIS web site at www.fcc.gov/wcb/armis/sq/.

2 *Policy and Rules Concerning Rates for Dominant Carriers*, CC Docket No. 87-313, Second Report and Order, 5 FCC Rcd 6786, 6827-31 (1990) (*LEC Price Cap Order*) (establishing the current service quality monitoring program and incorporating the service quality reports into the ARMIS program), Erratum, 5 FCC Rcd 7664 (Com. Car. Bur. 1990), *modified on recon.*, 6 FCC Rcd 2637 (1991); *aff'd sub nom.*, *Nat'l Rural Telecom Ass'n v. FCC*, 988 F.2d 174 (D.C. Cir. 1993).

3 *LEC Price Cap Order*, 5 FCC Rcd at 6827-30. The ARMIS database includes a variety of

Following these developments, the Commission released service quality summary reports in February 1993, March 1994, March 1996, September 1998, December 1999, and December 2001.

Pursuant to requirements in the Telecommunications Act of 1996,⁵ the Commission reduced the frequency of the filed data from quarterly to annual submissions.⁶ In May 1997 relevant definitions were clarified further, and these changes have been reflected starting with data covering the 1997 calendar year.⁷ This section represents an early view of data filed for 2001, which are subject to revision by the companies.

Data

The source data used in preparing this section can be extracted from an online database maintained on the FCC web site at <www.fcc.gov/wcb/armis/db>. The data are also available from Qualex International, at (202) 863-2893. Selected paper filings are available in the FCC Reference Room at 445 12th Street, SW, Washington, D.C. 20554.

The data presented in this section summarize ARMIS 43-05 and 43-06 carrier filings for 2001 and represent an initial view of the data. The data is subject to continuing review and may

mechanized company financial and infrastructure reports in addition to the quality-of-service reports. Most data are available disaggregated to a study area or state level.

4 *LEC Price Cap Order*, 5 FCC Rcd at 6827-30; *See Policy and Rules Concerning Rates for Dominant Carriers*, CC Docket No. 87-313, Memorandum Opinion and Order, 6 FCC Rcd 2974 (Com. Car. Bur.1991) (*Service Quality Order*), *reconsideration* 6 FCC Rcd 7462 (Com. Car. Bur. 1991). Previously the Common Carrier Bureau had collected data on five basic service quality measurements from the Bell operating companies. These were customer satisfaction levels, dial tone delay, transmission quality, on time service orders, and percentage of call blocking due to equipment failure.

5 Telecommunications Act of 1996, Pub. L. No. 104-104, 110 Stat. 56 (1996 Act).

6 Orders implementing filing frequency and other reporting requirement changes associated with implementation of the Telecommunications Act of 1996 are as follows: *Implementation of the Telecommunications Act of 1996: Reform of Filing Requirements and Carrier Classifications*, CC Docket No. 96-193, Order and Notice of Proposed Rulemaking, 11 FCC Rcd 11716 (1996); *Revision of ARMIS Quarterly Report (FCC Report 43-01) et al.*, CC Docket No. 96-193, Order, 11 FCC Rcd 22508 (Com. Car. Bur.1996); *Policy and Rules Concerning Rates for Dominant Carriers*, CC Docket No. 87-313, Memorandum Opinion and Order, 12 FCC Rcd 8115 (1997); *Revision of ARMIS Annual Summary Report (FCC Report 43-01) et al.*, Order, 12 FCC Rcd 21831 (Com. Car. Bur. 1997).

7 *Policy and Rules Concerning Rates for Dominant Carriers*, CC Docket No. 87-313, Memorandum Opinion and Order, 12 FCC Rcd 8115 (1997).

be updated as problems are discovered and corrected. The tables accompanying this section highlight many of the data elements now received. Tables include data from each major holding company: the regional Bell companies, including Verizon GTE, and Sprint.⁸

The data items summarized in the tables largely contain raw data measurements that are not scaled by company indexing processes. This removes a degree of procedural variation among companies. For example, companies file a fairly extensive amount of raw data about switching outages, including outage durations and number of lines affected.

