

## Consumer FAQs: TV Spectrum Auction

The Federal Communications Commission held a spectrum auction in April 2017 to help improve and expand wireless services across the country to meet the ever-increasing needs of American consumers for faster, higher capacity mobile broadband services. In the auction, TV broadcasters could voluntarily give up their current broadcast channel in exchange for a share of the proceeds from an auction of their channel to commercial wireless service providers to expand mobile broadband services.

What does this mean for you? Now that the auction is complete, some broadcast television stations will change their channels, or share a channel with another station, or, in some cases, go off the air. However, unless a station in your area is going off the air altogether, this will only affect you if you obtain TV service over the air using an antenna. If you subscribe to a cable TV or satellite provider, they will make any necessary changes for you.

If you have over-the-air TV, there are a few steps you will need to take at the appropriate time. The FCC has worked with broadcasters to plan a post-auction transition that minimizes viewer inconvenience and confusion. Below you'll find answers to commonly-asked questions and links to helpful Commission resources.

For more information about the broadcast TV incentive auction, visit our webpage at [www.fcc.gov/incentiveauctions](http://www.fcc.gov/incentiveauctions).

### **How can I find out if or when stations in my area are moving channels?**

You should monitor local TV broadcasts for public service announcements, “crawls” running across the bottom of your TV screen, and other notifications to learn the exact date that a channel in your area is making its transition. Stations changing frequencies are required to display updated information at least 30 days before their transition. You can also check the FCC’s website at <https://www.fcc.gov/media/engineering/dtvmaps> for an interactive map that allows you to insert your address to see the frequency change timeframe for most local channels.

### **Will I need to do anything to continue watching TV over the air?**

In general, no. You will not need to buy a new TV or purchase a converter box as you may have done during the transition to digital television in 2009. When one or more of your local TV stations move to a new channel, the only action that you will need to take is to rescan your television set. Stations will provide notice in advance of such a change; however if you notice a channel missing at any time, it may be because it has moved to a new channel number. If so, you may want to rescan for available TV stations in case you missed a notice. For information on how to rescan for channels, visit our guide, which includes an instructional video, at [www.fcc.gov/rescan](http://www.fcc.gov/rescan).

### **Will I need to buy a new antenna?**

In very limited cases, a local station may move from a UHF channel to a VHF channel, which may affect those few viewers who have a UHF-only TV antenna. For more information about over-the-air TV antennas, visit our guide at: [www.fcc.gov/consumers/guides/antennas-and-digital-television](http://www.fcc.gov/consumers/guides/antennas-and-digital-television).

## **Will cable and satellite still carry my local TV stations?**

Broadcast TV stations will keep their current arrangements with cable and satellite TV systems to carry the stations' broadcasts after the auction process is complete.

A few broadcast TV stations may move their transmission facilities as part of this process, which may affect which TV markets they're carried in as "local" stations. If they shift to a neighboring TV market, it may affect which cable and satellite systems carry their station. Please check with your cable TV or satellite TV provider if at any time you cannot find one of your local TV stations on their systems.

## **When will channels make their moves?**

Channels will transition during the 39-month transition period that began April 13, 2017. You should monitor local TV broadcasts for public service announcements, "crawls" running across the bottom of your TV screen, and other notifications to learn the exact date that a channel in your area is making its transition. Stations changing frequencies are required to display updated information at least 30 days before their transition. You can also check the FCC's website at [www.fcc.gov/media/engineering/dtvmaps](http://www.fcc.gov/media/engineering/dtvmaps) for an interactive map that allows you to insert your address to see the frequency change timeframe for most local channels.

## **Will I be notified if a station is changing or going away?**

Full power and Class A stations that are moving, changing channels or ceasing to broadcast must notify consumers with daily on-air announcements for at least 30 days prior to any change. During that time, stations will continue to operate on their current channels. Low power and TV translator stations, though not required to provide notice, may do so to assist their viewers as those stations transition.

## **Will my local stations change even if they did not participate?**

It's possible. As a result of the auction, there are fewer channels in the TV band, meaning that stations operating on channels that have been repurposed for wireless use would need to move to new channels. Other stations may need to move to different channels because of signal interference caused by changes in your TV market or in a nearby market. However, any station that changes its signal must notify viewers daily for at least 30 days before making the change.
