[Ticket: # 1282316 - Data Usage Cap](#)

**Date:** 10/22/2016 7:58:06 PM

**City/State/Zip:** Port Saint Lucie, Florida 34984

**Company Complaining About:** Comcast

---

## **Description**

Comcast has decided to limit customers in my area to 1TB of data. They say only 1% will be affected. I believe this data cap will definitely affect more people and is designed by Comcast to benefit financially. They talk about principles of fairness, however it is well documented that Comcast overcharges customers. This is another way for them to increase their already overpriced rates. I don't see this as fair.

---

**Ticket: # 1282317 - Comcast data caps**

**Date:** 10/22/2016 7:58:35 PM

**City/State/Zip:** Las Cruces, New Mexico 88012

**Company Complaining About:** Comcast

---

## **Description**

I am a resident currently affected and very unhappy about Comcast's new data cap plan they forced upon my home and my community. Data plan is not about fairness, it is not about congestion, it is a way for Comcast to pad their profits.

Let's talk about fairness; Comcast claims they are charging data like how any other utility charges for water, electricity, and gas. However, once the infrastructures are put in place, sending and receiving data costs almost nothing to them. They are already charging enough to post record profits last year. Now, let's talk about congestion, data caps have nothing to do with network congestion, as was evident when Comcast accidentally leaked an internal memo confirming so.

Increase in profits is the only reason left, and while a business has every right to make as much money as they can, Comcast, being a monopoly in many areas, should be held to a different standard. There is no competition, nowhere to turn. With the increase in high data-utilization applications such as 4K streaming and more Internet connected devices in our homes, this data cap is just an unfair way to get in on the money without actually innovating.

---

**Ticket: # 1282339 - Comcast Data Cap**

**Date:** 10/22/2016 8:39:04 PM

**City/State/Zip:** Jacksonville, Florida 32223

**Company Complaining About:** Comcast

---

## **Description**

Even at terabyte of data for a limit, which seems like a lot currently, as more items begin to connect to the Internet, and as 4k television streams and virtual reality becomes wider used, this data limit will be easily surpassed. Additionally I feel that Comcast had waited until the month prior to the Presidential election to roll this change out in hopes that it will go unnoticed by the majority of their subscribers. If this isn't fought now it will be too late to correct on the future. Minimally something should be done to postpone these cap limits until a time when more discussion can be had instead of just prior to what is perhaps the most distracting election in the history of the United States of America.

---

[Ticket: # 1282434 - Pending Comcast data caps.](#)

**Date:** 10/22/2016 11:00:38 PM

**City/State/Zip:** Parker, Colorado 80134

**Company Complaining About:** Comcast

---

## **Description**

I just learned of a pending reduction in service / price increase soon to be implemented by Comcast.

This is unacceptable for several reasons:

Lack of consumer choice other than Comcast due to local monopoly in broadband market.

Lagging behind the rest of the world in broadband availability and cost to consumers.

Importance of the internet for children to participate in school and for everyday people to participate in the modern economy.

This is not a "value-added" service. It's the same service I've always paid for, and now I'm being forced to pay more for it.

This is blatantly anti-consumer.

Additionally there have been reports that Comcast's "data monitors" do not record accurate usage information and am concerned about the lack FCC regulated data consumption measurement standards.

---

**Ticket: # 1282451 - Comcast XFINITY Data Cap****Date:** 10/22/2016 11:24:47 PM**City/State/Zip:** Smithfield, Utah 84335**Company Complaining About:** Comcast

---

**Description**

I recently received an email from Comcast XFINITY regarding an implementation of data caps in my area. I will not likely be too drastically affected by this new implementation, but I feel it is incredibly wrong for a company to promote the nature of their service as full and expansive, then alter the provisions based on their lack of planning for the future.

The new "agreement" which they have issued implements a 1TB data cap on internet usage, down from their unlimited cap currently in place. I find this incredibly disheartening, especially with how the internet is now regarded as a public utility and a necessity of the common era. If one exceeds their newly established terms, they are charged an outrageous \$10 per 50GB, with a maximum additional monthly fee of \$100. When Comcast XFINITY is already taking advantage of citizens with their outrageous price hikes and hidden fees, I find it incredibly difficult to wonder how they are able to get away with such horrendous business practice in the age which we live in. They are seeking to halt our children from being able to use the internet for school research, keep the average customer from relaxing after a hard day at work by streaming videos or gaming, and imposing previously non-existent limitations on what is now a right under ruling by the United States Government.

---

[Ticket: # 1282479 - 1TB Data cap](#)

**Date:** 10/23/2016 2:01:49 AM

**City/State/Zip:** Englewood, Colorado 80112

**Company Complaining About:** Comcast

---

## **Description**

With streaming services such as Netflix, CrunchyRoll, and YouTube that use automatic quality settings based on internet speed, it's incredibly easy to go over 1TB when you don't watch TV. If they want to put a cap on how much media we can consume on the internet they need to do the same with TV, or just don't cap the data. I know its only 50\$ extra a month for unlimited but when you're paying for speeds like 180MB/s you can chew through 1TB really quickly, and you can forget about backing up important data to the cloud you'll run out so quickly.

---

[Ticket: # 1282487 - ATT merger with TW will cripple me as an home-based freelancer](#)

**Date:** 10/23/2016 2:45:22 AM

**City/State/Zip:** Milwaukee, Wisconsin 53212

**Company Complaining About:** AT&T

---

## **Description**

I currently am a Milwaukee based TW customer who freelances from home, currently in Milwaukee the only two options are ATT or Time Warner. ATT currently imposes the business and commerce killing policy of data caps and if this merger passes I fear with almost 100% certainty they will pass this practice into TW customers. If this happens I will most likely be forced to move to an area with less stifling and business killing Internet Service Providers as my line of work requires heavy (400gb+) use.

Please block the merger between these two already huge corporations- business deals like these have proven to only negatively impact Americans.

---

## **Description**

They imposed internet caps it was unlimited now I am only getting 300 gb a month. That's ridiculous!

---

**Ticket: # 1282585 - Data caps**

**Date:** 10/23/2016 10:29:26 AM

**City/State/Zip:** Chicago, Illinois 60618

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently rolled out a 1TB cap on data usage for our internet service plan. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is not interested in upgrading existing infrastructure and is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access. I have no legitimate alternatives for high-speed internet access. My area is not serviced by RCN, AT&T's highest speed offering is nowhere close to what I can get from Comcast. As such, I cannot wait for Google Fiber to be offered in Chicago to at least bring some real competition.

The addition of caps has already changed our behavior. We were interested in getting access to TV networks we didn't have through a subscription to Playstation Vue but when looking into the bandwidth requirements it seems it is not a viable option when Comcast is able to zero-rate their own offerings allows us to avoid hitting our data cap. As such we're considering going with a Comcast plan despite not really wanting to.

Comcast wants to treat data as if it were some form of finite resource which it is not. Likewise if they did want to enact such a metered solution it should be performed like any other utility in which a highly regulated and verifiable meter is used on the customer's premise in order to ensure fairness. As it stands now we are at the mercy of Comcast to whether their meter is accurate and fair.

I would also argue that the location of the meter at Comcast's end is also inherently unfair because drops and retransmissions on their network would count against the customer despite the fact it is not their fault there was a lack of infrastructure to handle the congestion.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility. If data caps are allowed to stay I ask that the FCC enact and enforce an open, verifiable, and fair customer premise metering solution.

---

**Ticket: # 1282643 - Comcast Terabyte Data Cap**

**Date:** 10/23/2016 12:16:01 PM

**City/State/Zip:** Cicero, Illinois 60804

**Company Complaining About:** Comcast

---

## **Description**

Recently Comcast has enacted a capacity on data they serve to their customers, limiting it down to one terabyte. They previously had a cap at 300 gigabytes but this has been changed. There is just no reason for these arbitrary changes. Home connections should not be subject to data caps.

---

[Ticket: # 1282710 - Comcast 1tb limit](#)

**Date:** 10/23/2016 1:24:02 PM

**City/State/Zip:** Renton, Washington 98056

**Company Complaining About:** Comcast

---

## **Description**

Comcast is now imposing a 1tb cap on usage. This threatens how I choose to use the internet for work since I backup offsite site using this and with the fact I stream netflix, amazon, etc. This threatens the freedom of the internet and not only that there is no reason to. With the hardware in place it just becomes a cash cow to milk people out of more money. This year it's 1tb next year, some sob story then it's 300gb.

---

**Ticket: # 1282739 - Comcast Internet Data Usage Caps**

**Date:** 10/23/2016 2:00:01 PM

**City/State/Zip:** Jacksonville, Florida 32226

**Company Complaining About:** Comcast

---

## **Description**

I am writing to complain about Comcast's imposition of limits on internet data usage. I, also could expound at length about their poor customer service, but I will leave that for another time.

I think data caps are unfair, since Comcast typically (if not always) has a local monopoly. In my home, Comcast is the only broadband, high speed internet provider. I have no options other than:

- accepting the cap, even as my needs increase
- switching to another provider with much slower internet speeds
- stop using the internet

The caps will become evermore restrictive as my life changes. My wife and I are providing full time care to our two grand children. Also, we are adding additional internet based services to our house: home security, smart appliances, etc. It is only a matter of time before we exceed the current cap.

Finally, I believe the Comcast data usage limit is simply another means of controlling bandwidth or internet speed based on income. Poorer people likely will not be able to keep up with increasing charges. At one time, only a few people could afford private phone lines, everyone else had to either use a party line, or travel to a neighbors house to make a call. Do we really want to return to these times with regard to our internet use?

**Company Complaining About:** Comcast

---

## **Description**

Comcast informed me that I now have a cap on my internet of 1TB per month. I'm a CGI artist and this is concerning for me because I have to transfer many large video files (upwards of 5GB per second of footage) for work. I also watch video tutorials online to learn my trade and I share many of my personal projects with other aspiring artists. This hurts me, because I send and receive a lot of data for work. This hurts other artists because I'm less inclined to share my files since I have a data limit.

Most importantly, this hurts progress. The internet is such a powerful tool and we use it for more and more every day! It's ridiculous to think that someone can use more than their share of it. This is 2016 for goodness sake!

## **Description**

In today's modern era of high speed broadband availability and the need for mass amounts of high speed internet, data caps are a plague on society. I myself live in an area where the only available internet is satellite internet. This would be acceptable if not for the ridiculous data caps imposed by the satellite company. The plan that I have is allows for 10 GBs of high speed internet per month at the cost of 60 dollars. This is outrageous! I could get more, up to 25 GBs I believe for 150 per month which is even more laughable. I am super frustrated with this situation. I need more internet for work but I just have no other options. Please push to have these ignorant, useless data caps removed so that I can have usable internet. If that can't happen, decent internet needs expanding into my area so that I can purchase it and drop my current provider Exede.

**Date:** 10/24/2016 12:27:28 AM

**City/State/Zip:** Salt Lake City, Utah 84101

**Company Complaining About:** Comcast

---

## **Description**

It is unfortunate to begin with that the only useful internet service in my area is Comcast. Century Link only offers 10mb/s service.

The cost of internet service through Comcast is already high, and now they are implementing data caps. Previously the internet service I have through Comcast has been for and advertised as unlimited. They have been trying data caps on a trial basis elsewhere but not in my location, while in a leaked memo, Comcast employees were instructed to state that the policy is for "Fairness and providing a more flexible policy to our customers", and not for controlling network congestion.

The FCC required Charter Communications must not implement data caps as part of their approval for Charter's purchase of Time Warner Cable. Comcast must not be allowed to operate as a monopoly with the benefit of charging its customers by changing the service terms for a service that they pay an already high price for.

Comcast is attempting to create further profits based on their monopoly power while the Wall Street Journal has said "Cable executives and analysts say that about 90% of the money cable operators charge for broadband goes straight to gross profits, since there are minimal operational costs for providing Internet service."(Wall Street Journal November 13, 2012)

It is time that the FCC regulate internet service providers as a utility like telephone companies. Bandwidth is not a tangible item like the stuffing in an Oreo cookie. This data cap is nothing more than unscrupulous cash grab.

**City/State/Zip:** West Valley City, Utah 84120

**Company Complaining About:** Comcast

---

**Description**

The caps are weeding out cord cutters, and pushing them to once again pay for unlimited internet (so comcast can supplement the cost of losing cable customers). My internet was supposed to be "Unlimited" from the time I bought it. Now I must pay 50\$ more to be "Unlimited" yet again. This will put my bill back to what it was when I had internet and TV through Comcast.

They shouldn't be allowed to do this to customers who have decided to cut the cord from their TV service. 1TB isn't sufficient when it's your main source of TV entertainment, and you have multiple people in the house watching HD streams.

It's obvious they are doing this to recoup lost revenue from people who were sick of paying high prices for their TV service. There is no other reason for them to institute these caps, other than a desire to make more money. With the little to no competition in most area's, people are forced to pay these fees, or suffer ridiculous penalties.

[Ticket: # 1283784 - Comcast data caps](#)

**Date:** 10/24/2016 12:23:27 PM

**City/State/Zip:** Champaign, Illinois 61821

**Company Complaining About:** Comcast

---

## **Description**

Comcast is going to roll out 1TB datacaps on their services. There is a near negligible cost of passing traffic over copper or fiber lines. The burden of traffic on their nodes and switching equipment is laughable.

We will reach a day where there 1TB threshold is ridiculously low for everyone across the board. I have no confidence that Comcast will re-evaluate their caps and up their limits as appropriate. This cost will become standard, as a means of nickle and diming the consumers.

I am a high consumer of net services, both for my work and for entertainment. I am currently forced to use comcast as there is no adequate competitor at this time.

---

**Ticket: # 1283896 - Comcast Data Cap****Date:** 10/24/2016 1:05:08 PM**City/State/Zip:** Huntingdon, Pennsylvania 16652**Company Complaining About:** Comcast

---

**Description**

It was nice that Comcast upped the Data Cap from 250 GB to 1 TB but it's still ridiculous. I'm currently using Comcasts internet and tv but would like to switch tv because the service keep going up (\$99.99 for the first year, 142.50 for the second year). I'm looking to use an internet based tv company (Playstation Vue) but I'm a little nervous because Comcast's is like a sharks with there data cap. I find it ridiculous that they are purposely charging more to use it and believe they do it because they are competing with the Vue and would rather I stay. I believe they have an unfair advantage and hindering Playstations ability to compete because of it. They keep saying that if you use more, you should pay more and keep comparing it to electricity but we know that isn't true. I was away on a business trip for 2 weeks in July and could see my internet usage was a little less then half the average for the last 3 months and guess what, I still got charged the same amount for it. If you look at my electricity bill, I paid about half compared to the same time frame (and the prices for electricity went up in the last year) because I used less. So we're not comparing apples to apples. I believe Comcast and all ISP should either remove the tier system or be punished for hindering innovations (Playstation Vue).

---

[Ticket: # 1283928 - 1TB Data Cap](#)

**Date:** 10/24/2016 1:17:54 PM

**City/State/Zip:** Universal City, Texas 78148

**Company Complaining About:** Comcast

**Ticket: # 1284085 - Comcast data caps**

**Date:** 10/24/2016 2:21:24 PM

**City/State/Zip:** Vancouver, Washington 98684-8281

**Company Complaining About:** Comcast

---

## **Description**

I have recently been informed that Comcast is rolling out their one terabyte data cap across the US fairly soon in my state. I am a Twitch,tv streamer, Youtuber, artist, designer, and video editor. With a 1 Tb data cap, it would restrict my ability to do my job, and restrict my family's ability to be entertained when they return home from their jobs.

We can hardly afford living in this apartment as is, and an extra \$50 on top of our internet bill would simply not be possible, and would force me out of my job, considering all the uploading and downloading I do in an average day. My family easily eats through tens of gigabytes per day, not to mention the gigs I upload daily to youtube, and the bandwidth needed to stream can get enormously high when my streams go for 4 hours or longer at a time.

There simply isn't any reason for the data cap to begin with, I would be understanding if everyone in my city was like me, making, uploading, and downloading hundreds of things for my job, but most people are not like me, and use a fraction of what I use. We also can't forget about the 300 GB data cap that was discovered by users in 2015, which can easily be broken by today's standards. Raising the cap isn't going to help when users like myself and my family continue to watch higher data using content, like 4k+ resolution streaming, and in my case uploading. This doesn't just affect me, it affects everyone who uses comcast, including every single person forced to pay for their services to use this apartment complex, despite not wanting their services to begin with.

In closing, I thank you for your time in reading my say in the matter. I hope that data caps are given much better reasons to exist than a business decision in the future, especially when issues like this come up so often for the same company. It's a policy that punishes those who already reach the cap monthly, and does nothing to benefit those who don't. There's not even a technical reason for it, ask any engineer that works for the company.

## **Description**

Comcast's data cap implementation is unfair and unjust in this day and age. Where 4k gaming, streaming and other things are just coming into play, 1TB of data will very quickly get eaten up just by one person. If you have multiple people in your house, well then you are going to be forced to pay for unlimited data or the overage fees.

We are in 2016, data caps are from years past when 5gb a month was considered normal. You can now eat up 5gb a month just by watching 2 hours of netflix.

When we signed up for comcast internet we were promised UNLIMITED internet for the duration. Now we have to pay extra for unlimited. Comcast cannot be allowed to get away with this.

**City/State/Zip:** Milwaukie, Oregon 97267

**Company Complaining About:** Comcast

---

## **Description**

This data cap will negatively impact a consumer's ability to access services such as Netflix that compete against Comcast's own entertainment services, such as their Stream TV service, which are not subject to the same restrictions. This dangerous precedent will allow Comcast to edge out its online competitors or force online consumers to pay overage charges in the future as entertainment requires more and more data throughput. It's anticompetitive, anti-consumer, anti-innovation, and must not be allowed.

[Ticket: # 1284266 - Comcast Data Cap](#)

**Date:** 10/24/2016 3:26:54 PM

**City/State/Zip:** Springfield, Illinois 62704

**Company Complaining About:** Comcast

---

## **Description**

Comcast arbitrarily imposing data caps on customers is pure price gouging. There is no technical need for these caps just a way to charge their customers more for the service they are already paying for. Comcast doesn't have a limited supply of data like other utilities they are only supplying the medium for data transfer their is no reason for Comcast to charge and limit customers for how much data is transferred.

---

**Ticket: # 1284278 - Comcast Data Caps Unjustified****Date:** 10/24/2016 3:33:17 PM**City/State/Zip:** Oregon City, Oregon 97045**Company Complaining About:** Comcast

---

**Description**

Comcast is using a legacy mechanism that is intended to further push their profit while stating they had no reason beyond a business decision to implement the Data Caps. Furthermore this goes directly against Net Neutrality, in which ISP should treat all data equal. This practice is a direct shot on large bit-rate users such as Netflix, Twitch, and various streaming services. Not only that, this also hinders the advancement of things such as 4K TVs and streaming of that content. 4K will use a much higher bit-rate in order to stream at that high of quality. Instead of having it over their internet traffic, Comcast is pushing their 4K channels. While keeping their selection extremely limited.

**Company Complaining About:** Comcast

---

## **Description**

This complaint is being filed due to Comcast's desire to implement 1TB data caps on Internet usage. The Internet is a vibrant thing that has made my online business entirely possible because of access to sites like Twitch.tv without having data caps and as more technology becomes accessible data use rates will continue to go upwards. Instituting data caps is a de-facto violation of "net neutrality" as it will limit the use of high bandwidth sites like Twitch.tv to those that can afford "better access" at the consumer level to remove these data caps. I deliberately moved out of the area I lived in before so that I had different internet options to avoid Comcast's poor level of service at high prices but many people do not have that option which highlights the need for ensuring that data caps do not become common-place. Charge everyone the same price for the speed you want and don't have artificial limits in place to prevent people from getting what they need.

**Ticket: # 1284325 - Data Caps**

**Date:** 10/24/2016 3:48:28 PM

**City/State/Zip:** Woodinville, Washington 98077

**Company Complaining About:** Comcast

---

## **Description**

I am a heavy user and am reliant on the internet. My household uses upwards is 1tb of data each month due to our jobs. With Comcasts new 1tb data cap, this will put a hinder on out usage and force us to pay more for the data we use, even though we rely on it to do our jobs. This kind of behaviour from an internet provider is ridiculous and should not be allowed. With technology going towards 4k streaming in the coming years, this cap will limit usage everywhere.

**City/State/Zip:** Knoxville, Tennessee 37920

**Company Complaining About:** Comcast

---

## **Description**

Data caps, of any form, through any company are a hindrance to innovation and the future of technology. They serve no purpose, nor are there any legitimate reasons for enforcing a data cap other than a blatant cash grab and an excuse to not update infrastructure. The current cap of 1TB is far too inadequate for today. It is especially inadequate for when 4k streaming becomes mainstream and can use upwards of 7GB of data per hour. This is placing a hindrance on speeds. This is simply unacceptable when compared against other countries whose entire country has 1GBPS internet access speeds.

---

**Ticket: # 1284442 - Comcast Data Caps**

**Date:** 10/24/2016 4:19:10 PM

**City/State/Zip:** Bloomfield Hills, Michigan 48301

**Company Complaining About:** Comcast

---

## **Description**

With Comcast's introduction of a 1TB data cap per month. There is no reason for Comcast to impose these caps except to raise prices on an already vital service. There is very limited competition on internet service in many areas of the country including my own.

This lack of geographic competition makes it clear that this is a regulatory issue. 1TB of data now may be a reasonable cap but it will not be in the near future. Secondly I am concerned that this may be a limiting tactic by Comcast against streaming providers. Streamers are a direct competitor to Comcast's cable TV business and Comcast may be using its internet business to limit that competition.

## **Description**

The internet is a commodity most households have access to. Comcast has recently applied a 1TB data cap to their service per month. As a person who utilizes the internet to operate their business, I utilize more than 1TB every month just through business alone, not including watching movies and TV shows.

This internet data cap serves no purpose for Comcast other than a cash grab since they confirmed there is little to no congestion on their services. No internet service should be able to set data limits.

**Date:** 10/24/2016 5:40:12 PM

**City/State/Zip:** N/a, Georgia 30115

**Company Complaining About:** Comcast

---

## **Description**

The release of a 1TB data cap by Comcast is extremely concerning to me, and I would like to voice my views on why this data cap is a very bad thing. First I should state that I am an avid watcher of online content, and have not watched cable television in several months. I am greatly in support of platforms like Netflix, Amazon Prime, and Twitch, so this cap is serious business with the upcoming 4k content likely rolling out from these platforms in the coming months.

This new cap, if this is their intention or not, is timed very closely before many platforms will allow much larger file sizes for streamed content, and practically guarantees that the majority of their customers who watch Netflix, Hulu, Amazon Prime, or other services will go over their data cap. From my perspective as of the 24th of October, I have alone used almost 750GB of the data cap just from using Twitch.tv and YouTube at their default settings.

I highly emphasize the danger of allowing a company to impose a data cap when so much of our lives rely on the internet to do basic functions.

Anything that is needed for functioning as a normal citizen in our society should not have a limit to how much we can consume, given that there is a rate at which we can consume it.

Thank you for your time, and I hope you consider this position.

## **Description**

To be short, sweet, and to the point, I live in an area where Comcast has a monopoly. There are no direct competitors and no alternatives for internet service providers. Starting November 1st, Comcast will be putting my internet usage under a 1TB data cap. This is unacceptable. I stream as a side-job and as a hobby on Twitch.tv and once the data cap is implemented I will be forced to shell out a premium for them not to impose a limit on my internet activity. My living is based off of me uploading content to youtube, twitch, twitter, etc. and in order to do that effectively I need to be kept in the know of what is going on regarding all aspects of streaming and video game news. This is deeply troublesome because if the data caps are imposed I will only be able do 34.7% of what I currently do a month. Not including hosting my own personal website on that same connection and providing various web services, all of which use data.

Please, for the love of god, tell Comcast to go fuck themselves and not to take away my freedom to reap the benefits of what I've spent 2 years building. I genuinely believe they do not have the basis to take away my freedom of undeterred browsing because they want to create more profits and push their share prices up.

**City/State/Zip:** Hillsboro, Oregon 97123

**Company Complaining About:** Comcast

---

## **Description**

By placing caps on internet usage, Comcast (and other companies that employ this practice) are essentially going to slow the growth of the Internet of Things. Movie streaming, gaming, everything.

The future is moving towards more things being done across the internet, and capping and charging obscene rates for it, when Comcast themselves admitted there are no congestion issues that would warrant a cap, only serve to slow innovation and harm consumers.

This also sounds like a violation of net neutrality, since they exempt their own services from the cap.

## **Description**

On knowledge and belief, Comcast is rolling out a new data cap of 1TB for its customers. As a company that which is allowed to operate a virtual monopoly, the government has a responsibility to step in and prevent abuses such as this; a ploy to increase their bottom line. While it might be true that a very small number of customers will be affected by this policy change currently, Comcast has likely calculated that the \$50/mo price tag to lift its artificial data cap to be a revenue driver only a couple of years down the line as information technology bandwidth requirements grow exponentially. Comcast has acknowledged that there is no congestion issues with its network. It may be that this new policy claims to combat piracy or create "fairness" between the top percentile of users and the median; these are straw-man arguments and should be dismissed as such. These Comcast data-caps are a dangerous precedent and shouldn't be allowed to move forward. Thank you.

**Description**

I received a notice in the mail from Mr. Hank Fore of Comcast of Comcast notifying of a new usage based data plan, limiting my account's internet use to 1 TB a month. As a University Student in on-Campus housing it is outrageous that not only would such an unacceptable and immoral restriction would not only be placed on me, but those attempting to further themselves and the country at an institution of higher learning. These even do so with unsubstantiated factoids of what a Terabyte could do so without context such as so many hours of video at a certain compression or bit-rate and further use doublespeak stating that their plans are based on the principle of fairness. As a University Student, I can guarantee that both those around me not only use a higher amount of data, but also do so for advance the technology and practices that have built these systems that our modern communication depends on. They even making the egregious error of choosing to speak for the "vast majority" of their own customers. They talk about ways of managing your data usage, when Comcast itself serves ads, thereby making money off on both ends of a customer's data usage by increasing data used and charging more for it. Not a data cap, an extortion of customers based on Comcast's service of both ends of Internet Consumption, but it also violates the principle of Net Neutrality that our open Internet was built on and threatens the further social advancement that we all hope to achieve.

## **Description**

I recently submitted a complaint against Vyve Broadband and received an unsatisfactory response from Regional General Manager Dave Harwood.

He disregarded a few paragraphs in my complaints and ignored some of my questions. It seemed like he did a cookie cutter response, so I will restate some of the questions he did not answer and put my rebuttal here as well.

1. You stated that 99% of your customers use less than the 1TB data cap. Of course most customers will not go above the cap, because it is a CAP. What happens when someone approaches a cap? They STOP so they do not go over it. T-Mobile did a study and it showed that citizens that had an uncapped data plan used 20-30x more data than ones without.

(<https://www.publicknowledge.org/news-blog/blogs/t-mobile-data-roaming-petition-proves-wireless-data-caps-are-about-market-p>) You stated the average consumer uses 150GB a month, which is we take the low average from the study it means that your AVERAGE customer would use 3TB of data. So your statement about "listening" to your customers is false since you are not providing the AVERAGE customer the amount of data they would truly use.

2. You claimed there is no "cap" on my usage, just "should you exceed the monthly data limit for your plan, you will enjoy the same internet speeds, but will be charged extra \$10 per 50GB.

You lied Mr. Dave, as Wikipedia states "A bandwidth cap, also known as a band cap or a data cap,[1] limits the transfer of a specified amount of data over a period of time. Internet service providers commonly apply a cap when a channel intended to be shared by many users becomes overloaded, causing a strain on the provider. The provider then charges based on the amount the subscriber goes over." ([https://en.wikipedia.org/wiki/Bandwidth\\_cap](https://en.wikipedia.org/wiki/Bandwidth_cap))

That is EXACTLY what you sent in the letter, which mean there is a "cap" Mr. Dave.

3. Yes you provide a data meter to prevent me from going over the CAP, which is why 99% of the people don't go over, because it is a CAP.

4. You state that you incur cost based on the volume of data used by your customers. However, if this is the case, why do you provide UNLIMITED HD VIDEO STREAMING of cable? Its the same EXACT data being sent but you don't have a "cap" on it.

Studies have shown that during PEAK HOURS is when you have congestion and that is the biggest threat, not the AMOUNT OF DATA (<https://www.newamerica.org/oti/policy-papers/capping-the-nations-broadband-future>)

You state the "cost" is the reason, and if this is true, then why is the prices increasing and caps being enforced when the overall cost to provide data has been decreasing?

5. You stated that the FCC supports data cap however the FCC has always been consumer based. Lobbyist from ISP's have attempted to pass provisions that hurt the consumer. The amount of research and studies that have proven your statements wrong are copious and you are blind if you believe your "customers" want a data cap.

You are preventing growth, you are not allowing customers to watch what they need. Netflix offers 4k video streaming, which can use up to 8GB for an hour of footage. However, we will not be able to watch stuff and ENJOY our internet because of data caps.

If you are truly for the "customer" then provide a plan with unlimited data, after all you provide unlimited HD movies on my TV cable subscription, so why not on my internet subscription? They use the same data.

Internet is a utility NOT a luxury.

## **Description**

<https://www.google.com/amp/s/www.engadget.com/amp/2016/10/06/comcasts-1tb-data-caps-start-to-roll-out-nationwide/?client=ms-android-att-us>

I am against data capping. Since Internet is now a utility, it should be regulated more strongly by the FCC. We need to start enforcing net neutrality regulations. Internet construction and establishment was publicly funded and should not be allowed to be privately capitalized at the expense of US taxpayers, and solely for the benefit of business. Internet is increasingly a daily necessity in life for school, work and other personal reasons. Data capping is a predatory practice and should be considered illegal. There is no shortage of data and these assertions should be considered false until factual 3rd party research proves otherwise.

Comcast is an oligopoly and is one of only a few options I have for Internet, of which only one of the companies offers a comparable service.

## **Description**

I have just learned my internet service provider (ISP), Comcast, will be capping my previously unlimited internet connection to one(1) terabyte per month. Comcast is the only ISP in my area to offer 21st century bandwidth levels of bandwidth or in your parlance "broadband". I had previously been a customer of Sonic.net, a local ISP whose connection to my home barely made it to 20 Mbps. I will likely return to the 20th century levels of bandwidth offered by Sonic.net to support a company doing it's best to offer competitive products that are customer focused. Comcast is using it's position as the only ISP to offer actual broadband speeds to extort more money for less service from it's customers. Why did the same service that has no caps cost \*less\* in October than it would in November ? Is there some benefit to the customer ? No, the only benefit is to Comcast and it's shareholders.

My understanding of the current situation is that the only truly 'broadband' options left open to a customer in my area (the SF Bay Area) now have data caps. ATT instituted absurd data caps of 2 or 300 GB and now Comcast will institute a 1000 GB (1 TB) cap. Both want to nearly double one's bill (or more) if one uses more than the allotted amount, clearly indicating that these new policies are nothing but a cash-grab by companies that have not kept up in the 21st century market place. They need to replace their dying businesses, in ATT's case of long distance charges and in Comcast's case of cable TV access.

My household are heavy internet users, although we do not run enough bandwidth through our connections to run past these caps today, tomorrow will be a different story as it will be for every consumer. It's quite obvious these data caps will effect a lot more than the 1 or 2 percent of customers Comcast and ATT claim they will once the majority of households are streaming very high resolution video content and utilizing services we cannot at this time foresee (VR or some version of 360 degree video come to mind). Will these new services have to cut off a piece of their pie to these ISPs for each customer that connects to them. I can't see that working very well; save yourselves some work in the future and prevent them from these caps today. If the ISPs come back with increased prices, every customer can make decisions that support a future open internet (or not) and not just those who have their ears to the ground.

In short I ask you, the FCC, to work for the consumer in fighting these unfair backward's looking anti-competitive practices by the ISP's that have been granted monopolistic powers in most areas of the country.

---

**Ticket: # 1285095 - Comcast data cap**

**Date:** 10/24/2016 10:19:26 PM

**City/State/Zip:** Buckley, Washington 98321

**Company Complaining About:** Comcast

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

---

**Ticket: # 1285104 - Comcast Data Caps****Date:** 10/24/2016 10:22:14 PM**City/State/Zip:** Lemoore, California 93245**Company Complaining About:** Comcast

---

**Description**

As you are most likely aware, Comcast has been rolling out data caps nation-wide on their customers. While 1 TB of data seems like a large number, in the case of my household, it is not. My household uses over 1.5 tbs of data per month. We make heavy use of broadcasting services such as Twitch and Netflix, in addition to console and PC gaming. We even pay extra for Comcast's business class just to not have to worry about a data cap (back when Comcast had secretly implemented a 50 gb cap a few years ago). We simply cannot afford the additional fee for going over a cap we once didn't have (or at least have to worry about).

It doesn't help that Comcast is essentially a monopoly in many areas where they provide service, despite their CEO's claim to the contrary while exactly describe a monopoly. In my area, the only available ISPs are AT&T DSL, Comcast and local dial-up. I used to have AT&T DSL, but I stopped using them when they repeatedly refused to improve the quality of their phone and DSL services.

This data-cap that Comcast will implement will do considerable financial harm to many households, such as my own, that depends on unfettered bandwidth for their livelihoods as well as information and entertainment.

---

**Ticket: # 1285121 - Comcast Data Caps****Date:** 10/24/2016 10:38:08 PM**City/State/Zip:** Cottage Grove, Minnesota 55016**Company Complaining About:** Comcast

---

**Description**

As an avid user of the internet, these types of data caps are restrictive, unfair, and unnecessary. Even Comcast has said this themselves <http://www.extremetech.com/computing/212376-comcast-admits-that-its-data-caps-are-a-business-decision-not-an-engineering-requirement> . Now, as a student that shares a connection despite having to watch many hours of video lessons, remote video connections (as I study ITT) and of course the occasional recreational data usage for entertainment, this will affect me personally and raise my cost of living because as it is not just myself using the connection, a 1TB cap is far too small. Despite them saying "customers who use less, pay less" to justify these caps, costs are not going down. As a service nearly everyone must use every day, with many like us not having a choice in which company provides for us, this should be classified as a utility and such practices disallowed.

## **Description**

I received an email on October 6th informing me of a change to Xfinity's data usage plan. I currently have a two year contract with Xfinity for cable tv and internet with unlimited data. In my area, Xfinity will be changing from unlimited to one terabyte of data. You can then add unlimited data for an additional \$150 per month. I've attached the I email I received. According to Xfinity, they can change the terms of the contract at any time, yet if I were to do so, I would be penalized.

While my family does not currently come close to using that much data, this trend is of greater concern. More and more people are turning away from cable and streaming much of their entertainment and news. A home with just a few teenagers, I'm sure sure would go well over this terabyte of data. The internet needs to be available to all and not cost prohibitive. Thank you.

## **Description**

Comcast keeps pushing their 1TB data cap for internet usage to more and more states. My state is not currently affected, but it's only a matter of time. They should not be allowed to put a cap on anyone's access to the internet. This is just a way for them to impose more fees on their customers because they offer an unlimited data option for an extra \$50 a month. They claim that this won't affect 99% of their customers, but it is actually very easy to reach the limit with a family of 4 with only average usage. This company is notoriously greedy and they essentially have a monopoly in many markets. They should not be allowed to use this strategy to force all of their customers to use the internet less which in turn forces everyone back to their dying cable service. This data cap nonsense has to stop.

## **Description**

Comcast is looking to expand its data caps on home internet to a much larger portion of the US and I feel these practices are against an open Internet and pose a tremendous threat to net neutrality. Fortunately these caps are not coming to my area as of yet, I fear they will come shortly and this practice may become the norm. Due to limited competition in my area and many others, I won't have an option to avoid this change if I want to keep speeds that should be available nationwide, but aren't. Please don't let Comcast and other ISPs continue to use practices that are so anti-consumer. While this complaint will most likely warrant an auto response from Comcast, I hope that more people will file complaints to the point where something has to be done to stop this monopoly.

## **Description**

Comcast's new data cap is ridiculous.

First, one big issue is that Comcast is not announcing this new change in policy. They don't send you an email, letter, or call you up about these changes that are happening. I only found out because I read about it online in an article. If I had not stumbled across it, November 1st would have rolled around, the new 1TB cap would've been activated for our household, and we would've gone over it easily and been billed extra for something we had not been informed about. That alone should be throwing up a bunch of red flags. They're preying on customers who won't pay attention to the increased price in the bill, or people who have automatic bill payments. Even when I called to confirm that these changes were happening, the first Comcast agent said we were already under a 300GB internet cap, which wasn't true. It wasn't until we got to the third agent that he confirmed we didn't have a cap, but the 1TB cap would go into effect November 1st.

They tested caps in parts of the country by putting 300GB caps on home internet, and now they're forcing all customers to a 1TB(1,024 GB). That doesn't sound so bad, right? People who had the 300GB cap now have an increased cap, a bit more than triple. That is true, except the 1TB cap is still not enough. For a decent amount of people, they won't even notice. People who sparsely use the internet.

The real issue is with everyone else. We're in a new age where internet is very important. Just like back in the day, you needed a home phone. Everyone had a home phone, it was a necessity. Internet has quickly grown in importance and is even more of a necessity than home phones back in the day, because it does so much more.

People need the internet, and the majority of people use a lot of internet. Emails, videos, video streaming, Voice over IP(VoIP), downloading games, reading the news, online shopping, social media, and so much more require the internet. One person alone can easily reach a 1TB cap a month depending on their internet usage, especially if they do IT work or other computer related professions at home. The real problem comes in when you have 2+ people at home. What about a family of 4? I can easily tell you how that goes, because I live at home with my family. The 4 of us watch YouTube, Netflix, and Twitch on a daily basis. Not only that, but we play games, and the size of games have been getting bigger the last few years exponentially. We, as a family, easily hit 1TB of data before the month even ends. What are we supposed to do, pay an extra \$50 a month for unlimited data when it was already unlimited for years? We live week to week as it is, we can't afford that. We save money by staying home most nights and weekends, playing games together, watching movies on Netflix, or having our own time on YouTube. This all requires internet.

Then comes Comcast, putting a cap on how much internet we can use before going over the cap and getting additional charges. Surely if the internet was a costly resource, it would've been capped since the beginning. No, it isn't. It doesn't cost Comcast more money if a customer uses more or less internet, they even admitted it once or twice. THIS is the main problem. They are capping the internet and charging more if you go over, or charging for unlimited internet. But Internet usage does not cost them anything.

The only thing they can charge customers for that actually costs them money, is home installations, being connected to the ISP, modems, and internet speeds. Home installations is connecting the home to the ISP, and modems is renting or buying modems from the ISP(In this case,Comcast). Internet Speed costs is having a better connection, either through better cables to connect to the ISP, or getting priority over other customers when using internet from the ISP. However, in no way, shape, or form is internet usage costing an ISP a single dime. Sure, using their service should cost money, but using more of their service doesn't cost them anything. They aren't pumping water or gas to the house, a resource that is used up. Internet usage is simply being connected to the network and that is it, they aren't spending money to send data to my home network.

Not only that, but while under the cap, you can't stop using data. By that, I mean that if you're close to reaching the cap, it would make sense to turn the internet modem off and think no more data is being used. Nope, that is incorrect. Comcast constantly sends information to your home network. Not only does that mean that unplugging your modem won't stop your data usage from stopping, but that your monthly data you're allowed to use is wasted. The useless information Comcast sends out to your home network wastes your monthly data limits. You could unplug your modem at the start of the month and leave it so until the end of the month, check your monthly usage, and see that 100GB or so was being used up even though you did not use any internet at all.

They say we have 1TB of data a month, but it might as well be 900GB.

Bottom of the line: Internet usage does not cost Comcast anything, so why is it being capped? There is no other reason, then them trying to earn more money than they already do, even though they are a big monopoly, where many people in plenty of states have no choice but to use Comcast.

Look at any city that has google fiber, and you'll see Comcast's prices are lower there than anywhere else. They're simply abusing their monopoly status, charging high prices and now enforcing caps.

## **Description**

I am filing a complaint against Comcast and their new 1TB data cap policy. Comcast has started implementing data caps in my area that directly effect the freedom and availability of my access to internet content. I am a student that is required to stream instructional internet videos from pluralsight.com as part of my education. With the new 1TB caps, I will have to leave my home and watch these videos from places that offer free access to internet for fear of hitting their new caps. My home currently uses 3.5 TB per month of data and is now being forced to pay Comcast an additional \$50 per month simply because we use more data. I use the internet for my education, for my job, and for my personal hobbies. Comcast's new 1TB data cap very directly changes how I interact with the internet and for the worse. We already pay monthly premiums for our internet and we will not fork out extra money for caps on an unlimited utility.

**Description**

Moved into a new house May of 2016 and signed up for Cox's highest speed internet plan. "Allowed" a data usage of 2TB, which is already against FCC compliance, but put up with it because 2TB is reasonable.

Today I received an email letting me know that Cox is moving to a new billing method based on data usage and that they are expanding my data usage to 1 TB. Yes that's right, expanding my 2TB data cap to 1TB.

This day and age 1TB at 300mbps is nothing. At the speed that I am given I can reach my data cap in ~7.5 hours of max speed usage (!!!). A monthly service that can be capped out in less than half a day is ridiculous. I live with one other person in a house and we have consistently gone over this 1TB because we do not have a TV package so we get all of our media through the internet. We have subscriptions to Netflix, Amazon Prime, Youtube, Steam, and hundreds of other services that provide us with content. And now after about half a year of usage we have to cut down on this usage because of a cap that is imposed even though this cap was not part of the service when we first signed up.

We are fighting for an open internet and these restrictions are making me believe less and less in the power of the FCC and its regulations. Why have them if they're not enforced?

---

## **Description**

Cox Communications sent me an e-mail today warning me that data usage over a new "cap" that they implemented would result in a \$10 fee for every 50GB over this new artificial and arbitrary cap that they created on an existing plan that had no such caps or fees. They provided no way to opt out of this and I am using their largest internet plan, thus they have no options to purchase a plan with the terms I agreed to three years ago. Currently, there are no alternative providers in the area, thus Cox is operating under a monopoly and imposing fees on existing accounts in a malicious and targeted manner.

Interestingly enough, this came days after filling out an online survey sent by Cox asking what I thought of such practices by other companies. I feel this was a targeted effort.

Below is the e-mail sent by Cox:

Dear [REDACTED],

We want to inform you about an upcoming change to Cox billing related to Internet data usage. As Internet data usage continues to grow, Cox is committed to delivering you a fast and reliable Internet experience.

Beginning 11/21/2016, Cox is moving to a new billing method based on data usage. If you exceed your recently expanded 1 terabyte (TB) data plan, Cox will automatically provide additional blocks of data for \$10 per 50 gigabytes (GB) as needed.

What does this mean for you

Your data plan  
has expanded  
to 1 TB

Extra blocks  
cost \$10  
for 50 GB

Grace period  
for two  
billing cycles

Alerts when  
you've neared  
your data limit

You'll be able  
to track  
your data

Your recent data usage history indicates you may be likely to exceed your Cox High Speed Internet data plan of 1 TB per month. We will notify you by email and browser alert when you reach 85% and 100% of your monthly plan. You will not be charged during grace period, which is your first two billing cycles after the effective date.

To view and track your data usage and access your Cox Data Usage Meter and other helpful tools, visit [cox.com/datausage](https://www.cox.com/datausage).

Thank you for continuing to choose Cox as your Internet provider.

---

**Ticket: # 1285639 - Cox Communications Data Caps****Date:** 10/25/2016 11:06:23 AM**City/State/Zip:** Gainesville, Florida 32606**Company Complaining About:** Cox

---

**Description**

Hello,

My ISP is Cox Communications. I do not subscribe to cable TV. I only use their internet service. In the digital age cable tv, physic media and local storage is a thing of the past. Everything is online. Cox emailed me saying they introducing data caps. This email also mentions my previous usage indicates I will be affected by this cap. The cap is 1 terabyte and they are charging \$10 per 50 gigabytes over that cap. My household streams it's television/music, we download our video games and we store our photos and back ups in the cloud. I have no other option in my area but bend to the will of Cox in my area. If I want internet, this is my option and now I am going to have to pay more to use the same service I have had for 5 years (this doesn't include regular price increases by the way) in the same manner I have always used it. After speaking with them, there is nothing that they can do. However, I have a two month grace period to retrain my internet habbits. If I had the option to cancel my service I would. If there is anything that can be done, please intervene.

Thanks.

**Ticket: # 1285671 - Comcast/Xfinity 1TB Data Caps**

**Date:** 10/25/2016 11:20:51 AM

**City/State/Zip:** Denver, Colorado 80211

**Company Complaining About:** Comcast

---

## **Description**

I am writing to complain about Comcast's data cap policy going into effect nationwide on November 1. This is another clear cash-grab by Comcast to squeeze as much money from its customers as possible. These same customers have little to no choice in regards to their internet service providers in the area, and are at the mercy of Comcast's whims in regards to pricing and amount of data that can be used. In addition to the negative effect on its customers, this also allows Comcast to force content providers such as Netflix to pay for prioritized access to its network, just under a different name as before. This behavior by Comcast is anti-consumer and continues to erode at the provisions of Net Neutrality. These data caps have no real purpose other than to set current precedent which affects future content delivery. While the percentage of consumers currently who go through this data cap is low, the time will come when this percentage will rise due to the shift of consumers away from cable television service to internet-only service. With the advent of services such as 4k streaming and online gaming, passing these data caps in a modest family will be relatively easy. What is a slap in the face is the \$50 fee to disable this data cap, as this is an obvious extortion tactic that has no bearing on the network infrastructure of Comcast. In certain circumstances, this fee more than doubles the monthly cost of cable internet service to a home. I urge you, the FCC, to look into this further and to continue to provide regulation and oversight that protects both consumers and other businesses from continued cash-grabs by Comcast.

**Date:** 10/25/2016 11:24:59 AM

**City/State/Zip:** Bonaire, Georgia 31005

**Company Complaining About:** Cox

---

## **Description**

My internet provider Cox Communications has decided to start arbitrarily adding data caps to my internet service. I will be charged \$10 for every 50GB of overage. This is completely unacceptable to me, as it is just a way to squeeze more revenue out of their customers. I currently have no other options for true high speed internet in my area, so I am forced to stay with Cox. This is on top of this summer reducing my "data limit" from 2TB to 1TB to drive customers to their new fiber offerings, which of course are unavailable in my area.

**Company Complaining About:** Cox

---

## **Description**

Cox just sent an e-mail saying that they're introducing data caps. I'm furious. This is a blatant cash grab. It doesn't cost the company more money to provide me more Internet; bandwidth costs have been steadily decreasing for years.