The data summarized in this section contain sums, or weighted averages, of data reported by states or study areas and may be useful in assessing overall trends. Where information is reported in terms of percentages or average time intervals, data presented here are based on a composite of individual study area data that are calculated by weighting the percentage or time interval figures. For example, we weight the percent of commitments met by the corresponding number of orders provided in the filed data.⁹

The items contained in the tables are summarized below. Installation, maintenance and customer complaint data are shown in Table 9.1, and switch downtime and trunk servicing data are shown in Table 9.2. Installation and maintenance data are presented separately for services provided to end users and for interexchange carrier access facilities. Outage data categorized by cause are shown in Table 9.3. Customer perception data are contained in Table 9.4 and the associated survey sample sizes are contained in Table 9.5.

8 In February 1992, United Telecommunications Inc. became Sprint Corporation [Local Division]; and in March 1993, Sprint Corporation acquired Centel Corporation. SBC, Pacific Telesis and Ameritech facilities are shown separately despite the merger of the SBC and Pacific in April 1997 and SBC and Ameritech in October 1999. Bell Atlantic's merger with GTE and its new name Verizon Communications is now reflected in this report; however the GTE entities continue to be shown separately. While the data summaries in this report are based on ARMIS data, additional service quality data associated with these companies have been filed with the Commission pursuant to the mergers.

9 Company composite data were typically recalculated on a consistent basis from study area data, as a number of company-supplied composites could not be confirmed. Although the companies have prepared their own company rollups, we have discovered various inconsistencies or inaccuracies in some of these company-prepared composites. We have therefore weighted data involving percentages or time intervals in order to arrive at the more consistent composite data shown in the tables and expect that the companies will want to review their procedures for preparing composites. Parameters used for weighting in this section were appropriate for the composite being calculated and were based on the raw data filed by the carriers but are not necessarily shown in the tables. For example, we calculate composite installation interval data by summing the individual study area results multiplied by the number of installation orders reported for each study area and then dividing the result by the total number of orders.

This section has attempted to display data elements that have remained roughly comparable over the past few years. More detailed information on the raw data from which this section has been developed is contained on the Commission's website for the ARMIS database noted above. In addition, complete data descriptions are available in the Commission Orders referenced above.¹⁰ The row numbers and columns associated with the raw source data in the ARMIS 43-05 report are included in the descriptions below.¹¹

1. Percent of Installation Commitments Met

Percent of installations that were met by the date promised by the company to the customer. It is presented separately for residential and business customers' local service (row 132, columns f and i or af and ai, respectively) and access services provided to carriers (row 112, columns a and c or aa and ac).

2. Average Installation Interval (in days)

Average interval (in days) between the installation service order and completion of installation. It is shown separately for access services provided to carriers (row 114, column a and c or aa and ac) and for residential and business customers' local service

10 *See* footnote 6, *supra*.

11 For rows 110-121 in the raw machine readable data sets, column a or aa is the first column; for rows 130 to 151, column d or ad is the first column; for rows 180 to 190, column k or ak is the first column; for rows 200 to 214, column n or an is the first column; for rows 220 to 319 and 333-500, column t is the first column; and for rows 320 to 332, column aa or da is the first column. The companies also file printed copies of their submissions where rows 110-121 are designated as Table I, rows 130-170 are designated as Table II, rows 180-190 are designated as Table III, rows 200-214 are designated as Table IV, rows 220-319 and 333-500 are designated as Table IV-A, and rows 320-332 are designated as Table V. Note that some of the row numbers in the data such as rows 142, 143 and 160 do not appear in numerical order. In addition to definitional wording changes, most of which are minor, rows 111, 131, 160 and 170 (missed installations for customer reasons and subsequent trouble reports) have been added with the 1997 data; however, not all companies have populated the added rows. Many column designations have also been changed and most column labels are now preceded by the letter "a". The reader should note that there are variations in numbers of switches and access lines in the various ARMIS reports that may lead to inconsistencies when comparing data sources; however, these variations are not believed to be significant enough to alter the observations made in this section. Because the entire row and column descriptions and definitions for each year in question are too voluminous to reproduce here, the reader should refer to the relevant Commission Order referenced in a prior footnote describing requirements for the specific data year of interest.

(row 134, columns f and i or af and ai, respectively). Data on intervals for missed installations (rows 113 and 133) were replaced by average interval described above.

