RE: Complaint Regarding Interference From NA4MB Repeater; Case #EB-07-SE-249

Dear Mr. Hood:

We have reviewed the complaint you filed on July 20, 2007, and have determined that it is not appropriate for enforcement action.

Your complaint outlined interference to your coordinated repeater, WB4ULJ, from coordinated repeater NA4MB. Your repeater transmits analog voice communications using emission type F3E. The NA4MB repeater transmits digital communications between user stations using the "D-Star" protocol.¹ We note that the definition of a repeater station does not depend upon the emission type or designator and therefore we treat this complaint as a complaint regarding interference between two coordinated repeaters.

Section 97.205(c) of the Commission's rules, 47 C.F.R. § 97.205(c), states that where there is interference between coordinated repeaters, the two station licensees are equally and fully responsible for resolving the interference.

Sincerely,

W. Riley Hollingsworth
Special Counsel

cc: FCC South Central Regional Director