They're violating the core principle of net neutrality by giving preference to their own content. The notice they've posted on their web site says that "Content managed by Cox included in Cox-provided services do not count toward data usage."

This move is anti-consumer; they want to motivate their customers to utilize Cox services in order to avoid running up against their monthly data cap. I am a cord-cutter; I don't use cable television and legally stream my content online via services like Netflix and Amazon Prime. This move will directly impact how much I can utilize the other services I've paid for.

I don't have a choice about my Internet provider; my apartment complex only offers Cox. You can be sure that I will be selecting another ISP once I am able to, but in the meantime I am stuck with this awful, anti-consumer, anti-net neutrality policy. Please intervene and make the ISPs drop data caps.

---

**Ticket: # 1285980 - Cox New 1TB Data Caps**

**Date:** 10/25/2016 1:02:49 PM

**City/State/Zip:** Gainesville, Florida 32605

**Company Complaining About:** Cox

---

### **Description**

Just received an email from Cox saying they will be enforcing a new 1tb a month data cap and anyone that goes over will be charged \$10 every 50gb over 1tb. I think this is ridiculous. Data caps shouldn't exist, let alone hard data caps.

---

**Ticket: # 1285990 - Cox Communications increased Internet prices; new data cap; service remains unreliable**

**Date:** 10/25/2016 1:06:51 PM

**City/State/Zip:** Gainesville, Florida 32601

**Company Complaining About:** Cox

---

## **Description**

On Oct. 6, Cox Communications announced they were increasing prices across all tiers of their Internet service. This is the second rate increase in just over a year -- without any improvement to speed or reliability. I spoke with a representative who could not provide any concrete, specific examples of how my service was improving given the increased rates.

Instead, she copied language that was already on my statement and likely elsewhere on their website. We were unable to reach an understanding, and I left feeling disappointed and without recourse. I have attached a screenshot of the transcript.

One thing the representative did note was that "the rate went up because of the increase in data allotment." This is not true -- there was never a data cap previously, and now Cox has informed its customers of a 1TB data cap.

Thank you for looking into this matter.

---

**Ticket: # 1286020 - Comcast data capping at 1TB**

**Date:** 10/25/2016 1:15:54 PM

**City/State/Zip:** Albuquerque, New Mexico 87114

**Company Complaining About:** Comcast

---

## **Description**

Comcast has enforced a new policy effective Nov. 1st 2016. The data cap in my state will be 1TB. Our house consistently uses more than 1TB of data, pay \$110 per month for this privilege, and face slow speeds constantly. I suspect that they are also tampering with the connection speed when we use a lot of data. We know about net neutrality laws. Comcast should not be allowed to get away with this.

---

**Ticket: # 1286056 - COX Internet Service**

**Date:** 10/25/2016 1:32:49 PM

**City/State/Zip:** Gainesville, Florida 32605

**Company Complaining About:** Cox

---

**Description**

COX has today announced the introduction of data caps in florida in order to charge customers more for the same service they already pay for. Message I was emailed stated in part:

"We want to inform you about an upcoming change to Cox billing related to Internet data usage. Beginning 11/21/2016, Cox is moving to a new billing method based on data usage that will help keep future costs reasonable for the majority of customers by charging the heaviest Internet users more.

Due to this change, we just increased our data plans to 1 TB per month. If you exceed your data plan, Cox will automatically provide additional blocks of data for \$10 per 50 GB as needed."

"Your data plan has expanded to 1 TB"

I have unlimited data access, it is a lie to say my data plan has expanded to 1 TB.

---

### **Description**

Comcast is putting a 1TB cap on my download limit next month which can be avoided by paying an extra cost per occurrence. There is no viable reason for this and since I only can get internet via their service I am more or less paying whatever they charge because they can monopolize the market in my region

---

[Ticket: # 1286171 - Data caps are bad.](#)

**Date:** 10/25/2016 2:12:55 PM

**City/State/Zip:** Gainesville, Florida 32608

**Company Complaining About:** Cox

---

## **Description**

Data caps are a threat to an open and free internet and are only in place to siphon more money out of customers. 1 TB of data per month will soon be insufficient for an average household as 4k streaming becomes more prevalent and the size of digital downloads increases. Digitally buying a single game on the Xbox marketplace currently requires me to download over 50 GB and with four college students living in our apartment, each with their own computers, phones, and streaming services, I am surprised that we have so far managed to stay within the current data limits imposed by Cox.

---

**Ticket: # 1286179 - Cox ISP data cap**

**Date:** 10/25/2016 2:15:46 PM

**City/State/Zip:** Roanoke, Virginia 24019

**Company Complaining About:** Cox

---

## **Description**

Hi, I subscribe to ultimate and the data cap was originally 2TB cox sneakily rolled it back to 1TB without a notice. No email, phone call or letter in the mail stating it would be changed to 1TB. When I subscribed I was guaranteed 2TB. Now they have underhandedly gone behind Ultimate tier subscribers to make a quick buck.

Solution: Move ultimate back to 2TB or grandfather us current subscribers in.

Not only that they are increasing prices once again... No transparency at all. It was done without any announcements.

**City/State/Zip:** Fort Wayne, Indiana 46814

**Company Complaining About:** Comcast

---

## **Description**

On knowledge and belief, Comcast is rolling out a new data cap of 1TB for its customers. As a company that which is allowed to operate a virtual monopoly, the government has a responsibility to step in and prevent abuses such as this; a ploy to increase their bottom line. While it might be true that a very small number of customers will be affected by this policy change currently, Comcast has likely calculated that the \$50/mo price tag to lift its artificial data cap to be a revenue driver only a couple of years down the line as information technology bandwidth requirements grow exponentially. Comcast has acknowledged that there is no congestion issues with its network. It may be that this new policy claims to combat piracy or create "fairness" between the top percentile of users and the median; these are straw-man arguments and should be dismissed as such. These Comcast data-caps are a dangerous precedent and shouldn't be allowed to move forward. Thank you.

**City/State/Zip:** Spokane Valley, Washington 99216

**Company Complaining About:** Comcast

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

---

**Ticket: # 1286719 - Comcast Internet Data Cap**

**Date:** 10/25/2016 5:41:38 PM

**City/State/Zip:** Maple Grove, Minnesota 55311

**Company Complaining About:** Comcast

---

## **Description**

Comcast is forcing me to change internet plans against my wishes and will now cap my data at 1TB per month, which my family gets very near often. After contacting them they said they only way to retain my current plan is to pay them \$50 more per month.

That's not for any new service, it's simply to get back to a similar level of internet usage that I had previously. I asked them to keep my plan the same and told them I didn't want to opt-in for their new plan but they wouldn't let me keep the existing service.

It seems like they're just extorting me for an extra \$50 per month.

---

[Ticket: # 1286726 - Cox charging for internet overages](#)

**Date:** 10/25/2016 5:43:12 PM

**City/State/Zip:** Pensacola, Florida 32503

**Company Complaining About:** Cox

---

## **Description**

In the past, Cox has limited your connection if you go over your limit, however they offer an upgrade to a higher package. For those of us without a higher package option available, as we have the highest tier, they let it go. I typically use 2+TB a month, which was allowed via my cap, Cox has reduced the cap to 1 TB and sent an email stating that when you go over, you will pay \$10 per 50 GB. If I were to use my 2TB, which was my old cap, this would be an increase of \$200/month. I feel this is a violation of internet neutrality.

---

**Ticket: # 1286752 - data cap**

**City/State/Zip:** Port Huron, Michigan 48060

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently begun capping data usage at 1 tb a month with fees imposed for going over. The initial reason for signing up for comcast is there are little options other than them and they were the only offering in my area with an unlimited plan. I did not agree or sign up for a plan that was not unlimited and I see no reason why there is now a cap. Comcast says 99% of customers are under 1tb a month and that this change is to make pricing fair. If that were the case then shouldn't the prices go down for all the other customers in a tiered fashion such as their tiered capped system? This is nothing but a money grab and attempt at choking their competitors out of business. My household uses more than 1tb of data a month. We do not pay for cable tv and have on demand streaming services like netflix and psvue since we can have smaller programming packages with out all the junk we do not want. If comcast is allowed to continue with this monopoly on the internet in my area then they should not be allowed to cap data usage for absolutely no reason at all. I demand that my government and its employees look into this matter and break up these goliaths if this is how they are going to treat their customers. If you are an internet service provider then that is what you do provide internet not just provide the internet until you reach an arbitrary amount of data that we've decided for you.

---

**Ticket: # 1286781 - Data Caps**

**Date:** 10/25/2016 6:21:46 PM

**City/State/Zip:** Cameron Park, California 95682

**Company Complaining About:** Comcast

---

## **Description**

Comcast's data caps are arbitrary and not needed. They are simply being greedy and wanting to charge more to their customers. I did not sign up for data caps nor do I agree with them. This needs to end. When I asked about it via their chat customer support I was given zero help and bombarded with "deals" and attempts to get me to upgrade. Afterwards the chat rep reset/disconnected my modem out of spite since I didn't want to upgrade speeds.

Please ban all data caps. The internet is the pipeline to knowledge and when you limit knowledge to the population you help create dictators.

## **Description**

In the normal world, buying two items will cost you the sum of the individual prices. Some companies opt to offer a bundle of the same items for a slightly discounted rate. In Comcast's world the price of one item is nearly double the price of the bundle. This forces consumers into purchasing services they do not want. In turn this artificially inflates Comcast's TV Subscriber numbers to increase the perceived value towards advertisers.

I recently ran into this issue when attempting to lower my high speed internet bill. For the past 4 years I have been a customer with Comcast, my bill has gradually increased nearly 335%! During this time my service has received no significant updates. I attempted to contact Comcast in order to lower my bill, but am stuck with purchasing more services I do not want to keep it near what I am paying today. The only options I have are to bundle services I do not want to purchase, or move to the lowest tier of internet speed. Either way my bill will still increase. My current internet speed meets the minimum FCC definition of Broadband.

I would love to take my business to another ISP, but am unable to. Comcast is the only business which provides High Speed Broadband services to my apartment building.

To add to the issues, Comcast has created a datacap for home broadband service. With this cap Comcast has unfair control over online competitors such as Netflix, Hulu, Amazon, Sling and more. Now there is a limit of how much consumers are allowed to stream from Comcast's competitors, but these data caps do not apply to Comcast services. This is an unfair advantage given to Comcast and directly conflicts with the ideals of Net Neutrality.

Additionally this gives Comcast an unfair advantage to advertise as they see fit while punishing their users who go over data caps. Advertisements from competitors count against Comcast's unfair data caps.

[Ticket: # 1286887 - Comcast activating a new XFINITY Internet Data Usage Plan in my area.](#)

**Date:** 10/25/2016 7:13:47 PM

**City/State/Zip:** Renton, Washington 98056

**Company Complaining About:** Comcast

---

## Description

I'm in a 2 year contract for TV and Internet with Comcast XFINITY, I just received the following noncompetitive notice:

"We're writing to let you know that we will be activating a new XFINITY Internet Data Usage Plan in your area. Effective November 1, 2016, your XFINITY Internet service will include one terabyte (that's 1,024 GB) of data usage per month."

This is new burden a big deal because I have used close to and sometimes over this amount of usage. Right now my current data usage for this month is around 700GB or 70% of the data plan. This new change is a money grab as information transportation costs decrease and the size of HD content increases this new policy will place of huge burden on all Comcast customers now, and even more in the next couple years.

I called Comcast and they said they are unable to remove the data cap from my plan after escalating the call several times, but being the only provider of high speed internet that I need for my job(>40Mbps). I am stuck.

---

**Ticket: # 1286908 - Internet Data Caps****Date:** 10/25/2016 7:28:33 PM**City/State/Zip:** Folsom, California 95630**Company Complaining About:** AT&T

---

**Description**

Hello,

I have looked at my AT&T account and I am now being limited on how much data I may use per cycle. AT&T first decided to limit our household to 600GB, and then later raise it to 1TB, when Comcast limited home internet to 1TB as well. I do not like this new trend of data caps on home internet, especially since we used to be paying the same amount for unlimited usage of internet. With these new data caps, I have not seen a decrease in how much I have to pay for internet service, and there is no visible benefit to having data caps on home internet service. This new trend of capping home internet, like mobile data, is something that I do not agree with and the only option to receive unlimited data, again, is to spend even more money, which is quite ridiculous.

It has been shown that ISP's indeed have the infrastructure to give us faster speeds and unlimited use of internet, examples are areas in which Google Fiber appeared. Overnight, ISPs that used to offer slow speeds, all of a sudden, doubled and even tripled their offered speeds for no additional cost. As far as I can see, this new trend of capping internet is a cashgrab and in no way, shape, or form benefits the customer. The excuse of "committed to delivering you a fast and reliable Internet experience" is not sufficient as Google Fiber has shown that these ISPs have the ability to give us unlimited internet at much faster speeds. With the advent of streaming and gaming. Internet use has gone up, but service did not seem to suffer any more than the usual. From my experience, the ISP's are capable of this new load, but just want more money in the end.

Please look into the ISP's new data caps, as I do not wish to see home internet capped for no reason other than to make more money.

---

**Ticket: # 1286918 - Cox is imposing data caps on my Internet service**

**Date:** 10/25/2016 7:34:01 PM

**City/State/Zip:** Mesa, Arizona 85209

**Company Complaining About:** Cox

---

**Description**

Cox recently rolled out a hard 1TB cap on my Internet service.

This creates a situation in which online entertainment services like Netflix would be forced to compete against Cox's own services. This dangerous precedent will allow Cox to edge out its online competitors or force online consumers to pay overage charges in the future as entertainment requires more and more data throughput.

Furthermore, it unnecessarily impedes emerging video technologies such as 4k streaming while simultaneously punishing those that dare to download large games or files.

In addition, this change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include a hard cap on data.

This new cap is anti-competitive, anti-consumer, anti-innovation, and I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

**Description**

Cox, as well as many other cable/internet companies, is starting to roll out 1tb data caps. This is unethical. They have already raised prices on their services multiple times over the last couple of years. They make more than enough off of their customers to upgrade their infrastructure. Data is not a finite resource. People already have enough to worry about in their daily lives without having to worry about if they're going to have to pay another \$10 on their already ridiculously priced internet bill. I pay \$100/mo for 200mb/s internet, and now if you go over your limit, you have to pay \$10 for every 50GB that you go over by. That means that another 1TB of data would be \$200 additional to the \$100 that I already pay. The FCC MUST step in on ridiculous issues such as this, as well as Comcast's data cap. They are not losing money if I use another 50GB of data.

---

## **Description**

Data caps? Seriously? Is this North Korea? Regulate these monopolies as is desirable from a basic economics perspective. If telecoms really need to move to a usage model, do so with a continuous pricing function. Right now, the first 1,000 GB costs 6 cents per GB. After? More than triple the cost per GB. That is ridiculous and arbitrary. Not everyone is a walking cadaver writing 3 emails a month.

---

**Ticket: # 1287065 - Comcast Data Caps**

**Date:** 10/25/2016 9:13:28 PM

**City/State/Zip:** Plymouth, Michigan 48170

**Company Complaining About:** Comcast

---

**Description**

Comcast is taking the profit driven approach to capping people's data usage, without reasonable competition in their service areas for people to show their displeasure by changing to another provider. If you want to keep the unlimited access you've had for years? It's now an extra \$50. For the same service.

<https://www.engadget.com/2016/10/06/comcasts-1tb-data-caps-start-to-roll-out-nationwide/>

It's a bigger deal than that because they'll show that they aren't losing many customers after the move, which will show other ISPs that they can do the same thing, overall worsening the internet access of millions of people for the benefit of a few board members and investors.

America is already behind most of the other major countries in the world in terms of our access to the internet in both pricing and speeds, and this tactic is absolutely not going to help.

Weren't we supposed to be fostering more competition between companies, and improvements to internet access overall? How is this game of chicken race-to-the-bottom approach helping anything but Comcast's bottom line?

**Ticket: # 1287126 - Cox Communications Data Caps**

**Date:** 10/25/2016 10:15:42 PM

**City/State/Zip:** Pensacola, Florida 32514

**Company Complaining About:** Cox

---

**Description**

I have been a happy customer of Cox Communications for over 12 years. I am also an IT professional.

Cox informed me today that they are amending my agreement with them to include a 1TB data cap.

I do not see this as being legal, nor being fair to consumers. It does not cost Cox any more to serve me 1TB data than it does to serve me 1GB, or 100TB for that matter.

As a consumer of internet only from this ISP, it seems as if they are wanting to dissuade competition in the marketplace and introduce a further obstacle for customers to use streaming services (such as Netflix) in lieu of Cox's cable service.

Cox has been a great ISP - I am deeply troubled by these developments. Note that there is no way for me to contact them about this specific matter; the only option is to speak with tech support or billing, and each department says it is 'not their problem'.

---

**Ticket: # 1287144 - Comcast Data Caps Limit Access to the Internet****Date:** 10/25/2016 10:22:58 PM**City/State/Zip:** Philadelphia, Pennsylvania 19104**Company Complaining About:** Comcast

---

**Description**

Comcast (and lately, Cox) has recently moved to enforce data caps of about 1 terabyte (1 TB = 1024 GB), charging people more money if they surpass that cap. The FCC ruled that internet could be treated as a utility, and in doing so, established a precedent previous never encountered before. Since the internet is so important in many peoples' daily lives, from communication to education, it is incredibly important that companies are prevented from price gouging and otherwise limiting access to it. Comcast's data caps limit access to the internet, and therefore to access to the world, either in the form of communication or education or otherwise. While they are currently high (at 1 TB, very few people will encounter them), if they become precedent due to inaction, Comcast would be easily able to lower them, increasing the price of internet without providing additional service. At the same time, this further limits peoples' access to internet, and encourages other companies to follow.

Therefore, Comcast's data caps are excessive and limit access to the internet, and should be stopped. Besides, Comcast should offer additional services or improved service to warrant its increased prices, rather than price-gouging its customers.

**Company Complaining About:** Comcast

---

## **Description**

Hello,

I am writing this in protest of Comcast's new 1TB data caps rolling out November 1st. Comcast should not have the right to limit the subscriber's data. Source here: <http://bit.ly/2eOwkSe>

Comcast is using this opportunity to limit the use of streaming video services such as Netflix and Youtube, which is forcing people to use their own TV service. This is creating a monopoly and they must be stopped before this becomes a larger problem.

Thanks for considering,

██████████

[Ticket: # 1287214 - Data Caps imposed by ISP's](#)

**Date:** 10/25/2016 11:35:28 PM

**City/State/Zip:** Springdale, Arkansas 72762

**Company Complaining About:** Comcast

---

## **Description**

The data caps recently imposed by Comcast and now Cox are ludicrous. This severely limits an increasingly important tool in the modern age. ISP's should provide unlimited data, not rationed amounts. This affects our net neutrality as certain sites which rely on large amounts of data transfer are now being restricted by these data caps and the charges are being forced on the consumers.

**Company Complaining About:** Comcast

---

## **Description**

Comcast is implementing a data cap that our family of six often exceeds. Currently there is no data cap for Comcast, this was the policy when we signed up. Now they want to charge an additional \$50 per month to keep what we signed up for. Absolute crap. There is no other option for internet in my area, Comcast is just allowed to do whatever they want without penalty. There has been no cap for the past few years, all of a sudden they need to implement this cap and my family doesn't even have a choice to change internet providers because there are no other ones.

**Ticket: # 1287235 - Comcast's terabyte data cap****Date:** 10/25/2016 11:47:26 PM**City/State/Zip:** Perkasio, Pennsylvania 18944**Company Complaining About:** Comcast

---

**Description**

Do not allow Comcast to continue non-essential data-capping, and have them remove the caps already in place.

Comcast believes that adding a data cap to basic internet plans already in place will get past the FCC as only a selection of internet users will be affected, the problem they'll find is that we who they're striking at see what they are doing and can't stand for it. Comcast suggests 99% of users use less than 75GB a month anyway. They suggest that because most people won't go over the threshold, no one should worry about, they want to sedate the masses to ignore the fact that with the rise of 4k videos and games, streaming and downloading are going to be much heftier tasks for their bandwidth. Your average consumer doesn't realize this, and even they might not be affected by it, but what of the "Gamers" folks who download games, at a base of 60 gigabytes, rolling out updates and expansions. We play many games, and service providers don't like seeing bandwidth use spike, so this is Comcast's attempt at either slowing it, or trying to make an extra profit from it. Comcast knows they own the market for internet in enough areas. They also own NBC do they not? This data cap is at least in part an attempt to push users off the internet back to the television that many young adults are finding themselves wanting to be rid of.

**Date:** 10/25/2016 11:48:14 PM

**City/State/Zip:** Orlando, Florida 32825

**Company Complaining About:** Comcast

---

## **Description**

I just wanted to join the masses in expressing my thoughts on data caps: I don't want them nor see the benefit it has for consumers. With technology headed towards 4k streaming along with overall increases in applications' throughput requirements, penalizing users for data overages is, frankly, "going against the grain" of technological progression. It is clearly a blatant decision made in the sole interest of corporations to hike profits for corporations; bullshit.

---

**Ticket: # 1287238 - Comcast Nov. 1st Data Caps****Date:** 10/25/2016 11:48:50 PM**City/State/Zip:** Salinas, California 93908**Company Complaining About:** Comcast

---

**Description**

There is no free market when it comes to Internet providers. As such, Comcast is now introducing arbitrary data caps upon customers since there is no legitimate choice to change Internet Service Providers. This is nothing more than a cash grab to ensure they do not lose money as people move away from television and use Internet only to stream their entertainment. We are forced to accept these changes as we have no competitors to "speak with our dollars" and move to a competitor's service offering. There is no legitimate business reason to implement these data caps. They are not reaching capacity. Their equipment won't suddenly explode due to too much bandwidth. Look to *any* city where Google Fiber has brought competition as an Internet Service Provider and you will see Comcast/Cox/AT&T offer increased Internet speeds **\*\*WITHOUT\*\*** increasing price.

Comcast themselves have stated their data caps are *not* because of congestion. See this link (<https://i.imgur.com/quf68FC.jpg>). As another person already filed a complaint stated: "It hurts our economy as a whole as people give up services that they would otherwise pay for. Internet, unlike utilities such as water or electricity, do not have a higher cost associated with higher usage once an infrastructure is in place. We are faced with a product which breaks the traditional supply-and-demand model because supply becomes truly infinite. Comcast is akin to a company that charges you to install an air vent in your home. They have a right to charge you for the labor and materials to install the vent, but they do not have the right to charge for the amount of air that flows through the vent."

We forcefully and completely disagree with Comcast's desire to implement one terabyte data caps across its entire customer base.

---

**Ticket: # 1287243 - Comcast implementation of data caps**

**Date:** 10/25/2016 11:51:29 PM

**City/State/Zip:** South Bend, Indiana 46619

**Company Complaining About:** Comcast

---

## **Description**

I received a letter in the mail that stated that Comcast was implementing a data cap in my area. I do not believe that they are in the best interest of the consumer. I, and many others, use my cable provider primarily for streaming services and use of my multiple video game consoles for online game play.

I strongly believe that when 4K becomes more widely used, the data caps will be ever increasingly smaller, as Comcast executives continue to pad their pockets with more and more money. I already pay for a cable service that I currently do NOT use for the sole purpose of having a cheaper plan.

I am limited to what service providers are in my area and even though Comcast has not fully monopolized the area, they do have the speeds suitable for my personal use.

I believe that neither Comcast, nor any other service provider should be allowed to implement data caps, and be reclassified as a utility, so as to not further gouge customers, especially those who are on a fixed income.

---

[Ticket: # 1287246 - Comcast data cap](#)

**Date:** 10/26/2016

**City/State/Zip:** Logan, Utah 84341

**Company Complaining About:** Comcast

---

## **Description**

Comcast is going to start limiting data usage for its customers. Comcast hasn't released much information about these data caps. I didn't receive any information from Comcast detailing this change. Comcast is the internet service provider of many of my friends and they have no idea that this change is happening despite the fact that it affects them directly. Limiting the amount of data that users can access restricts certain activities. The ability to restrict data could potentially interfere with net neutrality. Comcast has not adequately notified its customers of this change or allowed them any say in the matter.

[Ticket: # 1287270 - Cox Communication's New Data Cap Policy](#)

**Date:** 10/26/2016 12:40:27 AM

**City/State/Zip:** Gainesville, Florida 32601

**Company Complaining About:** Cox

---

## **Description**

Cox recently sent me an email stating they were changing they're billing policy and as a result they would be instituting a data cap on my internet service. This data cap is at 1 TB a month which the growing streaming market can be easily passed within a week or two. They will provide the user with more data but at a ridiculous price point of \$10 per 50GB.

---

**Ticket: # 1287289 - Repeal Cox's New Data Cap****Date:** 10/26/2016 1:38:25 AM**City/State/Zip:** Fort Walton Beach, Florida 32547**Company Complaining About:** Cox

---

**Description**

Data caps are not about "fairness." It is about greed and making more money off streamers and internet users because they don't want to pay for your overpriced TV service in which you pay for TV yet still have to watch ads throughout each broadcast. You shouldn't charge people for using more data, but instead you should build your infrastructure to handle your already paying customers. If I was to reformat my computer and reinstall Windows/programs and games I could easily blow through 100-200GBs. Data caps are just going to cause you to lose customers and beg for companies like Google to install Google Fiber (\$70/month, 1GB up/1GB down) and not have data caps. You are negatively effecting companies like Netflix, Amazon Prime, Vudu, etc. and their customers if you enforce data caps. If over 90% of your customers don't ever go over the data cap, then there is no legitimate reason to punish the other 10% when the 90% of users isn't even effected to begin with. Also, picking a faster internet plan is no solution because you will reach the higher data cap faster considering faster speeds influence more internet use. Please remove and do not implement data caps. Cox's reputation will just go down the drain like Comcast's reputation already is.

**Ticket: # 1287322 - Introducing Data Caps****Date:** 10/26/2016 2:49:21 AM**City/State/Zip:** Gainesville, Florida 32608**Company Complaining About:** Cox

---

**Description**

Cox has sent notice to its current customers that it is introducing Data caps into its plans, with overages costing \$10 per 50GB over the cap. This is a threat to net neutrality and puts a heavy burden on people who cannot afford higher tiers. People who cannot afford faster speeds will now also be limited in their access to the internet thanks to lower caps at lower speed tiers. They will not be able to view and stream like those able to afford higher speeds. This clearly betrays net neutrality and makes the internet only work well for the wealthy. Additionally, Americans already pay some of the highest prices in the world for internet speeds that lag behind other countries. With paying such prices already, we shouldn't be limited in our data usage. This is especially true when only a small fraction of users use anywhere near enough data to legitimately need a cap. Those users should be offered business level rates, and the rest of the internet should remain open and neutral for those that don't have as much money nor threaten network infrastructure.

**City/State/Zip:** Lakewood, Colorado 80228

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently sent me an email stating they are instituting a new data cap program in our area. This is an unfair business practice as there is no reason to do this. It is essentially a cash-grab for people who don't have many (or no) choices for internet providers. Comcast already has a monopoly in our area for service providers and there is little-to-no oversight about their pricing structure.

A quote from the email they sent me:

"We're writing to let you know that we will be activating a new XFINITY Internet Data Usage Plan in your area. Effective November 1, 2016, your XFINITY Internet service will include one terabyte (that's 1,024 GB) of data usage per month. With a terabyte of data, you can stream between 600 and 700 hours of HD video, play more than 12,000 hours of games online, or download 60,000 high-res photos in a month."

This metering is wrong and will not be sufficient cap for our internet needs forcing us into purchasing an unlimited data cap for an additional \$50 effectively doubling my bill for service I already use. This is highway robbery.

**Ticket: # 1287327 - Comcast Data Cap**

**Date:** 10/26/2016 3:04:17 AM

**City/State/Zip:** Salem, Oregon 97301

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently imposed a data cap in my area. I already pay them a premium for increased speed but regardless of which speed package I purchase my data cap stays the same. This is nothing but a money grab on the part of Comcast. Also of worthy note the day they announced the cap the ability to view the data usage for my account has been disabled. It appears that Comcast who used to provide 6 months of historical data usage has decided that they'd rather not let me know my past or current usage. I'm not sure how they can impose a cap if they can't provide me accurate data. This is absolutely ridiculous on the part of Comcast. I've included a screen capture of my Comcast account usage page and the fact that it's blank and unusable.

---

## **Description**

Dear FCC,

I am genuinely concerned with the data caps that companies like Comcast and Cox Communications have put into affect due to the issues I believe they will cause in the near future (no more than 5 years). With streaming video content at 4k resolution, a family of four heavy television watchers could easily hit this cap. Not to mention that software, ever growing in size and complexity, is also downloaded by millions of Americans every day. For some, such as myself, this includes both entertainment in the form of video games, as well as software development programs. This begins to hinder my ability to not just enjoy content when I want to, but my own chance to innovate.

As of right now, there may be few and far between users who hit this 1 terabyte limit. But, given the rise of popularity of 4k televisions, I believe this will become a major issue for most consumers within the next few years. There is absolutely no justifiable reason why suddenly 1.1TB should be treated any differently from the previous 1TB. It does not strain their servers, routers, switches, etc... anymore than normal traffic. Not to mention that it was tax payers who assisted all of these companies in building these networks that they now have a monopoly. Please advocate on our behalf.

Regards,

---

**Ticket: # 1287361 - Internet Data Caps**

**Date:** 10/26/2016 4:09:14 AM

**City/State/Zip:** Wrightsville, Pennsylvania 17368

**Company Complaining About:** Comcast

---

**Description**

Comcast has begun introducing data caps in my area. A limit of 1 TB at current prices before they will begin charging exorbitant prices for any amount over that. For the same price we have been receiving unlimited internet until now. There is no reason to cap data except as a blatant cash grab because we as consumers have no other internet option in our area. This is also an issue because it sets up the provider to off the "service" of certain sites not counting towards the data limit, which is a clear violation of net neutrality.

---

**Ticket: # 1287365 - Comcast Data Cap**

**Date:** 10/26/2016 4:33:43 AM

**City/State/Zip:** Santa Clara, California 95051

**Company Complaining About:** Comcast

---

## **Description**

Dear FCC,

I have recently been contacted by Comcast letting me know that they were unilaterally instituting a 1TB cap on data usage on my internet plan. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas, such as mine, where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

██████████

---

**Ticket: # 1287389 - Cox Internet caps**

**Date:** 10/26/2016 6:57:08 AM

**City/State/Zip:** Phoenix, Arizona 85044

**Company Complaining About:** Cox

---

## **Description**

My internet provider is sending out notices that they will be capping data usage for a month at 1tb and charging \$10/50gb following it.

Aside from the fact that this data cap is entirely arbitrary, and not enough data for a full family of internet users, it is in violation of their advertising of a 300mb/s plan, which I signed up for on their top tier.

At 300 mb/s, this data cap only covers about 7.5 days out of the month. By my math, that's about 22 days short of what is promised in monthly service.

This of course doesn't address the limitations on data as data usage grows exponentially, the fact that cable providers are in direct competition with streaming video providers, and losing a massive amount of market share to them, while controlling what should be a true public utility to access them, on a platform we the taxpayers have paid for the infrastructure to provide.

We expect the internet caps to be struck down.

---

**Ticket: # 1287398 - Data Caps**

**Date:** 10/26/2016 7:43:29 AM

**City/State/Zip:** Flushing, Michigan 48433

**Company Complaining About:** Comcast

---

## **Description**

Comcast sent a letter stating that they were going to enforce a 1 terabyte data cap on my Internet package. I don't have any other legitimate options in my area for a broadband ISP and there have not been any outage or overcrowding issues in the area that I'm aware of so the new cap seems like it's only being used to make more money at the expense of people who don't have any other realistic options. The Internet is at the center of what many people do on a day to day basis and should be treated like a utility rather than a service.

---

**Ticket: # 1287403 - Cox Communications Data Cap****Date:** 10/26/2016 7:47:56 AM**City/State/Zip:** Gainesville, Florida 32607**Company Complaining About:** Cox

---

**Description**

Cox sent me an email yesterday describing their new data cap for my internet service. Currently, my internet cost is unreasonably expensive because Cox is the only service provider in my area. I have no choice but to use their service, and this cap will certainly negatively impact me and my wallet. I live in a house with 3 other college students and we absolutely have to have a reliable internet connection at all times to submit assignments for our classes. Cox can't even give us reliable internet, making this cap even more unreasonable. Internet is a utility and this new cap by Cox is a clear strike against Net Neutrality. Please work to eliminate data caps for internet consumers. It will stifle creativity, productivity, and communication.

---

**Ticket: # 1287441 - Comcast Data Cap**

**Date:** 10/26/2016 9:05:49 AM

**City/State/Zip:** Canton, Michigan 48188

**Company Complaining About:** Comcast

---

**Description**

I am fortunate to live in an area with a viable second provider and am already in the process of switching. That said I want to voice my complaint about Comcast's new data caps.

I work from the home, use online backup services, video chat with my son in college and have two more teenagers in the house. We are over their 1T limit and if we did not have another option would either have to pay their overage fees, or change our usage patterns. I would argue that trying to get customers to change their usage patterns is not the path forward. We want to progress into new more creative ways to use the internet, not allow often de facto monopolists to enact policies that restrict competition from Netflix, Amazon, etc.

I know this is a local issue and I am doing everything possible to keep my local cable/internet open to competition (so far successfully), but for many local government has failed them and they do not have other viable options -- don't allow Comcast to set a precedent restricting the future of the internet.

---

**Ticket: # 1287453 - Cox Communication's new data cap policy is anti-consumer and should not be allowed**

**Date:** 10/26/2016 9:21:59 AM

**City/State/Zip:** Alachua, Florida 32615

**Company Complaining About:** Cox

---

## **Description**

Cox has recently implemented a new data cap policy, complete with overage charges for exceeding the allotted amount. This is part of an alarming trend with ISPs to introduce arbitrary data limits to increase profits. Internet is not like other utilities, like water, where some finite resource is being consumed. The equipment has to be in place and powered on regardless. To compound the problem, like many other Americans, I'm in an area that has no competition for internet access, so I have no other option but to play by Cox's rules.

Please, for the sake of the American consumers, who have a right to affordable and effective internet access, do not allow this disgusting cash-grab to continue.

**Date:** 10/26/2016 10:20:15 AM

**City/State/Zip:** Andover, Ohio 44003

**Company Complaining About:** Armstrong Cable

---

## **Description**

Armstrong cable in North East Ohio has a strict data cap and charges \$10 per 50gb over that cap. They also notify you of your data cap by forcing your web page to redirect to a warning page that you then have to agree to in order to proceed using the Internet.

---

[Ticket: # 1287553 - Data usage caps](#)

**Date:** 10/26/2016 10:40:34 AM

**City/State/Zip:** Gainesville, Florida 32606

**Company Complaining About:** Cox

---

## **Description**

I'm disappointed that Cox cable is setting a standard of having arbitrary data usage caps. This is not something cable customers want and its not something needed. This is an upsetting standard being set and I would immediatly change providers, but there are no other cable options available in my area. 1TB can be used up quickly with things like HD video or video games and this would be especially true for large families with multiple devices. The other problem with this plan now implemented by Cox is that you cannot increase your 1TB data usage limit. Even the more expensive plans keep the limit at 1TB usage. This is a bad precedent being set and I'm disappointed to see Cox falling into this poor business practice.

---

[Ticket: # 1287574 - Comcast/Xfinity 1TB data cap](#)

**Date:** 10/26/2016 10:54:31 AM

**City/State/Zip:** Sandy, Utah 84092

**Company Complaining About:** Comcast

---

## **Description**

Comcast has instituted a new policy that is clearly designed to force consumers to buy additional services from comcast aside from basic internet. They have added a 1TB/month data cap to internet service. Once over the monthly data cap you are forced to pay more for continued internet service. This, to me, clearly represents what could be considered a monopoly. Comcast, with this cap, seemingly wants to force you into using their streaming, and TV services instead of its competition. Some consumers don't need the excess Comcast provides with some of its services. They are fine with streaming netflix, hulu, youtube, etc. This potentially cuts into Comcast's profit, therefore they must do something to combat it. That puts consumers as a clear disadvantage.

---

**Description**

Comcast is instituting data caps nationwide, rolling them out to markets like mine in Michigan. Although 1 TB is an insanely large amount of data, if it is allowed now, there is no guarantee that it will always stay so high, and with the rapidly increasing pace of technology, what seems like an enormous amount of data now may seem to be a pittance in the future. Twenty years ago, 16 GB hard drives were considered high technology, more space than anyone would ever need. Today, 16GBs is considered an intolerably small size, you can buy a 16 GB flash drive for about \$4, and it's considered on the small side. Some estimates say that the average American consumes over twice that amount a day in data. When this inevitably happens to 1 TB - which given the increasing pace of technological advancement could be sooner than we think - Comcast will have no incentive to raise the cap because it is a monopoly in most areas. In fact, it has every incentive to lower the cap once it is in place in order to extract more revenue from its mostly-captive customer base. This would restrict, or greatly burden, the internet access of millions of poorer Americans in the process. The UN has declared internet access essential to the protection of many other human rights, and the United States, as the leader of the free world, should never allow a state of affairs to develop on its soil which would so restrict freedoms, especially the freedom of expression.

This move by Comcast shows nothing more than bare, rent-seeking, and base monopoly power; the very thing the Sherman Anti-Trust Act was passed over a century ago to forestall. If Comcast is allowed to do this now, other ISPs with equally-captive customer bases, such as Verizon and Time Warner, may follow suit. If the prevailing paradigm of ISPs as natural monopolies is the only way an internet infrastructure can be constructed, it is long past time that the FCC come out in favor of regulating internet providers like Comcast as full public utilities complete with price control; not only to reign in these egregious abuses, but to promote, and require, innovation in a crucial infrastructure. Although the move by the FCC to start regulating ISPs as common carriers was a good first step, it is worthless if not used. The FCC needs to reign in abuses like these and truly hold Comcast and its ilk accountable for anti-innovation, price-gouging behavior like this.

Sincerely,

A University of Michigan Law Student

**Ticket: # 1287781 - Xfinity 1TB Data Cap**

**Date:** 10/26/2016 12:22:38 PM

**City/State/Zip:** Merced, California 95348

**Company Complaining About:** Comcast

---

**Description**

Xfinity is implementing a 1TB 'Data Plan' which despite the name is still a form of Data Caps. The data cap pricing is as follows.

~\$80 for 1TB of data per month (standard monthly payment)

\$10 per 50GB overage charge

or

\$200 overage charge for unlimited

or

\$50 in addition to ~\$80 monthly payment for unlimited data

This overage pricing structure charges the consumer at 250% times the \$/GB rate of the 1TB cap. In addition the option to add an unlimited data usage for an additional \$50 essentially doubles the cost of our internet utility and only provides a safety net to prevent the \$10/50GB overage charge. This is a blatant money grab on Comcast's part and will profit highly off non-tech users and the general public for using what should be a utility.

The household I am apart of currently contains 3 University students, with myself and one of the students attempting to begin an online business which consists of hosting a server and downloading massive datasets (hundreds of GBs) to improve our online business and make advances in our field of neural networks.

Although the house does not currently exceed 1TB of data usage, we are close and very well could exceed this data cap. If the house does exceed 1TB per month as our business scales, \$10/50GB is a laughable amount of data when compared to the 1TB cap and an outrageous rate to charge for data in this age of technology.

INTERNET IS A UTILITY

**Company Complaining About:** Comcast

---

## **Description**

On knowledge and belief, Comcast is rolling out a new data cap of 1TB for its customers. As a company that which is allowed to operate a virtual monopoly, the government has a responsibility to step in and prevent abuses such as this; a ploy to increase their bottom line. While it might be true that a very small number of customers will be affected by this policy change currently, Comcast has likely calculated that the \$50/mo price tag to lift its artificial data cap to be a revenue driver only a couple of years down the line as information technology bandwidth requirements grow exponentially. Comcast has acknowledged that there is no congestion issues with its network. It may be that this new policy claims to combat piracy or create "fairness" between the top percentile of users and the median; these are straw-man arguments and should be dismissed as such. These Comcast data-caps are a dangerous precedent and shouldn't be allowed to move forward. Thank you.

## **Description**

To whom it may concern,

I am a registered Ham radio operator and Comcast (Xfinity) customer in Santa Clara California and would like to lodge a formal complaint regarding Comcast's announced move to meter internet data usage starting November 1st. They have provided no statistics, studies, or histograms to back up their choice to set the cap at 1TB or the \$10 / 50 GB overage fee.

Comcast cannot and should not be allowed to enjoy the benefits of both speed-tier based billing (speed provisioning) and simultaneously usage based billing (capacity/usage tiers). This is double dipping, plain and simple.

Further, this sort of monopolistic behavior comes mere months after it became public knowledge that Google Fiber is largely abandoning plans to serve the Bay Area with 1 Gbps fiber service and I received my personal notice a mere day after it was officially announced that Alphabet is beginning layoffs in Access and Energy and their CEO left that position. Comcast is CLEARLY capitalizing on the announcement that their sole viable competition is exiting the arena.

I have no viable alternatives in my location and wish the FCC would display strong leadership in challenging these anti-consumer monopolistic business practices.

Regards,

**City/State/Zip:** Phoenix, Arizona 85085

**Company Complaining About:** Cox

---

## **Description**

To whom it may concern,

The broadband cap that Cox has put into place is ridiculously unreasonable especially with 4K streaming. A family of 4 will hit the usage cap within a week. Cox didn't give us any sort of warning that this was happening and forced it upon us. If people download games that they purchase for 60 dollars online they will hit that cap extremely fast because most games are now over 40 gb each. Call of Duty games are generally around 85 gb and have Day 1 patches of 15 gb. So why are we being nickel and dimed when the cost Cox incurs on each gb sent is less then half a penny. This is absolutely anti customer and anti innovation and it needs to be stopped.

## **Description**

ISPs like Comcast and Cox will hurt innovation and emerging technology by adding data caps to home internet. Comcast, for example, has stated that they will not measure data when streaming online video content from its own media boxes, but will count data usage when using devices such as tablets, computers, and smartphones. This proves that these data caps are only used to encourage customers to go with their ISP's home TV solution because they feel threaten that services like Netflix and SlingTV are actually creating innovation in this space.

I encourage the FCC to block these artificial caps as it's just another money grab for these companies, hurts innovation, and ultimately punishes customers who want choice.

## Description

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but

for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

---

**Ticket: # 1288247 - Comcast limiting data usage on existing internet service**

**Date:** 10/26/2016 3:25:37 PM

**City/State/Zip:** Rancho Cordova, California 95670

**Company Complaining About:** Comcast

---

## **Description**

I received a letter recently From Comcast stating that my internet usage must be limited or I will be charged almost twice what I pay for the service. There was no reason provided other than that it was "fair". This statement is not accurate as there is nothing fair about charging customers more when the business cost of providing the service is not actually increasing.

The cost of providing the service (Comcast's costs) have not increased. In fact the company has admitted that there is no technical data limitation. Where is the consumer protection? Source: <http://www.theverge.com/smart-home/2015/11/7/9687976/comcast-data-caps-are-not-about-fixing-network-congestion>

<http://www.extremetech.com/computing/212376-comcast-admits-that-its-data-caps-are-a-business-decision-not-an-engineering-requirement>

<https://consumerist.com/2016/06/03/another-broadband-ceo-admits-data-caps-have-nothing-to-do-with-capacity/>

4k television and other new technologies like VR and high definition streaming, gaming, and voice services will increase the future data usage of most internet users. This is a cunning preemptive move that will eventually affect all users just as much as it impacts the current "above average" data user. Internet consumption will not decrease, it will only increase with time.

Comcast already charges different pricing for internet speed, they should not be allowed to double dip and charge for both data usage and speed.

As a consumer the option to change providers if we feel a practice is unfair is not possible, as there are no other options in many areas, effectively giving this company a monopoly. When there is too little competition, their closest competitor simply adds the same charges. For example, ATT has simultaneously implemented the exact same policy, almost verbatim. If the FCC does not act American consumers will continue to fall behind the developed world in terms of internet accessibility, speed, and costs of access.

Furthermore, I believe this is also a response to tiered internet and net neutrality regulations enacted by the FCC. After the FCC wisely prevented ISPs from being able engage in this practice, they have simply found another way to limit internet access to the American consumer and extract more revenue for services that were already being provided at a lower cost. Time warner/charter cannot engage in this practice, as it was clearly bad for consumers. Why is Comcast getting preferential treatment and allowed to do so?

Finally, I want to point out that the cost of adding unlimited data is suspiciously similar to the amount of adding cable television. This is particularly telling, because as this business loses revenue in cable television, instead of innovating and finding ways to make that service more appealing to consumers, they are charging customers more for internet. The internet becoming more of a necessity than a mere resource. Several government agencies require, or encourage the use of online forms. Many schools require internet access, "Cyber" jobs are growing as other jobs like American manufacturing shrink. I urge those of you who are responsible for protecting the communication of the citizens of this country to please stop this practice.

---

## **Description**

I am filing this complaint in protest of Comcast and Cox unlawfully placing data caps to forcibly charge customers more for service that should be unlimited. In this world with rapidly changing media formats that come with higher data usage, this is an attempt to prevent customers from using services that offer 4k streaming and large digital downloads (The new call of duty would take up 13% (130GB) of your monthly 1TB data cap just downloading alone). The company is doing this to stall until they can launch their own high quality streaming services, which is clearly a move made in bad faith against consumers, especially considering the monopoly these companies have in most areas.

## **Description**

I am in a market where Comcast is starting to impose a 1TB data plan on Nov 1. I signed up for a 2 year contract with them in July -- at that time there was no mention of any cap. Now they are saying there will be a cap and I will be charged. At the very least, I think that they should honor the service that I have at the time that I signed up for the contract (no cap). I have talked to several people at Comcast -- none have been helpful and most have given me wrong information. Some have told me that there has always been a cap in place (although I have gone over 1TB of usage for the last 3 months with no notification) others have said that I was in a trial period (of which I was never contacted). I have had the Comcast phone representatives try to find information on their web site about either my usage agreement or their plan -- none of them have been able to navigate their own site to find the information. The fact that you cannot easily get to information about their plan, they change the plan after I have agreed to a contract seems very unethical to me. This does not seem like a fair way of doing business. Had I not be in a two-year contract with them, I would not be upset, but it seems like they are not honoring the terms of the agreement (which were never sent to me nor are the available anywhere on the web site).

**Description**

Comcast has recently implemented a 1TB monthly data cap on my home internet service. My only other ISP option is slow AT&T DSL. I am very unhappy that these companies are allowed to operate basically as a monopoly. They don't compete and the level of service provided is very poor compared to what is available in other countries. In markets where there is actual competition Comcast's service offerings and pricing are much more reasonable.