3. Average Repair Interval

Average time (in hours) for the company to repair access lines and service subcategories for switched access, high-speed special access, and all special access. Only data for switched and special access services provided to carriers are presented. (See row 121, column a and c or aa and ac.)

4. Initial Trouble Reports per Thousand Access Lines

Calculated as the total count of trouble reports reported as "initial trouble reports," divided by the number of access lines in thousands. (Note that multiple calls within a 30 day period known to be associated with the same problem are counted as a single initial trouble, and the number of access lines reported and used in the calculation is the total number of access lines divided by 1,000.) This item is subcategorized by Metropolitan Statistical Areas (MSA) (the sum of row 141, column d or ad and row 141, column g or ag divided by the sum of row 140, column d or ad and row 140, column g or ag); non-MSA (the sum of row 141, column e or ae and row 141, column h or ah divided by the sum of row 140, column e or ae and row 140, column h or ah); residence (row 141, column f or af divided by row 140, column f or af); and business (row 141, column i divided by row 140, column i or ai). Note that access lines for data filed in 1997 were requested in whole numbers, but were requested in thousands for prior years.

5. Found or Verified Troubles per Thousand Access Lines

Calculated as described in item 4, above. Represents the number of trouble reports in which the company identified a problem (row 141, column j or aj less row 143, column j or aj divided by row 140, column j or aj).

6. Repeat Troubles as a percent of Initial Trouble Reports

Calculated as the number of initial trouble reports acted on that recur, or remain unresolved, within 30 days of closing out the initial trouble report, divided by the number of initial trouble reports as described above (row 142, column j or aj divided by row 141, column j or aj). Provides a measure of the effectiveness of the company in resolving troubles at the outset. Subcategorized by MSA, non-MSA, residence, and business. (Also refer to the discussion of data qualifications that follows.)

7. Complaints per Million Access Lines

The number of residential and business customer complaints, per million access lines, reported to state or federal regulatory bodies during the reporting period. (Total residence complaints are calculated as the sum of row 331, column aa and row 332,

column aa; total business complaints are calculated as the sum of row 321, column aa or da and row 322, column aa or da).

8. Number of Access Lines, Trunk Groups and Switches

The count of in-service access lines (row 140, column j or aj), trunk groups (row 180, column k or ak), and switches (the sum of row 200, column n or an and row 201, column n or an or the sum of row 210, column n or an through row 214, column n or an). Trunk groups only include common trunk groups between Local Exchange Carrier (LEC) access tandems and LEC end offices. When comparing current data herein with data in prior reports the reader should note that access lines were reported in thousands in pre-1997 data submissions. Starting with 1997 data submissions access line data was requested in whole numbers. Data for 1995 was annualized as the average of quarterly data.

9. Switches with Downtime

Number of network switches experiencing downtime and the percentage of the total number of company network switches experiencing downtime (row 210, column o or ao through row 214, column o or ao or the sum of row 200, column o or ao and row 201, column o or ao).

10. Average Switch Downtime in Seconds per Switch

Total switch downtime divided by the total number of company network switches indicates the average switch downtime in seconds per switch. Shown for all occurrences (the sum of row 200, column p or ap and row 201, column p or ap, multiplied by 60 and divided by the sum of row 200, column n or an and row 201, column n or an) and for unscheduled occurrences greater than 2 minutes (data derived from rows 220 through 319 and rows 333 through 500, columns t through z in the source data divided by the sum of rows 200 and 201, column n or an).

11. Unscheduled Downtime Over 2 Minutes per Occurrence

Number of occurrences of more than 2 minutes in duration that were unscheduled, the number of occurrences per million access lines, the average number of minutes per occurrence, the average number of lines affected per occurrence, the average number of line-minutes per occurrence in thousands, and the outage line-minutes per access line. For each outage, the number of lines affected was multiplied by the duration of the outage to provide the line-minutes of outage. The resulting sum of these data represents total outage line-minutes. This number was divided by the total number of access lines to provide line-minutes-per-access-line, and, by the number of occurrences, to provide the line-minutes-per-occurrence. This categorizes the normalized magnitude of the outage in two ways and provides a realistic means to compare the impact of such outages between companies. A separate table is provided for each company showing the number of outages and outage line-minutes by cause.