This new data cap is just pure greed. In the near future with 4K streaming and Virtual Reality becoming more prevalent it will be very easy for a home to consume 1TB+ of data. By implementing these data caps now when most households do not use these up and coming services, Comcast is placing themselves in a position to greatly increase the amount that they can charge customers in the long term.

Comcast should be upgrading their infrastructure instead of taking billions of dollars in profits and buying up movie studios and TV channels. An ISP provides a connection at a data rate, not a volume of data per month. They are trying to redefine what it means to have an internet connection based on the cellular phone service model of extracting the maximum amount of money per customer. This is bad for the consumer and bad for the health of the internet.

I believe that cable lines should be regulated as a public utility in the same way that electric and gas lines are. Third parties should be allowed to offer services over the same physical lines that Comcast uses. Without change the United States will continue to lag behind other countries when it comes to internet access. More and more of the future depends on high quality internet service and right now the major players in that industry are performing very poorly.

Thank you for your time.

## **Description**

Hello! I'm sending in a formal complaint about Cox data caps. They've recently implemented or will be implementing a hard data cap of 1tb here in the next month or so. I find this inexcusable. In a world where if anything we're using MORE data, when combined with large game downloads, 4k streaming, and more and more people cutting the cord and using internet alternatives, all this is doing is leading to less competition in the market place. Cable (and cell phone) companies are able to use these caps to stop people from streaming movies and TV online.

### Description

Hello,

I'm writing to complain about the recent letter I got from Comcast Xfinity.

They are trying to limit my internet usage capped to 1TB, and they are saying there will be ADDITIONAL overage charge if I use more than 1TB per month. They are saying this is about internet fairness which is not true at all.

- 1) If they truly care about the internet fairness to low-usage users, they should have given more discount to the users who use less than 1TB. However, what they offered to the users who only use 5GB(!) per month is less than \$10 discount. In contrast, they are unlawfully charging the users for unlimited option for \$50, which is ridiculous.
- 2) They are saying 99% users are using under 1TB per month, which MAY be true at the moment, but this is really short-sighted. In the proliferation of technology-based companies who use streaming technology heavily, like Netflix, Hulu, Spotify, Apple, and Google, the 1TB per month per household is becoming more and more common. Think about 4 people household with all digital devices. Dad is using Netflix in the living room and children are using their own devices to watch movies/games, and mom can also listen to the music, all at the same time. In addition, now 4K services and devices are becoming standards, and this will accelerate even more data usage per household. And I think they (Comcast) know it.

Limiting the data usage for their internet service is seriously violating the net neutrality, because this will limit the advancement of new technology services and companies. This can be easily proved that Comcast's own streaming service (TV, movie) is NOT counted against the data usage limit.

- 3) I recently signed the 1-year renewal contract with Comcast (even with early termination fee) without any mention of data usage limit per month (so, this means unlimited data usage). Now, they are just ANNOUNCING that they are introducing data limit cap and charging additional \$50 per month if I want to keep my unlimited data usage which was ALREADY part of my original contract.

This is serious violation of the contract and Comcast cannot do this. It is totally unfair for the customers because if we are breaking the contract, we should pay for the early termination fee, but the company doesn't. I think FCC should be involved in this situation and make this company stop extorting their customers.

- 4) We cannot believe how Comcast is gauging the customers internet usage. There are already many concerns all over the place, and even there is article about it: <http://arstechnica.com/information->

technology/2016/09/tales-from-comcasts-data-cap-nation-can-the-meter-be-trusted/. I also myself try to gauge my own internet usage, but most of the people wouldn't be able to do themselves. So, this is seriously flaws in the beginning because there is no control if Comcast is overestimating the internet usage and start charging customers more money.

In summary, I think all this happens because of the serious monopoly situation in the broadband market in the US. In my case (and I think most of the US customers will be in the similar situation), the only option I can take is AT&T, which doesn't offer any comparable service. I strongly think this ridiculous behavior from Comcast should be stopped, since this will hurt the millions of customers in US and Comcast will keep manipulating their monopoly to collect more unlawful money from its customers.

Thanks for reading this long letter.

**City/State/Zip:** Chico, California 95973

**Company Complaining About:** Comcast

---

**Description**

My complaint is against Comcast and the way they "Measure" data usage. In July 2016 our usage was about 550 GB That's the first month they started measuring. The following months they claim our usage has more than doubled. August over 1200 GB September over 1300 GB October over a 1000 GB. Our usage has not changed if anything it should be less as 2 of my kids have moved out and do not use our internet anymore. My contract with Comcast when I renewed it had no data cap. I do not believe they can accurately track home data usage and it is an unfair practice to try and gouge us the customer for more money and provide us less product. Thank You.

## **Description**

There are five people in my household. We use:

Netflix

Hulu

Steam

YouTube

Multiple smart phones and tablets

Simply watching HD movies, renting/buying movies digitally, streaming music, downloading Steam and demos, updates for games and apps we are averaging 1.5TB per month.

Look at the bandwidth requirements that Netflix has on their site for high quality HD video. A family of two or three who watches a good amount of movies or show episodes is going to come very close to 1TB. When you factor in a gamer or two and the huge size of some titles this only makes matters worse.

The line between ISP and content providers is becoming blurred and Comcast is pushing the wow-factor of higher speeds along with HD and Ultra HD. This is no time for U.S. service providers to be capping data on home internet. They are already charging a small fortune for some of the slowest speeds and worst service in the world.

I pay MONEY for a higher than average data speed and I'm being punished by their "fairness" and being put in the "1%" because they are greedy.

Too long didn't read version:

A 1 terabyte data "cap" (more like a threshold) is not practical in today's society. In the U.S. HD viewing can vary between users, 4k viewing and 4k gaming are just around the corner. Comcast are simply punishing their customers who are cutting the cord. This NEEDS to stop NOW. I've been with Comcast for many years and hoped to see things change, but this is unacceptable, I have no problem switching ISPs. I will not pay \$10 extra per 50GB that is used over the cap, and have it come to \$200 extra on top of my bill. Then to charge people \$50 on top of their bill for unlimited data. Comcast are a bunch of liars. Someone needs to stop these thieves.

## **Description**

Comcast/Xfinity is going to be instituting a cap of 1 Terabyte of data on my residence with the potential of purchasing "unlimited" internet for an additional \$50 a month over my current rate. I am currently locked into a contract with Comcast and the fact that they will limit my service for the price that was agreed upon is unbelievable. Their excuse of less than 1% of users use above the cap each month does not give them an excuse to charge more for an agreed upon service. Comcast is clearly limiting the free use of the internet by redirecting people to utilize their Television service instead of the sheer volume of on demand, internet based, video streaming sites available. With 4k video streaming becoming more and more relevant as technologies improve, my household of 4 will go well over the cap and have to pay more for the same service we signed a contract for. There is no fair competition in my area for high speed internet access (>100mbps) and Comcast is clearly utilizing their monopoly on the high speed internet market for their own benefit.

**Description**

I am a resident currently affected and very unhappy about Comcast's new data cap plan they forced upon my home and my community. Data plan is not about fairness, it is not about congestion, it is a way for Comcast to pad their profits.

Let's talk about fairness; Comcast claims they are charging data like how any other utility charges for water, electricity, and gas. However, once the infrastructures are put in place, sending and receiving data costs almost nothing to them. They are already charging enough to post record profits last year.

Now, let's talk about congestion, data caps have nothing to do with network congestion, as was evident when Comcast accidentally leaked an internal memo confirming so.

Increase in profits is the only reason left, and while a business has every right to make as much money as they can, Comcast, being a monopoly in many areas, should be held to a different standard. There is no competition, nowhere to turn. With the increase in high data-utilization applications such as 4K streaming and more Internet connected devices in our homes, this data cap is just an unfair way to get in on the money without actually innovating.

## **Description**

On knowledge and belief, Comcast is rolling out a new data cap of 1TB for its customers. As a company that which is allowed to operate a virtual monopoly, the government has a responsibility to step in and prevent abuses such as this; a ploy to increase their bottom line. While it might be true that a very small number of customers will be affected by this policy change currently, Comcast has likely calculated that the \$50/mo price tag to lift its artificial data cap to be a revenue driver only a couple of years down the line as information technology bandwidth requirements grow exponentially. Comcast has acknowledged that there is no congestion issues with its network. It may be that this new policy claims to combat piracy or create "fairness" between the top percentile of users and the median; these are straw-man arguments and should be dismissed as such. These Comcast data-caps are a dangerous precedent and shouldn't be allowed to move forward. Thank you.

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

## **Description**

I received a letter yesterday from Comcast informing me that I'm going to have a 1TB data cap imposed on my service. I am worried about the direction home internet is heading if Comcast can get away with imposing limits like that. It's very clearly a targeted discrimination towards those that would prefer to use streaming content services on their home internet connection. My average internet usage over the last 3 months was about 950GB per month, with my last month of usage coming in at over 1200GB. That would place me over Comcast's artificial 1TB limit and incur additional charges on my bill moving forward. Comcast is requesting an additional \$50 to make my service unlimited, which it already was before, just to get more money out of me. Something needs to be done about this on a national level.

**Description**

We received a letter from Comcast this week stating we are going to have a 1Terabyte bandwidth cap put in place as of 1 November 2016. If we pay \$50 extra a month we can have unlimited. But if we go over it is \$200 fee. How is this even legal? As a Senior Systems Engineer I know bandwidth caps are complete nonsense. A way for a company to bilk their customers out of more money. In my city, Cottage Grove, MN., we have no other choice. Century Link is an absolute horror show and TW does not server our area. Now Google Fiber laid off half their workforce and stopped rolling out their service? We is enough enough? On top of that, Comcast is specifically targeting "cord-cutters" like my family. If a movie or show is on both Comcast OnDemand, and Netflix or similar service, the data used to watch it counts if you use Netflix or other service, but NOT OnDemand? This HAS to be illegal. If it isn't, it should be.

## **Description**

Comcast has become a regional monopoly. Due to the fact that it trades-off regions with its other major competitors, it can impose whatever billing practices it pleases in the areas in controls.

The FCC would like to pretend that there is internet competition in my area, but there is no real high-speed internet competition. Recently, using its power position in the market, Comcast has decided to alter the terms of my internet service to require data caps of 1 TB per month. I am still required to pay the same price I have been paying and receive no concession for this "altered" internet service deal. Not only that, but I have no recourse in turning to the competition because there is none (at reasonably high internet speeds). Comcast now will charge \$50/month additional to receive the same internet service I had before the change (on top of the \$100/month that I already pay for internet and very basic cable). That's a 50% increase! That is ridiculous and out of reach for the everyday consumer.

Comcast has very easily supported current consumer usage without the need for data caps. Suddenly, it has determined to charge for extra data in order to fight off internet-based TV competition such as Netflix and Amazon Prime because it is hemorrhaging TV customers to them due to its already-poor business practices. These data caps are a move to try and strangle consumers who want to stream HD videos from Netflix, Amazon, and others in order to break free from Comcast's TV service, which can easily put an individual over the monthly 1 TB data caps. It seems these anti-consumer practices are the only way it can retain its customer base and/or grab back the money it was losing from "cable-cutters".

The FCC has allowed this Oligopoly internet provider system to go on too long and needs to fully declare broadband internet as a utility so that Comcast's unreasonable pricing practices can be called into question. The FCC is supposed to be a representative for the American people against monopolistic business practices. Comcast's blatant anti-consumer, one-sided, and money-grabbing actions show that it has no fear of recourse from its helpless consumer base or from any Government oversight agency. This needs to change. FCC, please do something to stop this practice of Data Caps and ultimately, please move to break-up the power of these regional monopolies by declaring internet service as a public utility.

Thank you

## Description

Comcast's new data cap is ridiculous.

First, one big issue is that Comcast is not announcing this new change in policy. They don't send you an email, letter, or call you up about these changes that are happening. I only found out because I read about it online in an article. If I had not stumbled across it, November 1st would have rolled around, the new 1TB cap would've been activated for our household, and we would've gone over it easily and been billed extra for something we had not been informed about. That alone should be throwing up a bunch of red flags. They're preying on customers who won't pay attention to the increased price in the bill, or people who have automatic bill payments. Even when I called to confirm that these changes were happening, the first Comcast agent said we were already under a 300GB internet cap, which wasn't true. It wasn't until we got to the third agent that he confirmed we didn't have a cap, but the 1TB cap would go into effect November 1st.

They tested caps in parts of the country by putting 300GB caps on home internet, and now they're forcing all customers to a 1TB(1,024 GB). That doesn't sound so bad, right? People who had the 300GB cap now have an increased cap, a bit more than triple. That is true, except the 1TB cap is still not enough. For a decent amount of people, they won't even notice the cap. People who sparsely use the internet.

The real issue is with everyone else. We're in a new age where internet is very important. Just like back in the day, you needed a home phone. Everyone had a home phone, it was a necessity. Internet has quickly grown in importance and is even more of a necessity than home phones back in the day, because it does so much more.

People need the internet, and the majority of people use a lot of internet. Emails, videos, video streaming, Voice over IP(VoIP), downloading games, reading the news, online shopping, social media, and so much more require the internet. One person alone can easily reach a 1TB cap a month depending on their internet usage, especially if they do IT work or other computer related professions at home. The real problem comes in when you have 2+ people at home. What about a family of 4? I can easily tell you how that goes, because I live at home with my family. The 4 of us watch YouTube, Netflix, and Twitch on a daily basis. Not only that, but we play games, and the size of games have been getting bigger the last few years exponentially. We, as a family, easily hit 1TB of data before the month even ends. What are we supposed to do, pay an extra \$50 a month for unlimited data when it was already unlimited for years? We live week to week as it is, we can't afford that. We save money by staying home most nights and weekends, playing games together, watching movies on Netflix, or having our own time on YouTube. This all requires internet.

Then comes Comcast, putting a cap on how much internet we can use before going over the cap and getting additional charges. Surely if the internet was a costly resource, it would've been capped since the beginning. No, it isn't. It doesn't cost Comcast more money if a customer uses more or less internet, they even admitted it once or twice. THIS is the main problem. They are capping the internet and charging more if you go over, or charging for unlimited internet. But Internet usage does not cost them anything.

The only thing they can charge customers for that actually costs them money, is home installations, being connected to the ISP, modems, and internet speeds. Home installations is connecting the

home to the ISP, and modems is renting or buying modems from the ISP(In this case,Comcast). Internet Speed costs is having a better connection, either through better cables to connect to the ISP, or getting priority over other customers when using internet from the ISP. However, in no way, shape, or form is internet usage costing an ISP a single dime. Sure, using their service should cost money, but using more of their service doesn't cost them anything. They aren't pumping water or gas to the house, a resource that is used up. Internet usage is simply being connected to the network and that is it, they aren't spending money to send data to my home network.

Not only that, but while under the cap, you can't stop using data. By that, I mean that if you're close to reaching the cap, it would make sense to turn the internet modem off and think no more data is being used. Nope, that is incorrect. Comcast constantly sends information to your home network. Not only does that mean that unplugging your modem won't stop your data usage from stopping, but that your monthly data you're allowed to use is wasted. The useless information Comcast sends out to your home network wastes your monthly data limits. You could unplug your modem at the start of the month and leave it so until the end of the month, check your monthly usage, and see that 50GB-100GB or so was being used up even though you did not use any internet at all.

They say we have 1TB of data a month, but it might as well be 900GB.

Bottom of the line: Internet usage does not cost Comcast anything, so why is it being capped? There is no other reason, then them trying to earn more money than they already do, even though they are a big monopoly, where many people in plenty of states have no choice but to use Comcast.

Look at any city that has google fiber, and you'll see Comcast's prices are lower there than anywhere else. They're simply abusing their monopoly status, charging high prices and now enforcing caps.

## **Description**

I'm writing FCC Chairman Wheeler to urge him to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted[1] in internal customer service guidelines[2] that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

**Company Complaining About:** Armstrong Cable

---

## **Description**

Only option for cable and high speed internet in my area is Armstrong cable. They have a horribly low data cap on their plans at 250GB. Both my wife and I are required to be on call or work from home. With VPNing in from home and casual streaming use we have come very close to the data cap almost every month and we haven't yet hit the busy on call season yet. They have no issues charging \$10 for every extra 50GB used. In this day in age with internet speeds where they are and even wireless companies offering unlimited data it is ridiculous to have such a low data cap. And I don't even have a option to try any other company since Armstrong has a local monopoly in my area.

## Description

First, one big issue is that Comcast is not announcing this new change in policy. They don't send you an email, letter, or call you up about these changes that are happening. I only found out because I read about it online in an article. If I had not stumbled across it, November 1st would have rolled around, the new 1TB cap would've been activated for our household, and we would've gone over it easily and been billed extra for something we had not been informed about. That alone should be throwing up a bunch of red flags. They're preying on customers who won't pay attention to the increased price in the bill, or people who have automatic bill payments. Even when I called to confirm that these changes were happening, the first Comcast agent said we were already under a 300GB internet cap, which wasn't true. It wasn't until we got to the third agent that he confirmed we didn't have a cap, but the 1TB cap would go into effect November 1st.

They tested caps in parts of the country by putting 300GB caps on home internet, and now they're forcing all customers to a 1TB(1,024 GB). That doesn't sound so bad, right? ## **Description**

Good morning,

I would like to write to the FCC today to discuss about an important topic that I think would harm consumers and stifle American economic growth. Comcast announced a few weeks ago that they would be imposing a 1TB data cap for all of their customers who use them as an internet service provider. Now normally I wouldn't contact the FCC about such an issue as I believe a free market would prevent the issue at hand from happening. However, after looking at multiple apartments in the Seattle area it has become apparent to me that there is no free market. There are only two big ISPs in Seattle, CenturyLink and Comcast and unfortunately much of the area only has Comcast as the ISP. Almost all of the apartments that I toured in the northern Seattle area could only get Comcast as their ISP. This causes a problem because if I wish to move there I cannot take my money elsewhere to show my displeasure with Comcast's new data cap policy. This flies in the face of everything that our economic system is about.

Additionally I believe that this new policy that Comcast will be enacting in a few days will hold the US economy back. With the power of the Internet, start up costs for businesses have plummeted which has allowed anyone with a good idea to go and start their business. I can give an example that I am familiar with. I do a bit of game development/art asset creation in addition to my job as a printer. Before tools like Maya cost \$3,000-4,000; now Maya for game development costs \$30/mo. It is now easier than ever to start a business in your garage and websites like Kickstarter prove it. Data caps would affect people like me negatively because I use a lot of bandwidth to upload backup copies to offsite services such as Microsoft OneDrive. In addition I also am looking into streaming my game development sessions so I can learn from others and others can learn from me. That alone can take up a large amount of bandwidth and would cause me to pay large amounts in data cap overage fees just for trying to turn my ideas into a business.

This change would also be anti-consumer. I, like most people, watch Netflix a decent amount and as 4k streaming begins to become more common the 1TB data cap would be quickly used up especially if multiple people live in a household.

The way I see it is that this data cap is just a way for Comcast to extort more money from consumers while providing the same service and people like me have no other ISP in the area to turn to. If Comcast is allowed to enact this policy many people like me will either have to cease our goals and marginally weaken job growth or pay for an unaffordable \$300/mo business class Internet connection. With how the Internet is growing it would also hurt everyday families in a few years as downloads and streaming solutions become bigger.

Thank you for your time,

██████████

[Ticket: # 1289692 - Cox charging for exceeding data cap](#)

**Date:** 10/27/2016 12:45:01 PM

**City/State/Zip:** Omaha, Nebraska 68108

**Company Complaining About:** Cox

---

## **Description**

Cox starting in November will be charging their customers in Nebraska \$10 for every 50gbs they go over their data caps. They have never done that before and with 4k becoming a new standard, everyone will be using more data. This is clearly a cash grab. And I'm using their ultimate internet service (the highest service they have) which HAD a 2 tb soft data cap, which they LOWERED to 1tb about 1 or 2 months ago. This happening in conjunction with their rate increases is absolutely outrageous. They have had 2 rate increases within a year.

---

**Ticket: # 1289775 - Comcast Data Plans are Completely Idiotic****Date:** 10/27/2016 1:16:45 PM**City/State/Zip:** San Mateo, California 94403**Company Complaining About:** Comcast

---

**Description**

I pay for the bandwidth and they want to charge me in addition on data usage "based on a principle of fairness", which is completely false, since their infrastructure is limited on bandwidth NOT data usage, which is how I WAS billed. This is clearly an anti-consumer practice and hinders the usage of high-bandwidth internet services that are in competition with Comcast's cable offerings that do not use data, pushing cord-cutters back to terrible cable for entertainment. They claim that 1TB is definitely enough for everyone, but with evolving technologies this increasingly doesn't become the case. They claim you can play 12,000 hours of online video games, but this is disingenuous, as games are easily 50GB per download now, not including patches and the bandwidth required for online play. They claim 700 hours of HD video, but 4K UHD @ 60fps is now becoming increasingly popular which takes up ~68Mbps, which is only 34 hours.

I pay for 150Mbps, and with their data usage plans, I get 15.5 hours of the advertised bandwidth per month, a whopping 2% of hypothetical data usage. If I want the other 98%, I have to pay \$50 extra a month or pay \$10 per 50GB over 1TB.

---

**Ticket: # 1289782 - Data caps on internet in Internet in Omaha, NE**

**Date:** 10/27/2016 1:18:06 PM

**City/State/Zip:** Omaha, Nebraska 68104

**Company Complaining About:** Cox

---

## **Description**

My ISP, Cox, is implementing 1T data caps for all their internet service. Starting next month, I will not have unlimited service. This seems dishonest; it's not like there's a scarcity of bytes. And data caps don't help COX manage bandwidth during peak internet demand periods, which is actually the scarce resource here.

I already pay COX based on bandwidth. Paying them based on data cap too is not really fair.

My provider is also not doing a very good job communicating this change in policy: I am afraid they are trying to sneak it in, and then later hold it over my head by giving me overage charges or forcing me to upgrade to a higher speed (my current speed level is fine for my needs).

---

---

**Description**

I am a Computer Security Analyst who works out of his home to provide for his family. When my family and I originally chose this location, one of the requirements was selecting an area that would provide us reasonably priced unlimited broadband cable speeds. At the time Comcast's support for this area met the technology needs at an acceptable price for this location.

I have recently learned that in the coming month of November, Comcast intends to impose a data cap of one terabyte of data. This is made with the claim that presently a significant majority of their consumer base does not use near that amount of data. While that claim may be true, I have a significant number of concerns surrounding this change to my area.

As my work environment, and those of others who now work from home in our digital age, we are using our bandwidth to perform work essential to our families livelihood. Data caps are a severe hindrance to the rise of a mobile work force that allows employees with high demand skill sets to work in their region of preference. This is extremely important to allow both employees and businesses access to compete in the marketplace regardless of their location. At the present time my family and friends are now considering moving to a location that does not have data caps as unlimited data is essential for our modern life styles.

To the best of my knowledge, there is no third party or regulatory body that is ensuring that Comcast is metering the usage of the data correctly. This specific concern became realized when Comcast had their data caps in trial in some regions and some online users have claimed the usage metering appeared inconsistent. Some of the numerous related incidents, <http://www.extremetech.com/internet/219638-customer-fcc-complaints-signal-huge-problems-with-comcasts-data-cap-meter> and <http://www.slashgear.com/comcast-overcharges-for-bandwidth-usage-find-out-if-youre-affected-28420070/> . Without an independent third party to regulate how data usage is metered, how can we as consumers know and trust that the data is being metered correctly?

While Comcast's assertion may be that a majority of their current customers use less than one terabyte per month, I feel this amount has a very short life span. At present the most common monitor and television I have found in the homes of my own, families, and friend have been 1080p. Now that 4k resolution has significantly dropped in price, I feel that within the coming few years that will become the norm. If so, will not the average data usage of the consumers moving to this new technology be increased accordingly? This would make the terabyte datacap significantly too small for the average consumer. I am concerned that Comcast and other cable providers based on their history will not move quickly enough to reasonably support the technological demands of those who choose to stream content. What is Comcast's plan to raise the data cap above one terabyte in the coming years to accommodate the new standard of high definition streaming?

Comcast already had "soft" data caps with their current model. When I as a consumer subscribed to a cable line. I know the speed over time. Given this, I can multiply that speed per second times the

number of seconds available in that month to know my allotted data. That is what we had previously. An “unlimited” cap placed on what was possible within the confines of our physical world. So to me this hard data cap is a direct degradation of service I was paying for.

As a security analyst, I am keenly aware of the potential for harassment through denial of service attacks that imposing data caps on consumers can have. An individual without a data cap (or a significantly greater one) could choose to send unnecessary data to another consumer over their monthly period. This may prevent them from getting their fair usage from the service as they had their data used without permission by other individuals. This also opens up consumers to become victims from foreign threat actors should they choose to target specific consumers en masse via large scale data usage attacks. In addition to the intentionally harmful service denial attacks data caps open consumers up to, there the unintentional ones. Many applications users run automatically update applications. There is a very real possibility that a forced application update could contain an error in the new code where an application would unknowing to the user, use a substantial amount of data due to an error. These types of scenarios can be extremely difficult to find and far beyond the average consumers skill set or time, yet may affect them once hard data caps are a realized norm. What is Comcast’s plan to ensure the data being charged for by the plan was only data used intentionally by the consumer and not forced by an outside source?

This hard data cap I feel restricts my ability as a consumer to use entertainment streaming services that are an alternative to cable television programming. By setting a datacap, Comcast makes it difficult for competitors in the entertainment market of which they directly compete to enjoy the service at the same fidelity for the same amount of time. I feel that for Comcast to both be in the market of Broadband Internet and Cable Entertainment has encouraged them to impose data caps to make cable television a financially incentive alternative (by placing a extra \$50 expense on unlimited internet), possibly eliminating the streaming media competition they now face and I feel does not make the net neutral.

In my area, the only option I have for the speeds I feel I require is Comcast. Without competition, Comcast is asserting its dominance in my area, to enforce data caps.

At this point I feel there are a number of reasonable actions that the FCC could take to help remedy this situation for myself and my fellow consumers. Only permit a company to partake in business related to Internet access. In doing so, the internet service provider(ISP) would not have an exterior incentive (such as eliminating entertainment competition) to impose data caps. Create a “last mile” type system, where from only the cable-box to the home the line is run. This would drastically drop the price of entry for other ISP’s, permitting true competition in the market. The final option is to flat out ban on hard data caps. At the end of the day, I feel data caps are being used as a way to eliminate the streaming media competition that providers such as Comcast now have.

Thank you for your time and I look forward to your response thoroughly addressing all of my numerous concerns and questions.

**Company Complaining About:** Comcast

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

██████████

**Ticket: # 1289985 - Cox Internet in Omaha, NE enforcing data caps for internet usage.**

**Date:** 10/27/2016 2:29:03 PM

**City/State/Zip:** Omaha, Nebraska 68102

**Company Complaining About:** Cox

---

## **Description**

Cox Communications in Omaha, NE announced they would begin enforcing data caps for their internet users, and charging fines when people go over their allotted monthly data limits. This practice is unfair and exploitative to consumers, and sets an oppressive tone for other ISPs to follow suit. The hard caps don't do anything to prevent any congestion that might occur at peak usage times. One could still get slow speeds and buffering in the evening while not ever exceeding their cap. Conversely, one could watch Netflix from midnight to 6am each day, exceed their data cap, and never affect another person's internet speeds.

Additionally, with the onset of colder weather, many people will be staying indoors with their electronics and internet. Beginning to charge for exceeding data caps at the start of winter comes off as a predatory business practice that harms consumers. Additionally, 4k TVs being a hot Christmas item, paired with 4k Netflix, average baseline data consumption per capita is likely to see a strong increase.

This practice of charging fees for data caps is unfair, predatory, and oppressive. Please stand up to big monopoly ISPs and prevent them from extorting their consumers!

**Ticket: # 1290081 - Comcast/Xfinity Data Caps and Overages**

**Date:** 10/27/2016 2:55:01 PM

**City/State/Zip:** Haverhill, Massachusetts 01832

**Company Complaining About:** Comcast

---

## **Description**

Hello.

To whom it may concern, I hereby wish to file a formal complaint with the FCC regarding Xfinity/Comcast and their implementation of data caps and overages for their internet services.

First and foremost, I am in an area where their service is the only viable option, and they effectively kept and continue to keep out any competition.

Add to this the issue now where they are beginning to roll out data caps, essentially forcing anyone who wants to remove it a nominal fee, regardless if they signed up for a service under contract for X amount of time.

The caps themselves are ridiculous in this day and age. Even a 1TB cap is easily exceeded with the number of devices in a normal American home and with more than 1 person using services. I myself have my data backed up to the cloud and between the initial upload and ongoing regular syncs to check for changes, regular internet usage, etc. it's easy to blast right through it. Most software is also now digital, meaning if you have to reinstall a steam game, or bought something new, that's additional bandwidth being used.

How much longer before they get away with speed lanes and the like? In addition to net neutrality, I call upon my government to begin classifying internet access as a utility (ideally, TV should be as well). We need better regulation, fair prices, and MORE competition.

---

[Ticket: # 1290129 - Cox charging for data by incremental use](#)

**Ticket: # 1290159 - Data Caps****Date:** 10/27/2016 3:21:51 PM**City/State/Zip:** Saint Paul, Minnesota 55108**Company Complaining About:** Comcast

---

**Description**

I was recently informed by my ISP (Comcast) that they would be implementing data caps on my current plan. This is unacceptable to me and continues to push towards my lack of choice and inability to use all the services that I would like to use on the internet. I recently subscribed to have 4K streaming on my Netflix account to use with my new 4K TV, however, now due to data caps I will likely have to cancel this service as I can not stream significant amount of 4K content without incurring additional cost penalties from Comcast. This is restricting my use of a service which is in direct competition with the cable part of Comcast's business. Further, I occasionally have to work remotely for work, so the internet is important to my livelihood and business. Normally in a free market I could choose another provider if I was unhappy, however, upon doing some research Comcast is the only provider in my area that offers speeds I need, and also is the provider with the highest data caps (including an unlimited option that will cost me an additional \$50.00 a month for the same service I had previously). So ultimately every other choice I have is worse than Comcast, but I am unhappy with their choices, and I am now forced into paying more for a previous service.

---

**Ticket: # 1290196 - Comcast's introduction of data caps is incredibly customer-hostile**

**Date:** 10/27/2016 3:32:17 PM

**City/State/Zip:** Ann Arbor, Michigan 48104

**Company Complaining About:** Comcast

---

## **Description**

Comcast has added an artificial bandwidth cap, with usurious rates for users who exceed it. They've effectively doubled the price for the same (unlimited-bandwidth) level of service, with no additional benefits. The fee structure is built to force customers to decide whether to commit to a higher monthly flat price (with a 12 month commitment) or gamble with their Internet usage and pay \$10 per 50GB over the limit, up to \$200 per month.

If Comcast were really adding this cap in the name of service reliability, they would cap the \$200 cost limit at no more than the flat rate for unlimited access (\$50 per month), or do as wireless providers do and reduce connection speed when the cap is exceeded. Forcing customers to gamble with data usage is not for service reliability, it is for Comcast's financial gain.

These caps enable Comcast to prevent customers from gaining open access to competitive streaming TV content services by excessively pricing the bandwidth needed to do so. Comcast's own TV service over cable is at an unfair advantage because watching it does not count against the customer's bandwidth quota. This practice would seem to fly in the face of FCC's recent decision to classify ISPs as utilities rather than telecommunications companies.

There is no way for a customer to hard-limit their Internet usage to be stopped at the cap, and therefore no way to prevent overage charges. Notifications exist from Comcast, but they are done in a laughably insecure manner, by injecting Comcast packets into non-Comcast HTTP traffic. This is not acceptable means of notification based on commonly-held security and privacy principles on the Internet. Training customers to accept communications from their ISP in random, non-secure webpages leaves a huge opportunity for phishing attacks.

This also raises concern that Comcast could insert other content, such as advertisements or illegal tracking tokens to use for advertising sales.

Additionally, when I inquired about getting an alternative offer to the newly-added AT&T Gigapower service, the agent I spoke with looked up my address, saw that I was not directly served by AT&T, and then indicated that because there was no AT&T competition at my address I was not able to get any additional pricing offers. This pricing behavior highlights what we already know: that Comcast is a monopoly which doesn't care at all about serving the customers forced to use it.

This is unacceptable behavior for a service provider that gives access to a critical utility such as the Internet. Artificial caps, price gouging for overages, and excessively anti-competitive behavior on Comcast's part make the use of the Internet cost-prohibitive for some members of my community and reduce the effectiveness of the Internet for everyone's First Amendment right to free expression.

---

**Ticket: # 1290199 - Data Cap**

**Date:** 10/27/2016 3:33:47 PM

**City/State/Zip:** La Vista, Nebraska 68128

**Company Complaining About:** Cox

---

## **Description**

Cox has informed us that they will be putting a data cap on their internet service beginning 11/21/16. The data will cap at 1tb and anything over that will be charged at \$10 for an additional 50gbs. I have a family of 4, 2 of those are my children who are in high school and college. The vast majority of their assignments require the Internet. As a family we subscribe to streaming services like Netflix, Hulu, HBOgo etc and a data cap like this means we may be unable to enjoy these services that we also pay for. In my area I don't have other options. Cox is it. This is like extortion. It's ridiculous and cox should be ashamed by their blatant greed.

---

**Ticket: # 1290232 - Comcast imposing unfair data caps and excluding Comcast services**

**Date:** 10/27/2016 3:42:01 PM

**City/State/Zip:** Fishers, Indiana 46037

**Company Complaining About:** Comcast

---

**Description**

I am one of many Americans that recently discovered that my Comcast internet data is soon to be monitored and capped at 1 terabyte per month. I do not currently exceed this data amount, but with online game downloads reaching up towards 100gb recently and 4k content becoming more and more prevalent on Netflix, Amazon, and YouTube I can absolute understand that data usage in my home and others around the country will only go up and Comcast stands to profit considerably from this despite taking on literally no additional costs due to the userbase's extra usage.

To make matters worse, Comcast is allowing some services provided by themselves to be counted data-free, which is anti-competitive and in clear violation of net neutrality laws. Comcast is giving their own services special treatment and customers that choose alternative sources are being punished.

Please help in doing whatever you can to stop Comcast and other regional monopolies from imposing data caps and anti open internet practices in their business. Comcast is the only broadband provider in my town and I have no choice but to comply with their anti-consumer practices. At this point in society the internet is a basic human right and is not considered a luxury or something that we can simply cancel if we disagree with our provider. My family and my community Needs internet access and Comcast is the only company around, so we need something else to stand up to these monster companies when we cannot.

---

## **Description**

Data caps serves as another form violation on the open and neutral internet. Cox and various other internet service companies are slowly encroaching on controlling the flow of information and content after their approaches to data pathway methods failed. The implementation of data caps renews this attempt and also serves to hamper and limit access to certain form of data and certain activities thus harming not just the consumer but also businesses that utilize free flow of information and content with extra monetary compensation.

---

[Ticket: # 1290404 - Cox Communications Internet Data Caps](#)

**Date:** 10/27/2016 4:47:34 PM

**City/State/Zip:** Omaha, Nebraska 68164

**Company Complaining About:** Cox

---

## **Description**

Cox Communications decided they want to impose overage charges with their data caps. Data caps are a complete joke and there is no cost or overhead for people who use a lot of data. Using a lot of data doesn't break switches or any other equipment. This is just another way to suck money from the consumer. They are trying to recoup losses from cord cutters and people who don't want to pay their ridiculous price of cable.

---

**Ticket: # 1290453 - Cox Data Caps**

**Date:** 10/27/2016 5:02:43 PM

**City/State/Zip:** Council Bluffs, Iowa 51503

**Company Complaining About:** Cox

---

## **Description**

Good afternoon,

I'm a resident of Council Bluffs, IA, part of the Omaha Metro area. I currently subscribe to Cox high speed internet. In my neighborhood, I have two options for broadband connectivity: Cox and CenturyLink. I'm an IT professional, and I regularly work from home. CenturyLink's highest available speed for my home is a mere 12Mbps, which doesn't provide the bandwidth necessary for video conferencing and remote work. As such, the sole viable provider for me is Cox.

Cox has begun implementing additional billing for any usage above one terabyte monthly. Between my work, recreational video gaming, and video streaming from YouTube, Netflix, Hulu, and Amazon, I regularly meet the one terabyte threshold. While I have the second-highest tier of internet available, Cox has implemented the one terabyte data cap across its product, so it's impossible for me to upgrade to a higher tier product to support my internet usage.

It is unfair that I'm restricted to a single viable internet service provider in a major metropolitan area of nearly a million residents, and that provider has begun to enforce additional billing on a customer base with no other option and no ability to adjust costs to usage habits. Cox's decisions negatively impact my ability to use my internet service as I wish, which affects both my work and recreation.

Thanks,

██████████

### **Description**

My ISP, Cox, is planning to start charging for going over a data cap. I feel this practice is unfair at the expense of the consumer. We pay a set rate for their service, and they are trying to squeeze more money from us by coming up with artificial limits. As someone who works from home, this could impact my ability to do so. Thank you for helping the consumer with this major issue.

---

**Ticket: # 1290518 - Comcast Data Caps**

**Date:** 10/27/2016 5:31:44 PM

**City/State/Zip:** Portland, Oregon 97225

**Company Complaining About:** Comcast

---

**Description**

On Nov 1, 2016 Comcast is instituting a 1TB /month data cap on ISP plans in many service areas. My service area, Portland, OR, is one area that is being affected by this. ANY data cap is unacceptable, because data per se is an UNLIMITED resource. ALL data caps are 100% arbitrary. Bandwidth is the limited resource. Congestion can ONLY happen by over-saturation of bandwidth. When ISPs start capping services, they're not trying to prevent congestion. They're trying to arbitrarily limit service to get them more money, and that's the only reason they do it. This allows them to negate competition based on quality of service, and will allow them to 'compete' on arbitrary restrictions, ultimately for the worse of all customers.

Data caps are a major concern to many consumers and are unnecessary considering the steep decline in internet provisioning and transit costs and the extremely high price (and profitability) providers already get from offering unlimited broadband service.

Please ban data caps implemented by Comcast, and other ISPs, as they are unnecessary and discriminatory against competing online video services.

**Ticket: # 1290623 - Comcast terabyte data cap is nothing more than a cash grab**

**Date:** 10/27/2016 6:25:05 PM

**City/State/Zip:** Cary, Illinois 60013

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently announced its new 1T data cap in the Chicagoland area. I called them to complain and heard nothing but pre-canned statements (likely from their legal dept.). My main argument is that I can leave ALL of my TVs on 24 hrs/day for an entire year and never be charged more than my monthly fee. Now, if I go and stream the EXACT same content over the EXACT same wire (I know they use different frequencies) they can charge me extra when I go over the 1T limit.

This is nothing more than their way of replacing lost revenue for a crummy product (Cable TV - 100s of channels with nothing on) that has people leaving cable TV behind and turning to streaming content that they want to see when they want to see it.

I'd switch providers but they are the only cable internet game in town (which is a whole other complaint altogether).

Please consider my concern and stop Comcast and others like them from trying to milk the American people for every penny they can.

Thank you.

**Ticket: # 1290712 - Comcast internet data cap**

**Date:** 10/27/2016 7:15:48 PM

**City/State/Zip:** Houston, Texas 77059

**Company Complaining About:** Comcast

---

## **Description**

Comcast informed me of the data cap effective Nov. 1 of 1 terabyte. They said only 1% of customers are effected. Then told me I have already exceeded the cap for this month if cap had been in place. I have a 2 person household that is trying to save money by cutting cable TV subscriptions and we use 2 streaming services. I can't believe we use so much more data than everyone else. Can their numbers be trusted? These caps are a burden on consumers. The unlimited data package of \$50 month more is ridiculous. Then they just raised the fee for the basic internet service also. There are only 2 choices in my area and I quit ATT as it got too expensive. Now Comcast wants to do the same. And how can they enforce this in my town when other towns in the state are not having this limit placed on them? Lack of competition is making for oppressive internet providers. This is not good for consumers.

---

[Ticket: # 1290717 - Data caps are not okay.](#)

**Date:** 10/27/2016 7:18:34 PM

**City/State/Zip:** Austin, Texas 78717

**Company Complaining About:** Charter

---

## **Description**

Comcast is introducing data caps and charging outrageous amounts to get unlimited. Data is free, they should not be charging extra for something that doesn't cost them money. We already have bandwidth caps, that's the only thing costing them money. The only reason Comcast can do this is because they have a monopoly on areas of the country, especially smaller cities. I do not have Comcast personally but if Comcast can get away with this, there's no doubt that other companies (like Charter) will follow suit. We cannot allow these companies to control the Internet. Utility companies are not allowed to put caps on the amount of water or electricity we use, you just pay for what you use. No outrageous fees for going over, no warnings, no "unlimited" plans, no catch. In this modern age, Internet is a utility. The internet is a place that connects people from all of the world, we can't let these companies destroy the internet.

---

**Ticket: # 1290736 - Cox Data Caps with little to no notice**

**Date:** 10/27/2016 7:31:25 PM

**City/State/Zip:** Omaha, Nebraska 68134

**Company Complaining About:** Cox

---

## **Description**

Cox is informing people with service in Omaha that there will be a hard data cap, with overage charges, starting at a currently undetermined date. I am complaining because as it is, Cox has often had their internet service go down in the middle of the night with no warning or apology for being unable to provide the service I am paying them for. So I am not understanding why exactly I need to have a hard cap on my data, when I already wish there was an alternative besides Century Link (which is far too slow of a speed for the money you pay each month).

The attached file is a screenshot of a Cox representative confirming the data cap, but not the date or amount for overage charges. Please look into this, I cannot believe they can do this on such short notice.

### **Description**

Cox Cable is trying to implement a data cap on home internet. 1TB of data is not enough for a family of my size where we have 4k streaming. Also tried implementing with less than 1 months notice to any of us customers in Omaha.

---

**Ticket: # 1290787 - Internet data caps**

**Date:** 10/27/2016 7:58:38 PM

**City/State/Zip:** Omaha, Nebraska 68130

**Company Complaining About:** Cox

---

## **Description**

How is a data cap of 1 TB at all useful or meant to ease network congestion during peak usage time as is the claim? This is simply a ploy to stop the cord cutters. With 4K TVs becoming a hot item this season and streaming services offering streams in HD and 4K it will easily eat up the data provided. In addition, with music streaming services and online gaming where games can be purchased digitally and the sizes of the games ranging from 10-60 GB it is just ridiculous to have a data cap limit. There's also the forced advertisements for some of the video sites such as YouTube which eat up data as well. This is especially true with the incredibly low data caps on mobile devices which can account for 10-20% of the allowable usage.

Having a data cap is a major step backwards. It doesn't serve a legitimately valid purpose other than to nickel and dime the consumers from "overages" while lining the ISPs pockets.

---

**Ticket: # 1290797 - Anti-Competitive Data Cap**

**Date:** 10/27/2016 8:02:14 PM

**City/State/Zip:** Westminster, Colorado 80031

**Company Complaining About:** Comcast

---

**Description**

I recently received an email that I will have a 1Tb data cap placed on my internet service.

I share a home with two other people and we all stream and use cloud based services. We only have cable because it makes our internet less expensive for basic, and we use services such as Netflix, Amazon Prime, and HBO NOW for entertainment streaming purposes.

My issue is that Comcast exempts themselves from these data caps while at the same time offering a competing product to the services I listed above. 1Tb is well enough for now, but they are clearly using their monopoly status to get in front of 4k and UHD content. For the record, the only other option for Internet in my service area provides a paltry 1.2 Mb/s.

In addition, networks are built to handle a certain speed, not throughput. It costs no more to deliver the millionth terabyte than the first.

The very nature of the data cap is anti-competitive and outright greedy. It is an attempt to further monopolize their position in the (non-existent) market and further take advantage of their customers and the rest of the population.

---

**City/State/Zip:** Snellville, Georgia 30078

**Company Complaining About:** Comcast

---

## **Description**

This is regarding Comcast's plan to roll out a 1TB cap to all Xfinity internet users. The prospect of a data cap in the present is almost unbearable. In an age where files are getting larger (with AAA title video games nearing 100GB downloads each), streaming content is becoming more common, and consumers are using the internet for more and more things, you'd think the concept of a cap on activity would be thrown out the window.

What's even more unsettling is looking towards the future. 4K Videos are already on the rise. Large files are simply going to get larger. The computer storage industry has already become aware of this, making harddrives that have numerous terabytes of space easy and affordable to use. Why are ISPs like Comcast intent on sticking to the past?

It's a business move, and that's all there is to it. Jason Livingood, VP of Internet Services over at Comcast, has already pretty much confirmed that QoS is and never has been a concern. Data caps are an anti-consumer construct meant to milk internet users of every penny they can in a time where people are using more and more data. It's despicable.

Worst thing is that I'm one of a large majority of people who don't have much of a choice of ISP. Comcast is the only option for actual high speed internet. They have a stranglehold on the industry that needs to be seriously evaluated, both for the health of the economy as a whole, and on a simple moral level. It does no good for anyone other than Comcast.

**Company Complaining About:** Comcast

---

## **Description**

I just received mailing today 10/27/2016 about Comcast introducing data-caps effective Nov 1 2016 on my internet plan. I have no other options for service in my area for internet. This cap reduces the value of my "old" plan and will now cost more for the service I once had with no difference in the quality of service. Looking into the future this will harm myself, other consumers and future consumers as the amount of data and information available and consumed will continue to expand as we see technological advances and improvement to internet infrastructure (or lack thereof). Data caps will stifle healthy competition and they are a guise to undermine net neutrality.

---

**Ticket: # 1291104 - COMCAST CAP of 1TB**

**Date:** 10/28/2016 5:57:29 AM

**City/State/Zip:** Mendota Heights, Minnesota 55120

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

██████████

[Ticket: # 1291228 - Data caps and data based billing](#)

**Date:** 10/28/2016 9:29:36 AM

**City/State/Zip:** Gainesville, Florida 32607

**Company Complaining About:** Cox

---

## **Description**

This week Cox Communications both increased their internet prices by almost 10 percent and added an enforced 1TB data cap with a penalty charge for using more than the allotted amount. This move takes advantage of their virtual monopoly over internet service in Gainesville, and only serves to increase their profits.

With the growing use of data-heavy, 4K streaming services such as Netflix, the average Gainesville family will go over Cox's data cap simply by continuing to stream video in their homes as many are already doing. The decision by Cox to charge based on data usage serves to keep people locked into cable subscriptions.

Data limits and overage charges are a ploy by cable companies to increase their profits by taking advantage of consumers as the demand for high definition streaming increases. Broadband providers have admitted that caps have nothing to do with data congestion. This behavior creates a hostile and discouraging environment, and serves to harm consumers and limit innovation.

---

**Ticket: # 1291261 - Comcast's new data caps****Date:** 10/28/2016 9:53:25 AM**City/State/Zip:** Houston, Texas 77059**Company Complaining About:** Comcast

---

**Description**

I'm sure there are going to be countless complaints about this, but here is another one. Comcast's new 1TB data cap is a blatant and transparent attempt to circumvent net neutrality. It's been obvious for a while that Comcast and other TV providers are hemorrhaging customers of their extremely overpriced TV service as they leave for the better pastures of online streaming services. These companies have obviously always wanted to stop people from using streaming services so that customers are forced to continue paying for said TV service. Net neutrality has thankfully stopped them from doing so, until now. The 1TB cap is only going to affect people who use many gigabytes of data on a daily basis. There aren't a lot of ways to do that, but streaming video is by far the most common one. And with video streaming, it's very easy to exceed 1TB in a month. As such, people who stream video are going to have no choice but to pay Comcast an exorbitant fee to continue doing so, or stop streaming video. For the sake of open internet, net neutrality needs to be expanded to make data caps unacceptable, as they serve no other purpose than to control internet customers, which is exactly what net neutrality is supposed to prevent. Monthly data caps have absolutely no positive effect on anyone, but implementing them allows Comcast to extort even more money from their customers than they already are. The internet is pretty much a requirement to function in the modern world, and it's an atrocity that here in America, most areas have nothing but bad choices for internet service providers.

---

**Date:** 10/28/2016 10:31:10 AM

**City/State/Zip:** Council Bluffs, Iowa 51501

**Company Complaining About:** Cox

---

## **Description**

How is a data cap of 1 TB at all useful or meant to ease network congestion during peak usage time as is the claim? This is simply a ploy to stop the cord cutters. With 4K TVs becoming a hot item this season and streaming services offering streams in HD and 4K it will easily eat up the data provided. In addition, with music streaming services and online gaming where games can be purchased digitally and the sizes of the games ranging from 10-60 GB it is just ridiculous to have a data cap limit. There's also the forced advertisements for some of the video sites such as YouTube which eat up data as well. This is especially true with the incredibly low data caps on mobile devices which can account for 10-20% of the allowable usage.

Having a data cap is a major step backwards. It doesn't serve a legitimately valid purpose other than to nickel and dime the consumers while lining the ISPs pockets.

---

## **Description**

Comcast has recently introduced data caps in IL where previously there was none. It 's anti-consumer as it costs them no extra money to provide more of an internet that is already provided. In addition, Comcast also heavily advertises their own video streaming services that do not count against data caps. This is entirely anti-competitive. It serves only to pad Comcast's pocket in a market with currently no competition. With 4k TV and multi GB gaming becoming the norm, it's entirely too easy to surpass these caps on a monthly basis.

## **Description**

Recently the dubious policy of Comcast data caps has reached me now and it is absolutely ridiculous and should be put a stop to. It is well known that data caps are not due to congestion and that the actual cost of broadband internet does not coincide with what is charged. This is allowed to continue because of illegal monopolies on broadband internet that have left many Americans, myself included, with no alternative broadband internet service provider to TWC/Comcast who mysteriously are able to get away with never directly competing. Broadband internet is a necessity for many peoples lives in America as it connects us to entertainment, news, coworkers, professional sources, education and essentially all other facets of information and communication. Data caps stand in the way of progress as a society and should not be allowed so long as the current lack of marketplace competition is allowed. My only solution is to limit my connection to the wider world, or pay exorbitant fees to Comcast which bear no resemblance to the cost of the service provided. It is seemingly both a ploy to encourage usage of Comcasts TV services for entertainment as online streaming media services are a large portion of the public's data usage as well as a shameless money grab. Please put a stop to this.

**Ticket: # 1292335 - Internet Data Caps in Lititz PA- Lack of internet options and competition- Cable service conflict of interest**

**Date:** 10/28/2016 5:53:52 PM

**City/State/Zip:** Lititz, Pennsylvania 17543

**Company Complaining About:** Blue Ridge Communications

---

**Description**

Blue Ridge Communications is the only cable internet provider in Lititz Pennsylvania. They have hard data caps that are designed to extract money from consumers that choose not to sign up for their Cable TV services. This is a conflict of interest as the data caps are so low it's nearly impossible to use the internet with out continued monitoring of usage. The maximum data allowance is 1000GB which is too low for a household streaming 4k content. This issue will only get worse as time goes on and more people begin streaming 4k content.

I regularly go over my 700GB allowance even with constant monitoring and I am required to curb usage to keep my bill reasonable. They charge \$10 for every 50GB over the limit which quickly piles up if I'm not careful.

This is gross gouging of customers who don't subscribe to their cable service as a majority of my television usage is now streaming service like netflix and Amazon.

This wouldn't be as much of an issue if there was another cable internet or fiber company in the area as they would be forced to compete. There is no real competition in this area.

**City/State/Zip:** Loveland, Colorado 80537

**Company Complaining About:** Comcast

---

## **Description**

I believe Comcast is doing these data caps in order to recoup losses to their cable stocks in Viacom and other networks, as they have implemented a data cap only against Internet, not their cable packages that they have another hand in. They even admit there was no congestion or back-up that would warrant a cap. This is them trying to level the price of streaming services like Netflix, Hulu and others and making them cost as much as a cable package. I think this is wrong, unamerican and **NEEDS TO BE STOPPED**. These monopolies are only going to continue to hurt the innovation and creation that making the United States internet the driving force in world economics it is today.

**Date:** 10/28/2016 7:20:59 PM

**City/State/Zip:** Chico, California 95928

**Company Complaining About:** Comcast

---

## **Description**

One of my main issues with the data caps is the sudden implementation of it without advanced warning from the company. The Data Caps of 1 TB will start on the 1st of November, however I only received notification of it just currently. I am one of the "1%" of customers that uses more than 1 TB of data monthly, and they did not bother reaching out to me further, and in advanced before telling me that my supposed "unlimited plan" was going to be restricted in the coming days.

Another issue that arises is that there is not sure way for the consumer and the company to know if that they have used all or over the allotted data. Data is an unlimited resource, it is not comparable to natural resources that will over time disappear. The company can easily inflate the numbers without the consumers knowing and therefore charge them more at the end of the month. There is no way for consumers with a large family such as mine to keep tabs on every little bit of data we use. There are also other factors that would inflate the number of data we use, but not getting the service we had asked for. Dropped websites would need to be reloaded, therefore using more data to reload the page. Unnecessary adverts that just load numerous pages in a matter of seconds takes up data. There are numerous factors that could add up and inflate that data charges, without you even getting the service you had asked for or wanted in the first place.

Another concern is that I am paying for premium speeds, yet I am on the same boat as the people that have much slower bandwidth. The speed is the only finite resource in networking, yet if I am paying for a better quality speed, why is that I am on equal grounds with people who have a slower package than me? The people that had paid for faster internet speeds should be allotted more Data, as there is no point in having an extremely fast speed when your data pool is restricted to such a measly amount. They do offer an unlimited data plan for an additional \$50, but if you are paying nearly \$200 for your internet service, you expect to be getting additional bonuses that a \$100 or even a \$75 plan wouldn't. Sadly no, you get top of the line speeds, but you're on equal grounds with people who have significantly slower speeds than you.

Now onto my main concern. Comcast had issued an explanation that only 1% of their consumers ever use up 1 TB of their data, and then they proceed to tell everyone that you can have X amount of HD videos streamed in 1 TB, or X amount of pictures downloaded, etc. However, we live in a time where technology is rapidly developing. 4k is now more common, streaming services are now replacing cable television. Files are getting larger and larger every year as quality goes up. Soon, one terabyte would be exceeded in just days rather than a full month. Comcast has taken the liberty to screw its consumers under the facade that they'll treat everyone equally with the same amount of data. If only 1% of the entire consumer base is using more than 1 TB of data, why enforce a data cap entirely? The other 99% wouldn't think of that the data cap is some milestone they have to reach. Comcast is simply abusing its monopoly status to bump up rates and increase their revenue.

**Date:** 10/28/2016 9:11:56 PM

**City/State/Zip:** San Jose, California 95112

**Company Complaining About:** Comcast

---

### **Description**

I recently received a notification from Comcast that they will be implementing a 1TB data cap on the internet service provided to customers in my area. Customers who exceed this cap will be charged a \$200 Fee. They also notified me that they will be selling a new uncapped service plan which is an extra \$50 per month.

This plan was sold to me as ideal for streaming online content, a data cap of any sort limits my ability to do directly what I purchased this plan for. When I signed up for my Comcast plan there was no mention of a data cap or the possibility of one in the future. Comcast tied me into a year-long contract and have now changed the conditions of the contract. This is anti-consumer practice and is a direct breach of contract and promised service by Comcast.

Comcast is already notorious as the worst company for customer satisfaction in the country and rather than take any efforts to improve their service, They chose to implement extra fines and charges to punish their customers. This data cap is another in a long list of example Comcast has made to prevent free and open internet access. It should be stopped at all costs.

## **Description**

Xfinity/Comcast recently enacted a data cap in my area. By paying my next bill, I automatically accept the data cap, but I'm under a 2 year contract. I am heavily reliant on internet, as I require it for school and do not have cable for entertainment. Prior to this, I had unrestricted data. Now in order to have unlimited data, I would have to pay an extra \$50 a month. I live in a new development and Xfinity/Comcast is the only provider in the area apart from satellite internet, offering only a fraction of my 250Mb download, 25Mb upload plan.

---

**Ticket: # 1292616 - Comcast's new 1TB Data Cap****Date:** 10/28/2016 10:27:04 PM**City/State/Zip:** Auburn, Washington 98002**Company Complaining About:** Comcast

---

**Description**

Comcast's new 1TB Data Cap system is a blatant scam/money grab that is being forced upon users. They are putting a cap on an infinite resource. There isn't a limited amount of "internets" like there is electricity or water. They also stifle competition and I am forced into using Comcast and being forced into data caps, or going with Century Link with speeds up to 20Mbps which is too small to work from home. So thanks to the non-governmental regulation I am forced into a single option which means I as a consumer have zero say in influencing the way Comcast treats their customers. They receive countless complaints for their terrible business practices, but it doesn't matter because consumers have nothing they can do. There are no options. We are 100% powerless and the FCC needs to assert that Data Caps are absolutely unreasonable and serve no reasonable purpose. Working in the networking industry, it has nothing to do with the backbone or their infrastructure. It is 100% about profits.

**Date:** 10/29/2016 12:05:49 AM

**City/State/Zip:** Centerville, Georgia 31028

**Company Complaining About:** Cox

---

## **Description**

My internet provider cox communications has implemented a data cap with overage limits of \$10 per 50 gb after the cap. I have had this service for quite awhile and never agreed to any metered or capped data package from this company. Not only are caps bad for consumers but it completely limits access to information, services, and increasingly utilities that we use in our daily lives. This heinous decision will do nothing by stifle development and creativity in the Information Age.

**Ticket: # 1292715 - Cox Communications Data Caps in Nebraska****Date:** 10/29/2016 1:31:00 AM**City/State/Zip:** Omaha, Nebraska 68122**Company Complaining About:** Cox

---

**Description**

I didn't expect this terrible business practice from Cox. I'm livid that it is being proposed. The mark-up on data is high enough (2000% to 5000%). This kind of abuse of monopoly cannot be tolerated. A precedent should be set here and now to end excessively money grubbing tactics like this. There is NO positive side for the customer in this situation as we will NOT see improved infrastructure relative to the higher prices paid due to data caps. The internet is a necessity for the vast overwhelming majority of the working population of the United States; I know your commission is aware of this. I know it's not easy to fight, but you know every single person that knew about this would voice their concern if they knew how. Take my plea as the voice of those who don't have time or energy to constantly battle this unethically lucrative nonsense. Let's not take a step backwards in limiting what people can do with the internet. Let's take a step forward and make ISP's responsible for the infrastructure that we as tax payers helped fund instead of letting that money disappear. Thank you so much for your time in reading this. I'll be in touch if you need anything from me.

## Description

I just signed a two year contract with Comcast/Xfinity about 30 days ago. We decided to go back to them for TV instead of streaming everything only to find out with only a four day notice (See attached letter showing the date when the letter was sent) that our data will be limited to 1 Terabyte. After that we will be charged \$10 per 50 GB or we can pay an additional \$50 for unlimited data.

Obviously they are doing this because companies like Netflix, Hulu, CBS All Access, Playstation Vue, Sling TV and all the other streaming services out there are cutting into their profits. How can they be allowed to do this? You can't even find a job now without Internet. And whether you are streaming something or just using your phone to check your email, it all goes through our home Internet.

What options do we have? They are telling me that ALL Internet providers are going to this. And with no REAL competition, we have no course of action. Comcast basically owns this area. ATT sucks because they are regulated more than Comcast. And that is coming from the ATT representatives I have talked to over the years.

Please tell me you can do something . I read on the internet that the FCC was not going to allow companies to cap our streaming. Well they may not be capping it but they might as well. We can barely afford to put food on the table. We can't even take vacations... our only source of entertainment is our TV and Internet.. now we have to be worried about what we use each month. It's like our Internet is turning into our cell phones.

Why is it all of this stuff is so much cheaper everywhere else but here.

[Ticket: # 1292745 - Comcast and the new data cap](#)

**Date:** 10/29/2016 3:42:19 AM

**City/State/Zip:** Bellevue, Washington 98008

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently introduced a data cap of 1TB, which will directly affect me. According to the letter sent, I'm using in the top 1% of monthly data, near the new limit. In the current age of the internet where TV shows and movies are streamed in high definition and multiple people and devices are accessing the internet constantly, and software updates and installation in many multiple gigabytes, having a cap like this is a move that will shortly become a way to get more money out of customers without having to provide better service or speeds.

I ask you to please address this with Comcast to keep the internet a place where access isn't limited to those who can afford it. Already, fast internet is nearly a required part of daily life, and this will only serve to limit that to people of the country.

Thank you,

██████

---

**Description**

Dear FCC

I recently received a mail from Comcast informing me of their roll out for the 1TB data usage plan in my area. As a professional in the digital media industry and a heavy internet user, I am strongly against this change, as it is likely to impede the speed at which technology grows.

First of all, the letter included very biased data, which would mislead users that were less informed. For instance, it claims that 1TB will sustain ~600 hours of HD video, which points to a bitrate of 3.7Mbps, roughly the bitrate that streaming sites such as Netflix and YouTube serve for their 1080p videos. However, they failed to mention that 4K streams, which is rapidly growing on the aforementioned sites, are typically streamed at 4 times this bitrate, reducing total hours of video to 150 hours/month or 5 hours per day -- a vastly more reachable number for households of two or more. Let us not forget that 8K video streaming is just around the corner (already available on YouTube) with an even higher bitrate.

Given the existing trends of "cord-cutting", this practice will fundamentally limit the growth of online media streaming services, which are direct competitors to Comcast's cable service, in the matter of a few years. I cannot but question the business and strategic reasons behind this move.

Furthermore, the 1TB data cap is ridiculously low when considering the internet speeds that are offered. For instance, the 150Mbps internet I subscribed to is capable of downloading 18.75MB per second, and it will reach 1TB in a mere 53333 seconds -- also known as 15 hours. The 1TB data cap is not even capable of sustaining a full day of usage if I run it at its full potential!

This also limits the daily business of cloud-based companies, which is an industry growing at exponential speed. For instance, companies such as Backblaze offers full disk backup over the internet, and amazon's cloud storage provides unlimited storage for a fee. Internet cap is vital for these technological innovations because they fundamentally assume that data transfer between home computers and the cloud is as unobstructed as that of an SATA cable. This assumption fails quickly in the face of data caps -- let us not forget that 1TB is merely the size of a normal HDD from 6 years ago.

Let us not even mention their option of 50\$ for unlimited data. It acts more as a barrier to entry for those who cannot afford rather than an option that prompts fairness as they claimed.

Allowing ISPs such as Comcast to put in place an arbitrary data cap on their internet service is akin to allowing them to control the services that entire communities (where it monopolizes) can acquire from the internet. This is fundamentally wrong in many aspects, and in particular, given Comcast's track record, it is a company that I have little faith in when it comes to technological innovation.

Yours truly

██████████

## **Description**

My ISP has decided to implement hard data caps. This practice does nothing to help peak traffic and is anti consumer. It would not be a possible practice if there was a comparable competitor in my area. These nickel and dime charges are due to a monopolization of cable internet services. I would like to see the hard cap removed.

---

**Ticket: # 1292861 - Xfinity / Comcast Bandwidth meters**

**Date:** 10/29/2016 10:41:48 AM

**City/State/Zip:** Carol Stream, Illinois 60188

**Company Complaining About:** Comcast

---

## **Description**

The bandwidth meter on my xfinity account is not available. We are expected to be held to a 1TB data cap. I stream my television via the playstation vue service, which brings me close to my data cap. For the past three days, the bandwidth meters have been unavailable on the xfinity site. In a matter of a couple of months, I went from unlimited service to a now capped service without the ability to actually see the metering so that I know where my actual usage is at. Any other industry would be taken to task for such anti-consumer measures. I work in the banking industry - this would be akin to charging overdraft fees but not letting the customer see their balances. The FCC needs to step in and help consumers and eliminate the completely unnecessary data caps. I would happily switch to another service but I have no options in my area other than the very lowest tiers of DSL service which are about 1/5th the speed of my comcast connection. This is monopolistic anti-consumer business practices at their very worst. I implore the FCC to help me and fellow consumers in this matter and add additional regulations to the cable industry in this area.

## **Description**

To whom it may concern,

I recently learned about Comcast's plans to implement data caps around the country starting November. This is something that I learned via news outlets, as Comcast themselves couldn't be bothered to inform customers themselves.

Comcast has been treading dangerous water with their customers for as long as I have been one. I've experienced: terrible customer service, surprise hidden fees, failure to move my services to a new residence and instead creating a new account which billed me twice, terrible service and outages, poor communication, and unruly upcharges in billing.

It's no secret that Comcast can see the writing on the wall. Cord-cutters are taking over and Comcast's television revenue is dropping. Because of this, they choose to raise internet rates, implement data caps, and reduce streaming quality for various online video services. And why does Comcast get away with this? Because they lobby politicians to pass laws and allow monopolies to be legal.

I would like to quote Comcast's senior vice president and general manager Eric Schaefer, "Our data plans are based on a principle of fairness. Those who use more Internet data, pay more. And those who use less Internet data, pay less." This is absurd. How is it fair to implement data caps for customers, yet lobby to prevent competition from entering the free market? Comcast loves to scream free market, yet do everything in their power to stomp it out. And those who use less, pay less? Guess what? I use on average 250GB of data a month according to Comcast's data usage meter. I've been recently informed that my rates are going up in December. So let's say that my rates go up to \$69.99 or higher (I'm currently paying \$49.99). If my neighbor has the same plan as I do, yet uses 999GB of data and I use 250GB of data we pay the same price. That means Eric Schaefer is a liar. When my rates go up, I will cancel my service and sign up with Frontier. They offer unlimited data so they can have my service. I will not pay more for less with Comcast.

Aside from this being a personal issue, there is something deeper that the FCC needs to do something about. Comcast is stepping in the way of our constitutional rights. By limiting our access to the internet, they are limiting our freedom of speech. Millions of Americans use the internet as a tool for learning, letting their voice be heard, and a seemingly infinite amount of reasons to make the world a better place or express their artistic visions. Comcast cannot be allowed to abuse their customers and the FCC needs to actually do something about it. It is inherently un-American to be promoting these business practices.

I've visited countries in Europe and Asia that employ higher quality internet at cheaper prices and without data caps. Why is it we're moving backward in America? Aren't we supposed to be paving the way to the future? Doesn't Comcast want to be a great company that has the best technology in the world, excellent customer service, consumer-friendly practices, and just be a company everyone loves? Imagine that! Imagine a world where people flock to Comcast because they're actually a great company! Instead we have a company that is loathed by the population; likely receiving countless FCC complaints from customers; customers who may literally have zero other options for internet dues to Comcast's lobbying efforts for monopolies.

Why won't the FCC do anything? I anticipate a generic email from the FCC, followed by a phone call from some managerial puppet at Comcast trying to convince me that data caps and increased prices are, "better for the customer." Those employees know it's wrong. I feel bad for them having to spout nonsense. Working for such a corrupt corporation that abuses its customers and likely abuses its employees.

Data caps are un-American and unconstitutional. It's rather convenient that this happens as soon as Google Fiber pulls out of Portland. Comcast was scared and now they have free reign to rape their customers.

I will not stand for this. I will not pay for their garbage TV services. Speaking which: the TV services use the same cable and data that their internet service uses. You're telling me that I can leave my TV cable running 24/7 and Comcast won't care, but the second I stream video via YouTube, Netflix, Hulu and the like suddenly Comcast needs to charge more? Internet is not a finite service like water; and yet I don't pay more for my water bill if I go over a water cap. I pay for what I use. Internet can be a utility, but it needs competitive and fair pricing.

Americans need to be louder and step on Comcast. The FCC needs to properly regulate these terrible corporations. I will not stand by idly and let my freedoms and rights be stolen from me.

I beg the FCC to do what's right and stop Comcast from limiting their customers and stealing their right.

Thank you for your time and consideration,

██████████

## **Description**

I was recently informed of a data cap being instigated in my area. I have never consciously agreed to capped home wired internet. The practice is unaffordable and punitive in nature. The claims comcast makes for improving network performance are unfounded and frankly absurd. charging more for using the same service is still using the same amount of data, just unfairly profiteering off of what is becoming normal customers.

I did not agree to a data cap, and have no choice in the matter as comcast controls the overwhelming majority of broadband connections with requisite performance.

This abusive practice needs to stop before it gets out of hand.

**City/State/Zip:** Sweet Home, Oregon 97386

**Company Complaining About:** Comcast

---

## **Description**

I'm contacting the FCC to urge them to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

**Ticket: # 1293168 - Comcast newly introduced data caps in Houston Texas**

**Date:** 10/29/2016 4:30:59 PM

**City/State/Zip:** Webster, Texas 77598

**Company Complaining About:** Comcast

---

## **Description**

Today, 10/28/2016, I got a letter from Comcast in my mailbox telling me that they will switch me to a new internet data plan that limits my monthly traffic to 1 TB of data (1024 GB). Up until this point I had unlimited internet for the past 2.5 years. Comcast is kind enough to only charge me \$10(lol wut) per 50gb if I go over this data cap OR, if I so desire, I can pony up an extra \$50 every month and remove the newly introduced data cap to revert back to the unlimited internet plan I signed up for in the first place. This is unacceptable. To make matters worse, my only other option in this Houston metro city is AT&T and they offer "broadband" speeds of 6mb/s. Such a joke

I have a couple of issue with this new data plan, besides that fact that they changed my internet usage. If I get close to the 1 TB usage, I have to decide what to use my internet on, until the cap resets (or pay extra, which I won't do out of principle). It is limiting freedom of information and internet traffic. There is also no good reason why this data cap is put in place (besides greed). Internet traffic is not a finite resource. Nobody runs out of internet, so to assign a random traffic cap to users is arbitrary. Instead of charging users more, Comcast should upgrade their networks.

And If I do reach the 1TB data cap and don't want to or can't pay the "extra " Fee to get back my unlimited internet, my only other option is to unplug my router from the internet and wait. This is not right.

Comcast has the gall to say that this cap is based on the principle of fairness. As if. In their own words, "Those who use more internet data, pay more. And those who use less internet data, pay less." So, if I only use 250 gb data per month, I should get a discount every month, right? Wrong, that doesn't happen. I get charged a flat fee and they charge more if I go over their arbitrary data caps.

This is anti-consumer behaviour. It is actively discouraging people from using the internet as much as they would like to. Right now they might say 1tb is enough, but give it a few years when we can stream higher quality streams online and the data will be used up fast. I don't like where this is going and something needs to be done to break up this monopoly they have.

## **Description**

I just got a letter in the mail that I'm going to be charged up to \$200 a month if I don't buy in to their "unlimited data" of \$50 a month. Well, the problem is, going to their website they \*advertise\* "High speeds, endless streaming", yet this is completely false. As an example, at 44Mbps, it would take 2 days, 6 hours 37 minutes to reach this "cap". Doesn't really sound like "endless" to me. Sounds like false advertisement. A 1TB limit makes no sense when their even faster plans can reach this number ever faster than before.

**Ticket: # 1293198 - Comcast Data Caps in Chicagoland Area**

**Date:** 10/29/2016 4:53:26 PM

**City/State/Zip:** Glendale Heights, Illinois 60139

**Company Complaining About:** Comcast

---

**Description**

I believe it is unethical, illogical, and downright greedy for Comcast to implement a 1 terabyte cap on all internet subscribers in Chicago, especially to those who live in areas where Comcast is the only available ISP that offers broadband speeds.

As the owner of a sole proprietorship, I cannot afford their business packages or their data cap overage fees. I do wedding videography and must upload hundreds of gigabytes of video footage to backup online. Now that Comcast is restricting my usage of data, that means I either have to:

- pay overage fees, which I cannot afford.
- upgrade my internet service, which I cannot afford.
- stop backing up my data online, which will leave me liable for legal action in the event that I lose data that someone has paid me to create. or...
- move to a new apartment which has internet service providers available to me that can supply broadband speeds I need in order to successfully run my business.

As you can see, none of these options are ideal and I believe choosing any one of them will cause me to potentially lose my business.

---

**Ticket: # 1293208 - Conflict Of Interest (Data plans)****Date:** 10/29/2016 5:09:22 PM**City/State/Zip:** Spokane, Washington 99208**Company Complaining About:** Comcast

---

**Description**

Comcast is the provider of television services and Internet services. The Internet is quickly becoming the preferred method of video distribution. The new data plans are structured in such a way that if you choose to rely on Internet for media distribution, you will be forced to pay significantly more. Consumer Internet usage has gone up year over year and will continue to do so. They purposefully picked a data cap that is okay for most people today, but will not be viable in the near future as people transition to digital media distribution. They claim on their website that people who use more Internet should pay more and people that use less should pay less. However, they only give a 5.00 dollar discount to people using less than 5 GB of data. In contrast you can pay 50.00 to remove the data cap, or be subject to overages of up to 200.00.

**Ticket: # 1293216 - New Cox Data Cap in FL**

**Date:** 10/29/2016 5:22:09 PM

**City/State/Zip:** Pensacola, Florida 32526

**Company Complaining About:** Cox

---

## **Description**

I have just received notice that my 100mb download and 10mb upload speed internet is being capped at 1TB a month starting 26 Nov 2016. While I have not reached this cap yet (according to cox) I feel like this a blatant cash grab to get customers to buy cable packages or upgrade to the highest tier internet package (all internet packages besides the top one receive the same cap, the top tier gets 2TB which is not available in my area). There are only 2 high-speed internet options for my living area, and AT&T is far slower and less reliable than Cox, so I cant really say no with my wallet. We rely on internet for entertainment, education, and my wife's online business and now wonder if we are going to have to watch our data like we do on our phones (the whole point of wifi was to reduce data usage, which apparently wont matter now). While we may never reach a 1TB data cap, I feel this is just unfair and forces people may need more to pay an extra \$10 for only extra 50Gb of data (thats crazy).

[Ticket: # 1293251 - Comcast 1TB data cap](#)

**Date:** 10/29/2016 6:22:34 PM

**City/State/Zip:** Davis, California 95616

**Company Complaining About:** Comcast

---

## **Description**

After hearing news about Comcast's plan to roll out their 1TB data cap this November, it is important to know that this can not happen in the age of modern technology. The internet has become so well known and accessible that it should not be labeled as a service but as a public utility. Comcast's reasoning is that 1TB is a lot and that less than 1% of their customers reach that limit. Then why cap it in the first place if it affects that small amount of people. Clearly, that is not true and just another money marketing grab. Please pressure Comcast as this is not right in this time of age where 4K and so many more things are available on the internet.

**Ticket: # 1293271 - Unreasonable Data Cap**

**Date:** 10/29/2016 6:59:54 PM

**City/State/Zip:** Omaha, Nebraska 68106

**Company Complaining About:** Cox

---

**Description**

Cox Communications is about to enforce a 1TB data cap on all their internet tiers. Going over on your data cap is \$10 for every 50GB. At my house I live with my sister and two other roommates while we all go to college. Four students use a lot of bandwidth as we all use the Internet frequently. School work requires me to download large virtual machine files that are multiple gigs in size a few times a month. Netflix says: A data cap or allotment of 300 GB of data per month or higher is required just to meet the Internet television needs of an average American. With all my other Internet activities, it's basically guaranteed that we will pass the data cap.

I feel that the cap is being used to extort money from the customer. Data transfer is NOT an expensive task. It's transmitting bits, 0's and 1's, very fast through a fiber cable. There is no true reason to establish data caps besides for customer extortion. Data caps do not appear to serve a legitimate purpose and do not help manage traffic. They only serve to help ISPs make more money.

The hard caps don't do anything to prevent any congestion that might occur at peak usage times. I could still get slow speeds & buffering in the evening and never use 10% of this cap. I could also watch Netflix midnight to 6am every day & blow my cap and still never affect another person's internet speeds.

I do not believe this practice of Internet data capping should be legal.

---

**Company Complaining About:** Cox

---

## **Description**

Data caps no matter how large are anti-consumer. It literally makes no sense for the consumer to charge for data if you're a power user. I don't have the luxury of downloading all my games and programs and keeping them on one large drive. Instead, I have to uninstall programs and redownload them if I want to use them. As a result, charging for a data cap is like charging me for every time I have to go into the fridge to get food. Its stupid. Make it stop please.

---

## **Description**

Yes, I have been informed I will be subject to a 1T data capture on Nov. 1st 2016. I contacted Xfinity to discuss this change. I was informed I could add unlimited for an additional \$50 a month. I currently paying around \$80 for there blast Internet. This would up my bill to \$130. This is concerning considering I have cell phone service through T-mobile for \$50 a month with unlimited data and Hotspot.

My real concern and complaint is I asked about data being used for on-demand TV service through xfinity. I was informed that data used for on-demand will be accounted for. This is an unfair business practice as xfinity prefers customers to bundle products and most of the time their products are not affordable if you do not. Now the will account for data usage using their own product and informed me I cannot have the one demand service removed and discontinue paying for it. It is not okay I am forced to pay for a TV product on my cable portion of the bill and now on my Internet bill through usage deductions . If they are going to force caps upon consumers data there should be usage deductions or their own services.

---

## **Description**

I received a letter in the mail this week stating that starting on November 1st 2016, my internet would be under a data cap of 1TB. As you can see in the attached letter, I have gone -over- 1TB on data for the last few months. I have three people who do online gaming and streaming on a daily basis. Enforcing this cap is ridiculous, especially when they are aware I already use an amount of data every month that is over their proposed cap. They are essentially forcing me to pay 50% more on my bill every month for the ability to have unlimited data, because there are NO other providers available to me at my address. I would have to move to a different part of town to have access to a different provider, which doesn't provide the same speed that my current internet has. If I chose not to pay the extra 50% every month, they will limit my usage but keep my bill the same. This is ridiculous.

---

## **Description**

Cox Communications in Omaha NE is implementing a data cap of 1TB for their customers beginning November this year. This is pointless as it does not affect internet speeds at peak times and does not deter people from using their internet. With the amount of streaming, downloading video games, and gaming in general a person can reach this easily in no time what so ever while paying a heavy cost to have the internet let alone the fines that go with going over the cap. This is not fair to people that pay for their internet, use it the way they always have, and then suffer the consequences.

---

**Ticket: # 1293616 - Net neutrality restrictions data cap effect and forced usage adjustment policy**

**Date:** 10/30/2016 10:41:31 AM

**City/State/Zip:** Galveston, Texas 77551

**Company Complaining About:** Comcast

---

**Description**

Comcast says I have to manage specifically how much I use the internet or I have to either pay an outrageous price for internet overage coverage. Either \$50/month for an unlimited plan or a Gb coverage plan which is over \$500/month. I am worried because they are specifically asking me to limit how much I use the internet, or pay specific fines of 10/GB overage or I must get an additional coverage. How is it legal to restrict the amount of internet I use when I just rebundled my services, inquired specifically about the change, and was told it would not apply to my speed usage of 250/mbs. Yet it does. We also got a letter in the mail saying the service starts on 11/1/16 but when I called customer service on 10/30/16 at 9:25 Am I was told it's been ineffect for two months. I was also told the first two months of overages are free to allow me to adjust my usage. So I'm paying for a service with limits that were not mentioned when I subscribed which will restrict the business practices of Microsoft Xbox, Netflix, Vudu, T-Mobile ( I have a cell booster) specifically because I regularly use these services. As a teacher it also restricts my usage for education based content search and application for my classroom. I am filing a complaint for the purpose of free market, economic and educational effect.

---

## **Description**

I am a resident currently affected and very unhappy about Comcast's new data cap plan they forced upon my home and my community. Data plan is not about fairness, it is not about congestion, it is a way for Comcast to pad their profits.

Let's talk about fairness; Comcast claims they are charging data like how any other utility charges for water, electricity, and gas. However, once the infrastructures are put in place, sending and receiving data costs almost nothing to them. They are already charging enough to post record profits last year.

Now, let's talk about congestion, data caps have nothing to do with network congestion, as was evident when Comcast accidentally leaked an internal memo confirming so.

Increase in profits is the only reason left, and while a business has every right to make as much money as they can, Comcast, being a monopoly in many areas, should be held to a different standard. There is no competition, nowhere to turn. With the increase in high data-utilization applications such as 4K streaming and more Internet connected devices in our homes, this data cap is just an unfair way to get in on the money without actually innovating.

---

**Company Complaining About:** Comcast

---

**Description**

I live in the Portland, Oregon Metro area and I was recently informed by Xfinity/Comcast that there would be a 1 TB Data Cap on my account. I do not believe they have made a reasonable case for why this is necessary. I believe this is an unjustified attempt by Xfinity to punish customers who chose to stream video they desire over the internet instead of paying for broadcast cable tv. In addition, new technologies like internet game streaming will be dramatically affected by these caps.

I would like the FCC to investigate and consider whether these caps should be illegal.

---

**Ticket: # 1293881 - Comcast data caps - Portland, OR**

**Date:** 10/30/2016 4:51:08 PM

**City/State/Zip:** Portland, Oregon 97209

**Company Complaining About:** Comcast

---

## **Description**

The 1 TB data cap is arbitrary and purely an attempt to artificially inflate the perceived value of the commodity service they provide. Modern DOCSIS 3.0 cable networks backed by fiber are than capable of providing reliable bandwidth usage beyond this level for less.

With the treatment of ISPs as common carriers attempts such as this represent an abuse of their monopoly position in certain markets. The coincidence of enacting these caps at the same time that Google has paused the roll-out of fiber is likely no coincidence at all.

The FCCs common carrier designation was a huge victory for the American consumer. Hopefully under these rules the FCC can prevent ISPs from creating artificial constraints.

**Ticket: # 1293977 - Comcast charging data caps and \$200 surcharge in Utah**

**Date:** 10/30/2016 6:27:20 PM

**City/State/Zip:** West Valley City, Utah 84128

**Company Complaining About:** Comcast

---

## **Description**

We just received a notice in the mail on October 30, 2016 stating that in two days Comcast is going to charge us a \$200 fee if we use more than 1 terabyte of data via the internet. This is after bumping our bill for internet use \$30 last month.

We are going to switch to another carrier because of these two issues- but I do not feel that internet caps are legal. They will unfairly target lower income families and make it harder for children to do school projects. In addition access to the internet should be without caps- you pick a speed- pay that speed. What you use is what you use and cable companies should not be able to cap or determine the amount people use the internet or slow down speeds to other sites or types of traffic.

This violates net neutrality and title II and this becomes especially important since Comcast and AT&T are buying up pretty much everything so the choices that consumers have is getting less and less.

We are fast approaching the days of Ma Bell again where consumers had no choices and their utility companies could charge anything they wanted because they had a monopoly on the service.

Please do something to stop this abuse. Stop Comcast from imposing data caps/surcharges and stop Comcast and AT&T from swallowing up their competition and leaving the consumers with no choice.

Your department is supposed to protect the consumer. Please start doing so.

**Ticket: # 1294119 - Data caps at Cox Communications****Date:** 10/30/2016 9:09:28 PM**City/State/Zip:** Omaha, Nebraska 68114**Company Complaining About:** Cox

---

**Description**

I was informed that Cox in Omaha, Nebraska will start implementing hard data caps. I have the highest speed internet Cox offers in Omaha, 300 mb/s. They are implementing a 1 TB data cap.

How is a data cap of 1 TB at all useful or meant to ease network congestion during peak usage time as is the claim? This is simply a ploy to stop the cord cutters. With 4K TVs becoming a hot item this season and streaming services offering streams in HD and 4K it will easily eat up the data provided. In addition, with music streaming services and online gaming where games can be purchased digitally and the sizes of the games ranging from 10-60 GB it is just ridiculous to have a data cap limit. There's also the forced advertisements for some of the video sites such as YouTube which eat up data as well. This is especially true with the incredibly low data caps on mobile devices which can account for 10-20% of the allowable usage.

Having a data cap is a major step backwards. It doesn't serve a legitimately valid purpose other than to nickel and dime the consumers while lining the ISPs pockets.

---

**Ticket: # 1294120 - Comcast Data Cap**

**Date:** 10/30/2016 9:10:04 PM

**City/State/Zip:** Mapleton, Utah 84664

**Company Complaining About:** Comcast

---

## **Description**

Comcast is rolling out a new data cap of 1TB for its customers. As a company that which is allowed to operate a virtual monopoly, the government has a responsibility to step in and prevent abuses such as this; a ploy to increase their bottom line. While it might be true that a very small number of customers will be affected by this policy change currently, Comcast has likely calculated that the \$50/mo price tag to lift its artificial data cap to be a revenue driver only a couple of years down the line as information technology bandwidth requirements grow exponentially. Comcast has acknowledged that there is no congestion issues with its network. It may be that this new policy claims to combat piracy or create "fairness" between the top percentile of users and the median; these are straw-man arguments and should be dismissed as such. These Comcast data-caps are a dangerous precedent and shouldn't be allowed to move forward. Thank you.

---

**Ticket: # 1294146 - Cox introduces data caps**

**Date:** 10/30/2016 9:29:38 PM

**City/State/Zip:** Warner Robins, Georgia 31088

**Company Complaining About:** Cox

---

## **Description**

I have had Cox internet ever since I have lived in this area, over a decade now. They have had no issues offering services up to this point without having to enforce data caps. Data caps are simply a way for companies to make more money without having to offer any additional services. There is no reasonable alternatives in this area.

I understand that bandwidth can sometimes be an issue, but data usage over an entire month is unrelated to bandwidth issues. This is simply an anti-consumer method to encourage people to use cable services instead of competitors such as Netflix.

As an online student, it is entirely unreasonable for the other people in my household to limit their time on online services so I can complete my coursework.

---

## **Description**

I have recently received notification that Cox Communications, Inc. (Cox) will begin charging data overage fees for exceeding the arbitrary amount of 1TB (1,024 gigs) per month. This is very anti-consumer and only serves to line their pockets. The justification for doing so., in order to provide better service) is completely untrue and has been debunked time and time again. What this will end up doing is forcing customers like myself to do one of two things.

- 1- Switch to a business plan with an inflated cost, little extra benefit, and severely reduced speed.
- 2 - Resort to paying them for cable television, which defeats the purpose of "cutting the cord".

When the IPS's lost their fight against Net Neutrality, they simply regrouped and came up with a new plan. These data caps are only being implemented in an effort to generate more revenue, and will hurt their customers.

---

## **Description**

I'm filing a complaint in regards to Comcast and their data caps. I and many others feel that it is redundant for Comcast and any ISP to enforce data caps as the internet is not a finite resource and shouldn't be measured/limited as such. It's quite clear that this is just another way for Comcast and other ISP's to milk their customers for more cash, this is further validated by the fact that Comcast charges you \$10 per 50gb when you start going over your cap, and they charge you an additional \$50 to your bill to remove the cap. Disgusting. Despite them recently increasing the cap to 1tb, with the rise of 4k streaming this data cap will soon be insignificant.

---

**Ticket: # 1294270 - Comcast Xfinity Data Cap**

**Date:** 10/31/2016 2:51:39 AM

**City/State/Zip:** San Francisco, California 94121

**Company Complaining About:** Comcast

---

**Description**

The 1 TB limit on internet data usage being rolled out on November 1 needs to be stopped.

The plan unfairly targets high-data users and is a greedy attempt to earn money from those individuals. It also sets a dangerous precedent in which internet utility companies restrict what it's users can do with the service. For example, it could potentially lead to the company whitelisting certain content, making it not count against the data cap. This is not outside of the realm of possibility, as Xfinity is owned by NBC Universal, a large content-creating entity.

Furthermore, the fact that an overage incurs a \$200 fee, whereas buying unlimited data (i.e. the service that Xfinity has been providing) is only \$50, is a blatant money grab.

Please stop these sorts of shady business practices and force Xfinity to end this new restrictive data program.

Having a data cap is a major step backwards. It doesn't serve a legitimately valid purpose other than to nickel and dime the consumers while lining the ISPs pockets.

## **Description**

Hello,

I am currently a Comcast subscriber because there are no options where I live. Much like most Americans, I dislike the company as well as all support they supply. Please, FCC, unbundle the last mile monopolies. This industry needs competition, and until this is done, we will not receive the service and value we should.

As you know, Comcast has data caps as well. This further impedes progress and costs users more money, who are forced into paying for a service they do not even want.

Please, please unbundle!

---

**Ticket: # 1294505 - Comcast Data Cap****Date:** 10/31/2016 10:58:30 AM**City/State/Zip:** Portland, Oregon 97210**Company Complaining About:** Comcast

---

**Description**

My internet is being restricted from streaming videos that use up my data limit meanwhile advertisements and trackers that Comcast supports are free to use up the data I pay for. If my data is limited to what I pay for and view online, I shouldn't be forced to use my data for things I didn't choose to access. Comcast is letting through content that is profitable for them, and hindering me from viewing content I want to see. Instead of a clear cut throttling of access to certain web sites, they are imposing a limit that restricts me from going to the site after I reach this newly imposed data cap. At the end of the day, I will no longer be able to Skype or stream TV because of the cap.

---

## **Description**

Cox in my area has decided to implement hard data caps on their Internet Service offerings. They are the only viable ISP in my area, and I am basically forced to use their service.

How is a data cap of 1 TB at all useful or meant to ease network congestion during peak usage time as is the claim? This is simply a ploy to stop the cord cutters. With 4K TVs becoming a hot item this season and streaming services offering streams in HD and 4K it will easily eat up the data provided. In addition, with music streaming services and online gaming where games can be purchased digitally and the sizes of the games ranging from 10-60 GB it is just ridiculous to have a data cap limit. There's also the forced advertisements for some of the video sites such as YouTube which eat up data as well. This is especially true with the incredibly low data caps on mobile devices which can account for 10-20% of the allowable usage.

Having a data cap is a major step backwards. It doesn't serve a legitimately valid purpose other than to nickel and dime the consumers while lining the ISPs pockets.

**Ticket: # 1294598 - Comcast Data Caps****Date:** 10/31/2016 11:36:51 AM**City/State/Zip:** Forest Grove, Oregon 97116**Company Complaining About:** Comcast

---

**Description**

Comcast is implementing data caps in my area of 1TB. This may seem like a large cap, but it's really quite small when you stream all your video at 4k. And that doesn't take into account software updates and other required downloads. And this cap is just the foot in the door. What's to stop them from incrementally lowering the cap until everyone is having to overage fees?

These cable companies want to charge us like it's is a service and a utility. They want a monthly fee as well as a usage fee. They fight tooth and nail to have all the perks for themselves of both systems and to squeeze their customers for as much cash as they can. It wouldn't be so bad if the "competition" was either non-existent or complicit in the same practices, then we could at least shop around like what many consumers did in the old dial-up days.

Long story short, if the cable companies want to charge a utility-style usage fee, then they should be treated like a utility. If they want to charge a service-style monthly fee, then they can be treated like a service. But they can't have their cake and eat it too. Make them choose to be one or the other and govern them accordingly. If they want to bill by both methods, then hit them with the full set of regulations.

## **Description**

Recently, Comcast decided to roll out its data caps in the Portland, OR metro area. This has been widely known through leaks, peer assessment, and common sense to be an attempt by Comcast to take advantage of its monopoly status and charge as much as possible, by any means, due to losing its customers to services such as Netflix and Hulu. Not only is this extortion on a grand scale, this will also be a giant hindrance to the growing technology sector in the Pacific Northwest. Combined with bait and switch billing practices and lackluster customer service, it is absolutely unbelievable that Comcast is allowed to follow through with these practices. This is setting a very dangerous foundation for the future of telecommunications and will open the door to a growing "black" internet.

Thank you for your time.

**Company Complaining About:** Comcast

---

## **Description**

Dear FCC,

With the recent Comcast/Xfinity rollout of nationwide 1TB data caps I feel it is crucial that I submit my complaint. Data caps are a problem and without swift action will be a much larger issue in the near future limiting not only innovative uses of the Internet but the entire global flow of information.

We recently went over our data cap and Comcast/Xfinity slowed our internet down from 75mb down to 24.71mb down (see the attached screen shot). Here's link to a past internet speed of what the speed should currently be - <http://www.speedtest.net/my-result/5503911685> This business practice is unacceptable.

Data caps are not only an inconvenience to those customers but are simply against net-neutrality at its core. This is nothing more than a money grab and attempt to get people to stick with the dying cable TV model. It even excludes Comcast/Xfinity related data from that cap!!

Some other points to consider:

- We have a lack of consumer choice due to local monopoly.
- We are lagging behind the rest of the world in broadband availability and cost to consumers.
- This is not a "value-added" service. It's the same service you've always paid for, and now we're being forced to pay more for it.
- This is blatantly anti-consumer I urge you to please consider restrictions or outright banning of data caps on hard-line Internet connections such as cable and DSL.

It unnecessarily impedes emerging video technologies such as 4k streaming while simultaneously punishing those that dare to download large games or files. It's not even rooted in network congestion: <https://www.techdirt.com/articles/20130118/17425221736/cable-industry-finally-admits-that-data-caps-have-nothing-to-do-with-congestion.shtml>

For example: streaming 4k content according to Netflix uses roughly 4.7GB per hour. Doing that math that's ~7 hours PER DAY before hitting said 1TB cap. Multiply that by 2 or 3 other members of a household and you can watch at most a few hours per day. This is assuming you do absolutely NOTHING else with that Internet connection.