(These items are derived from data in rows 220 through 319 and 333 through 500, columns t through z, in the source data).

12. Scheduled Downtime Over 2 Minutes per Occurrence

Determined as in item 11, above, except that it consists of scheduled occurrences. (These items are derived from data contained on rows 220 through 319, and rows 333 through 500, columns t through z, in the source data).

13. Percent of Trunk Groups Meeting Design Objectives

This data item provides the percentage of trunk groups exceeding an industry standard for blocking over the reporting interval (the sum of rows 189 and 190, column k, divided by row 180, column k for 1995 data and the sum of rows 189 and 190, column ak divided by row 180 column ak starting with 1996 data). The trunk groups measured and reported are interexchange access facilities. These represent only a small portion of the total trunk groups in service.

Qualifications

The data presented in this section are a first view of this year's filed data. As in the past, we have identified several pitfalls and general qualifications in using quality of service data.

Overall, we caution readers to be aware of potential methodological shortcomings and inconsistencies associated with use of the service quality data presented in this section. First, carriers periodically revise submitted data as problems are discovered, and data presented here may contain errors or may not reflect the latest updates. Second, although the data are subject to an initial screening by Commission staff, and certain problems may have been corrected in carrier-submitted revised filings, there are still potential flaws in the data that will only become apparent when users subject the data to further analysis or compare it with data from other sources.¹²

Third, Commission staff have recalculated holding company totals or data composites, and these might not match company-filed totals or composites.¹³ This is primarily due to

12 For example, small variations between GTE prepared composites and those that we calculated independently appear to have been caused by inclusion or exclusion of data from study areas such as Micronesia (GTMC) and Alaska (GTAK).

13 Past Commission orders have modified definitions in the data collection process in an attempt to remove perceived ambiguities. We note, however, that because this section contains many items whose composites are calculated as weighted sums or averages, we have recalculated company composites for this section to improve consistency and we have pointed out general cautions in using the data. We expect that this will be useful to the companies in their review of internal processes associated with calculation of composites and may enable us to use company-calculated composites in the future.

calculation variations regarding, *e.g.*, percentages or average intervals that require weighting in the calculations. Carriers have updated earlier filings numerous times. The data presented here typically reflect data for the most recent ARMIS filing of April 2002. We therefore caution the reader that some of the problems that may be discovered in connection with the data presented here resulted from differences in aggregation methodologies, errors including data irregularities, or data revisions that either could not be used or were not available in time for use in this section.¹⁴

Fourth, outage measurements should be considered in context. For example, the average number of lines affected per event would tend to favor a company with a larger number of smaller or remote switches with lower line counts per switch, while the average outage duration might favor a company with larger switches. Thus, using the average number of lines per event measurement, one 25,000 line switch that is out of service for five minutes would appear to have a greater service impact than ten 2,500 line switches that are out of service for five minutes. That is why we present a grouping of outage measurements that include the outage line-minutes per event and per 1,000 access lines. We have also added the number of outages per switch as another metric for measuring a company's performance.

Except in the calculation of company composites, we have not, in most cases, deleted or adjusted data. It is expected that the process of data correction will continue as problems are further identified and corrected.

This section presents data that reflect several different ways of measuring switch outages, including line-minutes-per-access line and line-minutes-per-event. Outage line-minutes is a measure that combines both duration and number of lines affected in a single parameter. We derived this parameter from the raw data by simply multiplying the number of lines involved in each outage by the duration of the outage, summing the resulting values and dividing the sum by the total number of access lines or events. Because outage measurements tend to exhibit more variability than other measurements, we have shown in the tables several ways of presenting the results. Improvements in responding to outages by some of the reporting companies may be associated with efforts to improve switch reliability, including working with manufacturers to replace poorly performing switches and to improve performance of existing ones.

Because performance within any single data category may vary widely over time, evaluating a given company's performance by looking at a single measurement may be misleading, especially considering that long lead times might be needed to correct certain problems or that corrections might already be underway. On the other hand, problems that are observed in several service quality measurement categories could also reflect overall service deterioration. We believe that customer complaint and perception levels should be viewed in the

14 We have noted that total access lines as reported in the last column of row 140 does not always agree with the sum of the first column entry of rows 320 and 330. Variations in access line and switch counts may affect normalized outage data reported in the tables. In some instances irregularities inherent in the underlying data at the study area level may have resulted in other undetected errors in the calculated composites.

context of other measures of performance. However, we have found that it is practically impossible to ascertain whether changes in aggregate customer complaint levels result from developments in a single problem area or reflect a perception of a wider ranging set of problems. For these reasons and because data is now filed annually rather than quarterly, we recommend the use of both trend and pattern analysis of the data.

Finally, one of the measurements for which service quality data are collected is the number of service affecting troubles reported by customers. Because of the various classifications of trouble reports, in 1997, the Commission addressed problems relating to subtleties in the definitions associated with the terms "initial" and "repeat" trouble reports.¹⁵

All of these reflections and observations essentially relate to the issue of maintaining the necessary continuity of data measurements. While an attempt has been made to preserve continuity up to this point, detection of errors and changes in reporting requirements that are deemed necessary will introduce discontinuities into certain time series data or eliminate certain items of data entirely.

We note that changes in service quality measurements may be dictated by changes in technology and that the companies periodically wish to change their internal measurement procedures, from which regulatory data are drawn, adding difficulty to long-term measurements.¹⁶ In some cases procedural changes in the data measurement and collection process may be subtle enough so that they are not immediately noticeable in the data. Significant changes in company procedures, however, usually result in noticeable and abrupt changes in data levels. It appears that at least some of these changes are not reported to the Commission. These factors tend to limit the number of years of data available to track service quality trends and will affect the frequency and availability of summary reports that are prepared by the Commission. In spite of these caveats, it appears that customer satisfaction and complaint data have exhibited adverse trends for some of the companies in recent years.

15 See *Policy and Rules Concerning Rates for Dominant Carriers*, CC Docket No. 87-313, Memorandum Opinion and Order, 12 FCC Rcd 8115, 8133 (1997); *Revision of ARMIS Annual Summary Report (FCC Report 43-01) et al.*, Order, 12 FCC Rcd 21831, 21835 (Com. Car. Bur. 1997). See also Industry Analysis Division, Common Carrier Bureau, Federal Communications Commission, *Quality-of-Service for the Local Operating Companies Aggregated to the Holding Company Level* (March 22, 1996) (mimeo 60268) for further discussion.

16 For those interested in trending customer perception data in this section with that available in prior Reports, it should be noted that Bell Atlantic, for example, reported changes to its customer perception surveys that were reflected in its post-1990 data, and Pacific Telesis had noted changes effective in January 1992.

**Table 9.1
Installation, Maintenance, & Customer Complaints
Company Comparison - 2001**

Company	BellSouth	Qwest	SBC Ameritech	SBC Pacific	SBC Southwestern	Verizon North	Verizon South	Verizon GTE	Sprint

10. Infrastructure

The infrastructure information contained in this report is based upon data collected by the FCC as part of its price-cap monitoring procedures.¹ This summary is intended to highlight changes in the use of technology in the local telephone company plant. The data (ARMIS 43-07 reports) upon which this infrastructure summary is based are filed April 1 for the previous calendar year.² This infrastructure report includes data through 2001.³ The most recent data were filed in April 2002.

Background

The data items presented here summarize ARMIS Report 43-07, which is filed by local exchange carriers subject to mandatory price-cap regulation. The information contained in this report is for the years 1991 through 2001.

The ARMIS 43-07 reports are filed only by those local exchange companies originally subject to mandatory price-cap regulation--the Bell operating companies (BOCs).⁴ Together, these large companies are estimated to provide service to more than 90% of the nation's telephone lines. The data are generally filed at the study area level, which typically consists of a company's operations within a state. The state-by-state data are available from the Commission's

1 These procedures were established in *Policy and Rules Concerning Rates for Dominant Carriers*, CC Docket No. 87-313, 5 FCC Rcd 6786 (1990) (*LEC Price Cap Order*), *Erratum*, 5 FCC Rcd 7664 (1990), and 8 FCC Rcd 7474 (1993).