The further encroachments of data caps sets a dangerous precedent that unchecked will stifle innovation and let ISPs control the flow of information into households. This is something that needs to be curbed quickly to prevent ISPs restricting the flow of information simply to benefit themselves.

This is nothing but the stifling of innovation, holding onto an archaic business model, and lining of pockets of ISP executives. What we ACTUALLY need is more innovation, more competition, and a stronger Internet presence as a country.

Signed,

A solid black rectangular redaction box covering the signature.

## **Description**

Comcast is taking the profit driven approach to capping people's data usage, without reasonable competition in their service areas for people to show their displeasure by changing to another provider. If you want to keep the unlimited access you've had for years? It's now an extra \$50. For the same service.

<https://www.engadget.com/2016/10/06/comcasts-1tb-data-caps-start-to-roll-out-nationwide/>

It's a bigger deal than that because they'll show that they aren't losing many customers after the move, which will show other ISPs that they can do the same thing, overall worsening the internet access of millions of people for the benefit of a few board members and investors.

America is already behind most of the other major countries in the world in terms of our access to the internet in both pricing and speeds, and this tactic is absolutely not going to help.

Weren't we supposed to be fostering more competition between companies, and improvements to internet access overall? How is this game of chicken race-to-the-bottom approach helping anything but Comcast's bottom line?

**Ticket: # 1295519 - Comcast 1TB Data Cap Tragedy**

**Date:** 10/31/2016 6:26:50 PM

**City/State/Zip:** Auburn, Washington 98001

**Company Complaining About:** Comcast

---

**Description**

Comcast informed me on October 24th, 2016 that they will be activating a new 1 Terabyte Data Usage Plan on my account starting November 1st, 2016.

When I first signed up for Comcast, I was thrilled as there were no internet data caps and I was able to use the internet freely (my usage varies from standard internet browsing, video streaming through services like Netflix, Hulu, and Amazon Prime, to gaming which includes digitally downloading games from companies like Microsoft and Valve.

In our modern era - data caps should be non-existent as they prevent the ability to freely use the internet (after paying a flat rate to have said internet). My data usage this last month was 1.5 terabytes. Under Comcast's plan I would need to pay an additional \$100 based on my internet usage. This also adds concern to monitoring my monthly usage so that I do not incur additional costs - which goes against the point of an open internet.

For the internet speeds I require - I have no other option. Comcast is my only available ISP. I'd happily move on if there was a competitor in the area who offered the same speeds with no data caps. Please help in stopping this data usage plan that Comcast has implemented.

Many years ago - the internet was the future. Today - faster internet speeds bring even more potential to the future of the internet, however limiting how much data can be consumed from the internet should not be allowed - especially when it's been proven that there are not any "capacity" constraints that require this limit. Comcast is violating the open internet with this data plan and it needs to come to an end IMMEDIATELY.

---

[Ticket: # 1295537 - Data caps are unnecessary and a potential way to skirt net neutrality](#)

**Date:** 10/31/2016 6:34:42 PM

**City/State/Zip:** Portland, Oregon 97213

**Company Complaining About:** Comcast

---

## **Description**

Comcast is imposing data caps (which you're well aware of) when there is no logical reason to do so. They claim that it's based on fairness and that customers who use more will pay more while customers who use less will pay less. Except that's not the case, because if that were so then your bill would be LOWER when you used less data. If I used 10% of a monthly allotment then I should be billed for just that 10%, but I'm not. But if I went over the cap by even a little bit then I'm charged for a full \$10 block of data.

Also, this will clearly be used to skirt net neutrality. Now that NBC/Universal owns Comcast it won't be long until they're saying that that content won't count against your cap, and they'll be a preference against Netflix, etc.

One last point, if data caps are legal and we can legally be considered to be using a finite resource, then ads, auto updates, trackers - anything of the sort - are stealing from us on a grand scale.

[Ticket: # 1295553 - Data Cap](#)

**Date:** 10/31/2016 6:44:46 PM

**City/State/Zip:** Fort Walton Beach, Florida 32548

**Company Complaining About:** Cox

---

## **Description**

Cox decided to start charging a data cap. This negates the free and open internet and only hurts companies that provide streaming services like Netflix. This is an attempt to put competitors like Netflix and Hulu out of business so customers will have to pay a ridiculous price for cable TV. Setting a cap is not a realistic thing to do due to the increase of streaming. Streaming is using more and more data which will make the customers use more data. With 4K streaming and eventually 8K and 16K streaming soon enough you will be able to hit your cap every single month. This is hindering the free and open internet!

## **Description**

Comcast has placed a data cap on the consumer market I live in (Chicago, Illinois). I use internet for television viewing and do not subscribe to a TV package from Comcast. If I go over the 1TB restriction I am fined \$10.00 for every additional 50GB I use. This restriction is a scheme to force me into purchasing their TV package, which would not count against the internet data cap. This policy restricts the rights of the consumer by penalizing us for not purchasing an additional product in order to obtain internet, which is a necessary household utility in 2016. Also, internet is not a limited resource whereas electricity and water are. To consumers these charges from Comcast are unjustifiable and profit-centric. My rights as a consumer are being violated and I demand this data cap policy be dropped immediately from all consumer markets in which Comcast and similar companies provide their services.

## **Description**

Hello and thank you for taking the time to read this.

I personally feel that if the FCC does not take a firm stance on this issue soon, some of the underlying fabric of why the internet became what it is today will become under fire. I feel that it is fair to say that we would have no Netflix, no YouTube, and no Twitch if Data caps had existed when those sites were originally conceived. If there were data caps like there are now, people may have been hesitant to use those services in the first place, taking away many of the common websites we have today and take for granted in many cases.

10 years ago 5gb of bandwidth may have seemed excessive but today that would be a few hours of Netflix. 4k+ video is becoming more and more a thing. Technology is hurriedly pushing us towards more data heavy services. I'm confident that we will reach a day where the 1TB threshold is ridiculously low for everyone across the board. Do we as the American public have confidence that Comcast and other large monopolistic internet service providers will re-evaluate their data cap limits in the future? Because financially it wouldn't benefit them to do so.

Please I ask, no beg, that you take a stance on the right side of technological progress for America and keep us on the forefront of information technology.

Again, thank you for your time,

██████████

## **Description**

I, along with residents of about twenty different states, have recently had the data on my Comcast internet account capped. This is not a "value-added" service. It's the same service I've always paid for, and now I'm being forced to pay more for it. I also cannot simply change ISP because of the area that I live in; the next best choice would be a satellite ISP which could deliver incredibly slow speeds and only on clear days. Comcast has a de facto monopoly in my area and they are squeezing myself and the thousands of people who rely on them for more money. This also sets a terrible precedent; the US is already lagging behind the rest of the world in broadband availability and cost to consumers which in turn stifles creativity and development.

## **Description**

I'm writing to complain about the imposition of data caps by Comcast on wired broadband users in California. Just as I was considering dropping most of my cable television services in favor of broadband-based streaming services, this new limitation arrives. Comcast is now offering me the option to get back what I already had (unlimited data) for an additional \$50/month. I already pay them for improved speed. And, as such, I'm essentially paying them for the ability to reach my cap even more quickly.

While I may be considered a heavy user (indeed, Comcast sent me a letter indicating that, according to their unverifiable metrics), I'm just barely under their 1TB/month threshold with my current consumption. Thus, switching my television service to streaming services will easily take me right over their caps.

There is no competition in our market. AT&T recently launched fiber service, but it also comes with a 1TB/month cap. This is clearly designed to discourage consumers from switching away from the content delivery services that Comcast and AT&T (with their proposed merger to Time-Warner) in favor of services such as Netflix, Hulu, and the plethora of new offerings trying to gain a foothold in what should be a competitive market.

I contend that it is unfair to charge both for Internet speed \*and\* data. As is the case for all communications media, the limited resource is generally bandwidth, not overall usage, and it is absolutely unfair to charge consumers for both.

---

**Ticket: # 1295852 - Comcast 1 Terabyte Data Cap****Date:** 11/1/2016 12:39:15 AM**City/State/Zip:** Bellevue, Washington 98005**Company Complaining About:** Comcast

---

**Description**

Tonight I opened mail from Comcast informing me that there will be a 1 terabyte cap on my internet. This may seem reasonable to most people, but I work in software and find this to be a slippery slope. As the internet has evolved consumers are using more and more data each month. Comcast should not be putting consumers in a disadvantaged position. They are also potentially harming consumers with their overage policy. If they want to charge \$50 a month for unlimited they shouldn't be able to have an over policy that caps at \$200 a month in charges.

**Date:** 11/1/2016 12:42:49 AM

**City/State/Zip:** Oakland, California 94606

**Company Complaining About:** Comcast

---

## **Description**

The enforcement of data caps, even through they may seem large enough for regular use now is obviously going to be an unacceptable and restrictive constraint in just a short time as the availability for 4k video and oncoming technologies will make the terabyte limit severely limiting. There is no true technical reason to do this and Comcast is leveraging their monopoly on modern internet speeds simply to stifle competition and squeeze future profit.

---

## **Description**

Besides Comcast being a company I've had a lot of issues with, this new data cap seems like a big downer -- especially in light of the monopolies these Internet companies have. I do not have a choice in my city to choose a different carrier. Data caps for Internet should not be allowed -- bandwidth isn't an issue to cable companies. This is a scheme to get people to either pay more for packaged services that bundle cable, which punishes the cord-cutters who want Internet for watching television and movies through websites.

## **Description**

I am a resident of Colorado. My xfinity internet service has recently been capped to 1 terabyte per monthly billing period. This is stated to be in the interest of fairness. Those using more are charged more. As someone using less than the 1 terabyte xfinity will not be providing any discounts, but only fees if we go over our limit. This is a blatant cash grab and an effort to restrict and control Internet traffic and as such is completely unacceptable.

---

**Ticket: # 1296260 - Comcast XFINITY Internet Capped at 1 Terabyte per Month**

**Date:** 11/1/2016 10:49:32 AM

**City/State/Zip:** Austin, Texas 78753

**Company Complaining About:** Comcast

---

## **Description**

As of November 1st, 2016 Comcast has decided to seek profit over the welfare & best interests of their consumers by implementing a 1 Terabyte data cap, or as they call it "threshold", in an attempt to siphon more money from their monopolies in areas with no competition.

This is anti consumer at best and complete corruption of the market at worst.

Comcast has stated on numerous occasions that the implementation of data caps was due to network congestion, network management, or some other nonsense. After being independently investigated they were forced to admit that these data caps were not being implemented due to those things but because "if you use more then you should pay more." While that is true of resources which may or may not be naturally occurring and/or non renewable, it is NOT true of data. This justification for data caps is completely ridiculous considering they are measuring the flow of packets of information carried via electrical pulses. They have used the analogy of a car driving down the road, you go farther and you have to buy more gas; use more, pay more. While this is true in this scenario it doesn't hold up when compared to data since you cannot run out of data. I already pay for a certain speed of access and now I'm expected to pay for unlimited data as well?

I work from home, I upload a lot of large files, I have a youtube channel, I play games, I stream movies, and I have a significant other who does many of those same things. According to our current usage we sit at around 5 - 7 terabytes per month. This is NORMAL usage. Comcast offering unlimited data for \$50 per month extra just shows that they're doing nothing but extracting more profit, by force, since their entire footprint consists mostly of ZERO competition! Competition cannot be counted as ADSL or satellite providers, they cannot provide the same level of service as a cable/fiber ISP. Competition would be another provider who is in the same league. Another cable/fiber ISP which covers 90% or more of the same area. Ideally we should see 3 - 4 cable/fiber ISPs covering the same area but we don't. Largely this is due to the initial investment of laying lines coupled with the anti competitive practices and litigation we see from the major providers. Just look at what Google is currently facing while trying to expand!

This CANNOT be allowed. If we are not allowed to access as much information as quickly as possible then we are limiting our ability to learn and innovate. We're limiting our ability to develop the next great thing! Don't let this happen, please do your job and represent the people's best interest!

## **Description**

I am writing in regards to the recent comcast internet caps in multiple states. It is OUTRAGEOUS that a company like comcast, who has a monopoly on internet usage in the United States, is able to control the amount of data I use and the price I pay for it.

The most offensive part about this data cap is :

"This data plan is based on a principle of fairness. Those who use more Internet data, pay more. And those who use less Internet data, pay less."

This is extremely offensive to American citizens and anyone else that has fought for our freedom as Americans. This is a major violation to our rights and the FCC needs to start regulating accordingly.

---

**Ticket: # 1296337 - Comcast 1tb data caps are completely out of line with reality**

**Date:** 11/1/2016 11:22:34 AM

**City/State/Zip:** Crystal, Minnesota 55422

**Company Complaining About:** Comcast

---

## **Description**

Yesterday, I received a letter from my ISP (Comcast) detailing their latest 'rape and pillage the masses' plan. The letter went on to explain how Comcast was 'generously' granting a 1 terabyte data cap on 'accounts in my area' and that less than 1% of their users ever approach that limit, which seems from their perspective to be justification in and of itself.

This is nothing short of extortion from a monopolistic company that KNOWS THEY ARE A MONOPOLY! I have NO OTHER ISPs in my area capable, or legally able to provide me with alternative service at similar data rates. The fact is that I signed up for a specific DATA RATE (and knowingly pay more money for it) with the knowledge that I was being billed based on the SPEED of the connection, not the QUANTITY of data!!!

This is tantamount to double billing and all cable companies/ISPs know it (Comcast has publicly admitted as much). They offer different speed tiers, and CHARGE ACCORDINGLY! So following the ISPs own 'fairness of use' and 'pay for what you use' can someone please explain to me why I'm being billed for both a higher data rate tier and next month potentially have to pay overage charges because that same data rate tier could easily exceed their arbitrary 1TB data cap? The point that less than 1% of their users exceed this amount of data is MOOT, for one thing most consumers don't have any idea how much data 1 TB tangibly is, let alone understand that simply watching On Demand content, or Netflix will eat heavily into this data cap (for example, 8 hours a day of Netflix will easily eat almost 400GB/mo and that isn't factoring in other On Demand content, buying legitimate XBOX and PC games, or playing them online).

This is not only deceptive business practice, but EXTREMELY ANTI COMPETITIVE! Comcast has been known to selectively ignore their own data caps for customers that subscribe to both their TV and Internet service but happily enforce it on those like myself that don't care for their variety of 'rape and pillage the customer' approach (if I had ANY other ISP choice that was a reasonable data rate I would use it and stop complaining).

It was my belief that the FCCs goal was to create a fair and competitive market in the telecommunication space (ie ALL data services should be fairly treated; make no mistake this IS A NET NEUTRALITY ISSUE).

**Ticket: # 1296483 - Data caps enforced as of today 11.1.16**

**Date:** 11/1/2016 12:27:14 PM

**City/State/Zip:** Madera, California 93637

**Company Complaining About:** Comcast

---

## **Description**

Today, Comcast has begun to enforce data caps in my state.

I have a few major grievances with this and the company will not respond to my concerns.

1. Data is not accurately being tracked and the tracking data is not shared with users such as myself to verify versus my usage. I do not get the opportunity to verify therefore I am locked out of meaningful dispute in the event of a disparity.
2. The cost of overage fees is wildly inconsistent with the overall price of the service. I pay approximately 50 dollars per month for the internet access through Comcast's services, bundled with other services. Their overage fees are 1/5th the price of the service for a 5 percent overage (10 dollars per 50 gb added). This fee is completely outrageous given the unlimited resource that is the internet.
3. At the current time, any unused data is not being added to next month's limit, which should be mandatory given that they've decided to limit a previously unlimited resource that is not maintained directly by Comcast.

Calls to the provider have been responded to in the typical manner for Comcast, which has been: escalated to a supervisor, the supervisor apologizes but can make no changes, or I've been outright hung up on.

---

**Ticket: # 1296493 - Cox Internet Caps****Date:** 11/1/2016 12:29:22 PM**City/State/Zip:** Norman, Oklahoma 73069**Company Complaining About:** Cox

---

**Description**

I'm already paying for access to the internet, and I believe it's beyond reprehensible that Cox can institute a data cap.

They are the only internet provider in my area that provides speeds of more than 18MB/s, and I believe they're using that to their advantage.

They offer me speeds of 300MB/s, but then cap me at 1TB of data? They'll then charge me \$10 for every 50gb after that. Which, by the way, they make very difficult to find on their website. Not even their FAQ page has the number.

<http://www.cox.com/residential/support/tv/article.cox?articleId=2fd6ccb0-b13a-11df-4be3-000000000000>

Initial TB of data \$90

Every 50GB after that is \$10

$1000/50 = 20$

$10 * \$20 = \$200$

That means if I were to use twice the amount they oh so graciously gave me, I would be TRIPLING my already expensive bill.

This is ludicrous. If there were more competition (meaning these companies didn't have a monopoly over parts of the nation), this would never happen. It makes me sick.

---

[Ticket: # 1296520 - Comcast Data Caps are hurting the free internet and should be disallowed](#)

**Date:** 11/1/2016 12:38:27 PM

**City/State/Zip:** Portland, Oregon 97211

**Company Complaining About:** Comcast

---

## **Description**

I live in a state in which Comcast recently implemented a 1TB data cap "in the interest of fairness." I would argue that this is about more than fairness. This is a ploy to make cord cutters re evaluate their decision to end their cable subscriptions. Comcast are panicking because their cable subs are dropping and this is their plan to strong arm them back into their subscriptions.

It doesn't matter how high the cap is, it's still a cap, and it still hurts the free internet. Please, I urge you to not allow them to get away with this.

---

**Ticket: # 1296526 - Data Caps**

**Date:** 11/1/2016 12:40:45 PM

**City/State/Zip:** Newark, California 94560

**Company Complaining About:** AT&T

---

## **Description**

With the video streaming being the norm in today's society it is ridiculous that data caps exist. People must restrict themselves so that they do not go over data caps which they cannot upgrade for any reasonable price. The price of going above said cap is absurd. While many people may not be going over the caps now, with improvements in video quality and resolution- 1 terabyte may just not be enough (especially when multiple people share the network).

---

**Ticket: # 1296533 - Comcast Data Caps**

**Date:** 11/1/2016 12:45:08 PM

**City/State/Zip:** Kansas City, Missouri 64119

**Company Complaining About:** Comcast

---

## **Description**

I wish to file a complaint about the new Comcast Internet Data Caps. While Comcast will tell you it's all about maintaining quality of service for all of it's customers, in reality it is just another one of their cash grabs. If Comcast would actually invest in the technologies that would carry us forward, like fiber to the home, instead of sitting on their butts, they might actually be able to do something really positive whilst still making a huge profit.

These data caps are wrong.

**City/State/Zip:** San Rafael, California 94903

**Company Complaining About:** Comcast

---

## **Description**

In an age where we consume media primarily through the internet, this kind of cap is an absolutely inexcusable grab for another dollar from our wallets. We read the news, watch movies, Skype our loved ones, and play multiplayer games online, and Comcast wants us to pay even more for the privilege. Please step in and tell them that enough is enough. I already pay them for their service, and in return, they should provide that service.

Thank you,

██████████

---

**Ticket: # 1296611 - Comcast Data Caps**

**Date:** 11/1/2016 1:15:33 PM

**City/State/Zip:** Houston, Texas 77054

**Company Complaining About:** Comcast

---

## **Description**

Today, Comcast implemented a 1TB data cap where I live, Houston. Comcast is owned by NBC Universal, a content creator who's primary means of distribution is through television. This is a clear conflict of interest, especially when companies like Netflix, also a content provider, operate solely over the Internet. Implementing data caps on a resource that is not finite, seems to be nothing more than a way for Comcast to handle the declining television subscription numbers.

Comcast should first and for-most be a provider of Internet access, and nothing else. It should not matter how I use my Internet that I pay them for. An electricity company doesn't care how I use electricity, the same principle applies here.

Please look into enforcing regulations on ISP's that restricts their power over how I use my Internet.

Thank you.

**Ticket: # 1296623 - Internet usage data cap cash Grab**

**Date:** 11/1/2016 1:17:57 PM

**City/State/Zip:** American Canyon, California 94503

**Company Complaining About:** Comcast

---

## **Description**

I am writing to complain about the new Usage Data Caps implemented by Comcast. As we all know there is NO valid reason other than another Cash Grab by a Monopoly, to gouge the consumer. Unlike things like electricity, or water, data is NOT limited and it doesn't cost anything for them to produce. To use Al Gores, Internet pipes as an analogy, if the pipe can handle 100 GB of data, it doesn't matter who is using the data, there is no ADDITIONAL cost for it to go through the pipe. They are willing to charge extra though if you wish to use what the pipe is capable of handling. If the pipe was just not big enough they couldn't offer to give you extra. STOP the cash grabs by these Monopolies and putting undo stress on not only the users, but the people who provide the content that is delivered in this manner. It is up to the FCC to put a stop to Data Caps of the internet.

[Ticket: # 1296659 - Comcast 1 Terabyte Data Cap is unfair and unethical](#)

**Date:** 11/1/2016 1:29:35 PM

**City/State/Zip:** Richmond, Kentucky 40475

**Company Complaining About:** Comcast

---

## **Description**

The 1 terabyte data cap in Comcast's data plans is unfair and unethical. While 1 terabyte today seems like an exorbitant amount, it probably won't seem like that in the future. Comcast cannot be allowed to dictate the amount of data consumers are allowed to use.

---

**Ticket: # 1296719 - Data Caps****Date:** 11/1/2016 1:51:30 PM**City/State/Zip:** Spokane, Washington 99202**Company Complaining About:** Comcast

---

**Description**

As of today, Comcast has rolled out 1TB data caps to my home state, Oregon. This is a complete violation of net neutrality as it would not allow those who reach 1TB to access the internet unless they pay more to up their usage. The cap, and subsequent \$50 extra charge to get unlimited data, obviously does not pertain to the "problem" of people using too much internet. The company makes it sound as tho we could run out of data, whereas in reality that is not true. Bandwidth is the true problem. However, that is already solved where people who want faster speeds and thus probably use it more pay more. The addition of a 1TB cap will eventually turn into a cash cow for Comcast as information size grows and the cap remains the same. Remember, 10 years ago, 1TB was huge, now think of 10 years in the future when 1TB is a lot smaller and more easily attained.

Already, streaming in high resolution and large games such as DOOM take up large amounts of data. With increasing amounts of people cable cutting, this cap forces them to either keep cable and thus be forced to use a service that they do not want to is against America's capitalist values. We should have the freedom to choose how we wish to watch our shows, or download our games, or access the web. Comcast's introduction of this cap almost creates a monopoly as people may be forced to use their service because of the cap.

**Ticket: # 1296724 - Stop Comcast XFINITY Monthly Data Caps**

**Date:** 11/1/2016 1:53:01 PM

**City/State/Zip:** Odenton, Maryland 21113

**Company Complaining About:** Comcast

---

**Description**

Comcast XFINITY just expanded 1TB/Month data caps to its existing broadband customers across multiple states. Data caps absolutely impede the use and availability of advanced telecommunications capabilities for all whom they are imposed upon. The greed of telecommunication providers like Comcast needs to come to an end to promote a stable, prosperous, and healthy U.S. Economy; which is entrenched in technology and Internet connectivity.

The FCC embodies clear, logical, and proper thinking when it comes to promoting a free and open Internet-based society. Please stop Internet Service Providers from limiting the U.S. economy, its citizens, and our position as a world leader in being a technology-based society. Please prevent ISPs from expanding their corporate greed by banning Internet data caps that artificially limit our access to something we already pay for.

Help us FCC, you're our only hope!

**Date:** 11/1/2016 2:53:37 PM

**City/State/Zip:** Hinesville, North Carolina 31313

**Company Complaining About:** Comcast

---

## **Description**

I'd just like to make a complaint about Comcast 1TB monthly data cap in Hinesville GA. I decided to cut the cord and get rid of cable TV. My replacement was going to be PlayStation Vue along with Hulu and Netflix. Trying to do this while staying under the internet cap is just too frustrating. Comcast says that the cap is more than enough room for 99% of their users. So if congestion isn't an issue why make a cap? We have no competition at my area with a similar speed and to get unlimited internet from Comcast is an extra \$50 a month. About what my cable TV cost from them.

**Ticket: # 1296920 - Comcast Data Caps**

**Date:** 11/1/2016 3:04:44 PM

**City/State/Zip:** San Carlos, California 94070

**Company Complaining About:** Comcast

---

## **Description**

Comcast is imposing data caps with no evidence that they address a problem. It is nothing more than an attempt to place a limit today that has little relevance to most customers with the knowledge that as more households integrate with the digital economy those households will breach the limit and incur additional bandwidth charges.

This limit should be prohibited by FCC regulation. It is arbitrary, solves no market issue, and is nothing more than a placeholder to impose additional customers costs in the near future.

---

**Ticket: # 1296949 - Comcast Internet Data Limits**

**Date:** 11/1/2016 3:20:39 PM

**City/State/Zip:** Midvale, Utah 84047

**Company Complaining About:** Comcast

---

**Description**

Comcast is imposing Data limits on wired internet limits.

Received a letter saying that i would incurred charges for internet usage over 1024GB of data a month, up to a possible charge of 200 dollars a month in overages.

I have contacted Comcast and was informed the only way i could avoid these charges was to either pay 50 dollars a month for unlimited internet, or switch to a business account for over 250 dollars a month.

I already pay a premium for faster internet, and this change will result in my bill doubling if i pay for unlimited internet, or up to 5 times if I am hit with the overage charges.

I believe that Comcast is unfairly controlling the internet to limit services like NetFlix and YouTube, and reducing my ability to downloading games from services like Steam, GoG, Origin, and UPlay.

---

## **Description**

I just got a letter yesterday October 31, 2016 from Comcast letting me know that I was going to have a 1Tb data cap imposed on November 1, 2016. First off they only gave me a one day warning which is way too late of a notice, that would be like getting a letter from my land lord informing that rent had increased the day before rent was due. Second and most importantly I think that this data cap is a slippery slope. In their letter Comcast says that only less 1% of their consumers use more than 1 Tb (I myself was quoted at 671 Gb of data usage). So if only less than 1% of customers use that much data then why was it necessary to impose this data cap. I think that the reason behind this is that once they put in a 1Tb cap then they can slowly start lowering and lowering the cap until more customers go over the data cap and then they can start charging those customers for data overages. Now keep in mind that I can get rid of the data cap if I pay a ridiculous \$200 a month on top of the \$60 I pay for internet (the \$200 a month is 233% more than the worth of the internet).

Basically this is a slippery slope that has me worried.

**Date:** 11/1/2016 3:39:15 PM

**City/State/Zip:** Indianapolis, Indiana 46228

**Company Complaining About:** Comcast

---

## **Description**

On knowledge and belief, Comcast rolled out new data cap of 1TB for its customers. As a company that which is allowed to operate a virtual monopoly, the government has a responsibility to step in and prevent abuses such as this; a ploy to increase their bottom line. While it might be true that a very small number of customers will be affected by this policy change currently, Comcast has likely calculated that the \$50/mo price tag to lift its artificial data cap to be a revenue driver only a couple of years down the line as information technology bandwidth requirements grow exponentially. Comcast has acknowledged that there is no congestion issues with its network. It may be that this new policy claims to combat piracy or create "fairness" between the top percentile of users and the median; these are straw-man arguments and should be dismissed as such. These Comcast data-caps are a dangerous precedent and shouldn't be allowed to move forward. Thank you.

---

**Description**

Data Caps are a way for big-time companies like Comcast and Verizon (not imposed as of yet) to wring extra money out of unaware customers through overages. Any aware, self respecting internet user can see that these are a way to scam old ladies, sick grand-dads, and your kid brother out of an honest buck. Grandma finds out about this cool new thing, called "Netflix, is it deary"? Suddenly she's watched all the old seasons of gilmore girls. Fantastic. Before data caps, this was alright! She could reminisce on her old favorite and just enjoy it. But now, companies like Comcast want to charge for how much data she uses while doing this. "Why" you may ask? Because they're greedy! It costs them next to nothing in the grand scheme of things, certainly not what they are charging with overages. In one day of downloading video games and their updates on a Steam client on my Windows computer, I blew through 50 gb of data. Already, by myself, in one day, I have gone through 5 percent of the average data cap (1 terabyte). That does not include anyone else in my home. This is just regular gaming, no P2P sharing, torrenting, movie watching, just regular downloads and updates. This is wrong. You know it. Stop it already.

## **Description**

As of 11/1/2016 my ISP, Comcast, has imposed a 1TB monthly data cap on my internet usage. After years of contractual agreement that they provide a service in exchange for monthly payments, they have changed the terms and created an arbitrary limit on the usage of a limitless resource. This is a disgusting example of what happens when lack of regulation allows giant corporations to run unchecked and harm the consumer whenever they need to protect their bottom line. There is a lack of oversight and a lack of competition and Comcast has capitalized on both at the expense of its customers. I have spoken with Comcast representatives who essentially told me there is nothing I can do and to deal with it. This is intolerable.

## **Description**

Hello,

My Name is [REDACTED] and I am Comcast subscriber, not by choice but because there is no other competitive high speed internet provider in my part of Oakland California. As of Today Comcast has imposed a new 1TB data cap on my home network that will incredibly limit my ability to use the internet the way my family has become accotomed to over the entire history of our usage as a household.

My Daughter, My Girlfriend, and I all use the internet daily to watch TV, Play games, and download various things from games to windows updates which will easily push us over our cap within a month and force us into an extra 50 dollar a month plan.

I understand that there is no current regulation at this time to stop them from doing this, but the general usage of a family of even 3 people who regularly use the internet. If I were to download the new call of duty which is roughly 40GB for just the remaster of the previous entry that is being released along side the download for the current entry at roughly another 40GB, i alone have used 80GB in a single day. That doesn't include my daughter trying to download the new Skylanders, or watching netflix, which would easily push us over 100GB in a single day of use. Add in a large windows service patch and we have another 20gb of data that's being used which by day 2 of November I'm already at 10% of my granted data allowance.

This is unacceptable, and at a time when our entire life is on the internet, where anything from Photos of my kids, Documents needed for my girlfriends classes and everything else in our lives are accessed by a connection to the internet it is your responsibility as a member of the FCC to protect us and allow the continuation of an open internet.

The additions of data caps to our home ISPs does nothing to further the lack of competition and is entirely designed to force a new 50 dollar charge for "Unlimited" internet. I already got forced into a package I didn't want and am required to pay for TV that I don't and told the company I wouldn't use, not I'm being told i need to pay another 50 dollars a month on top of the 125 dollars I already pay if I want to continue using the internet in a way that I have used it for years. That isn't right and the American people need your help in fixing this problem.

Thank you,

[REDACTED]

## **Description**

Comcast has just implemented data caps at 1 terabyte per month. I disagree with this practice as their rationale for these caps is in actuality irrational and appears to be motivated by profit. These caps will not make their network more efficient, nor better and serves no purpose other than to inflate their profits at the expense of their customers.

---

**Ticket: # 1297249 - Comcast Xfinity 1TB Data Cap Is Atrocious**

**Date:** 11/1/2016 5:11:42 PM

**City/State/Zip:** Everett, Washington 98208

**Company Complaining About:** Comcast

---

**Description**

Tom Wheeler and/or to whom this may concern,

Comcast Xfinity's 1TB Data Cap Is Atrocious, and according to their letter my household has received we are "less than 1%." According to Comcast, our household averages about 1.7TB a month for data. The house that I live in contains 6 professionals in in the greater Seattle metropolitan. We live in the suburbs, which unfortunately for us we only have Comcast as a provider. Frontier won't even run their lines to new housing developments in our area.

The 6 professionals that live in our house are of various tech and aerospace backgrounds. Our house contains 5 desktop computers, 5 laptops, 6 android cell phones (excluding unknown amount of android tablets), 3 smart TV's (or regular HD TV's with interfaces like Chromecast, Fire TV, etc.) We heavily game on services like Steam, Battlenet, Origin, etc, and every room has a way to access services like Netflix, Hulu, or Amazon Video.

Perhaps the living expenses in Seattle have hiked up quite a bit in the past decade, but living under a roof with 6 like minded roommates that are gamers is has a lot of benefits. But now Comcast wants to hike up our bill an additional \$50 a month?

We pay for the fastest internet package we can get in our area, because gaming in our off time is what we do. Sure we watch Netflix or Hulu before we go to bed, but a major portion of our data slice is gaming. With our demand for data, we already pay over \$150 a month (without tax) for Comcasts' Extreme 100Mbps pipeline. If we could, we'd be on 1 Gigabit internet. Frontier apparently doesn't want our money!

Please consider that in our day an age, ISP's and Technology companies are trying to find any which way to get consumers to pay \$5-10 a month for their services. Every app, ever cell phone carrier, every website we agree to terms of services. Comcast is already charging us for the fastest pipe, yet they want to up our bill for overages? We don't even have a congested network.

Thanks for your time,

██████████

## **Description**

I received letter from Xfinity 3 days ago informing me that my data usage will be capped at 1024GB and told me that my average usage was 2060GBs over the last 3 months.

I now being told that I need to pay \$50 more a month for unlimited data usage on a contract that have already in place or be charged an extra \$10 / month for every 50GB block of usage above my 1024GB.

This would equate to an additional \$207.20 on my next bill. There were no data usage clauses (CAPs) when I signed up on the original contract.

In my area only ONE service provider monopolizes the market. Century Link cannot/will not install the service in my unit.

I am hearing impaired and have to rely on using the chat service. As I attempt to contact Xfinity about my added charge on my bill, the chat service never responds.

And by writing this complaint, I will, mostly likely face retaliation. :(

---

**Ticket: # 1297320 - Comcast 1TB data caps**

**Date:** 11/1/2016 5:40:37 PM

**City/State/Zip:** Minneapolis, Minnesota 55412

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently introduced data caps of 1 TB per month on many US markets, including my own. Due to the nature of my work (thus, beyond my control), I will be far surpassing these very low data cap limits, and will be forced to pay more next month for the exact same service last month.

I believe that this violates FCC regulations on Net Neutrality and is anti-consumer.

Thank you for your time.

[Ticket: # 1297329 - Comcast Data Caps](#)

**Date:** 11/1/2016 5:49:18 PM

**City/State/Zip:** Marysville, Washington 98270

**Company Complaining About:** Comcast

---

## **Description**

To think that data usage requirements won't grow exponentially is ignoring everything that has happened since the dawn of the information age. How does imposing a limit on users not interfere with net neutrality? Where is the open competitive market that benefits users and fosters innovation? It has been seen that anywhere another ISP is offering a fair service, Comcast has magically offered a more competitive rate.

**Date:** 11/1/2016 6:01:12 PM

**City/State/Zip:** Seattle, Washington 98103

**Company Complaining About:** Comcast

---

## **Description**

Our data with XFINITY Comcast is being capped at 1 terabyte per month effective November 1. This is an unconscionable restriction of what should be by now considered an essential utility. Data, unlike water or electricity, is not limited, as there isn't a specific wellspring from which they come.

---

**Ticket: # 1297347 - Internet Data Caps****Date:** 11/1/2016 6:01:50 PM**City/State/Zip:** La Verne, California 91750**Company Complaining About:** Comcast

---

**Description**

It has come to my attention that Comcast XFINITY has recently applied a new 1 terabyte monthly cap on internet usage to various new states. I am not a Comcast customer, but this is extremely concerning as it is limiting my freedom on the web as well as my freedom as a consumer to have options. Every month internet restrictions are getting tighter and ISP's are doing everything they can to squeeze as much money out of the customer as possible. With all the current mergers going on, I am very concerned that I will soon not have the same freedoms that I have today on the internet.

The worst part of all this is that we are taking steps backward in technology. Internet caps use to never be a thing in the United States. In fact, they were common in more remote countries where getting internet access was a struggle. But now, even these countries are lifting the caps because they too have the capability to offer unlimited data. Any yet, here we are in 2016 and major US ISP's are charging customers more, offering them fewer choices, and giving them poor service with the excuse that they "can't keep up with demand". Various studies have shown this to be a lie, and it is time for regulations to be put in place to ensure companies can no longer abuse customers like they are today. I ask you to please look into these types of data caps, as well as the current mergers that are about to take place, and think about the future of this country. The world runs on technology now, and if we allow corporations to control this large aspect of our lives, then there is no telling how much damage could be done just for the sake of making a quick buck.

**Date:** 11/1/2016 6:24:59 PM

**City/State/Zip:** Fall City, Washington 98024

**Company Complaining About:** Comcast

---

**Description**

As a resident of Washington state, my XFINITY internet service by Comcast is now capped at 1TB of data per month. This is an underhanded attempt at a cash grab by forcing individuals and multi-person households to upgrade to "Unlimited Data" plans, as high usage becomes the norm (streaming media, 4k video, etc.).

There is zero benefit provided to the consumer, and flies completely in the face of how the internet technically functions. There are no increased costs to companies for high data usage. Bandwidth is bandwidth, and data usage is not some sort of finite resource. Comcast purports this policy to be one of "fairness" and "data usage equality". Why then are they not offering discounts to those who use less than average data? The only option is a severely restricted "Flexible Data Option" that comes with expensive penalties if you exceed the 5GB/mo cap.

In my area, there are no realistic alternatives to Comcast that provide fast and stable internet speeds. I urge the FCC to reign in the anti-competitive and anti-consumer behavior of Comcast.

---

**Ticket: # 1297397 - Comcast Data Cap in Seattle****Date:** 11/1/2016 6:34:21 PM**City/State/Zip:** Seattle, Washington 98126**Company Complaining About:** Comcast

---

**Description**

Regardless of what Comcast calls it, their "network capacity management" clause for Seattle residence is simply a cap. Consumer have already paid for the bandwidth they are using. Capping the amount of data downloaded for bandwidth paid should be illegal. I paid for the bandwidth, I should be able to utilize as much or as little of the bandwidth as I want to. It is Comcast's job to build a network capable of what they are selling. If their network cannot sustain the bandwidth they sold to consumer, then that is false advertising. It is NOT my problem that they are unable to keep up with consumer demand due to their monopolistic business practices. There are ZERO competition in my neighborhood, so instead of doing the right thing to build out their infrastructure, Comcast is penalizing its customers. This is absolutely unacceptable. FCC should ban Comcast from implementing caps or force them to allow 3rd party ISPs to use their physical cables to provide services for free. I say for free because if Comcast is allowed to charge for the access, then they will price it so astronomically expensive that 3rd party ISPs will not have a viable business. In addition, the fact that Comcast exempt its own IPTV service from being included in the cap is further evidence of their monopolistic business practice.

## **Description**

Hello,

Today I received a notice in the mail from Comcast saying that there was now a 1TB data cap on my internet service starting on November 1st. It also stated that I used 974GB in the last month and that almost no customers use 1TB so this shouldn't be an issue, but I immediately went and checked for myself. Checking my data usage for the month of October on their website I noticed that my household and I used over 2TB of data last month so I decided I would call Comcast and try to get this worked out myself. After getting sent back and forth all over Comcast customer support I learned that my only option would be to pay an extra \$50 a month to continue getting the internet service I locked into a two-year contract for, or just decide to cancel it. I decided to get forwarded to the cancellations department where I was informed that the data cap can be enacted regardless of the contract I'm in, and to go ahead and cancel my service. I asked if I would still be charged all of the cancellation fees for breaking my contract even though I never agreed to this insane data cap, but the woman on the phone told me that I would, and asked what date I would like to cancel my service on. After that conversation, I tried to weigh my options and checked if there were any other internet service providers in the area, but sadly Comcast is the only one. My only option is to now pay an extra \$600 a year to get the service I originally signed up for, or just to deal with the exorbitant overage fees Comcast told me I would receive if I went over my cap.

[Ticket: # 1297435 - Data Caps on Internet](#)

**Date:** 11/1/2016 6:52:26 PM

**City/State/Zip:** Gig Harbor, Washington 98332

**Company Complaining About:** Comcast

---

## **Description**

Xfinity Comcast is establishing data cap at 1Tb per month which may not limit our current ability for usage, but discourages and even penalizes the market for expanded use. A user who uses just 20% of their current limit would meet or even exceed the data cap if they were only to upgrade from 1080p HD streaming to 4k UHD. It is deceptive and greedy.

The amount that consumers are using data is increasing exponentially, so for Comcast to establish data caps and a pay wall to access high quality content may seem innocuous now, but is going to harm businesses and consumers that rely on the internet.

---

## **Description**

How can Comcast legally or morally limit the amount of data used per month. They already cap on speed; if I am using my internet to the extent of the speed promised by Comcast I am using  $60\text{sec/min} * 60\text{min/hr} * 24\text{hr/day} * 30\text{day/month} * 150\text{Mb/sec} = 388.8\text{Tb} = 48.6\text{TB}$ . Comcast is double dipping its restrictions to the tune of offering only 1/48th of the plan I agreed to. Unless I can pay only 1/48th of my bill this is a ludicrous abuse of a pseudo-monopoly.

---

**Ticket: # 1297474 - Comcast Data Cap**

**Date:** 11/1/2016 7:10:04 PM

**City/State/Zip:** Kirkland, Washington 98033

**Company Complaining About:** Comcast

---

**Description**

This new data cap is ridiculous. This is purely a money grab and It's forcing me to pay extra for the bandwidth especially when their data tracking methods aren't public or regulated.

They say that 1 TB of data can accommodate the following:

Stream between 600 and 700 hours of HD video

Play online games for more than 12,000 hours

Stream more than 15,000 hours of music

Upload or download more than 60,000 hi-res photos

The main issue is that those numbers are unrealistic and in a family environment, you are more than likely to do more than one at a time. 600 hours is also very inaccurate for HD video. That implies that you're streaming 720p video... 1080p video uses more than double the bandwidth which lowers it down to around 300 hours... If you have 2-3 family members each streaming at once, that's about 2 hours of streaming a day to get you over the data cap WITHOUT doing anything else.

## **Description**

Today, 11/1/2016, Comcast has implemented their Data Caps nationwide. This is a very anti-consumer practice. I frequently use more than 1TB of data due to the fact that most of my media consumption occurs over the internet outside of Comcast's cable system. This is an extortion attempt for customers like me, as services like Netflix and etc are causing the subscribers to Comcast's cable service to leave. What makes this even more anti-consumer is Comcast is Zero-rating their own video services over the internet. They have chosen to charge customers \$50 for the option of using their service as it originally was, without limits. As a former Comcast network engineer, I can assure the FCC that this change is not for any network management or cost of business reasons. I would as well be willing to testify to this fact. These kind of business practices must be stopped as they are a deterrent to an Open and Fair Internet

**Ticket: # 1297511 - Cox Imposing Data Caps****Date:** 11/1/2016 7:30:06 PM**City/State/Zip:** Destin, Florida 32541**Company Complaining About:** Cox

---

**Description**

Data caps are a disgusting cash grab that need to be eliminated. Cable companies are using their privilege of utility monopolies to continue to price gouge users for services they don't provide. While rates do make sense, the providers do not create internet, nor is there some finite supply of internet. It exists. They have no right to charge me based on how much of it I use. Likewise, I have no alternative to select another provider of similar capability in my area. Cable companies should be made to regulate their prices at the local level in line with the services provided and the rate of inflation in the area. Instead, they have continued to make cash grabs at the cost of their users who have no choice to select another provider based on the utility monopolies they have been given.

**Date:** 11/1/2016 7:41:21 PM

**City/State/Zip:** Grand Island, Florida 32735

**Company Complaining About:** Comcast

---

**Description**

For a nation as varied as we are it should be a crime that I only have one option for a service provider in my area. Comcast can charge as much as they want (and they do) for relatively tiny bandwidth (I get the same bandwidth here as I did in my hometown, for a higher cost, ten years later.) I get the feeling it actually IS, but nobody wants to admit it because we have the option to pay nearly as much for laughably slow DSL so technically it's not a complete monopoly.

And now they have the outright gall to impose a frankly insulting data cap and outrageous fees for breaching that cap. The price per gigabyte for going past the cap is higher than that of most hard drives. As in physical possessions I can touch and use.

Local governments have taken kickbacks from big cable for far too long, and competition is NOT being fostered here. It's frankly un-American.

**Ticket: # 1297577 - Comcast 1Tb data cap**

**Date:** 11/1/2016 8:08:18 PM

**City/State/Zip:** West Jordan, Utah 84088

**Company Complaining About:** Comcast

---

## **Description**

Today, November 1st 2016, Comcast-Xfinity has instituted a 1Tb data cap on internet plans in Utah, among other states. This is a massive money grab by a company that already has a nationwide monopoly on "high speed" Internet, if you want to retain your unlimited data plan you must pay an additional \$50 for the exact same service I had one day ago.

Comcast says that this is an effort to make people who use more internet to pay more money while those of us who use less internet to "pay less". My Internet bill hasn't gone down a single penny yet in their e-mail explaining this situation it states "This data plan is based on a principle of fairness. Those who use more Internet data, pay more. And those who use less Internet data, pay less." So If I use less Internet I am going to pay less? If I don't use my full 1Tb "allowance" will I be reimbursed for the data I did not use? This is a cash grab, plain and simple.

Telecommunication companies have received billions of dollars to update infrastructure and yet no upgrades ever get done. There is no finite amount of "data" the Internet isn't just going to run out of supply one day. Comcast, Verizon, Time Warner and others have refused to update their own back end infrastructure while increasing cable bills for millions of Americans because they want more money. It's in their best interest to not upgrade their infrastructure to get customers to "upgrade" to a higher tier of service that costs more just so they can watch a youtube video without buffering, or play a game without high latency.

## **Description**

Hello,

Comcast has recently instituted a cap on data usage of one terabyte per billing cycle(which is a month.) This has changed the way my family has consumed media for the worst. This practice of constricting customers to be overly conservative with their internet use is highly anti-consumer. When I contacted Comcast with this concern, the representative just said, "I don't know who would ever go past that amount of data!". Comcast did not enforce data caps prior to now, and to get back to those times, they want me to pay an extra \$50/month. What's worse is that Comcast does not count data usage when it comes to the content they provide, which is also very anti-consumer. I don't understand how what they're doing is even legal. I would go with another ISP, but my options are very limited. I believe Comcast is very much aware of this fact, and thus can get away with carrying out it's anti-consumer practices

Thank you for your time.

**Date:** 11/1/2016 10:39:04 PM

**City/State/Zip:** Papillion, Nebraska 68046

**Company Complaining About:** Cox

---

## **Description**

How is a data cap of 1 TB at all useful or meant to ease network congestion during peak usage time as is the claim? This is simply a ploy to stop the cord cutters. With 4K TVs becoming a hot item this season and streaming services offering streams in HD and 4K it will easily eat up the data provided. In addition, with music streaming services and online gaming where games can be purchased digitally and the sizes of the games ranging from 10-60 GB it is just ridiculous to have a data cap limit. There's also the forced advertisements for some of the video sites such as YouTube which eat up data as well. This is especially true with the incredibly low data caps on mobile devices which can account for 10-20% of the allowable usage.

Having a data cap is a major step backwards. It doesn't serve a legitimately valid purpose other than to nickel and dime the consumers while lining the ISPs pockets.

## **Description**

I am extremely worried about the current policy by Comcast to start enforcing 1tb per month data caps on their customers. In their videos promoting the new policy, they are portraying to their customers that they will never go over this data cap, by giving examples of how many photos, or tweets they can do, but they don't make any mention of streaming video. If what I have seen is true, that streaming 1 hour of HD video content is equivalent to 3gbs, and 1 hour of 4K streaming video is 7gb, it will become trivial for a home with a 4 person family to exceed these limits. Their customers pay for service, Americans already pay exorbitant amounts of money for our internet compared to other first world nations, this is a policy we can't let happen.

## **Description**

The internet company Comcast is now implementing data caps upon their customers and not changing anything else. they already have a 97% profit margin. With this and the non-competition pacts they have with other ISPs to gain a monopoly in their area of service it is becoming increasingly clear they are taking advantage of the average customer. In a day and age where internet is becoming a necessity rather than a luxury, this is criminal. For instance, many jobs these days require online applications. If you walk into a store and ask for an application, chances are they will just tell you to visit their website.

**Ticket: # 1297795 - Comcast Internet Data Caps**

**Date:** 11/1/2016 11:27:46 PM

**City/State/Zip:** Englewood, Colorado 80112

**Company Complaining About:** Comcast

---

**Description**

Comcast is introducing data caps today in the Denver area. This plan will restrict my ability to enjoy and purchase content from other companies. I download video games, and subscribe to streaming services. Due to the \$50 increased rate to continue enjoying my services, I will have to cut content from other companies.

Comcast says it is only fair that people who download more pay more. But they are not considering reality when they claim this. Reality is that quantity of bytes is not the only measure of internet usage. The power company regulates prices by what time of day the power is used, but Comcast is not. If I use data at a rate of 10 MB all 24 hours in the day, and someone else uses 100MB in a single hour, I am considered to use 2.4 times as much as the other. However, during the peak hour, I only used 10 and the other used 100.

Data caps unfairly discriminate against streaming and downloading services offered by Comcast's competitors. Please federally regulate all data services as a Public Utility. Regulate the non-competing monopolies. They are no longer part of a fair capitalist market, and should be contained.

---

## **Description**

Comcast limiting internet usage to 1TB shouldn't be allowed and shows their abuse of power. In my area, Comcast is the only ISP, so they have the monopoly. Because of that, we were chosen as "guinea pigs" for the 1TB data cap, which I have been trying to live with for the past few months. Comcast is treating their customers like crap and they shouldn't be allowed to do this. This is a clear violation of net neutrality and NO ISP SHOULD BE ALLOWED TO DO THIS

**City/State/Zip:** Decatur, Illinois 62522

**Company Complaining About:** Comcast

---

## **Description**

In the middle of the month of October, Comcast enacted its 1TB datacap policy without notification of the service being implemented. I am only 1 of 4 members of the household, and we all attend the local university. After seeing that we had a data cap, we also checked our current usage and saw that we were already close to the limit with still 2 weeks left in the month. The data cap will not benefit us in any manner, since we already have to worry about our budget and Comcast's new policy will only force us to pay for going over their set limit. When the company says "This data plan is based on a principle of fairness. Those who use more Internet data, pay more. And those who use less Internet data, pay less" that becomes a blatant lie because they do not offer any type of incentive to use less data. Instead, it puts those in a position like ours in a bind because the only option would be to either continuously pay their \$50/10GB fine or pay nearly triple the rate we currently have in order to receive unlimited data usage. This is made even worse considering that in my area, Comcast is the only Internet Service Provider thus limiting our potential to seek an alternative.

## **Description**

We all know, this is going to be a major issue. With the rulings of which companies are in the process of merging and creating monopolies it has been seen that the likes of AT&T, Time Warner Cable, Cox, Charter, Comcast and the likes are zoning into the fact that modern day Cable and Satellite entertainment are a dying breed. Within this we have notice deals and companies forming mergers and hiking prices of usage along with setting data caps and limits. Now I ask you to think upon this issue. Why would these companies start making this decision? Simply because of the fact that streaming videos, content is on the rise and within this the usage of internet is increase than it had been for the past decade. Companies want to continue making more money and in doing so are willing to make their customers suffer. How can this be justifiable? It can't in fact it never will be. Corporations don't care about their customers. Plain and simple they only care about what will make them larger profits. It is the duty of the FCC to keep this from happening.

I am currently self employed, and in such I use the internet in great excess to perform my job function, my schooling and such. This is just the data usage in my own personal connection not including neighbors and such who are also on this network.

I am pleading with you for the sake of the future of the world and freedom of the internet to now allow Comcast to go forward with this idiotic scheme for quick cash.

## **Description**

Comcast recently began imposing a 1 terabyte data cap on subscribers' internet usage in the past couple of months. This is wrong for a multitude of reasons, but to summarize:

1. Comcast continues to offer a sub-par service at an ever-increasing cost to the consumer. They suggest that there is some shortage to bandwidth therefore users must be limited when in reality they are simply gouging subscribers for higher profits incurred from overage charges. This brings me to to my next point.
2. In certain regions (read: most of the US) Comcast has little to no competition. Local laws have allowed them to monopolize telecommunication services in many communities thus preventing competition from forming and giving them any reason to offer a modern service. Without competition, they will continue to squeeze money from their subscribers because their subscribers have literally no other option for internet access.
3. Comcast claims that 99% of their users do not exceed 1 terabyte of internet data usage in a single month. This may be true today, but given the rate at which the quality and popularity of stream-able media (e.g. movies, online gaming, music) is rising, a terabyte of internet data will seem like nothing. Soon users will have no choice but to upgrade to a higher tier usage plan so that they may avoid excessive overage charges.

Comcast will continue to stifle progress in the telecommunications industry as long as it remains profitable for them to do so. This means that until their monopoly is destroyed, users' costs will continue to rise while the quality of the service they are paying for will become more and more antiquated.

## **Description**

Comcast is taking the profit driven approach to capping people's data usage, without reasonable competition in their service areas for people to show their displeasure by changing to another provider. If you want to keep the unlimited access you've had for years? It's now an extra \$50. For the same service.

It's a bigger deal than that because they'll show that they aren't losing many customers after the move, which will show other ISPs that they can do the same thing, overall worsening the internet access of millions of people for the benefit of a few board members and investors.

America is already behind most of the other major countries in the world in terms of our access to the internet in both pricing and speeds, and this tactic is absolutely not going to help.

Weren't we supposed to be fostering more competition between companies, and improvements to internet access overall? How is this game of chicken race-to-the-bottom approach helping anything but Comcast's bottom line?

## **Description**

Comcast, and AT&T, now have 1TB data caps. I am not a direct customer, as my roommate is the account holder. However, data caps are not to be taken lightly. The internet is meant to provide an open and limitless accessibility to information. This accessibility to information has aided in incredibly rapid growth in all facets of our society, including science, technology, and culture. Data caps limit our entire society from growing, both in Intercommunication Technologies and in our cultural understanding of ourselves and other peoples and conflicts around the world and at home. It limits the growth of web and application development, as more and more data transferring is needed with each advancement we make. Newer nicer websites need to provide more data to the user. New applications are becoming larger, and are frequently downloaded rather than bought on a disk or other physical media. Those same applications often need internet access to transfer data back and forth and make innovations to the software. Each and every day, we use more of these tools, and our need for data access will not stop. A terabyte today may seem like plenty, but so did 100 gigabytes 15 years ago. And these corporations would have no incentive to raise these data caps as our needs grow, effectively truncating our growth as a society.

These data caps serve no purpose, but to bleed more money from everyone else for the greed of very few.

Furthermore, such limitations will bring to question the entire system in place today. Could it not be said that, if data is a finite resource (which, we know, it is not - especially in the capacity of the internet as data is transferred and later deleted far more often than it is saved), each and every data connection made to my computer, through my ISP, without my express permission is stealing from me? Each time I access a website, I must download ads. Ads which make revenue for those sites so they may stay active. Which means that these ads, which I do not expressly request, or know if I will receive, or how large they may be, are directly stealing my "finite" data. This system would be akin to electronic billboards tapping into my electrical service, which I pay for, to deliver ads to me that I did not request. We would undoubtedly consider this ludicrous theft. Ads being the thing that monetizes most of the internet, we can not afford to adopt such a system without drastic consequences.

So do we stop this greed and affront to the growth of our society, and the very thing that brought us into the information age? Or do we tear apart the system to accommodate those who don't need a penny more for the next 100 years, and destroy what makes the internet such a wonderful resource to everybody around the world? If we do nothing now, this will be a very real problem within one generation, or less.

## **Description**

Two months ago I bought a 4k TV & subscribed to Netflix. Last month, I signed up for a 1 year bundle package from Comcast which included a faster internet speed, basic cable channels and no limit on Internet downloads. Now, I discovered that my Internet downloads are being capped at 1TB effective Nov 1, unless I want to pay extra. This is dirty pool. I signed a 1 year contract for a certain price and the following month Comcast changes the plan, taking away what we agreed to. This is going to force me to watch less 4k viewing from Netflix and I can't get out of the contract for another year. I'm not getting what I agreed to pay for.

## **Description**

Hello,

I pay \$100/month for internet service that Comcast will not allow me to use. Now they want to charge me up to another \$200 in overages if I exceed an arbitrary data limit. I think this price is unfair, even when compared with unlimited cell phone plans (T-Mobile etc).

They are inflicting a cap that their infrastructure does not need. I think they are creating a false sense of supply and demand to drive customers to their cable TV services instead of using online streaming services.

My household uses services like Netflix, Amazon Prime, Youtube, Twitch etc because we don't use old-fashioned cable TV. This quickly eats into their limit when you have a household of people using those services. This will only get worse with time as services become higher quality and take up more bandwidth.

Some extra information:

<http://www.extremetech.com/computing/212376-comcast-admits-that-its-data-caps-are-a-business-decision-not-an-engineering-requirement>

I think it creates a competitive problem when Comcast's own content (Cable TV) isn't held under the same data cap that their competitors data is (Amazon Prime for example). This forces their customers to use Comcast content instead of all the other options.

Thank you for your time,

██████████

**City/State/Zip:** Olathe, Kansas 66061

**Company Complaining About:** Comcast

---

## **Description**

Comcast has issued a nationwide data cap for all consumers. Realistically, this is just a tax on those who opt for services such as Netflix vs their cable TV.

Furthermore, those that "go over" their cap get penalized with fees, despite Comcast not having a secure and accurate way to measure data usage (from my understanding, it is handled by a third party company)

Not only are these practices unfair, but they are malicious given the fact that most consumers don't have the option of multiple ISPs to pick from to combat these unfair caps and chargers. I, for one, am going to start looking at other options in my area. Comcast should be shamed for their actions in establishing a monopoly and controlling revenue loss by creating caps, fines, and fees rather than simply being fair and competitive with their service and pricing.

**Ticket: # 1298966 - Comcast Data Cap****Date:** 11/2/2016 3:59:14 PM**City/State/Zip:** Belleville, Michigan 48111**Company Complaining About:** Comcast

---

**Description**

On knowledge and belief, Comcast has rolled out a new data cap of 1TB for its customers. As a company that which is allowed to operate a virtual monopoly, the government has a responsibility to step in and prevent abuses such as this; a ploy to increase their bottom line. While it might be true that a very small number of customers will be affected by this policy change currently, Comcast has likely calculated that the \$50/mo price tag to lift its artificial data cap to be a revenue driver only a couple of years down the line as information technology bandwidth requirements grow exponentially. Comcast has acknowledged that there is no congestion issues with its network. It may be that this new policy claims to combat piracy or create "fairness" between the top percentile of users and the median; these are straw-man arguments and should be dismissed as such. These Comcast data-caps are a dangerous precedent and shouldn't be allowed to move forward. Thank you.

**Ticket: # 1299067 - Xfinity Data Cap**

**Date:** 11/2/2016 4:29:01 PM

**City/State/Zip:** Ann Arbor, Michigan 48104

**Company Complaining About:** Comcast

---

## **Description**

Xfinity has imposed a data cap on my internet usage. This presents a horrifying danger to my household as I use VOIP for phone calls. In case of an emergency, they may end up charging me an exorbitant amount. Furthermore, there are numerous reports of their data usage meter incorrectly calculating usage. In fact, the last time I attempted to use their tool on their website (11/2/2016), the tool presented an error ("Data usage details are unavailable at this time.") and could not display my usage. I have attached a screenshot of the issue. If the company cannot measure usage accurately, this clearly indicates that they can abuse their metering and charge me more than what I actually used.

They are touting this data cap as a feature, but it apparently does not increase my speed. I pay for up to 75 Mbps, which I never get. If this data cap did anything reasonable, I would be getting a guaranteed 75 Mbps all the time.

Information about a New Terabyte

Internet Data Usage Plan

We're writing to let you know that we have activated a new XFINITY Internet Data Usage Plan in your area. Effective November 1, 2016, your XFINITY Internet service includes one terabyte (that's 1,024 GB) of data usage per month. With a terabyte of data you can stream between 600 and 700 hours of HD video, play more than 12,000 hours of online games, or download 60,000 high-res photos in a month.

The vast majority of our customers would consider one terabyte to be a massive amount of data – in fact, less than 1% of our customers use that amount in a month. However, it may not be enough for everyone, so we want to make sure you understand your options and choose the Data Usage Plan that works best for you. Our data plans are based on a principle of fairness. Those who use more Internet data, pay more. And those who use less Internet data, pay less. If you believe you will need more than one terabyte of data, we offer an Unlimited Data option.

Terabyte Data Plan and Unlimited Data Option:

One Terabyte (TB) included/month      If one TB is exceeded, \$10 is charged for each additional data block of up to 50 GB/month      \$200 overage charge limit - no matter how much data is used

Unlimited Data      Additional \$50/month      No overage charges — no matter how much data is used each month

You can also track and manage your usage so there are never any surprises about how much data you use. Here are several tools you can use:

Data Usage meter – Monitor how much data your household has used with our Data Usage Meter.

Data Usage Estimator - Estimate your data usage with our Estimator Tool. Simply enter how your household typically uses the Internet and the tool will estimate your monthly data usage.

Notifications - If you approach, reach or exceed one terabyte of data usage, we will send you a courtesy "in-browser" notice as well as an email. You can also elect to receive notifications at specific usage thresholds and set up mobile text notifications. Learn more about notifications here. Usage notifications will not be sent to customers who enroll in the unlimited data option.

For the less than 1% of customers who do exceed one terabyte of data usage, we're offering two courtesy months, so customers will not be charged the first two times they exceed one terabyte while they are getting comfortable with the new plan.

If you have any questions about the new Data Usage Plan, please visit <http://dataplan.xfinity.com/>.

Thank you for being an XFINITY Internet customer.

Sincerely,

Hank Fore  
Senior Vice President  
Comcast California Region

**City/State/Zip:** Houston, Texas 77006

**Company Complaining About:** Comcast

---

## **Description**

I live in Houston, TX where only two companies server the vast majority of residences: Comcast/Xfinity and ATT. In July 2016 I purchased Xfinity high speed internet with advertised speeds of 75Mbps down and 5Mbps up with unlimited data. The unlimited data aspect of the plan was a key reason why I chose Xfinity over ATT as ATT has data caps for all their plans.

This month (November 2016), Comcast introduced a data cap of 1TB to all Xfinity internet customers in Texas. With the introduction of this cap, Comcast also introduced an "additional fee of \$50 per month" to regain the unlimited data as well as \$50 overage charger for every 50Gb over the limit (maxes out at \$200 in overage charges).

From Comcast/Xfinity's website, the stated purpose of this cap is: "This data plan is based on a principle of fairness. Those who use more Internet data, pay more. And those who use less Internet data pay less."

<https://customer.xfinity.com/help-and-support/internet/data-usage-what-is-the-terabyte-data-usage-plan>

The reasoning for this data cap does not hold water as Comcast already charges for different speed tiers. What Comcast is doing is "double dipping" and these data caps do not improve the service offered like paying for different speeds does in reducing line congestion.

In addition, there is no guarantee that the imposed data cap of 1TB will remain at 1TB or scale with how "99% of our customers" use their internet. As the reliance on the internet for downloading personal and work related software, communicating with friends, family, and colleagues, and consuming digital entertainment continues to increase, data caps will only impede and stifle digital innovation and progress.

In a landscape where few home internet providers are available to consumers, I am vehemently against data caps. The sole purpose of data caps are to increase company profits while artificially restricting how customers use their internet connection and obstructs digital advancements.

Kind Regards,

██████████

**Description**

I just signed up for service this month and there was NO disclosure to me that COMCAST CAN CHANGE MY PLAN AT ANYTIME on I JUST received an email informing me of a DATA CAP limitation to my plan. I just received an email The details of my home internet plan have been switched, without my approval or input, to a cap of 1TB per month with an additional automatic If one TB is exceeded, \$10 is charged for each additional data block of up to 50 GB/month." "New Terabyte Internet Data Usage Plan" I never agreed to this change and I have been assured that no one has an option that everyone west of salt lake city has this "New Terabyte Internet Data Usage Plan" and that if we don't like it we are happy to go somewhere else provided that I pay a cancellation fee and go to the only other ISP in my area (I HAVE TWO options) We tried Century link first and they said I could get "BURSTS up to 40MBPS" but the 20+ year old copper phone lines in my area kept me at a max of 7MBPS connection. That's not a viable option for me and further more I feel like I have been taken advantage of and lied to. And I am stuck with them I have NO other options. We just bought this house and now I have to deal with Comcast and the deception. I wish I had another broadband entity I could to do business with. THIS IS TERRIBLE!

**Description**

I would like complain about Comcast. My contract as of Sept. 9, 2016 was to have 25 mb/s internet and basic cable with unlimited access, the day that I moved into my new apartment. This was not provided immediately because the apartment had no internet, despite the request for service being put in to the Maple road, Troy, MI location 3 weeks prior. When I called to have the internet setup, I was told they couldn't make a connection and I needed to buy a better router (Have receipts from Best Buy). I bought a better router and returned, only to be told the same thing. I never received anything for this useless expenditure. They continued on with the search for why I didn't have internet to end up deciding to have someone check out my apartment. This guy concludes that I don't have internet in my apartment. They later send another guy out the weekend after moving in to rewire the apartment. He left after it worked, telling me that I wouldn't have to pay for it, which I didn't but they felt free to charge me for the week of service in which I didn't even have a connection to them. I made a few calls (6 to be precise) to them and finally got someone who would credit my account for the time I had no internet. That amount of work for getting my money back on something I shouldn't be charged for is not acceptable.

Then after having my account set up for a little over 30 days (IE the period to which I can cancel service for free), I am now having my data capped at 1 terabyte/month, that is not stated exclusively to change in my contract. This is in addition to no warning about putting the data cap on until it was already enforced. I have pictures attached of my email, showing all email contact since my account was created that had the word Comcast involved at all. Notice taht the email even warning about the change is sent today, Nov. 2nd, 2016 saying the changes happened on the 1st... with no warning. I am fairly certain they can't change a contract status without warning, if they can change them at all.

This last one might belong with the BBB. A data cap? Just before/while 4k television is becoming an economically affordable? Before online Virtual reality gaming comes into fruition? Let alone anyone who wants to play any new generation game (downloads) that use 4k resolutions. This is a money grab. The email even specifies that they are doing this to charge more for people who use more, but don't reduce the cost on those who use less; literally only charge people more. The combination makes for a messy future for any Comcast customer who, unlike Comcast, can't change the contract at all without fees.

## **Description**

Comcast has enjoyed a nationwide monopoly/oligopoly for many years, both in the areas of cable television and cable internet. Now, with customers leaving their television service in droves they have decided to flex their monopolistic muscles and begin charging customers more for the same service. Today, I received an email from Comcast informing me that they would begin enforcing arbitrary "data caps" - a concept which has no technological justification other than a vague, hand-wavey dismissal of 'fairness' - on my account.

In short, if I want to receive the exact same service I have received before, as a loyal customer, I must begin paying an EXTRA \$50 per month to continue enjoying unlimited data. They claim that they are "increasing" their previous limits, as a courtesy to the customer - limits that were never enforced and never advertised, and therefore never actually existed. They've taken my virtually unlimited access to information, crippled it, and put an additional price tag on it.

This is a clear punishment towards the millions of customers who have opted not to purchase television service, and rely on heavy internet usage for streaming shows and entertainment. It is blatantly anti-competitive against Netflix, Hulu and Amazon, their largest competitors in the television market.

I beg the FCC to put a stop to this. There is no technical reason to enforce data caps, there is no additional cost to provide more bits & bytes to the customer. It is time to break up the Comcast monopoly; force them to rent out their service lines - divide the internet service provider from the cable lines they so greedily exploit.

America is already struggling, with other countries far surpassing us in quality and cost of internet access. We need to take action, to remain competitive in the global marketplace and ensure internet service is as cheap and available as any other utility, such as phone lines or water.

---

### **Description**

I received an email today outlining the new data caps for XFINITY(Comcast) services with the option to pay \$50 more a month to go back to unlimited. This is absolutely absurd and is not a part of the contract that I signed. This violates net neutrality and is a step in a completely wrong direction for internet usage. Internet has become a necessary utility in the past decade and these practices are hugely predatory and taking advantage of people.

## **Description**

Comcast is taking the profit driven approach to capping people's data usage, without reasonable competition in their service areas for people to show their displeasure by changing to another provider. If you want to keep the unlimited access you've had for years? It's now an extra \$50. For the same service. Without the extra \$50, you have a 1TB cap.

Under the new 1 TB cap, users with existing 4K televisions who wish to watch 4K content at the same rate as they do current HD content would very easily hit and exceed the cap. Sure, 50 hours of 4K content will barely go over 50% of the cap; however, there are multiple people in the household. Thus, with a two person household, you can easily go over 1TB very easily. Furthermore if you have more than two in the household.

The additional complication of Comcast's de facto monopoly makes this unilateral change to the terms of service an unreasonably burdensome one on consumers, and should be strenuously opposed in favor of maintaining an open internet that encourages innovation. Without competition, markets go unregulated and will further impede innovation and have prices rise, as we have seen with Comcast and AT&T. No innovation whatsoever, we are still on copper and nothing has been done about this. Comcast is now squeezing more money by implementing data caps and overages, driving down innovation.

**Description**

The recent internet cap imposed on Comcast Cable Internet subscribers in Oregon (and the rest of the country) reeks of greed. Since the availability of internet to the public at large, this method of communication has grown and become a massive means for commerce, communication, and other activities of importance for US citizens. Since the passing of the Open Internet rules many in the technical fields celebrated them as a means to keep the internet neutral to how an end user chooses to use it. However, given the new limits a user must now choose whether to use that data to perform activities such as viewing video or purchasing items from Amazon. While I understand that this limit is sizable (1TB is a huge amount of data in today's data use by the average user) it is still a limit to using something the citizens of the US believe to be indispensable.

I recently read an astute explanation of how limits affect the average user. The internet is similar to our roads, and Comcast is the gatekeeper to those roads. In the past, Comcast and other ISP's had technical limits to the speed at which it could allow a user to 'drive on' the web. The bandwidth it sold is similar to an enforceable speed limit on a road (the reason for having these is different, but the result is similar). Now, the limit that Comcast is implementing is equivalent to the government imposing a mileage limit on all cars driven on all roads and charging a fine to anyone who goes over. Now, the consumer has to choose whether to spend his miles going anywhere. There is no technical reason for this limit on miles, but the government receives more revenue from the people who choose to drive more. This limit will have the effect of keeping more people home, which will reduce the revenue of the shops in town, could reduce the interactions amongst people in a community, and may reduce productivity in general. Comcast's CEO has stated "Just as with every other thing in your life, if you drive 100,000 miles or 1,000 miles you buy more gasoline. If you turn on the air conditioning to 60 vs. 72 you consume more electricity,"[1]. This quote helps him to answer the question of why implement a cap, but it does not truly equate to what he is saying. A cap is not in place because there is some chemical process required to navigate the web, a car's motor works on combustion and requires gasoline to perform the reaction. Similarly, power is generated by a finite resource which heats water to turn a generator. The cost to ensure that the power is continuously generated is charged to a customer based on usage, along with static charges for the lines which have to be maintained. Comcast is in the business of lines, not generation. Internet users do not require a finite resource from Comcast to navigate the web. They need a means to connect their electronic device to the web. This connection is provided with a bandwidth limit. The use of a single byte does not in turn cost Comcast any more money than that byte costs an edge provider, or a website. There are static costs (physical equipment, maintenance, power, etc.) but none of those increase based on a single user's increased byte usage.

For now, there is no clear limit to people who fall within the bell curve of data usage, but as technology changes the amount of data required to do anything online will increase. Prohibiting this kind of growth will have a negative effect on our technological edge, alongside of this, people will generally spend their time on items they know will use their data a certain way and will not be as open to new technologies. While the vast majority of data is used on video entertainment today, it is not without merit to believe that a more necessary use of high amounts of data will come along that will challenge this arbitrary limit. I realize that Comcast is a business and must make money. My

suggestion is to either enforce actual net neutrality rules to keep these kinds of arbitrary restrictions from being used to bolster bottom lines, thereby forcing Comcast (and other ISP's planning to implement limits) to actually come up with a product they can sell which provides value rather than forced pay outs.

These limits are truly only going into effect because the markets where Comcast is operating are not competitive. I am an advocate for strong regulation, but I believe that strong market competition will provide a product that is much better for the consumer. Where market competition exists for Comcast, bandwidth is much higher, and data limits do not exist. This is because people don't want them, but when a market has no real choice, they are forced to have these limits. I think the FCC has two choices, enforce strong Open Internet rules where ISP's do not get special treatment (zero rating and data caps) or work tirelessly to open up markets for competition to come in. I think a third even better option is out there. This option is to nationalize the infrastructure and 'last mile' connections, and allow Comcast to compete nationally as a service provider with every other service provider, then these anti-consumer policies will no longer be present unless there is a technical reason to do so.

**Description**

Hello,

I am a Comcast Xfinity customer who has just received a notice that there are data caps being applied to my area. This is highly disturbing and a huge money grab to take advantage of their customers. As someone who lives in an area where the ONLY Internet provider is Comcast, I expect fair treatment since I have no other way to gain access to the Internet. This is very clearly an attempt to exploit those who don't understand that it doesn't cost Comcast extra whether a user has used 1 Gigabyte of data in a one month period or 1 Terabyte in that same period. It's just one more way for Comcast to step on their customers and bleed them of money when there is no clear business need for them to do so.

Please investigate and do what you can to help those of us that have no other option but to use Comcast for our Internet access. It is basically a necessity and should be treated as a utility in this day and age, so I would appreciate it being regulated and prevented from becoming a monopolistic situation.

Thank you,

██████████

## **Description**

A brief summary; 1TB of data exchange may be slightly out of reach today, but not tomorrow.

Streaming in 1440p(2K) is becoming more common in this age, soon when 4K videos become a standard as 1080p is today, you can watch less than 4 hours of video at this resolution before exceeding this new data cap. Comcast knows this very well, and are basing their new implementation off the hopes of ignorance. There's no pro-consumer aspect to this, and when a majority of Americans live in areas MONOPOLIZED by large cable companies, something needs to be done on a federal level.

Going further into the future, Graphene is a substance that can be integrated into internet hardware and transportation media. This can transmit speeds at a theoretical 1 Terabyte per second. Pointless.

## **Description**

Comcast has implemented their Data Caps nationwide. This is a very anti-consumer practice. I frequently use more than 1TB of data due to the fact that most of my media consumption occurs over the internet outside of Comcast's cable system. This is an extortion attempt for customers like me, as services like Netflix and etc are causing the subscribers to Comcast's cable service to leave. What makes this even more anti-consumer is Comcast is Zero-rating their own video services over the internet.

They have chosen to charge customers \$50 for the option of using their service as it originally was, without limits. I can assure you that this change is not for any network management or cost of business reasons. As someone who chooses to live in one of our beautiful mountain towns, we have no other options for a reliable, stable, and speedy internet connection. This disproportionately affects areas such as mine due to lack of service options. These kind of business practices must be stopped as they are a detriment to an Open and Fair Internet

Sincerely,

US Marine Veteran [REDACTED]

## **Description**

Comcast just notified me they will be imposing data caps on my contract that had no mention of data limits when I signed up. This policy is supposed to start in February and is a flagrant and unethical revision of our contract without my consent. Comcast has a nationwide monopoly on internet service and it is unacceptable to allow a company to impose data caps on something as essential in the modern age as the internet. I want my voice to be heard along with the tens of thousands of fellow Comcast customers who are fed up with this monopolistic behavior. Data caps and throttling of any kind for internet service are highly unethical and extremely frustrating to customers who have very limited options when it comes to internet service providers or speed tiers. There needs to be some form of government legislation to stop companies from doing this currently as well as in the future.

**Description**

Complaints DO work, due to the sheer number of FCC complaints when Comcast first announced caps, they upped the cap from 300GB to 1TB. We need to keep filing and filing until they realize this pure money-grab is one of the worst decisions they can make and we will not stand for it.

Here is a short template you can paste in the complaints box:

I am a resident currently affected and very unhappy about Comcast's new data cap plan they forced upon my home and my community. Data plan is not about fairness, it is not about congestion, it is a way for Comcast to pad their profits.

Let's talk about fairness; Comcast claims they are charging data like how any other utility charges for water, electricity, and gas. However, once the infrastructures are put in place, sending and receiving data costs almost nothing to them. They are already charging enough to post record profits last year. Now, let's talk about congestion, data caps have nothing to do with network congestion, as was evident when Comcast accidentally leaked an internal memo confirming so.

Increase in profits is the only reason left, and while a business has every right to make as much money as they can, Comcast, being a monopoly in many areas, should be held to a different standard. There is no competition, nowhere to turn. With the increase in high data-utilization applications such as 4K streaming and more Internet connected devices in our homes, this data cap is just an unfair way to get in on the money without actually innovating.

**Company Complaining About:** Comcast

---

## **Description**

Comcast has been disseminating false and misleading information concerning user monthly average data use in advance of the 1 TB data caps they implemented on November 1st, 2016. I pay around \$62.00/month for 150mb/s download speeds. With this data cap I am only allowed to utilize that service at its highest capacity for 14.81 hours a month, or 2.04% of the month (726 average hours/month). Once meeting that cap I will be charged \$10 for every 50GB. Which at 150mb/s would be \$10 every 44.44 minutes, up to a cap of \$200 in additional charges per month, at which point there are no additional charges regardless of data usage. This is an absurd and arbitrary cap designed to increase profits at the expense of the consumer. The US government needs to intervene against these monopolistic internet service providers on behalf of the public/consumer.

**Company Complaining About:** Comcast

---

## **Description**

The new data cap will double my monthly bill. It will be cheaper for me to now pay the \$50 extra for unlimited data than the overage charges.

It is not fair that streaming video services like Netflix via the cable box app do not count toward your data usage. This is a simple push to get people to pay for cable in order to avoid being charged overages.

If there was any competition in my area, I would not use Comcast at all.

## **Description**

I agreed to a contract with Comcast in August of 2016. The plan I was offered was for their Performance 25 Internet for \$39.99 for 12 months with a free upgrade for the Blast internet for 12 months. There was no limitation of data usage. Today 11/03/16 I received an email from Comcast stating that I would be placed on a limited data plan as of 11/01/16. This was 2 days after the plan was to go into place. After calling them, no one was willing to assist me in resolving my issue. I have found my contract and it states that "Comcast may rearrange, delete, add to or otherwise change programming or features or offerings contained in the Services." but it doesn't state anything about limiting my services. After calling and inquiring about the changes, I was transferred 6 times and ultimately hung up on after 1 hour and 17 minutes of patiently waiting for a resolution to my concern.

---

## **Description**

In September 2016 I entered into a 2-year contract with Comcast for internet service at my residence with a download speed of 25Mbps with no data restrictions. Comcast just mandated a 1TB data cap which affects my service, including massive fees if I exceed the 1TB data cap (which I did last month by almost 600GB). Even though Comcast changed their end of the contract, I will still be on the hook for an early termination fee of over \$200 if I cancel my service early, and even then there are no other providers offering comparable internet service speeds in my area. My only other option is to shell out an additional \$50/month (which would double my monthly bill) to regain the "privilege" of not having a data cap. After contacting Comcast customer service about this, it is obvious that Comcast does not care about their consumers or the quality of the service they provide. Such business practices are completely unfair to the American consumer and are not conducive to having an open, free, and neutral internet.

**Ticket: # 1299710 - "New Terabyte Internet Data Usage Plan"**

**Date:** 11/2/2016 11:14:53 PM

**City/State/Zip:** Eugene, Oregon 97401

**Company Complaining About:** Comcast

---

## **Description**

Earlier today I received an email from Comcast with information about changes to my account and its data caps:

We're writing to let you know that we have activated a new XFINITY Internet Data Usage Plan in your area. Effective November 1, 2016, your XFINITY Internet service includes one terabyte (that's 1,024 GB) of data usage per month. With a terabyte of data you can stream between 600 and 700 hours of HD video, play more than 12,000 hours of online games, or download 60,000 high-res photos in a month.

Comcast seems to be promoting the 1 TB limitation on my Internet service as a positive thing, when in reality it represents an unfair limitation on my online access. There are no other high speed internet providers available in my area. Comcast is the only cable internet provider, and Fiber access is incredibly limited to very select areas. This leaves Comcast as my only option for broadband Internet access. Thus, I effectively have no choice but to accept this new data cap, as well as the potential charges that come along with it.

Broadband Internet access is a key public utility, and when companies such as Comcast participate in price gouging in this manner, they are limiting the ability of Americans across the nation to access it. Internet infrastructure is based on bandwidth - the total amount of data has no effect on their capacity, only the total amount of bandwidth used. That's why until lately internet has always been sold by price per bandwidth and never had data caps, because it never cost them more to give you more data, it only costs more for a faster data rate.

These caps are an easy money grab by Comcast, which is effectively a monopoly because people have no other choice and have to pay them, and they try to shove outdated tech down your throat at the same time because again since they're a monopoly they can make terrible business decisions and still be profitable because there is no competition.

**City/State/Zip:** Lafayette, Indiana 47905

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently begun enforcing 1TB data caps in my area, and I am current subjected to them. There is absolutely no technical need for data caps and is only used as a ploy to scam more money from customers who are already paying exorbitant fees for slow and poor service and to make up for lost revenue from cord cutters. Their argument that most people do not hit the cap only suggests that they will be lowering the cap eventually so they can promote their \$50/month unlimited more easily. This is bound to happen as video and audio streaming services become more advanced and consumer devices begin rolling out to support, e.g., 4K streaming and other high quality content.

**City/State/Zip:** Seattle, Washington 98103

**Company Complaining About:** Comcast

---

## **Description**

I received an email from Comcast this afternoon (11/2) with no warning, letting me know that my XFINITY internet service is now data capped at 1 terabyte per month, effective 11/1, with penalties of up to \$200/month for exceeding 1 terabyte of data. Visiting the Comcast website, there is no way to opt out of the "Data Usage Plan," even though this is not what I signed on for when I chose Comcast as my internet service provider. This is outrageous, as Comcast has a near-monopoly on internet service in much of the U.S. It's time to regulate these companies further, especially as internet access has become essential for daily life for much of the world's population.

**Description**

I signed up with Comcast Xfinity 3 months ago and signed a contract stating that my price was guaranteed. They have now informed me that as of November 1, they would begin charging me if I use more than 1TB of internet. This violates not only the contract of a guaranteed price (they claim that the extra cost is a "Fee" and that fees can be added despite having a price guarantee). Also, This has to clearly violate Net Neutrality. They are limiting the amount of internet I can receive for the price that I pay. I have tried calling them and they can not provide me with an explanation of why this has been imposed and they are unable to even explain what that means to me in technical terms. Their phone support and email support can not explain to me what 1TB is or what that even means, they just say that it is what it is. This practice should be illegal and has to stop, they have already been fined multiple times by the FCC, they just do whatever they want to get more money. The only reason they are doing this is so that people will not subscribe to streaming television services, this has to also violate free trade agreements as well. Their television service is IPTV which goes through the internet, but their TV service is not counted as part of the cap, which is in clear violation of the Net Neutrality act.

Not only that, they only informed me one week prior to the implementation of this that it would be taking place.

**Ticket: # 1299899 - Data limits****Date:** 11/3/2016 9:11:07 AM**City/State/Zip:** Fort Wayne, Indiana 46814**Company Complaining About:** Comcast

---

**Description**

Yesterday, November 2nd 2016, around 3 PM EST, I received an email from Comcast, notifying me that, effective November 1st 2016, there was a 1024 Gigabyte "data plan" for my account, per month. Should I exceed this limit, Comcast stated that I would have to pay an extra \$10 per 50 Gigabytes. This is unacceptable for several reasons.

Comcast has decided to put arbitrary financial limits upon customers who use what they have already paid for. I paid for a 150 megabit per second internet connection, which means that I paid for nearly 50 terabytes per month. Comcast is now saying that I can only have 2% of what I paid for, and if I exceed this, I will have to pay an additional \$10 for every .1% of the data I already paid for. This means that if I want to fully utilize the connection I paid for, Comcast would add a ~\$9,800 fee to my cable bill.

Let's look at this from another angle. 1TB/month = ~3mbps when fully utilized. The lowest speed Comcast offers in my area is 10mbps, because anything slower is practically unusable. Even at that low speed, I wouldn't be getting close to the full use of the connection I paid for. In fact, I would be getting under a third of the full utilization of that connection.

I paid for my internet connection like I did for my cable and my phone. I am paying for an always-on uplink, not for a certain number of minutes or a certain amount of data. With Comcast's so-called "data plans," I am limited to about a day of full internet connectivity before I start having to pay more. If Comcast tried pulling this with cable or telephone, it would never fly, but somehow they are expecting it to work with the internet, which they are financially limiting access to.

FCC, please take action to stop this madness. I'm no longer getting everything I paid for.

## **Description**

Hello, Comcast has sent notification to me that they are enacting a data cap of 1TB <https://dataplan.xfinity.com/> . While this may seem like a lot, with 4k content (A Sony rep has said that a single two-hour movie download will eat up 40GB), big downloadable updates (computers / phones), etc this will quickly become and issue for many users. Comcast has said this isn't about cord cutters, but is exempting their services from the data cap which seems quite contradictory and setting the stage for unfair monopolies given their position. This is clearly a contradiction and should not be allowed nor should there be a cap as I signed up for their services without a cap. At worst, the same way ATT/Verizon/etc have to allow current users to be grandfathered in, the same way they should have to at a minimum do the same for existing customers. They should be investigated and any fines levied in the event they've violated any rules which it seems they have.

This also stifles innovation, sharing, and the economic benefits we get as a result of cap-freedom. Cell phone companies are reaping in huge money as a result of this and the cable companies want in on this as they realize cord cutting is real. They have also openly said that there is no engineering reasons why these new caps exist as the infrastructure can easily handle it and are purely for profit. Please do the right thing here and set a prescience for current and future generations to not be limited because of a decision you can help stop today.

Comcast's does not pay more when we use more data yet they are charging customers for an invisble glass ceiling. Please do the research and stop this maddness.

---

**Ticket: # 1300276 - Comcast bandwidth cap is anti-competitive****Date:** 11/3/2016 12:34:21 PM**City/State/Zip:** Ypsilanti, Michigan 48197**Company Complaining About:** Comcast

---

**Description**

Comcast has added an artificial bandwidth cap with usurious rates when exceeding them. They have effectively doubled the price of the same service. The fee structure is built to get people to decide whether to commit to a higher flat price each month (on a 12 month commitment) or gamble with their Internet usage and pay \$10/50Gb over the limit, up to \$200. If Comcast was really doing this cap in the name of service reliability, they would cap the "risky" limit at no more than the flat rate, or do as wireless providers do and reduce the speed when the cap is exceeded. This is Comcast's way of blocking me from gaining open access to competitive streaming TV content services by excessively pricing the bandwidth needed to do so. Comcast's own TV service over cable is at an unfair advantage now because watching it does not trigger the bandwidth usage.

Also, there is no way to hard limit the data to be stopped at the cap, and therefore no way to prevent overage charges. Notifications exist, but they are done in a way that is insecure, by injecting Comcast packets into my web usage, thus breaking into the content of my web sessions when they are not HTTPS. This raises concern if they are inserting other content, such as advertisements or illegal tracking tokens to use for advertising sales.

Additionally, a colleague of mine inquired about getting an alternative offer to the newly-added AT&T Gigapower service to the area. The agent indicated that, because there was no AT&T competition at the address, that no additional pricing offers were available. That Comcast uses pricing that is based on competition and keeps prices high when there is no competition reeks of monopoly behavior.

This is unacceptable behavior for a service provider that gives access to a critical resource such as the Internet. Artificial caps for anti-competitive gains and price gouging for overages making the use of the Internet both cost prohibitive and reduce the effectiveness of the ubiquitous vehicle of free speech.

## **Description**

It appears that Comcast has decided that they will charge more for customers using data over the data cap. This seems to be just a cash grab, as now they offer an unlimited plan which costs double per month, and if you decide against an unlimited plan you will pay fees for going over. Many studies have shown that data itself costs comcast virtually nothing once lines have been installed, and it seems they are taking full advantage of being a monopoly in my area (and many other areas). Since other providers are not an option, it's disgusting to charge more for the same exact plan. Something needs to be done to prevent this; break down their monopoly, or impose restrictions on what they are allowed to charge and stop them from increasing price without higher cost.

**Ticket: # 1300548 - Xfinity Discrimination on Data****Date:** 11/3/2016 2:11:42 PM**City/State/Zip:** Magna, Utah 84044**Company Complaining About:** Comcast

---

**Description**

Utah recently was added to Xfinity's Data Cap List. However if you subscribe to their TV and stream their content it is not counted toward your Data Cap usage. I believe this violates Net Neutrality Rules. How can they say one type of data is capped but other type of data is not. Is this not the same thing as charging certain types of data a surcharge thus discriminating on the data. Also the cap itself should be stopped. They have been clear on why they have implemented these caps. To stop Internet uses from streaming content they don't own thus can't make as much money on there content and since they can't they are passing that cost onto internet users by adding caps and then saying we will charge you more if you go over. The internet should be separated from content owners. We should not be held hostage by Internet Providers because people are opting for other content they don't own, also Most area's don't have more than one or two options for internet locking the consumer into these absurd rules with no where else to go. Please help us stop these data caps before they get out of control.

**City/State/Zip:** Tallahassee, Florida 32303

**Company Complaining About:** Comcast

---

## **Description**

Hello,

I signed up for Comcast Internet which included unlimited usage with no data cap. I was just informed that effective Nov. 1, 2016, that Comcast will no longer honor this commitment and intends to limit my internet to 1 TB per month.

Comcast has a monopoly in my current location (Tallahassee, FL) as far as decent internet is concerned, and because of their monopolistic position there are no alternatives available to me for this vital service.

I strongly encourage the FCC to use their Title II powers to prevent Comcast from using their monopoly to limit innovation and growth on the Internet.

Title II was successfully used in the past to prevent companies like AT&T from restricting vital services such as communication services and phone services.

The use of the Internet is as ingrained in our lives as electricity, water, and phone services were for past generations, and if Comcast or other carriers refuse to play fair they should be held to the Common Carrier regulations set forth in Title II.

Even in the attached letter, Comcast "offers" unlimited data for an additional \$50, showing that they are more than able to provide the services that I initially signed up for.

This act is nothing short of a bait and switch at best, refusing to provide the services that I initially purchased at the price that they guaranteed. At worst, it is an attempt to limit the growth of content providers on the Internet to benefit Comcast and their wholly owned content providers and Cable TV offerings. This is a clear violation of the letter and spirit of Net Neutrality and Comcast's attempt to bypass the FCC's rulings to provide an open Internet.

I implore the FCC to not allow Comcast to continue to stifle innovation and attempt to use their monopolistic position to unfairly prejudice competitors of their content offerings.

## Description

As a citizen that works from home, I use more than the 1TB Comcast data cap often enough where I now have to worry about OVERAGES for using the Internet. In 2016. Their justification is fair usage-- those who use more should pay more. Yet Comcast offers streaming services that don't count toward your data cap? How is that fair? Essentially you only get penalized for not giving Comcast your money to use their streaming services. So either give Comcast your money or give Comcast your money? It's absurd.

I don't want to be locked in to Comcast but unfortunately they're the ONLY provider I have access to. I feel so burdened that Comcast is squeezing \$80 a month out of me for a paltry 70MB/s (I feel like this is a third world Internet deal and I live in a major city south of Seattle) and want to squeeze another \$50/month out of me for unlimited Internet usage so I can WORK. It's crazy. I can't believe data caps and un-fair usage of Comcast entertainment to circumvent data caps is actually a thing and the FCC hasn't commented on any of it.

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely, [REDACTED]

## **Description**

I have two problems with the new Data Caps forced on comcast customers in my area (southeast Michigan)

1) if classified as a utility (which it needs to be), how is it sensible that a provider can simply put a limit on the service you're paying for? What they provide (data) costs no more in large amounts than it does in small. It's not a consumable and it makes no sense.

2) They are inserting messages about data usage into my web browsing. How is this legal? How is this controlled? How much longer until someone pays them to insert advertisements or propaganda. I pay to browse the pages I want to look at. They shouldn't be allowed to alter my web experience.

## **Description**

Comcast suddenly decided to cap my internet at about 1 terabyte. We have no other options available for high speed internet at our house. Comcast clearly is flexing their monopolistic muscles, and there's nothing we or most others can do because they are the only option for high speed internet. Although the value of the service we've been paying for has decreased, the monthly cost certainly has not. Of course, now Comcast offers services that compete with those that would otherwise benefit from not having data caps, like on demand programming. This sort of anti-competitive behavior goes against the principles of a free market, and I find it unfair and distasteful.

**Description**

On Oct 30th., I received an email from Comcast, telling me that a cap would be placed on my monthly internet data allowed. This cap went into affect on Nov 1. If my housemates and I use beyond this cap, we are charged \$200, plus \$50 per 10 GB.

This cap constitutes a dangerous challenge to net neutrality, as it deincentiveizes my use of Comcast's competitors beyond internet service. For example, this cap keeps me from watching TV online through services like Netflix, Hulu or Amazon. In turn, this essentially allows Comcast to control the cost of their competitors services, pressing people like me to buy their cable TV service.