2 ARMIS, an acronym for Automated Reporting Management Information System, is a publicly available repository of financial, plant, demand, and quality-of-service data. Additional infrastructure data are contained in the ARMIS 43-08 report. See *Statistics of Communications Common Carriers*, published annually by the Wireline Competition Bureau's Industry Analysis and Technology Division for a compilation of 43-08 infrastructure data.

3 See Industry Analysis Division, Common Carrier Bureau, Federal Communications Commission, *Infrastructure of the Local Operating Companies Aggregated to the Holding Company Level* (April 24, 1995) for data for the years 1989 and 1990. Those early years have not been included in this report because some of the data apparently contain discrepancies and are inconsistent with the later years. Reports containing data for the early years can be found in the infrastructure section of the **FCC-State Link** Internet site at <www.fcc.gov/wcb/stats> under the file names INFRA99.ZIP, INFRA98.ZIP, INFRA95.ZIP, and INFRA93.ZIP. More recent reports can be found in Section 10 of earlier versions of this report on the same web page under the section covering the Commission's Federal-State Joint Board *Monitoring Reports*.

4 See footnote 1.

ARMIS web page at www.fcc.gov/wcb/armis/db/.⁵ The information summarized in this report is organized into two sets of tables. Table 10.1 shows switching system data and gross plant expenditures covering all types of plant. Table 10.2 shows transmission system data. Each set of tables contains segments for each of the regional Bell operating companies (along with Verizon's GTE companies shown separately) with aggregated summary data for all the reporting companies. The data summarized for each holding company reflect the aggregate of data filed for individual states or study areas and should be useful in assessing overall trends. In some cases, refiled data may cause values to differ from prior summary reports. Current data reflect mergers of GTE and Bell Atlantic, which are now under the name Verizon Communications, and the acquisitions by SBC of Ameritech and Pacific Telesis.

Description of the Technologies and Analysis of the Data

The data in the attached tables provide a historical series for a variety of plant elements that illustrate the deployment of technology in the networks of the major local exchange carriers.⁶ The data items provide a picture of the well established technologies in use. This report highlights key trends in the evolution of basic telecommunications infrastructure and illustrates the replacement of older technologies with newer ones. In some cases, older technologies either no longer exist or are in very limited use. Major revisions to the 43-07 report from which the data in this summary are obtained are currently pending.⁷

A useful overall measure of company activity is the dollar amount of total gross capital expenditures, which increased less than 1% over the last reporting period compared to more than 20% during the previous reporting period. The data reported includes all plant additions on both switching and transmission facilities motivated by modernization, replacement and growth.⁸

5 To access ARMIS data from www.fcc.gov/wcb/armis/db/ click on the words "run the application primary link and select the desired report, table and row(s)." To access data instructions and definitions applicable to the 43-07 report click on the words ARMIS site map at the top right of the screen and then select the 43-07 report and table desired.

6 A number of irregularities including several time series anomalies were noted in the data. Not all data revisions were available in time for inclusion in this report. Verizon indicates that at least some of the discrepancies have resulted from system changes made to its data collection systems over the past year. BellSouth noted that recent ISDN capable line data (row 490) reflects a change in methodology. Prior data was based on equipped central office pairs. Data for 1999 is based on working lines.

7 See 2000 Biennial Regulatory Review—Comprehensive Review of the Accounting Requirements and ARMIS Reporting Requirements for Incumbent Local Exchange Carriers: Phase 2, CC Docket Nos. 00-199, 97-212, 80-286, and 99-301, Report and Order in CC Docket Nos.00-199, 97-212, and 80-286 Further Notice of Proposed Rulemaking in CC Docket Nos. 00-199, 99-301, and 80-286, 16 FCC Rcd 19911 (2001).

8 The data is provided as a single number in the ARMIS 43-07 report and includes

Total gross capital expenditures should therefore continue to be an important overall parameter in assessing deployment of infrastructure in the local service business. Because construction expenditures may ultimately affect quality of service levels, broad long-term changes in the relationship between construction expenditures and access line growth should be of continued interest.