Additionally, the introduction of a data cap is a step towards non-counted data. Comcast could decree, for example, that one particular news site does not count towards the monthly cap, effectively controlling where their customers get news.

**Ticket: # 1301577 - Comcast National Data Caps**

**Date:** 11/3/2016 11:48:02 PM

**City/State/Zip:** Renton, Washington 98058

**Company Complaining About:** Comcast

---

## **Description**

Comcast's data caps are a clear violation of net neutrality. The data cap does not provide an extra service to the consumer, and only serves to limit the bleed of customers who are moving to online services in favor of Comcast/Xfinity. Not only is Comcast negatively impacting private customers, but schools and other educational institutions must now pay extra for a service that they were already getting. Also, with the advent of 4K streaming and the popularity of online entertainment, Comcast is attempting to stifle the market before it grows any further. This is an anti-competitive practice because Comcast holds the only internet solution in many markets in the US.

## **Description**

Comcast has instituted 1 TB limit data caps in my state of Illinois as well as other states. In a house hold of four, we have reached that cap twice now since Comcast has begun this program only a few short months ago.

If Comcast is going to charge me based on a meter then I need a mechanism to trust that meter. So I'm asking the FCC to create and deploy technology that allows for regulation and oversight over meters.

Given Comcasts negative history when dealing with shady price hikes and fees, I have a lack of trust when it comes to Comcast monitoring my actual data usage. With little other options, we rely on you the FCC to do what's best for the consumer.

Thank you

## **Description**

Effective November 1, 2016, Comcast introduced a new policy for my Xfinity Internet connection that introduces a cap on how much data can be carried through my connection before having to pay additional fees. I have attached a copy of the email announcing the policy change, and they say that more information is available <http://dataplan.xfinity.com/> if you are interested in seeing the details.

Basically, they will only allow me to utilize up to 1 Terabyte of data transfer through my connection before I am charged additional fees. When I use more than 1TB of data, for each additional 50 Gigabytes of data that I use Comcast will charge me a further \$10. These limits are imposed monthly, and may make my charges rise to as high as a \$200/month maximum, depending upon how much I exceed 1TB by.

I am awestruck by the greed that Comcast is displaying by capping the amount of data I can use with my connection before owing them more money. It is unconscionable that they do this to consumers.

Other data plans in our lives also have caps and overages, such as the mobile data provided by my wireless phone carrier, and consumers are often told, 'If you want to avoid mobile data usage, simply use your phone/tablet/etc. on a WiFi connection, like at your home.' But now my home Internet connection will have limitations around how much data I can use before additional fees are incurred as well! What are consumers supposed to do? Is any connection to the Internet 'safe' from interference anymore?

I'm willing to state that the Internet is the greatest invention in the history of mankind. It brings such wonderful opportunity that I think it should be available to every household in the US. Clearly it is a negative thing to raise prices on data usage for a home's Internet connection. This could easily influence Americans to question their Internet usage, and have to place self-imposed limits on what they use the Internet for, all because Comcast placed an initial limit on them.

Furthermore, in my case specifically: I have multiple people in the household, and according to Comcast's own records that they have shared with me, my Internet connection's usage has exceeded 1TB in prior months. So, under Comcast's new policy, I will be liable for increased connectivity charges should this sort of usage happen again in the future.

Of special note in my case is that I am under a 12-month contract with Comcast. I agreed to the year-long contract to receive a slightly lower price on my connection. The main provision of the contract is that I face an early termination fee to be assessed by Comcast if I choose to end my relationship with them before the contract expiry date. I question the legality or their ability to alter the terms of the agreement I have in place with them during the contract period. Is it truly possible for them to now have a cap on how much data I can use before being charged more when we had an agreement for one year of a specific service? If so, that makes no sense. If they can alter my service so wildly while I have an active contract, what was to stop them from -- on day 1 of our agreement

period -- saying they were going to begin charging me double? Or triple? The agreement I have with them seems completely invalid and worthless if they can modify the parameters of the Internet connection I agreed to, without any recourse on my part. I do not understand how Comcast can be allowed to do such a thing.

**Ticket: # 1301621 - Comcast Internet Data Caps**

**Date:** 11/4/2016 1:05:22 AM

**City/State/Zip:** Sacramento, California 95815

**Company Complaining About:** Comcast

---

**Description**

I am writing to complain about the recent enforcement of Comcast internet data plans. Not only did I sign up for a two year contract 4 months ago for unlimited internet, this business practice is extremely unfair and unjust. I will not accept Comcast nickel and diming me for every cent I have. We are cord cutters and stream all the content across our household.

Comcast claims that this change is to help share bandwidth among there customers without proof in the year 2016 where fiber and 10gigabit internet are at there lowest prices ever. This is absurd and abhorrent from Comcast and I believe they are trying circumvent the net neutrality rules put forth by your organization to force businesses like Netflix, Hulu, and other services to lose customers and force users to cable TV subscriptions.

I respectfully request the FCC do something about this and end this archaic disgusting practice. I know people do not want this, but we have no other options or avenues to turn to.

Thank you.

**City/State/Zip:** Crystal, Minnesota 55428

**Company Complaining About:** Comcast

---

## **Description**

Comcast, or Comcrap if you will is implementing data caps as though the internet was a finite resource that we can run out of. Amazingly these data caps are rolling out in areas where Comcast has no market competition. Here are a few flaws in there "logic" aka reasons they are screwing their customer base to make more profit.

If you're a Comcast customer that's now under a 1tb cap:

They say less than 1% of users will be impacted, so then why implement it at all?

How can you trust their "meters" when there's not a neutral 'weights and measures' type outfit to verify accuracy? They want to charge me for going over on data yet I am also supposed to blindly accept their metering of my internet service rather than a impartial 3rd part of the FCC itself. This is a company that charged me for a modem i did not have for 3 months. I literally called their cancellation department to cancel their service before the modem charges were removed from my account, and this is nowhere near a isolated incident. <http://time.com/money/4209556/comcast-modem-fees-ripcoff/>  
<http://www.dslreports.com/forum/r29285736-Bill-Comcast-charging-for-unused-modem-I-own>  
[https://www.reddit.com/r/Seattle/comments/1yb3se/followup\\_comcast\\_charged\\_me\\_800\\_for\\_modem\\_rental/](https://www.reddit.com/r/Seattle/comments/1yb3se/followup_comcast_charged_me_800_for_modem_rental/)

Why don't I get a discount on my internet for using less? I pay based on usage for other metered utilities. Only seems fair to have that go both ways. If they're trying to punish people for using tons of data, then I should be rewarded for staying well below their cap.

The politicians that are getting paid by Comcast and their ilk to block fair and neutral internet processes should be removed from office. Everyone who is for caps and think Net neutrality is a bad thing are also people who have never had to apply for a job. Seriously try applying to a job without the internet. Try signing up for health care. The internet has become a necessity, There is a line to use the free internet access at my public library. You sign up for a time slot, and come back when it is your turn.

## **Description**

My Internet connection is through Comcast. They have recently imposed a 1TB data cap on my Internet connection. There is literally no advantage for Comcast to do this. This is a desperation move by Comcast and only serves to artificially pad their bottom line.

They hold their customers captive and attempt to restrict customers from bailing to OTT service providers such as Sling or PlayStation VUE. They are restricting competition and consumer behavior. Service providers should not be allowed to limit or charge extra for the amount of data used.

Comcast has too much control over consumers. The FCC has the power to step in and do the right thing.

## **Description**

Comcast now has put this area under a data cap of 1TB a month. My problem is that their data meter from their site does not show real time usage. They have a disclaimer that their meter may not display as much as 24 hours on what it is showing. Comcast needs to display accurate information so users can monitor their usage.

By having Comcast meter running 24 hours behind makes it very difficult, if not impossible, to check the accuracy of their meter with your own or to monitor your usage. The FCC needs to take action on this and protect the consumers from unfair practices. If you pay for gas, you expect the meter to be accurate and give you real time information. Why does this principle of "fairness" apply to Comcast?

## Description

Hello FCC,

I'd like to raise my concerns about the newly imposed data cap Comcast has recently implemented in Washington state. I have no way to opt out of this new cap, Comcast has changed the contract that I agreed to and my only options to restore the service I had are to pay a \$50/month fee (which would nearly double my monthly cost).

Here are my main concerns with this new policy.

In the email Comcast sent letting me know about the 1TB cap they say less than 1% of people use more than 1TB per month. If so few customers would be impacted by this why do they feel the need to limit the usage at all? I believe they are trying to penalize people who use services that compete with Comcast's TV service (Netflix, Hulu, etc) these services use bandwidth. For example Netflix has this guide to how much data one hour of video uses per quality setting:

<https://help.netflix.com/en/node/87> UHD (4k) video streamed from Netflix uses roughly 7GB of data per hour. That is just 146 hours of video before one would reach that cap.

At my current speed package with comcast (250Mb/s) that is just over 1 hour of full bandwidth before I reach the 1TB limit. Don't worry I can double my price for unlimited speed, which is exactly what I had before the cap was implemented, unlimited speed. This is a very short amount of time, considering I have 1 full month to use this data. What is the point of paying comcast for fast internet if the reality is you can only use that full speed for 1 hour in a month's billing period? That is insane.

If Comcast is metering my usage and charging me more based on how much I use, who is verifying the meters are accurate? Usually if a product is metered (gasoline for example) there is an impartial agency (weights and measures) that verifies the amount metered is accurate. Comcast has no check like this in place. What is stopping comcast from double or triple counting my usage and charging me a fee, up to \$200 in a month without anyone checking the math. There are many people who have expressed concerns that the metering Comcast is doing is not accurate

<https://www.dslreports.com/forum/r31050103-Caps-Internet-Consumption-Meter-Will-it-work-come-November>

If Comcast is charging me for using more, why don't I pay less for using less? If the reason for the data cap is to get those who use the most to pay for that usage, then those who use less shouldn't have to pay for the usage they don't use. The reason this isn't an option is comcast is not being honest as to why they are doing this. It is to punish people who choose services like Netflix over Comcast television in order to keep the declining cable tv subscriptions. Very anti competitive. Comcast hasn't implemented data caps in areas where actual competition exists, only in areas where they have monopolies in those markets. For me, the next best option for internet is dial up or one of the cell phone based providers. There is nothing that comes even close to what Comcast offers. This indicates that Comcast knows the policies are unpopular and given the option of staying with Comcast and dealing with data caps or going to another ISP without data caps Comcast will likely lose customers.

This is tangentially related to Data Caps. Comcast says in the email that I got “ If you approach, reach or exceed one terabyte of data usage, we will send you a courtesy "in-browser" notice as well as an email.” this is very concerning for me. This means comcast will intercept my communications and alter the information coming to me from various websites in order to notify me. If this isn't illegal it should be, at the very least this should be highly concerning to people. Comcast is not only paying attention to what information is coming and going between me and the internet, they are altering that information. Who is to say that they aren't altering this communication in order to make complaints about them more positive. It is a troubling practice, and given Comcast's reputation I don't trust them to do the correct thing with the data I am sending to the internet.

I would love to switch to another company, but I have no other realistic option. Comcast is taking advantage of the monopoly that they advocated for, lobbied to create and protect with legal actions they can afford but those fighting against them cannot, in order to push policies and practices unfavorable to consumers. They don't push the same policies in markets where real competition exists.

Now Comcast is asking to merge with Time Warner cable. The effect will be a larger company controlling most of the home broadband market in the US. Given the already troubling actions that Comcast engages in when they hold local Monopolies giving them control of more of the markets, and making that control more exclusive, is a step in the wrong direction. Please oppose and fight such a merger with great effort.

## **Description**

Greetings and thank you for your consideration. I'm writing today to express my concern of Comcast's expansion and enforcement of data caps for their broadband Internet customers. Although I am not currently subject to a data cap in my market, I see the writing on the wall and know it is only a matter of time.

The FCC has worked hard to try to ensure an open and accessible Internet for all US citizens. Data caps will certainly lead to less innovation, less Internet usage, and stifle Internet use growth.

One terabyte of data may seem like a lot to utilize in a month until you break it down for a fairly typical family. Both my wife and I are technologically savvy along with two school aged children who utilize the Internet for school work as well as entertainment. I also work in IT for an Emergency Services provider. Our lives revolve around being online. We have no less than 15 separate Internet-connected devices in our household: iPhones, iPads, Smart TVs, AppleTVs, Roku, etc. We don't watch traditional cable television preferring to stream our entertainment from services such as iTunes, Netflix, Sling, and Hulu. Weekly we purchase a movie to watch as a family, and often there are several streams active at once.

I pay for Comcast's highest tier of Internet available to me; their Blast 200 plan which provides 200mbps download speeds. And even though I'm not subject to the cap, I check my usage and I go over the 1tb "limit" every month.

Comcast says that less than 10% of users use more than 1tb per month, but I'd be curious what the percentage is for those in their highest tier plans. We are already paying more for increased bandwidth, and shouldn't be forced to pay penalties for violating some arbitrary limit. I'd also be curious to see if the absence of limits leads to increased usage? If 90% don't utilize more than 1tb each month, then their lower usage should be used to offset the higher users.

I urge the FCC to strongly look into data caps, and in particular those by Comcast, and evaluate their impact on consumers. I don't recall the telephone company ever charging more for landline service if a house had teenagers and used the phone more than their neighbors.

Thank you again for your consideration, and I look forward to seeing the FCC take a strong stance on consumer protection and innovation.

## **Description**

Comcast has rolled out a 1TB data cap in our area, effectively placing artificial scarcity on a non-limited resource. I'm the **ONLY ONE IN MY BUILDING** that has it! It's deliberately anticompetitive, as they are discouraging people to use Netflix and Hulu for their television, which cuts into Comcast's advertising revenue.

It's well established that Comcast and other major ISP's spread themselves out to give themselves effective monopolies over major metropolitan areas, and knowing they're the only game in town, they jack up prices whenever they feel like it. **DO NOT ALLOW THEM TO CONTINUE USING DATA CAPS TO QUELL COMPETITION!!!**

On top of that, their pricing for plans is deliberately designed to take advantage of you. they have expensive plans with fast speed (still goes down for hours at a time nightly), or cheap plans with unacceptably low speed, but nothing in the middle for people to consider if they're on a budget but need sufficient speed. I don't need speeds over 100MBps, but it's literally the only way I can get anything regarding acceptable for HD streaming. I'm paying \$100 a month for internet, and then more for cable i don't use but they force me to bundle, and extra for their modem which is necessary to use their internet!

**Ticket: # 1303256 - COX Communications Data Cap****Date:** 11/4/2016 7:03:58 PM**City/State/Zip:** Gainesville, Florida 32608**Company Complaining About:** Cox

---

**Description**

I recently received notice from my ISP, COX Communications, indicating that they will be implementing data caps for all of their plans starting 11/21/2016. While their cap of 1 terabyte is nowhere near as bad as some implemented by the likes of Comcast, the fact that they felt the need to implement one at all is a concerning trend as a consumer. Implementation of data caps is an anti consumer move designed to stop the hemorrhaging of profits that ISPs are seeing as more and more people become cord cutters and stop subscribing to traditional cable TV. Data caps DO NOT ensure faster speeds and protect the consumer as many ISPs would have you believe. In a time when access to the internet has become so ubiquitous it might as well be a utility, the fact that ISPs are able to essentially price gouge like this to prop up their profits is unacceptable. Especially when these ISPs often hold a monopoly in the area leaving the consumer no choice but to comply if they want to be able to access the internet.

## **Description**

Hello,

How are you doing? This is my first FCC complaint that I am making against Comcast / Xfinity. The reason why I am has to do with the new data caps that they are issuing to 28 new states. I happen to be in one of those new states (California). The problem that I am having is when I signed up for this internet (Years ago) I sign up for unlimited data. It did not say "Possibility of a data cap" or anything like it does now on Xfinity's internet plan page. One of the reasons why I signed up for that internet was because of the unlimited data. Now my other problem is, they never informed me of adding it. The only reason I found out was because I was looking for something else of their FAQs and found the new data cap for California. Which is effective starting November first. I then contacted Xfinity about this, and got nowhere. The person I talked to kept going back and forth saying that I do not use that much data. Although, I have brought it their attention that I do not believe their online data monitor is correct, as my router says differently. I also am starting a media company that revolves around 4k video, so my data usage will also go up substantially in the coming months.

So, in summary, I signed up for the internet with no data plan and no possibility of it. They also never informed me of Data cap.

Thank you very much for reading it, if you need more information, please just ask. I may also be making one or two more complaints against this company, as I have never received the internet speeds I pay for.

Thank you for your help!

**City/State/Zip:** Tacoma, Washington 98244

**Company Complaining About:** Comcast

---

**Description**

Comcast sent a notice with an unfair internet cap of 1 TB. We received the notice in early October, informing us that it would take effect November 1. This was not enough notice for us. We have a contract with the company, and this is in violation of the terms to which we agreed.

Additionally, a 1 TB cap is an unfair limit.

Finally, there is no metering -- we are forced to rely on Comcast's estimate on the data we have used. There is no oversight, no format for us to dispute potential overages. This is also a direct violation of net neutrality.

**Ticket: # 1303907 - Comcast Data Caps in Monopoly areas**

**Date:** 11/5/2016 4:28:21 PM

**City/State/Zip:** Chico, California 95926

**Company Complaining About:** Comcast

---

**Description**

Comcast has begun rolling out data caps in areas where they have a monopoly and areas where the competition (such as AT&T) also imposes data caps. This stifles creativity and access to an open internet. This also discourages replacing cable TV with streaming services such as Netflix, Playstation Vue, and Amazon Video.

As someone working from home and streaming TV I easily breach this 1TB data cap. I should not have to pay \$50 a month on top of my \$60 a month internet bill just to avoid overage fees. Data caps don't exist as a way to relieve load on a network, they exist to force customers to pay for when there are no alternative companies (which there never are since Comcast either buys them out or gets them locked out of the area by lobbying, as was the case with Google Fibers expansion).

**City/State/Zip:** San Jose, California 95112

**Company Complaining About:** Comcast

---

## **Description**

Comcast is now capping my internet data at 1TB and charging extra if I go over - this is not a violation of net neutrality? They are offering "unlimited" plans now - at an extra charge, for me of course. Data doesn't roll over, so even if I manage to stay under their arbitrary limit, I'm not getting anything in return. Capping data in this day and age is unacceptable. As media file size increases with quality, 1 TB will mean nothing for a cap. There should be no cap.

**Description**

FCC online form direct link: [https://consumercomplaints.fcc.gov/hc/en-us/requests/new?ticket\\_form\\_id=38824](https://consumercomplaints.fcc.gov/hc/en-us/requests/new?ticket_form_id=38824)

Here is my letter, feel free to copy&paste

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, telecommuting, file backups, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for.

The Internet is not something that should be closed off, capped, or restricted from anyone anywhere on the planet. The Internet is no longer a luxury and according to the recent ruling from the US Court of Appeals and supported by the FCC, broadband internet has been declared as an essential utility, much like electricity. Comcast is implementing new nation-wide data caps on November 1st, and they are a violation of freedom of speech and personal liberty. The internet is a basic human right in the modern era, and no entity has the right to restrict it.

Data caps are unreasonable and unlawful.

ANY cap is unacceptable, because data per se is an UNLIMITED resource. ALL data caps are 100% arbitrary and this can easily be proven with the laws of physics. Bandwidth is the limited resource. Congestion can ONLY happen by over-saturation of bandwidth. When ISPs start capping services, they are not trying to prevent congestion, instead they are arbitrarily limiting your service to for profit. This allows them to negate competition based on quality of service, and will allow them to 'compete' on arbitrary restrictions, ultimately for the worse of all customers.

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps are not about network congestion. Instead, Comcast claims these data caps are about "fairness," and do not serve a traffic management function. They have been described alternatively as a way to align consumers' use of the network with what they pay. As a method of price discrimination however, data caps and usage based pricing are redundant to the speed tiers that consumers are used to. The broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes.

By exempting only its own online video application from the cap, Comcast gives their own services an advantage over all competing online video applications.

**Date:** 11/5/2016 7:09:12 PM

**City/State/Zip:** Atlanta, Georgia 30318

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently implemented a data cap on my internet usage without notifying me. Comcast's data caps are clearly designed to push power users into signing multi-year contracts for their uncapped "business class" service. Since Atlanta's a captive monopoly market, consumers have no choice but to conserve bandwidth or agree to an even more one-sided agreement.

Also it is my understanding that cable TV customers do not have video programming traveling over the same wires counted against their data cap, my viewing of any audio or video programming is logged against my data cap. This seems to privilege the video programming sold by Comcast over competing video services. Why can a cable TV customer watch 24 hour HD programming Without this usage counting against their data cap, while my viewing of HBO Now, Hulu, or Netflix accrues against the data cap?

**Ticket: # 1304069 - Unfair bandwidth caps**

**Date:** 11/5/2016 7:22:01 PM

**City/State/Zip:** Aurora, Colorado 80019

**Company Complaining About:** Comcast

---

## **Description**

Comcast has unfair bandwidth caps, as they are only putting the bandwidth caps in markets where there is no actual competition. They are preventing people from choosing to use online services such as Netflix and Hulu, forcing people to get their overpriced cable services.

Also with their bandwidth meter taking up to 24 hours to update it is difficult to make up to date decisions with what I would like to use with the little data I have. Also, the tools they have in place to monitor traffic take into account for more than just the traffic I use, but the traffic that is used for them to manage my modem.

On a side note, the tools they have in place to watch my current bandwidth usage do not appear to be working as my current bandwidth usage for this month and the last three months are wrong and show less than 1 GB usage. As seen by my attachment.

## **Description**

To whom it may concern. Comcast is now implementing data caps on internet use. This is something should not even be on the table as an option for companies. Limiting access to the internet is unfair and against our constitutional rights. What may seem as a generous data cap now, is just the start of Comcast's newest attempt at making access to the the internet limited or speed throttled. If not having data caps in their business model truly affected Comcast in such a detrimental way, then why is it only now they are implementing data caps?

---

**Ticket: # 1304133 - Comcast Instituting Data Limit Cap without notice**

**Date:** 11/5/2016 8:26:33 PM

**City/State/Zip:** Lehi, Utah 84043

**Company Complaining About:** Comcast

---

## **Description**

My internet provider, Comcast Xfinity, instituted a bandwidth transfer cap on my internet service without warning. I received an email notice this week that a bandwidth cap had been placed on my connection active as of Nov 1st, but I did not receive this email until after that date.

In my area, Comcast is the only internet provider who offers true broadband internet access and they use this monopoly to already charge higher than normal rates. Interestingly, in other areas of my state (Utah) where Google Fiber is available, Comcast rates are much lower even for the same speed as my service.

I believe that Comcast will simply use this new bandwidth cap as a way to extort money from their customers. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement.

---

## **Description**

Data caps are a pointless money grab with no way to ensure accuracy. They have a virtual regional monopoly and my current apartment complex does not allow us to have a different provider other than comcast. Even though the cap is 1 TB, which may seem like enough now, in the coming years there is nothing to stop them from either lowering the cap, for a reason like they used implementing it. With 4k becoming more and more common and technology progressing at the rate it does, 1 TB will not be enough. The internet is not a luxury anymore and is borderline necessary to have on a day to day basis. Comcast has done nothing to be pro consumer in their entire existence and continue on a day to day basis completely screwing customers. They stifle competition. They are destroying net neutrality and we, the consumers, are paying for it. Not willingly either. The FCC MUST step in, and soon, if they want to have a chance at reigning in Comcast and other large corporations from causing more harm to the consumer AND keeping the respect of the people. Please. We implore you. Do something to help us. We are only a few steps away from losing net neutrality. From the internet being controlled by money hungry corporations and their special interests. The future of the internet is at stake.

**Ticket: # 1304168 - Comcast Data Cap**

**Date:** 11/5/2016 9:09:30 PM

**City/State/Zip:** Issaquah, Washington 98027

**Company Complaining About:** Comcast

---

## **Description**

It is clear that the implementation of the "Data Plan" by Comcast is an anti-competitive strategy to ensure profits for themselves and dissuade customers from subscribing to Internet based streaming content. Comcast is continuously losing subscribers to their TV content with their lack of keeping up with customer trends - this data cap strategy is designed to push customers away from services like Netflix, Youtube, or Hulu. Rather than creating services or content that are able to compete with the streaming services, Comcast just wants to drive them out. This leaves the customers left paying more for less.

**City/State/Zip:** Minnetonka, Minnesota 55305

**Company Complaining About:** Comcast

---

**Description**

Starting November 1st of this year Comcast starting instituting a data cap of 1TB. Now that seem like a lot of data now but within a few years it will be nothing. I work in IT and there is not reason for them to do this other than punish cable cutters and slow the loss of customers to streaming services. I'm sure in the near future they will try to offer their own streaming services.... but it won't count against the data cap.

This practice is insane for quality service. In the past they tried to claim that they needed data caps to prevent their network from being over loaded. This is simply false. The only situations where their internet service suffered was due to the company not upgrading it for 10-15 years. America has some of the poorest internet offerings/choices in the industrialized world. The only one I can think of that is worse is Australia. Our issue is related to government protected fiefdoms so ISPs hardly have to compete.

I have a friend who works at Comcast customer support. He stated the same sound bite that Comcast sends out. "Most customers don't use 1TB." I don't think many people understand the full implications of this. It's not what I paid for, it's not what I agreed to when I order services, and I don't think it should be accepted at an industry norm.

I hope that in the future that the FCC will be able to curb this unethical behavior.

## **Description**

To whom it may concern,

Comcast/Xfinity recently imposed a data cap of 1TB per month. This is unacceptable in today's internet age and this decision really seems like it's strictly an additional way to generate revenue without having to improve their service in any way. The internet is a necessity for a first world country and should be regulated like other utilities such as gas and water. They state that "people who use more data should pay more and people who use less should pay less". This isn't what they're doing as people who only use 500GB of the data cap aren't receiving a 50% discount, they're only punishing heavy data users. The problem is that data usage is only going to increase for everyone because content is constantly growing with high definition pictures, video, etc. While 1TB might be fine for most users today, it won't be going forward. A data cap is an attack against companies like Netflix, Hulu, Pandora, etc that stream increasingly more data to users. Comcast effectively has a monopoly in many areas as the only other option for many people in their areas is DSL, which is far too slow to be useful for anything other than basic web browsing.

Please take a fair look at Comcast and their new data caps. These caps aren't fair to the public and we're stuck being bullied by this company because no one will stop them.

**Date:** 11/5/2016 10:36:05 PM

**City/State/Zip:** Sterling Heights, Michigan 48310

**Company Complaining About:** Comcast

---

## **Description**

They've been ripping customers off with unwarranted services, they raise prices out of no where, they monopolized areas where competitors could offer AFFORDABLE internet. Now they're trying to cap data? This is disgusting and a regulation on the internet that we have laws that protect us. If they won't let us have competitors, which is unfair too, they should not be able to put caps on our data. They're not a necessity like water, electricity, and gas. They shouldn't be treating customers like it is.

---

[Ticket: # 1304258 - Comcast data caps](#)

**Date:** 11/5/2016 10:39:00 PM

**City/State/Zip:** Colorado Springs, Colorado 80925

**Company Complaining About:** Comcast

---

## **Description**

Comcast is now implementing and enforcing a data cap on me and my family's Internet usage. This is absolutely ridiculous. In no way does it cost them any more money if I use 2 gigs or 200 gigs of data. This is simply another way for them to take money from the consumer. In my area I only have 2 choices. And one of those only offers up to 10 mbps which cannot fit my needs. I only have one true choice and they know that. How long must us, as consumers, put up with this unfair treatment?

**Ticket: # 1304262 - Comcast Monthly Data Limit**

**Date:** 11/5/2016 10:40:46 PM

**City/State/Zip:** Pittsburgh, Pennsylvania 15239

**Company Complaining About:** Comcast

---

## **Description**

It is unreasonable for Comcast to impose the monthly data limit cap in the middle of service without my active consent. Regardless whether I use the 1TB of data limit or not, I am without recourse or an alternate provider where I live.

---

**Ticket: # 1304283 - Data caps**

**Date:** 11/5/2016 11:21:59 PM

**City/State/Zip:** Greensburg, Pennsylvania 15601

**Company Complaining About:** Comcast

---

## **Description**

I am concerned about the proliferation of data caps. This is not specific to Comcast, but they are a prime example. The establishment of data caps is an anticompetitive policy that favors their vertical integration business model to prevent customers from utilizing outside video streams in favor of their own video delivery systems. Please consider Internet providers utilities and regulate them as such to prevent unnecessary and harmful policies such as the progressive spread of data caps across their delivery area. While the data caps have not yet reached my service area, I feel that it is only a matter of time before the precedent is set.

**Ticket: # 1304287 - Comcast Data Caps****Date:** 11/5/2016 11:25:37 PM**City/State/Zip:** Chicago, Illinois 60642**Company Complaining About:** Comcast

---

**Description**

I'm writing FCC Chairman Wheeler to urge him to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

---

## **Description**

Comcast, the only broad band provider available in my location, recently started enforcing an arbitrary data cap. This seems unnecessary, user hostile, and like an effort to make me subscribe to their tv service instead of using internet based competitors.

I also have numerous other complaints against them, mostly the random bill increases every couple months.

Please do something about this despicable company.

---

**Ticket: # 1304372 - Comcast Data Cap**

**Date:** 11/6/2016 2:26:04 AM

**City/State/Zip:** Sandy, Utah 84094

**Company Complaining About:** Comcast

---

## **Description**

Comcast placed an unnecessary and unfair data cap on my account. Comcast's monopoly is out of control and I do not have any reasonable alternatives to their service in my area. While it is true that Comcast pays for maintenance of their infrastructure, the amount of data transferred does affect their operating cost. They are simply the middlemen connecting two wires. The party that incurs the cost of downloaded data is the party on the other side of that wire sending me data. I believe this cap was put in place to push people unfairly into their services. If you use their services you are not charged for data. If I want to stream Netflix to my 4k TV I have to worry about data usage and if I watch too much I'll be charged overage fees. However, if I use Comcast's movie service I don't have to worry about using any of my data and I'd never incur any overage charges. I'm sure you've received more detailed and better written complaints but I thought I'd summarize it all in my own words.

**Ticket: # 1304391 - Data caps**

**Date:** 11/6/2016 3:42:02 AM

**City/State/Zip:** Golden, Colorado 80401

**Company Complaining About:** Comcast

---

## **Description**

I believe that the data caps being put in place are the completely wrong way to respond to increasing internet usage in the United States, as they discourage the installment of fiber networks and therefore feed the uncompetitive practices of Comcast/Time Warner. Additionally, they are causing Comcast to break countless contracts (including mine), as they can no longer provide the services that were promised.

If Internet lines were instead treated as a utility (as I believe they should be), then perhaps these caps would be justified, but they are not.

Also, the increasing use of the internet is necessary in our growth as a society and economy, and the FCC is directly hindering this growth with this legislation.

**Ticket: # 1304395 - Data cap imposition**

**Date:** 11/6/2016 4:08:04 AM

**City/State/Zip:** Salt Lake City, Utah 84105

**Company Complaining About:** Comcast

---

**Description**

Comcast informed me recently that I will be capped to 1TB, which has never been the case before. I pay for a per-month speed, in fact I pay more so I can get better speeds for all the internet-required things I do; Stream music/movies/TV, play games online, download games (Steam+PS4+XB1)... A lot of the things I used to pay them for previously.

However, nowhere has Comcast ever been clear that there was or would be any data caps. Yet now it feels like they're trying to make up for a loss of revenue from places I've taken my money elsewhere, just by imposing data caps, effectively gaining a cut of these third-party services.

I know they already have deals with a good chunk of these vendors, so for them to dig for more from the consumer, it comes off as even more greedy.

It's especially frustrating that the only true high-speed option in my area has almost exclusively been Comcast for at least the past ten years. My only hope being that Google Fiber is coming soon, which has cause Comcast to up its speeds without additional charge, but data caps are not what I signed up for.

I realize there may be wording in the contract I signed, but if that's the case then it needs to be clearly displayed on their advertising and contracts.

### **Description**

I'm a university student. I live in a six person house. There is no way to buy more contracts so we have to split six ways. The new data cap law is unfair in itself but especially penalizes me. There is nothing I can do, besides not use the Internet.

---

**Ticket: # 1304401 - Comcast Data Usage Plans****Date:** 11/6/2016 5:10:08 AM**City/State/Zip:** Oakland, California 94619**Company Complaining About:** Comcast

---

**Description**

I am calling to protest Comcast's 1TB (1024GB) Data Usage Plan. Though they market this as being much more data than what the average user uses, this Data Cap is not set at a level that accounts for the higher data usage that would be expected in the near future. Experts agree that there is no practical reason for instituting a cap at all as the networks aren't strained by the amount of data used by customers and that it is simply a money grabbing scheme by a monopolistic corporation. Broadband internet must be regulated as a utility and Net Neutrality and unlimited data usage should be mandatory for all internet providers. As an example, I have a low-tier cloud storage service, Google Drive. My Google Drive capacity is 1TB. If my local hard drive, where my Google Drive files reside fails, I need to re-download all those files from the cloud. This would cause me to exceed the 1TB Data Plan that Comcast has implemented and I would be hit with major overage fees (I've already used up my two courtesy months due to this very thing). With the increase of 4k streaming videos on Netflix, large cloud storage services, and "The Internet of Things" like Amazon Echo and Phillips Hue, etc., all using internet data, more and more consumers are going to be approaching, and eventually exceeding this 1TB 'soft' data cap. This needs to stop now, before it becomes harder to prevent all internet providers from following in Comcast's footsteps, and before Comcast has a chance to raise overage fees or lower the Data Cap. Please, listen to the complaints of thousands of consumers and do whatever is necessary to end this unjust money grab. Make it easier for competition and end the monopolies of internet service providers. Use anti-trust laws to break up mega corporations... do something!

**Date:** 11/6/2016 10:47:46 AM

**City/State/Zip:** Tacoma, Washington 98408

**Company Complaining About:** Comcast

---

## **Description**

The practices of Comcast Xfinity in capping data for home internet plans is preposterous in so many ways. They're essentially doing what Hulu did with commercials. Created a product, sold it to the masses, and then in Comcast's situation decided to data cap it, whereas Hulu increased commercial content. The resolution to this as a consumer is pay more, for both. Hulu to get rid of some commercials, and Comcast for more data. What says this type of business tactic won't continue for life?! Slowly increasing caps, etc in return requesting more money. It's unfortunate cause I could cancel Hulu, find another content provider such as a standard television provider such as Comcast, sling tv, directv, etc. There are many options for television. Internet is monopolized by Comcast in my area. We have no other cable internet provider. They're using this monopoly to fill their greedy pockets with money. I ask the FCC to have an independent study done about this. Lastly, if in fact they do charge for data overage, then does a Consumer have the ability to charge their content provider an also exorbitant amount when their service goes down or when the speed I pay for doesn't actually provide me that speed? I attached a picture of our current usage, we are six days into our cycle and almost to the cap.

---

**Ticket: # 1304510 - Anti-Competitive Data Caps**

**Date:** 11/6/2016 11:37:33 AM

**City/State/Zip:** Chicago, Illinois 60615

**Company Complaining About:** Comcast

---

**Description**

Comcast has begun imposing widespread data caps, which discourage consumer users from using such common services as Netflix in favor of subscribing to entertainment services that don't use data such as Comcast's cable. Given that Comcast itself has admitted that there is literally no technical reason for these caps, this move is clearly anti-competitive in nature, and it certainly doesn't match the company's given reason for the data caps of 'fairness.'

---

**Ticket: # 1304516 - Comcast Data Cap implementation**

**Date:** 11/6/2016 11:42:22 AM

**City/State/Zip:** Southfield, Michigan 48076

**Company Complaining About:** Comcast

---

**Description**

When I signed up for Comcast, it was under the assumption that I would not be capped like the only other reasonably fast provider in the area (ATT). I specifically asked the representative if there were data caps, to which he replied "no". Now it seems Comcast is implementing a data cap on my usage. For the same price. Since they can freely reduce the amount of data I can use without my consent (unlimited---->1TB), what is stopping them from reducing it further?

Also - there is the fact that, as technology improves, data usage increases. Pictures/videos take up more space, Video games are already 50-70GB in size. With these sizes increasing, it is only a matter of time before people start reaching the data caps imposed by these companies.

Comcast executives are on record saying that data caps don't serve a practical purpose other than lining the pockets of these monopolies.

Please either start trust-busting these corporations, or at least keep them from screwing over their customers.

[Ticket: # 1304550 - Data cap added to our plan](#)

**Date:** 11/6/2016 12:48:59 PM

**City/State/Zip:** Sunnyvale, California 94086

**Company Complaining About:** Comcast

---

## **Description**

We signed up with Comcast when we moved to Sunnyvale in August. Our internet-only plan is \$69.99 per month and includes no data cap, which is very important to us. One member of our household is disabled and watches movies and educational videos almost 24/7 (he even tends to fall asleep with them on). In addition, the other two of us enjoy video games, streaming TV shows from Netflix and Hulu, and using the sports apps on our Apple TV devices.

Comcast wrote us this month to inform us of our new terabyte data cap, and told us that we would now be paying \$10 for every 50GB overage. We also have the option of paying \$50 per month for unlimited, nearly doubling the effective cost of our internet. We believe that this is a punishment from Comcast for using streaming options instead of paying them for cable TV (which, depending on the package, would also be around \$50 per month).

Comcast is using their stranglehold as the only fiber provider in our area to extort their customers. The FCC is our only hope for a fair and open internet and I pray that you can help us.

---

**Ticket: # 1304687 - Unreasonable Data Caps**

**Date:** 11/6/2016 3:29:56 PM

**City/State/Zip:** Greenville, Pennsylvania 16125

**Company Complaining About:** Armstrong Utilities

---

## **Description**

I am in the process of moving to Meadville, PA. The local cable internet provider, Armstrong (zoominternet.net) has extremely unreasonable data caps in ratio to speed offered. Their highest tier internet is 300Meg/sec with a 500gig data cap. This means in theory you can use all your data within 6 hours. In a house hold of 7, and various devices streaming from video services this data cap can be reached within days. What more, they penalize you for not purchasing cable and phone by lowering the data cap if you do not bundle their services. One service should not be connected to the other. This essentially means customers paying for the same tier receive different amounts of data which is unfair. This is a blatant attempt at punishing anyone who wants to receive tv programming online vs their cable system. If you purchase more data, they do not pro-rate for unused data or carry over to the next month, which is essentially stealing from the customer. I'm afraid the smaller size of this company will result in their obviously abusive behavior going unchecked. I understand the need for data caps, but their current offering is unreasonable, unfair to the customers and sinister in nature at best.

i appreciate your time,

Thank you,

████████████████████

## **Description**

I have a serious problem with the new Comcast data caps, as I'm sure many other people do. If this was a free market, then I would just switch to another provider, but this is not an option for most people with their internet. Comcast is once again taking advantage of the consumers, and we need the FCC to step in and put a stop to this. Someone else has phrased the argument much better than I could have, so below is the message:

"I'm urging the FCC to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications. "

Also, I should be able to voice my opinion on an issue without giving every piece of info about my internet.

---

**Ticket: # 1304738 - Comcast Data Caps****Date:** 11/6/2016 4:12:52 PM**City/State/Zip:** Puyallup, Washington 98374**Company Complaining About:** Comcast

---

**Description**

With Comcast rolling out its data caps nation wide it is time to act. Not only does it unfairly effect the consumers, it will also hurt innovation. While they claim that only 1% of customers are effected, that is right now. With websites becoming more complicated, files getting larger and more internet devices coming online, 1tb will not go far enough in a few years. Look at the new Call of Duty. If you got both the new game and Modern Warfare Remastered, it is 150gb, more than 10% of your monthly data. Another problem is that it does not benefit the consumer in any way. With Comcast keeping its rates the same it only makes people who use a lot of data pay an insane premium to use as much as they need. This will also have ripple effects across the internet. These data caps will make innovators less likely to innovate on the web, because if people don't have the data to use their innovation, why bother. And if I remember correctly, Comcast's own streaming service does not effect your data consumption, giving Comcast an unfair advantage in the streaming field. The thing is, the cost difference between delivering 10gb, 100gb, or 1tb is not that much. This is isps wanting to price gouge their customers and make the internet not accessible to everyone. You MUST stop this disastrous practice before it gets out of hand!

**Ticket: # 1304749 - Comcast Data Limits - Greater Seattle Area**

**Date:** 11/6/2016 4:28:18 PM

**City/State/Zip:** Snoqualmie, Washington 98065

**Company Complaining About:** Comcast

---

**Description**

Comcast just implemented data limits in my area. With five people in my household, this certainly has an impact and will raise my internet costs. Additionally, my X1 TV set top box data (used for VOD) counts towards that cap...that is double dipping from a change standpoint.

Since I have VERY LIMITED options in my area, this is a monopoly taking advantage of their position. I am not only disappointed with Comcast, but also the FCC for allowing a "what was unlimited" service to now implement caps, forcing me to monitor another service including policing how my family uses service (like VOD TV) that I already pay for...and now have to pay for twice.

This also goes at the heart of open internet, as I am not able to select what TV services I use and now forced into Comcast as I would certainly go over the limits using someone like SlingTV or another service that might stream 4K.

Also....I already pay over \$240 per month for Comcast services....and the company is now wanting to charge me more.

I wrote the FCC about this concern earlier this year...and although thousands of people complained.....Comcast still implemented data caps.

Show the American public that the FCC is listening and that Comcast lobbyists are not in control. Stop this madness. How much is enough to charge people for their entertainment and internet (required for Education, work, and normal family business)?

---

[Ticket: # 1304764 - Comcast placing a monthly cap on my internet usage](#)

**Date:** 11/6/2016 4:39:24 PM

**City/State/Zip:** Denver, Colorado 80249

**Company Complaining About:** Comcast

---

## **Description**

For some reason Comcast thinks it's ok to put a 1tb cap on the amount of internet I use monthly, it started on 1 Nov 2016. The problem with this is it's not what they initially advertised and I pay to be able to use as much internet bandwidth as needed for school, work, etc. The fact that they want to charge more makes me if I go over my 1tb limit makes me sick. If this is the case then they should provide roll-over data and stop lobbying to keep legitimate companies such as Google Fiber and Verizon FIOS from coming to the Denver Metro Area.

---

## **Description**

I recently had to file a complaint against comcast/xfinity for raising the price of its packages prior to the end of my promotional period. Now, right AFTER signing a new contract for 12 months Comcast placed a data cap which is below what they show as my normal usage. I have no way of contesting their usage meter, which shows that I use 1.4-1.5TB on average, but in OCT 2016 I used 2.75TB per documents I found online Comcast will say their meter is not 100% accurate. This is unfair and was not part of what I discussed with comcast when setting up service. Comcast has unfair monopoly on service in my area, and block any other company from coming in and being competitive. I have much slower service than other parts of the country but don't get a discount based on speed, in fact I have to pay more just to get the speed that I do get. It is unreasonable to change the terms of a contract right after getting set up. This is a misrepresentation of service.

**Ticket: # 1304816 - Comcast Internet caps starting Nov 1st 2016**

**Date:** 11/6/2016 6:03:46 PM

**City/State/Zip:** Lehigh Acres, Florida 33971

**Company Complaining About:** Comcast

---

## **Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, telecommuting, file backups, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for.

The Internet is not something that should be closed off, capped, or restricted from anyone anywhere on the planet. The Internet is no longer a luxury and according to the recent ruling from the US Court of Appeals and supported by the FCC, broadband internet has been declared as an essential utility, much like electricity. Comcast is implementing new nation-wide data caps on November 1st, and they are a violation of freedom of speech and personal liberty. The internet is a basic human right in the modern era, and no entity has the right to restrict it.

Data caps are unreasonable and unlawful.

ANY cap is unacceptable, because data per se is an UNLIMITED resource. ALL data caps are 100% arbitrary and this can easily be proven with the laws of physics. Bandwidth is the limited resource. Congestion can ONLY happen by over-saturation of bandwidth. When ISPs start capping services, they are not trying to prevent congestion, instead they are arbitrarily limiting your service to for profit. This allows them to negate competition based on quality of service, and will allow them to 'compete' on arbitrary restrictions, ultimately for the worse of all customers.

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps are not about network congestion. Instead, Comcast claims these data caps are about "fairness," and do not serve a traffic management function. They have been described alternatively as a way to align consumers' use of the network with what they pay. As a method of price discrimination however, data caps and usage based pricing are redundant to the speed tiers that consumers are used to. The broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes.

By exempting only its own online video application from the cap, Comcast gives their own services an advantage over all competing online video applications.

---

## **Description**

Internet connectivity isn't a luxury anymore. Almost every single household has to have it in order to work, pay bills, and live. Comcast is wrongfully putting a data cap on my service and everyone's service in my region because they failed to innovate and are taking it out on their customers by taking even more money from them although they don't upgrade their own circuits. I am pushing for either this cap to be removed or a cap be instituted on Comcast at the tier 1 level so they can feel the pain that the rest of us are feeling. They should have no right to do this to a service that is a necessity and not a luxury.

**Ticket: # 1304863 - Internet Data Caps**

**Date:** 11/6/2016 7:04:09 PM

**City/State/Zip:** Eden Prairie, Minnesota 55344-6670

**Company Complaining About:** Comcast

---

**Description**

Hello,

Last month I was notified by my ISP, Comcast, that I would soon be subjected to an Internet data cap of 1 Terabyte per month. I find this unacceptable and detrimental to growth and innovation. Comcast argues that 1 TB is more than adequate for most consumers and that I have not exceeded this cap in the last three months so I have nothing to worry about.

Americans pay too much for their Internet service and placing this data cap on customers is monopolistic in nature given the availability of alternative providers.

I request that the FCC push for policies requiring the ISPs to lower their pricing, increase the data rates, and eliminate data caps.

**Ticket: # 1304944 - Comcast data caps**

**Date:** 11/6/2016 8:55:26 PM

**City/State/Zip:** Greeley, Colorado 80634

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently rolled out data caps to most of it's internet subscribers. While I understand paying for what you use, the caps seem arbitrary and are a push to have consumers use Comcast services over competitors. It's way to lock out (or limit) alternative sources outside of Comcast.

Additionally, their online data usage meter just shows the total data used per month. There is not a break down of day of the month OR upload/download OR other ways to differentiate the usage patterns so consumers can adjust. There is also not a way to validate the accuracy of their meter. This is inherently a flawed system and hold customers accountable for usage, when it cannot be accurately measured or verified, is unconscionable.