ARMIS data currently collected only cover circuit switches that provide a dedicated path through the network for the duration of a call, not routers or switches that are used in connection with frame relay, ATM and internet services that are specifically designed to handle data packets or bursts.⁹ Almost all of the major local exchange carrier switches are digital. About one-third of these are ISDN capable. However, the rate at which new ISDN switching capability is being added to the networks has slowed considerably, with only twenty-four additional ISDN capable switches being reported in 2001. Even so, in 2001, the reported number of equipped ISDN Primary Rate Interfaces increased by about 28 percent, from 429,295 to 551,102. ISDN basic rate services also grew, though more slowly, even in light of the use of xDSL technologies, with about 284,000 reported new Basic Rate Interfaces equipped or working in 2001.

A number of transmission elements are included in Table 10.2. Definitions for these elements can be found on the Commissions ARMIS website noted above. These illustrate the rapid development of fiber capacity in terms of terminations, sheath kilometers, and links. The number of sheath kilometers of fiber nearly tripled over the period 1991-2001, with more than 650,000 fiber sheath kilometers being reported in 2001. During the same period, the number of sheath kilometers of copper remained steady at somewhat over 5 million and other sheath data, in relative terms, were not significant.

Table 10.2 also highlights the relative magnitude of equipped and working channels, providing an indication of termination equipment utilization. In both cases, copper channels have grown between 15% and 25% from 1991 to 2001, whereas fiber channels have increased over ten-fold. For interoffice carrier links, analog technologies have mostly disappeared, and all but a small portion are now provided over fiber. Although data on links and channels show that circuits connecting local central offices could typically be provided on only two fibers, the economics of fiber deployment have resulted in deployments of typical fiber cables containing more than 40 fibers. This suggests that there is a significant amount of fiber capacity currently unused in the *interoffice* transmission plant.¹⁰

additions to plant accounts 2110, 2210, 2220, 2230, 2310, 2410, 2680, and 2690.

9 Remote switches as defined in this report only cover those switches capable of functioning if the host switch fails.

10 A large portion of the cost of fiber deployment is associated with labor and installation rather than with the cable itself. Thus, the incremental cost of installing a larger fiber cable is typically relatively small. This suggests that the sheath-kilometer parameter shown in the attached tables may be a better measure of fiber coverage than fiber kilometers. In general, care should be exercised in interpreting aggregate fiber data when

Although the overall level of growth in fiber has been high, its use in the local loop at present is relatively small. The reporting companies had an installed base of about 218 million copper-pair mainframe terminations in their central offices for local loop use in 2001. In comparison, about 3.3 million fiber loop terminations had been installed by end-of-year 2001. The data show that growth in central office fiber terminations increased about 13% during 2001 as compared to about 35% in 2000. Significant growth in DS-3 terminations on fiber facilities is evident. Over the longer term, fiber and hybrid copper/fiber systems will likely become increasingly important in the local loop as the number of high-quality copper pairs available to support higher data rate digital services declines.

The data presented in this report do not include newer offerings of xDSL services that are now available that offer broadband digital capability using special terminal equipment that enhances the capability of existing copper access lines.¹¹ Nonetheless the number of ISDN capable lines can be used as an upper bound for potential broadband availability over copper loops, since copper loop characteristics necessary to support ISDN services are also required for newer xDSL services.¹² Readers interested in more disaggregated information may wish to examine data at a more localized level than presented here.¹³

determining, for example, whether fiber is concentrated in certain parts of a company's service area with relatively little fiber elsewhere. See Industry Analysis Division, Common Carrier Bureau, Federal Communications Commission, *FCC Fiber Deployment Update - End of Year 1998* (Sept. 9, 1999), available at <www.fcc.gov/wcb/stats> under the file name FIBER98.ZIP (authored by J. Kraushaar).

- 11 These services are generally referred to as xDSL (Digital Subscriber Loop) services.
- 12 Table 10.1 in the data indicates the number of switch terminations that are available for ISDN and "ISDN capable lines" in Table 10.2 indicates the number of copper loops that are capable of supporting ISDN.
- 13 Individual study-area data are also available to address more localized issues. This information is available on the ARMIS web page at <www.fcc.gov/wcb/armis/db/>.

11. Revenues, Expenses, and Investment

This section provides information on revenues, expenses, and investment by major local telephone companies. The information included in this section is calculated from some of the summary information in the Commission's Automated Management Information Systems' (ARMIS) 43-01 Reports. The original data plus more detailed data can be found in the ARMIS 43-01 Reports. These reports along with the other nine ARMIS reports are available for public inspection on the ARMIS Internet site at <www.fcc.gov/wcb/armis/db>.

The source of the data in this section is the ARMIS 43-01, Annual Summary Report, prescribed for every incumbent local exchange carrier with operating revenues that exceed a specified threshold.¹ The report is filed on a study area basis and includes data on revenues, expenses, and investment to enable the Commission to monitor the carriers' operations.² For this section, information was derived from ARMIS 43-01 data for 2001 for the following tables:

Table 11.1 - Revenues and Other Operating Items.

Table 11.2 - Expenses and Taxes.

Table 11.3 - Gross Investment.

Table 11.4 - Total Investment Reserves (Row 1890 of the ARMIS 43-01 Report).

Table 11.5 - Net Income (which is the difference between Table 11.1, Revenues and Other Operating Items, and Table 11.2, Expenses and Taxes).

Table 11.6 - Average Net Investment (Row 1910 of the ARMIS 43-01 Report which is the difference between Table 11.3, Gross Investment, and Table 11.4, Total Investment Reserves).

Table 11.7 - Total Operating Revenues (Row 1090 of the ARMIS 43-01 Report).

Table 11.8 - Other Operating Income or Loss (Row 1290 of the ARMIS 43-01 Report). Tables 11.7 and 11.8 show the detailed items that when aggregated constitute Table 11.1, Revenues and Other Operating Items.

1 For year 2001 data, the threshold was year 2000 revenues in excess of \$117 million. For year 2002 data, the threshold will be year 2001 revenues in excess of \$119 million. These carriers are classified as Tier 1 carriers.

2 Eight Tier 1 carriers furnished the data used in this report for 119 study areas in 2001. The data covers all 50 states (except Alaska), the District of Columbia, and the Commonwealth of Puerto Rico. Smaller carriers that, in the aggregate, serve about 7% of the nation's telephone lines do not file ARMIS data.

Table 11.9 - Total Operating Expenses (Row 1190 of the ARMIS 43-01 Report).

Table 11.10 - Total Non-operating Items (Row 1390 of the ARMIS 43-01 Report).

Table 11.11 – Taxes -- Federal, State, and Other (Rows 1490, 1590, and 1595 of the ARMIS 43-01 Report).³ Tables 11.9 through 11.11 show the detailed items that when aggregated constitute Table 11.2, Expenses and Taxes.

Table 11.12 - Total Plant Investment (Row 1690 of the ARMIS 43-01 Report).

Table 11.13 - Total Other Investments (Row 1790 of the ARMIS 43-01 Report). Tables 11.12 and 11.13 show the detailed items that when aggregated constitute Table 11.3, Gross Investments.

Each table in this section contains columns headed “Subject to Separations”, “Intrastate”, and “Interstate”.⁴ The “subject to separations” column reflects the total amount that is subject to separations allocations between the state and interstate jurisdictions pursuant to Part 36 of the Commission's rules. The “interstate” and “intrastate” columns reflect the amounts allocated to the interstate and state jurisdictions pursuant to those rules. In some instances, the “interstate” column also reflects FCC prescribed adjustments made after the separations process. These adjustments are made only at the interstate level; consequently, the “intrastate” and “interstate” columns may not necessarily add up to the “subject to separations” column.

Each table also contains a column headed “Percent Interstate”. The data in this column is calculated by dividing the data in the “interstate” column by the data in the “subject to separations” column.

Table 11.6 - Average Net Investment - has one additional column headed “Interstate Rate of Return”. The data in this column is calculated by dividing the data in the “interstate” column of Table 11.5 - Net Income - by the data in the “interstate” column of Table 11.6.

3 Beginning in 1999, mid-sized companies (incumbent carriers other than the Bell operating companies and GTE subsidiaries) no longer report taxes to different governments separately. Therefore, Table 11.11 shows the sum of rows 1490 and 1590 for the Bell South, Qwest, SBC, and Verizon subsidiaries and row 1595 for the mid-sized companies.

4 These are reported in columns (f), (g), and (h) in the ARMIS 43-01 Reports. The numbers are in thousands of dollars.