## **Description**

Comcast/Xfinity has instituted data caps in my location. Are we supposed to be a first world country with internet speeds that don't compare with the rest of the developed world, and practices by the service providers that only aim to stifle competition and come up with ways to charge customers more and more, like a bunch of thugs. My issue is with the data caps, which is aggravated by the fact that Xfinity doesn't provide an easy access to the data meter, which should be available on the account landing page. Additionally, what is being done to make sure that their data meterage is accurate? They decide the data caps, and they measure how much data is being used with no third party oversight. They claim that they have their meters tested, and who did test it, services that they hired themselves. I mean at this point all of this feels like a bad joke. And, the consumers are the brunt of that joke. I don't expect consumer protection services to do much, because we all know how the system is set up at this point. Anyway, if someone is going to do anything data caps need to be done away with. Internet isn't a luxury anymore, it is a necessity. We need it not just for entertainment, but also education, business and shopping.

---

## **Description**

Recently Comcast added data caps, this seems to be an abuse of a monopoly. I have no other choice for true broadband and with franchise agreements it likely will never change. As technology changes, more data will be consumed. Once we used modems at as low as 2400 baud rates, but today you couldn't load a webpage with that speed. This is an attack on competition from streaming services. I have considered dropping their TV service and to go with a streaming service like Sling, Hulu or similiar. But with data caps that might cost me alot in data overages just to watch TV.

**City/State/Zip:** Fresno, California 93704

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently decided to start implementing data caps for users (currently 1TB). They claim that less than 1% of users currently use more than that per month. It's an interesting point, but completely moot because as 4K streaming is slowly becoming the norm, more people will be using much more than 1TB of data a month. Besides, why implement the data caps now if only 1% of users are using more than the allocated amount? All it is, is just setting up to start charging people more for the same speeds as they were getting before plus the bonus fees once people start using more data in the near future. This is one of the few complaints about Comcast that I have, including the basic monopoly Comcast seems to have in many areas around the U.S, allowing them to charge for internet mostly, as TV and phone have become a thing nobody even uses and yet it's still in all their plans.

---

## **Description**

There is no reason for such a data cap to exist as admitted by Comcast:

<http://www.extremetech.com/computing/212376-comcast-admits-that-its-data-caps-are-a-business-decision-not-an-engineering-requirement>

and this affects me as someone who streams a lot of video both down and up. The development rate of technology is constantly pushing towards greater data-heavy services (higher framerates, higher resolutions, larger downloads, etc). Such a cap will almost certainly be an issue for many consumers over the next few years though it may not seem like an issue yet. It would be understandable if this cap were truly necessary because of strain on resources, but clearly it is not. Thus I view it as nothing more than a greedy cashgrab.

**City/State/Zip:** Radford, Virginia 24141

**Company Complaining About:** Shenandoah Telecommunications Company ("shentel")

---

## **Description**

Shentel, Radford Va started data caps a couple years ago and said that it would only affect 3-5% of their customers. Now that is no longer the case, it affects a large portion of the customer base. I work for a small tech support company and hear it all day. They call in and asked for options, and we have none. 10 minutes in any direction and you can purchase 150mbps service for a fraction of the cost. The cost of providing broadband is going down at the same time they are charging more. We do not have another option. They have a license to rob the consumers. My personal bill has gone for \$39 a month to over a \$100, I am not alone. I am one of the ones who was well under the data cap when it started.

On the business side it is even worse. The cost of 15mb service with Shentel is over \$300 while the next town you can get 100mbps service for under \$50. Yes my business is located in the lower cost area (thank goodness). But in a time when internet access is critical to business, the disparity in fees put a real burden on the small local business people. We have hotels in the area where the franchise requires them to have 100mb service, and in our area the only way to get this level service is via fiber. Again the Shentel offering is 6X more than the smaller town just minutes away. We are talking one exit off the interstate, the hotels have to compete.

Thanks for your time.

## **Description**

After a year of using this service I received a letter stating that my area now has a 1TB data cap and that i would be charged extra due to going over said cap. This is after I deliberately gotten this service due to the local comcast office telling me that i should have now issues with data caps due to there not being one in this area. I use my internet to watch 4k HDR content over the internet because no cable or satellite service in my area offers it. now i have to pay MORE to comcast because of using this alternative service. this practice is anti consumer and worse of all anti competition due to the fact i am being charged extra to continue enjoying a competitive product (in this case sling TV an internet based TV service)

---

**Ticket: # 1306933 - Predatory 1TB Data Cap****Date:** 11/8/2016 5:02:04 AM**City/State/Zip:** Albuquerque, New Mexico 87114**Company Complaining About:** Comcast

---

**Description**

Comcast's new data cap is ridiculous.

First, one big issue is that Comcast is not announcing this new change in policy. They don't send you an email, letter, or call you up about these changes that are happening. I only found out because I read about it online in an article. If I had not stumbled across it, November 1st would have rolled around, the new 1TB cap would've been activated for our household, and we would've gone over it easily and been billed extra for something we had not been informed about. We average our usage at 1.4 TB per month. That alone should be throwing up a bunch of red flags. They're preying on customers who won't pay attention to the increased price in the bill, or people who have automatic bill payments. Even when I called to confirm that these changes were happening, the first Comcast agent said we were of the minority which exceeds the limit, but the 1TB cap would go into effect November 1st. We will be charged accordingly to their new pricing, and 2 agents plus a supervisor could not aid us.

They tested caps in parts of the country by putting 300GB caps on home internet, and now they're forcing all customers to a 1TB(1,024 GB). That doesn't sound so bad, right? People who had the 300GB cap now have an increased cap, a bit more than triple. That is true, except the 1TB cap is still not enough. For a decent amount of people, they won't even notice the cap. People who sparsely use the internet.

The real issue is with everyone else. We're in a new age where internet is very important. Just like back in the day, you needed a home phone. Everyone had a home phone, it was a necessity. Internet has quickly grown in importance and is even more of a necessity than home phones back in the day, because it does so much more.

People need the internet, and the majority of people use a lot of internet. Emails, videos, video streaming, Voice over IP(VoIP), downloading games, reading the news, online shopping, social media, and so much more require the internet. One person alone can easily reach a 1TB cap a month depending on their internet usage, especially if they do IT work or other computer related professions at home. The real problem comes in when you have 2+ people at home. What about a house of 5 adults? The 5 of us watch YouTube, Netflix, and Twitch on a daily basis. Not only that, but we play games, and the size of games have been getting bigger the last few years exponentially. We, as a family, average 1.4 TB a month, peaking at the 1 TB cap just over halfway through the month. What are we supposed to do, pay an extra \$50 a month for unlimited data when it was already unlimited for 7 years on our contract? We live week to week as it is, we can't afford that. We save money by staying home most nights and weekends, playing games together, watching movies on Netflix, or having our own time on YouTube. This all requires internet.

Then comes Comcast, putting a cap on how much internet we can use before going over the cap and getting additional charges. Surely if the internet was a costly resource, it would've been capped since

the beginning. No, it isn't. It doesn't cost Comcast more money if a customer uses more or less internet, they even admitted it once or twice. THIS is the main problem. They are capping the internet and charging more if you go over, or charging for unlimited internet. But Internet usage does not cost them anything.

The only thing they can charge customers for that actually costs them money, is home installations, being connected to the ISP, modems, and internet speeds. Home installations is connecting the home to the ISP, and modems is renting or buying modems from the ISP(In this case,Comcast). Internet Speed costs is having a better connection, either through better cables to connect to the ISP, or getting priority over other customers when using internet from the ISP. However, in no way, shape, or form is internet usage costing an ISP a single dime. Sure, using their service should cost money, but using more of their service doesn't cost them anything. They aren't pumping water or gas to the house, a resource that is used up. Internet usage is simply being connected to the network and that is it, they aren't spending money to send data to my home network.

Not only that, but while under the cap, you can't stop using data. By that, I mean that if you're close to reaching the cap, it would make sense to turn the internet modem off and think no more data is being used. Nope, that is incorrect. Comcast constantly sends information to your home network. Not only does that mean that unplugging your modem won't stop your data usage from stopping, but that your monthly data you're allowed to use is wasted. The useless information Comcast sends out to your home network wastes your monthly data limits. You could unplug your modem at the start of the month and leave it so until the end of the month, check your monthly usage, and see that 50GB-100GB or so was being used up even though you did not use any internet at all.

They say we have 1TB of data a month, but it might as well be 900GB.

Bottom of the line: Internet usage does not cost Comcast anything, so why is it being capped? There is no other reason, then them trying to earn more money than they already do, even though they are a big monopoly, where many people in plenty of states have no choice but to use Comcast.

Here in New Mexico, only one other company services our address and they don't have even remotely fast enough speeds for a household of 5 adults where 3 of us work from home and 4 of us are students. The internet and reliable speeds are absolutely necessary for our survival through university and in our careers. When we have to start deciding if our data should be used for education or to get paid this week, there is going to be a serious problem likely resulting in poor professional and academic performance. Or the other option is too eat less to cover the extra \$50 a month to continue with the unlimited data we've had under our contract for 7 previous years.

Not only does this affect how our lives will need to carefully balance money, school, and working, but this also directly affects any of our internet subscription services. If I only have enough data to watch 10 episodes on Netflix over a month, that means Twitch, YouTube, and Hulu won't be receiving any ad revenue. This hurts any and all services that are web-based. I use Cloud services for my work. If I have to pick between checking my email everyday or using Canva, I'll have to pick email and not my paid Canva account, and rather utilize some open source offline software. All of the subscriptions we have will be impacted by decreased use, leading to decreased revenue – and if this is not dealt with, these companies will suffer profit losses and have to cut their workforces accordingly, therefore increasing unemployment further!

Just as early as April 2016, the FCC ruled against data caps ([http://transition.fcc.gov/Daily\\_Releases/Daily\\_Business/2016/db0425/DOC-339028A1.pdf](http://transition.fcc.gov/Daily_Releases/Daily_Business/2016/db0425/DOC-339028A1.pdf)) and now Comcast gets a free pass? This impacts lives across the country in harmful and predatory ways to squeeze every penny out of people who have no other choice but to use their service or forfeit having internet. Internet is now a necessity. It's not a commodity. We built the internet into every aspect of our lives and this will directly hinder the continued growth of the United States, sending it further to the bottom of list of Developed Countries.

**Ticket: # 1307040 - Discriminatory advertising and practice**

**Date:** 11/8/2016 9:52:21 AM

**City/State/Zip:** Irmo, South Carolina 29063

**Company Complaining About:** T-mobile

---

## **Description**

I was notified that the Binge On option that T-Mobile provides guarantees that my data limit would not be affected by any programs (in this case WWE Network) that I used to stream video. When my data limit was reached and I tried to inquire about the situation, at first they blamed me for using the data, and finally admitted that because I used a computer to watch WWE Network I used too much data since WWE Network doesn't limit video quality. (The higher quality video uses more bandwidth than other services on the Binge On list.)

It makes sense that T-Mobile would attempt to provide more services to reach out to more potential customers, but what does not make sense is that there was nothing they could do about my inconvenience based on their shortcomings and inability to handle the advertised data usage plan. T-Mobile should not advertise WWE Network on the Binge On list and cut service when the data is higher than they expected.

**Ticket: # 1307124 - Comcast Data Cap****Date:** 11/8/2016 11:06:08 AM**City/State/Zip:** Bloomington, Illinois 61704**Company Complaining About:** Comcast

---

**Description**

I am a Twitch streamer and gamer. Comcast has issued a data cap in my area that threatens to charge me for using an unlimited resource. Previously we have never had a data capacity, and they have imposed one. NOT ONLY this, but we have also been told we have NO option for an unlimited package. This is likely because there is no other competition to them in the area for internet. I was told 3 times that an unlimited option was available, at a cost! But when it came time to decide to add it, I was told they have no option for unlimited. The issue I have is that the internet shouldn't be capped! And if they can get away with putting a cap on it, at least I should get the option to have unlimited.

---

**Ticket: # 1307245 - Comcast Data Caps****Date:** 11/8/2016 12:12:20 PM**City/State/Zip:** Roseville, Michigan 48066**Company Complaining About:** Comcast

---

**Description**

When I initially signed up for comcast internet (only) in July of this year; no where in the contract did they state that our area had data caps; and the technician that installed our lines told me that there were no data caps in Michigan. 3 months later and surprise surprise, they some how managed to sneak in a clause that stated monthly data caps would now be 1TB in my area. Not only was this sneaky and back handed, it also seems to be a way to deal with "cord cutters" who do not want to sign up for package deals (TV + internet + phone; since those packages do not have data caps). So what they are doing to house holds that depend on steams (netflix, amazon, hulu ect) is effectively bottle necking what they can do with their service. In a house hols that runs 1 streaming service at a time will accumulate between 250-400 GB of data streaming at prime hours 5pm-10pm over the course of 30 days. With 3 streaming platforms this grows to 750-1200GBs; and that is just for watching streaming services; if you incorporate using device for games, social networking, business, emailing ECT this can jump to well over the 1TB cap. Also in today's world people are starting to grow their IoT networks and "smart" homes which constantly have an internet feed (home hubs like Alexa, google assistant; new appliances; door locks; light bulbs) that require more and more data to stay on top of everything.

I only found out about this by checking the "internet" panel of my comcast account by accident by clicking on random links; there was no mail notification or email notification. I have reviewed all of my initial signed documents and nothing states a 1TB cap; I will attach file below.

**Date:** 11/8/2016 2:08:00 PM

**City/State/Zip:** I Don't Think So., Alabama 20850-1234

**Company Complaining About:** Comcast

---

## **Description**

I'm calling FCC Chairman Wheeler to urge him to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion:

<https://gizmodo.com/comcast-will-cap-more-peoples-data-because-of-fairness-1740913276>

. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications. "

**Date:** 11/8/2016 2:37:40 PM

**City/State/Zip:** Tacoma, Washington 98446

**Company Complaining About:** Comcast

---

## **Description**

September 2015 I signed into a two year agreement with comcast for cable tv and internet. Today I received a letter stating that they are capping all internet in washington to 1TB but for an additional 50 dollars a month I can be upgraded to unlimited internet. I am not able to get out of my contract with out paying a fee so how are they able to change the terms of my contract with out me agreeing?

---

**Ticket: # 1307526 - Comcast Data caps**

**Date:** 11/8/2016 2:44:49 PM

**City/State/Zip:** Lacey, Washington 98503

**Company Complaining About:** Comcast

---

## **Description**

As a long time customer of Comcast and having had an unlimited data plan from the beginning of my service I feel that Comcast has changed the terms of service without my consent. Data caps are just another way to squeeze the consumer for more cash. This will become an access barrier to the lower income consumers such as my self. I have a disabled wife and an autistic son and the internet is their line to the outside world. I just started a podcast and as I continue to build the show my usage is going up, however, my income has not increased, show at some point I will be forced to limit my family usage or my shows because of money. This is wrong on so many levels. I don't know if the FCC can do anything about this, but someone needs to put a stop to this as it will only get worse and then only the rich will have access to the internet. Stop it now.

---

**Ticket: # 1307564 - Cox Communications implementing data caps and overage fees**

**Date:** 11/8/2016 2:59:14 PM

**City/State/Zip:** Council Bluffs, Iowa 51503

**Company Complaining About:** Cox

---

### **Description**

I'm appalled that Cox thinks it appropriate to start enforcing data caps with overage fees beginning this November. This does nothing to prevent congestion during peak times, and all it does is punish consumers who have decided to stop using cable TV and choose to stream their media instead.

---

**Ticket: # 1307779 - Comcast's 1TB Data Cap**

**Date:** 11/8/2016 4:47:02 PM

**City/State/Zip:** Vancouver, Washington 98686

**Company Complaining About:** Comcast

---

## **Description**

My issues are:

I feel that the data caps and overage fees imposed upon me as a customer are unfair.

There are no other suitable internet provider options NOR is there any other competition in my area, city, or state.

These data caps are a subtle infringement of net neutrality.

---

The data caps that came to my area as of October create a 1 Terabyte monthly data transfer limit to any Comcast customer. If I as a customer were to go over the 1 TB limit, I will have to pay \$10 for ever 50 GBs. This is outrageous for many reasons. First, I pay \$60 a month for the fastest internet Comcast can provide me. And if I use 50gb over the cap, I am charged 10% of my usage plan up to a \$200 maximum. 50GB worth of 1000GB is nothing if my household has the potential of using that much data per month. My household has 5 adults, all of which use internet. We easily use up to 800gb a month casually using streaming services such as Netflix, Twitch, or Hulu. We all work full time jobs, and in the off time stream such services. If we had the slightest bit more of free time, we could easily surpass that data cap. Comcast has argued its average user only uses 75GB. I would argue that statement is fraudulent and unfair. I would assume most of its customers use their service for TV, and Internet is a mandatory part of the television package. What of Comcast users that are households like myself with more than one user?

Even if I'm unhappy with all of this, I would gladly switch to ANY OTHER SERVICE that has comparable or slower internet speeds in the trade off for no data caps. But that competition does not exist.

This 1TB Data cap encourages me and those in my household to not use the streaming services that we want to use. This cap objectively stops us from freely using the internet in the way that we choose.

I'm outraged and appalled that in the 21st century it's legal to apply these caps to internet usage and stifle the free will of its users. It doesn't cost Comcast the slightest amount of money to allow users to use such High amounts of data. There is absolutely no proof or evidence that shows customers using as much data as they want slows or even affects the company or other users of that company.

The United States falls behind incredibly in the speed that it actively offers to its citizens and there is absolutely no real competition in the internet provider market.

This is my complaint: I want to pay a FAIR price for a COMPETITIVE internet speed with more than 1 provider, without being capped on how I chose to use what should be classified as a freedom. I feel all data caps are unfair and outrageous no matter how large. If I was given other options of service I would chose them.

---

**Ticket: # 1307924 - Data Caps****Date:** 11/8/2016 5:59:12 PM**City/State/Zip:** Northbrook, Illinois 60062**Company Complaining About:** Comcast

---

**Description**

I am writing to voice my concern over the implementation of data caps in the ISP industry. With growing dependence on an increase of data, it is vital that data caps be removed from this utility. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

---

**Ticket: # 1308140 - Comcast Data Cap****Date:** 11/8/2016 8:47:25 PM**City/State/Zip:** Mundelein, Illinois 60060**Company Complaining About:** Comcast

---

**Description**

I don't understand the reason for these data caps. As a family of 4, we might not exceed the 1 terabyte limit now but as we start connecting more devices and start consuming more HD, download our next gen games, or other data dense content I believe we will be hitting those limits sooner than we think. The break down for a family of 4 for the month is 8.3gigs/day/person, which wouldn't be enough for 2 full movies. I work in the IT industry and have years of experience dealing with networks and network traffic. Technology and equipment have vastly outpaced usage, so it's been getting cheaper to move more data. At the university I work at, we tripled our data speed and cut the price as well. It's actually more expensive to keep older network technology. So there is no reason I can think of to place these data caps other than to gouge their customers. I think this is a direct consequence of the lack of competition in my area. The FCC needs to do more to protect competition or allow for municipal infrastructures.

---

**Ticket: # 1308147 - Data Caps by Comcast have no basis in reality; Comcast is foisting their greed on the consumer**

**Date:** 11/8/2016 9:03:08 PM

**City/State/Zip:** Portland, Oregon 97233

**Company Complaining About:** Comcast

---

## **Description**

Today I received a notice that we had used 90% of the imposed data cap of 1TB for my home connection. I am upset and appalled that Comcast is allowed to get away with truncating my ability to access the internet, and making me pay extra for the privelege of doing so.

First of all, why was everything just fine before September and now things are so drastic that they need to impose these caps? I have been using comcast without incident for about the past 8 years, and only NOW do they see a necessity in enabling a cap for consumers?

Second: the internet is NOT a non-renewable resource. We have usage fees on Water, on electricity, because those things are finite. Internet speed is not one of those things. There is no "limit" to how much one can use up, Comcast can regulate your speed, but they aren't sitting on pools of data waiting to be used by the consumers. Therefore, why is it necessary to cap the usage if it is not something you can have a draught of ?

And lastly, they are providing no concrete proof that the metrics are accurate. Meters on Gas, water, and Electricity have meters that are created by a third party, vetted by the state, and put in place and monitored by the company but verifiable to be accurate, as per law. Who is analyzing, with what metric, and what oversight is there that it is accurate? If I set up a Tomato or DD-WRT router to monitor usage, and it is different than what Comcast states, who am I to believe?

Trust me, if I was in an area that had something other than Comcast, I would switch. And as 4K streaming becomes more commonplace, or e-downloads for large sized video games, how is 1TB an acceptable cap? How are ANY caps acceptable?

There are some things to take note of:

- The \$10/50gb seems to be universal across all cable companies and many DSL companies, despite this price having no relation at all to wholesale data prices (where 50gb would just be pennies). This suggests collusion, or even anti-trust-type illegal activities.
- The 50gb, if not used entirely, is neither pro-rated nor rolled over to the next month... it's \$10 even if you go over the limit by 500 kilobytes.
- The overages apply even to off-peak traffic, meaning that this policy has nothing to do with congestion or network management.

This is Comcast pushing their greed onto the consumer, plain and simple. There are no reasons for these caps, outside of them trying to stifle the usage of streaming services they don't want to compete with. It's unethical, it's greedy, and it harms the consumers.

Plus how, if I signed a contract for Comcast before the Data Caps were in place, is this not a bait and switch? I'm fine with paying the price that I pay for internet. It is expensive, but necessary to my life. When I signed up there were no data caps in Oregon, but now, 6 months into my contract, there are. Why am I not exempt? How is this not them breaching the contract? This is basically a bait and switch for anyone who had a pre-existing contract with them, and with 2 year agreements with ETF, switching becomes untenable because THEY decided to change the rules. If they had the data cap when I entered into the contract, I would understand that I knew the risks. But now, they put a cap on the service, and if I want to switch because of this new draconian tactic they GET to charge me an ETF fee for "breaking the contract"? Where's my ETF fee for their decision to change the terms on me?

Regulation needs to be done on this, otherwise consumers will continually be overcharged or taken advantage of only because they wish to use the internet.

I expect Comcast to take these issues seriously and provide me with answers to ALL of the questions with justifiable answers, or exempt my account from the data cap. I have not received any message from them about my PRIOR FCC complaint about the data cap before it was introduced. They are already breaking the rules there as well. If you don't want to respond to the rising number of complaints to the FCC about your unethical practices, then perhaps you should not impose an arbitrary cap.

What they are doing is unscrupulous, unprincipled, amoral, and purely based on greed. Not on network or consumer safety, or consumer satisfaction.

[Ticket: # 1309333 - Data Caps](#)

**Date:** 11/9/2016 6:56:40 PM

**City/State/Zip:** Yulee, Florida 32097-6559

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently imposed a data cap of 1TB a month. This is ridiculous given the fact that switches forward the IP packets at a predetermined rate and has no bearing on usage. This is why faster speeds cost more money. Usage is not a metric as your usage doesn't cost the cable company any more money.

---

**Ticket: # 1309410 - Extremely low data caps**

**Date:** 11/9/2016 7:58:23 PM

**City/State/Zip:** Youngstown, Ohio 44511

**Company Complaining About:** Armstrong Cable

---

## **Description**

Dear Sir or Madam, I have internet only service from Armstrong Cable in the Youngstown, Ohio area. Armstrong has a 200GB per month data cap where each additional 50GB is charged at a rate of \$10. It is my understanding that cable TV customers do not have video programming traveling over the same wires counted against their data cap, my viewing of any audio or video programming is logged against my data cap. This seems to privilege the video programming sold by Armstrong over competing video services. Why can a cable TV customer watch 24 hour HD programming Without this usage counting against their data cap, while my viewing of HBO Now, Hulu, or Netflix accrues against the 200GB limit?

Approximately 3.5 hours of HD programming a day in a month with 30 days by one individual within a household would be impacted by Armstrong's data cap. We have four members in our household and do not wish to select low quality video feeds or agree to all watch the same programs at the same time to manage our internet usage. I view the limit as extremely and arbitrarily low compared to other cable providers such as Time Warner (no cap) and Comcast (1 Terabyte limit)and with no option in my area to use a competing service. the implementation of only metering signals not originating from Armstrong as a preferred programming provider as opposed to the fair playing field intended by the FCC.

---

[Ticket: # 1309445 - Comcast internet data cap](#)

**Date:** 11/9/2016 8:26:45 PM

**City/State/Zip:** Portland, Oregon 97229

**Company Complaining About:** Comcast

---

## **Description**

Recently Comcast has introduced internet data cap on their cable internet service in my area. This seriously interferes with my ability to subscribe to internet based TV service (such as Playstation Vue or Sling TV). The cap currently is set to 1 TB, but it's very easy to exceed that limit when subscribing online TV services. I believe Comcast has done this deliberately to limit competition for their cable TV subscribers. This new limit seriously limits my ability to explore any other TV option other than what is offered by Comcast.

---

**Ticket: # 1309960 - Possible unstated data caps?****Date:** 11/10/2016 12:02:25 PM**City/State/Zip:** Fonda, New York 12068**Company Complaining About:** Frontier Communications

---

**Description**

We have been using Frontier internet for several years, largely because they are the only non-satellite ISP in the area. Most of the time, we are rarely around and use very little bandwidth. Over the past two months, I have been attempting to work from home, and have been using the internet more. A couple weeks ago I downloaded probably 50 or so pictures that were sent to my email from various people who were at an event I had helped organize (in a volunteer capacity). There have been other increases in our internet usage --though our internet is NEVER fast enough to watch a video, it is always less than 2.5 mbps whenever we do a speed test, and often less than 1mbps. (Our Frontier bill does not say what speed we are paying for/contracted to get).

At any rate, our internet has now been out since October 29, and Frontier is insisting that they are not coming to fix it until November 23rd. This is unusual. We are frequently forced to go without internet for several days, but never several weeks. The Frontier customer service rep two days ago (we call every day or every couple days) told me that she had never, in her time working there, seen a ticket be stretched out for so long, and she could not understand why Frontier was taking so long to fix the issue. It seems earlier times could be made available. She referred the issue to a manager, but so far we have still not heard back.

This gives me the impression that Frontier is trying to punish us for something. Perhaps because I have been calling much more than before to complain when there is an outage (outages are CONSTANT, largely due to the equipment/wiring Frontier refuses to fix), and because I have been demanding reimbursements. But this punishment could also be levied upon us because we have been using more internet. or perhaps Frontier does not like the news pages/political persuasion of our news pages? I don't know exactly what is going on, but I do know that even to a Frontier representative and her manager, this purposeful refusal to fix our complete lack of internet and phone service is incredibly unusual, never before seen, and yet is ongoing.

I am listed on the bill, among two others who share the service. Frontier sometimes tries to say that I am not (primarily/only when I bring up issues of reimbursement for outages). They may try to say this to you. This is not true. I am on the bill. And I am presently the primary internet user, along with one or two other part-time co-residents who are not listed on the bill.

**Date:** 11/10/2016 11:04:05 PM

**City/State/Zip:** Hayward, California 94544

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently rolled out a 1TB data cap in my area, claiming to be generous and arguing that no reasonable use of this utility could hope to exceed such a threshold. Perhaps if I lived in a household with just my spouse and a child or two, this would be a somewhat accurate assertion, however I live in a household with 4 adults and a young child. Furthermore, as bandwidth requirements for online services continue to increase as our country's internet infrastructure grows, this will not be tenable in the near future. Allowing an anti-consumer practice like this to become the norm is a dangerous precedent to submit ourselves to. It is up to the FCC to step in and protect the consumer from money grubbing cable companies who issue arbitrary restrictions that unfairly affect consumers in the name of their bottom line. Furthermore, I pay for a 100 mb download speed, at any given moment I get about 75% of. My hardware is not the bottleneck in this case. How is it legal for a cable company to advertise speeds that they do not fulfill. It is notable that when my service started two months ago, this was not a problem.

---

**Ticket: # 1311028 - Wired Internet Data Caps****Date:** 11/10/2016 11:50:41 PM**City/State/Zip:** South Salt Lake, Utah 84115**Company Complaining About:** Comcast

---

**Description**

I signed up for Comcast internet wanting to try it...I wasn't concerned that the trial would cost money because they offer a 100% satisfaction guarantee for the first 30 days....I kept the service but 1 month later I get an e-mail saying the unlimited services I am paying for are now capped at 1TB and for each additional 50GB will be charged @ \$10.....I called to make sure the original agreement would be upheld but sadly they informed me it would not and that I would be under the new usage plan.....well I'm now locked into a one year contract and I average 1300GB a month so I'm screwed....I called them and they did offer to waive the early cancelation fee but refused to cover the installation fee..... I feel they are doing this to stop people from getting streamed TV from anyone but them....but I have no other real option that will work with my streaming usage, so I'm stuck with an outrageous bill that I never agreed to when starting up

**Date:** 11/11/2016 4:47:17 PM

**City/State/Zip:** Atlanta, Georgia 30318

**Company Complaining About:** Comcast

---

## **Description**

With the recent Comcast rollout of nationwide 1TB data caps I feel it is crucial that I submit my complaint.

Data caps are a problem and without swift action will be a much larger issue in the near future limiting not only innovative uses of the Internet but the entire global flow of information.

Data caps are not only an inconvenience to those customers but are simply against net-neutrality at its core. This is nothing more than a money grab and attempt to get people to stick with the dying cable TV model. It even excludes Comcast related data from that cap!!

It unnecessarily impedes emerging video technologies such as 4k streaming while simultaneously punishing those that dare to download large games or files. It's not even rooted in network congestion: <https://www.techdirt.com/articles/20130118/17425221736/cable-industry-finally-admits-that-data-caps-have-nothing-to-do-with-congestion.shtml>

For example: streaming 4k content according to Netflix uses roughly 4.7GB per hour. Doing that math that's ~7 hours PER DAY before hitting said 1TB cap. Multiply that by 2 or 3 other members of a household and you can watch at most a few hours per day. This is assuming you do absolutely NOTHING else with that Internet connection.

The further encroachment of data caps sets a dangerous precedent that unchecked will stifle innovation and let ISPs control the flow of information into households. This is something that needs to be curbed quickly to prevent ISPs restricting the flow of information simply to benefit themselves. I urge you to please consider restrictions or outright banning of data caps on hardline Internet connections such as cable and DSL. I further ask that you investigate data caps on cell data to determine if there is actually any legit reason they exist. T-Mobile is a great example. They allow very specific traffic to NOT count towards a data cap. This is also against net-neutrality.

I'll say it a second time, please consider a ban on data caps. This is nothing but the stifling of innovation, holding onto an archaic business model, and lining of pockets of ISP executives. What we ACTUALLY need is more innovation, more competition, and a stronger Internet presence as a country.

  

---

**Ticket: # 1311900 - Comcast Data Cap**

**Date:** 11/11/2016 6:08:05 PM

**City/State/Zip:** Lansing, Michigan 48915

**Company Complaining About:** Comcast

---

## **Description**

Comcast introduced a data cap to my internet plan this month. One of the main selling points that was mentioned while I was shopping for internet access by the Comcast representatives was the unlimited X Mb/s. However now that doesn't matter even though I'm locked into a plan with them. So they changed the terms of my plan while I signed a different one, and the change is an arbitrary data cap that does not represent the service I originally bought.

---

**Ticket: # 1312078 - Open Internet**

**Date:** 11/11/2016 8:51:30 PM

**City/State/Zip:** Aloha, Oregon 97006

**Company Complaining About:** Comcast

---

## **Description**

Comcast is taking the profit driven approach to capping people's data usage, without reasonable competition in their service areas for people to show their displeasure by changing to another provider. If you want to keep the unlimited access you've had for years? It's now an extra \$50. For the same service.

<https://www.engadget.com/2016/10/06/comcasts-1tb-data-caps-start-to-roll-out-nationwide/>

It's a bigger deal than that because they'll show that they aren't losing many customers after the move, which will show other ISPs that they can do the same thing, overall worsening the internet access of millions of people for the benefit of a few board members and investors.

America is already behind most of the other major countries in the world in terms of our access to the internet in both pricing and speeds, and this tactic is absolutely not going to help.

Weren't we supposed to be fostering more competition between companies, and improvements to internet access overall? How is this game of chicken race-to-the-bottom approach helping anything but Comcast's bottom line?

**Ticket: # 1312106 - Internet Data Caps**

**Date:** 11/11/2016 9:17:43 PM

**City/State/Zip:** Rio Vista, California 94571

**Company Complaining About:** Comcast

---

## **Description**

Comcast is rolling out a new 1TB Data Cap Nationwide, this an issue for those of us that use a lot of data for our jobs and hobbies such as programming and entertainment fields such as YouTube or consuming Netflix. With technology becoming more an more data dependent with 4k becoming a popularized feature more data is needed than ever before. Not only are these restrictions unneeded but Internet in today's era is more of a necessity than a privileged; please continue your work to reclassify internet into a utility and sanction Comcast for their actions.

Thank You

**Company Complaining About:** Comcast

---

## **Description**

Comcast started enforcing data caps on California and its unfair to us since we don't own cable TV and we stream all of our content through the Internet. It is very easy for us to reach the cap, specially when streaming 4K content from Netflix. We are a family of 3, two of us which we play a good amount of video games online. Moreover one of us work from home and rely on the Internet to be readily available and due to the nature of the work a good amount of data is transmitted. We feel part of the problem is that we have no decent alternative. The apartment complex was pre-wired with Comcast and no other cable Internet id available. Finally, we can't install any antenna on the apartment to try an alternative leaving us with one last time choice, ATT UVerse which has a horrible ping and due to the lack of good signal is not able to maintain its throughput in our location.

Please, do something, data caps shouldn't exist at all. The Internet needs to become a similar affordable and available service such as electricity.

## **Description**

Hi,

Our household was recently informed that Comcast is rolling out monthly data caps in our area. Comcast has a monopoly in our area, so we have no other option for internet service. We regularly have billing discrepancies, and now we are facing a cap on the amount of internet we can use per month. The overage charges are ridiculous.

Comcast has a monopoly in our area, otherwise we would switch providers. Can you guys please do something. This is ridiculous.

Comcast does not care about our complaints. It is ridiculous that when we call, it takes multiple calls of waiting on hold just to voice an opinion.

They always say they are going to fix the issue, but the very next month we have the same billing issue and have to go through hours of being on hold.

## **Description**

I currently pay for the highest level service that I am offered, but am capped to a limit of 350GB usage per month. In a world where streaming a 4K movie can use 50GB in one hour, or downloading a game can use 40-80GB, I end up having to ration my usage instead of enjoying all the different types of content that are available. These caps are implemented under the guise of fair usage, or network management, but that would only be true if every single person who is on the network was actively downloading something every day, all day. Even those of us who are heavier users would not in any way impact the overall network stability with unlimited usage. These caps are a draconian method to attempt to keep people from cutting the cord. I do hope that the FCC can sooner than later take a strong look at the practice of data caps, that perhaps they can be abolished like they are in so many other developed nations.

**Ticket: # 1312611 - Complaint about Comcast's New Data Caps****Date:** 11/12/2016 4:00:33 PM**City/State/Zip:** Fremont, California 94539**Company Complaining About:** Comcast

---

**Description**

I've recently gotten a letter from XFINITY that they are imposing a new data cap on my home Internet plan. There is no reason stated in the letter for them in imposing this cap, and I have great concerns about how they are metering the data, as they refuse to give details about that. Even though a 1 TB cap is higher than what XFINITY is setting elsewhere in the US, there seems to be no safeguards against them lowering the price. I keep my work for photography backed up online in services such as Dropbox and Google Drive, and in the case where my hard drive fails and I'd need to restore from it, I can easily exceed the cap and get price gouged. XFINITY should charge me by the speed at which I can get my data (i.e. like today), rather than the actual amount of data I consume, as that itself costs close to nothing. As there is no competition in my area, I'm filing this complaint as it would stifle innovation and is an unfair billing practice.

**Description**

To whom it may concern,

I am writing to protest the ridiculousness of the data usage limits isp's are currently moving towards. By having a monopoly of service coverage (like Comcast) or by all of the big name isp's 'coincidentally' starting to limit data all at the same time, it has prevented people like me (a fulltime student pursuing a BS in Computer Science) from being able to complete my work. I don't have a ton of money, but it is crucial for me to use the internet to complete my assignments. I already only have so much time in the day, so moving big files and quickly is the only way to complete work. These companies are overstepping their bounds, knowing that they don't have any real competition. In fact, where I live I am only offered one choice, and that is Comcast. I don't expect them to work against their own self interest, but I do believe in affordable fast Internet coverage in a day and age where it is mandatory for some work. The fact that they can hold it hostage like this is Orwellian to put it simply. If nothing gets changed, it will hurt businesses like Youtube and Netflix, and it is already hurting consumers.

**Ticket: # 1312686 - Comcast Data Cap**

**Date:** 11/12/2016 5:49:33 PM

**City/State/Zip:** Orlando, Florida 32825

**Company Complaining About:** Comcast

---

**Description**

Out of nowhere Comcast decides to impose a data cap on us. For years we have gone without a data cap and never heard a single complaint from them. Now they decide they can spring surprise charges upon us. I had to find out on my own that they imposed this cap. I was not sent any sort of notification.

Data caps should be illegal. Bandwidth is not a limited resource and the bills they send probably cost more than a gig of data. Please look into this, especially since Comcast is only doing it to select areas. They also offer unlimited if you pay an extra \$50, so it seems very easy for them to provide unlimited if they wanted. They claim less than 99% of their customer base use less than 5GB a month. They should reassess that claim and look at family households too. If it really is less than 99% why is it necessary to cap people?

---

**Ticket: # 1312709 - Comcast 1TB Bandwidth Cap**

**Date:** 11/12/2016 6:31:46 PM

**City/State/Zip:** Layton, Utah 84041

**Company Complaining About:** Comcast

---

## **Description**

Comcast has been rolling out 1TB limits on their customers and this is unfair. I spend the majority of my time on the internet and the things I enjoy doing the most take up large amounts of bandwidth. I spend a lot of my time on Twitch.tv, a service designed for video game streaming. This issue affects both watching and broadcasting on this website. The video games other broadcasters and I download are quite large and the bandwidth drained by streaming at high bit rates makes this limit almost impossible not to pass. Comcast might say that this is a quality of service measure designed to make sure everyone has good internet, but I disagree and believe it is almost purely a business decision judging by Comcast's inadequacies when it comes to other areas of quality of service. The internet is becoming more and more of a necessity in the world and the United States is running behind in terms of ISP's. We need to ensure that Internet providers do not take advantage of their customers for their own financial gain.

**Ticket: # 1312819 - Recently imposed data caps on a high speed unlimited data internet plan**

**Date:** 11/12/2016 10:03:16 PM

**City/State/Zip:** Moss Beach, California 94038

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently imposed a 1TB data cap on my unlimited-data high speed internet plan. I pay \$100 per month for 300mbps download speeds, and 30mbps upload speeds.

This unbelievably low data cap of 1TB allows me to use the service, I pay a lot of money for, for a total of ~7.6 hours a month before I hit these new Draconian data caps of 1TB.

In a 31 day month, there are 744 hours. That means I can use the bandwidth, that I pay a lot of money for, for ~1% of the month before I hit the newly imposed data cap.

Why am I paying \$100, for their highest tier service in my area, to only be able to use my connection for 1% of the month?

This is ludicrous. I have ~800 games in my Steam library, totaling nearly 5TB in total size. That means when I build a new computer, it will take me 5 whole months to install all of my games under Comcast's obscene 1TB data cap. 5 MONTHS before I can install the games I paid for?!

I backup all of my important data to a cloud backup service. The data being backed up totals ~7TB. This means to complete my backup of all my important data will take 7 months under these data caps imposed by Comcast. That's 7 months where my data is vulnerable to data lose, while I wait for the backups to complete under the new Comcast data caps.

I have computer monitors, and televisions, with 4K resolutions. 4K streaming via Netflix utilizes 7GB per hour of content. This means with two 4K streams running in my house, I am allowed to watch the content I pay good money for, for a total of 3 days of the month (~73 hours of viewing time).

This 1TB data cap is extremely cumbersome in my ability to enjoy the games I play, in my ability to use my cloud backup service to backup my important files for safe keeping, and my ability to enjoy the entertainment services I pay good money for every month.

These are just a few examples of how these newly imposed data caps are beyond unreasonable. It can't be emphasized enough: if I use the 300mbps download speeds I am paying Comcast for, I can run my internet connection for only ~7.6 hours! Again, I can only use the service I pay monthly for, for 1% of that month.

This data cap needs to be reverted, and my unlimited data high speed internet plan restored.

Sincerest regards,

-Frustrated Comcast customer

**Description**

Comcast injects javascript code in non-comcast websites when browsing on a comcast cable account.

Here is a snippet of the code that got injected into websites I was visiting:

```
// Copyright (C) 2015 Comcast Cable Communications, LLC
// Contact Us: http://customer.xfinity.com/contact-us/
// Intended use of this message is to display critical and time sensitive notifications to customers.
/*
[...]
```

```
var _ComcastAlert = (function(){
    return {
        SYS_URL: '/e8f6b078-0f35-11de-85c5-efc5ef23aa1f/aupm/notify.do'
        , dragObj: {zIndex: 999999}
        , browser: null
        , comcastCheck: 1
        , comcastTimer: null
        , xmlhttp: null
    }
[...]
```

Attached, please find the full website source code with Comcasts injections at the end.

Thus, comcast can intercept all my browsing activity, modify it, and interfere with it.

They do this to inform me about my data cap usage (which I already filed another complaint against).

I am concerned this violates my privacy.

I think this is an unlawful modification of computer systems and should be punished.

---

**Ticket: # 1312928 - Cable One Anti-Consumer Data Caps****Date:** 11/13/2016 3:05:15 AM**City/State/Zip:** Nampa, Idaho 83687**Company Complaining About:** Cable One

---

**Description**

I live in near Boise, Idaho, and where I live, there are 2 internet providers. CenturyLink and CableOne, so there is very little competition regarding internet providers in this area, but I signed up for that when choosing to live here, so that is not the problem. The problem is that because of this, there developed an anti-consumer situation between these providers. CenturyLink does not offer reasonably fast internet speeds. Because of this, CableOne has decided to lure customers by offering amazingly fast speeds to consumers because of their infrastructural advantage; sometimes up to 10 times the fastest speeds offered by CenturyLink. This would be very beneficial to consumers, except for the fact that CableOne then implemented ridiculously low data caps on every single one of their service plans, each speed's data cap getting more ridiculous than the previous one, and then when customers (almost inevitably) break this cap, they get forced into buying a "reasonable" larger data plan for a large price hike and a marginally higher data cap. For instance, their slowest speed offered at my location is 100mbps. The data cap on this plan is 300GB in a month. CableOne now offers a service called GigaOne, their fastest plan, which is 1000mbps (or 1Gbps). This plan has a 500GB data cap. For reference on how low this is, per my calculation, if a customer used this full 1Gbps speed, they would surpass their MONTHLY data cap in 1 HOUR. This is ridiculous, it's like giving someone a Ferrari and 3oz of gas in the tank and then selling expensive test drives on it. It is 2016, and in this day and age, someone can use 500GB in a couple days, ESPECIALLY when one takes into consideration common, popular things like 4K Netflix streaming that can use 15+ GB for one single movie or TV show episode, digital game downloads sometimes up to 80GB, music streaming services, online classes, online employment, and so many other services that simply require a lot of data. CableOne is intentionally throttling people's data to harm the consumer by forcing them to upgrade their internet services, even if they don't want to, and making them spend more money for something that they don't want (or need). I noticed that data caps were made illegal for other internet service providers who were doing something similar. What I am asking is that the FCC impose similar prohibition on data capping where I am living for CableOne. They are benefitting nobody by limiting their data. If these caps were made illegal, then everyone in the area would benefit. I would greatly appreciate if there were some way to ensure that there were a reasonable Internet provider for Idaho citizens. We have 2 options: CableOne, which is fast but unethically anti-consumer when it comes to data regulation, or CenturyLink, that is reasonably priced and unlimited, but painfully slow (only 5mbps maximum in my area). Neither of these options are particularly suitable, and as someone who relies heavily on the internet for everything from my schooling, to shopping, to supplemental income, to entertainment; fast, unlimited internet is something that is invaluable to me, and most of the people I know. All I ask is that you do something to ensure that Idahoans can have access to it.

**Company Complaining About:** Comcast

---

## **Description**

I've been enjoying unlimited internet along with millions of Americans for the past decade or more. Now, all of a sudden, Comcast feels the need to put an artificial limit on the amount of data I consume each month. What's more is that there isn't even a valid reason they can come up with to justify this. Because as it sits, I am paying for both the speed and the amount. That's asinine and they're completely double dipping. They say that there's a low amount of people using more data over the terabyte cap, well if that's the case then why are they enforcing it? It doesn't make any sense unless you view it as a cash grab. The whole reason for this cap is so that they can recoup lost profits from people cutting the cable cord and going to just internet services.

**City/State/Zip:** Coon Rapids, Minnesota 55448

**Company Complaining About:** Comcast

---

## **Description**

I signed a 2 year agreement with Comcast in late 2015 for TV and internet with unlimited data. Beginning November 1st I was informed that I would now have a monthly data limit. My services offered have therefore been reduced significantly and the terms of my contract have changed. When I contacted Comcast they said they would not be reducing pricing (despite reducing service), and also would not be allowing me to exit my contract without an early termination fee. These data caps should be illegal if under contract with a customer. Also I would hope our government officials would ensure service providers do not limit access to information, or retroactively try to charge more for the same services previously provided. Also it was said that watching Xfinity content would not count towards the cap, which also gives them an illegal advantage over other providers of internet content going against the best interests of the customer.

---

## **Description**

We were locked into a contract for a full year before Shentel Cable gave us a data cap. Now, every month, we have to treat our internet usage like we're starving and rationing food. It's gotten to the point where I tell my guests that we're having internet problems, just to save myself from having to pay the outrageous overage fees. It's a completely unnecessary hassle that was only implemented to suck more money away from their customers.

---

**Ticket: # 1314467 - Data Caps restricting online media consumption**

**Date:** 11/14/2016 4:07:45 PM

**City/State/Zip:** Pensacola, Florida 32514

**Company Complaining About:** Cox

---

## **Description**

Cox is now enforcing a 1TB data cap with \$10 overages per 50GB. As a home with numerous streaming services and a family of 6, we regularly go over this amount. We dropped cable TV/DVR service when we switched to online streaming through SlingTV. The new restrictions place a 1TB cap on all plans available in my area through Cox, which provides the fastest internet in the region sold to consumers. Their (Cox) fiber plan is not available in my region, and there is no way to upgrade our plan to remove or increase these caps.

Their new enforcement and change in their data caps makes it harder to stream media through services such as YouTube, Netflix, Sling and other online services without incurring a fine. Their new caps favor their own cable and on demand service.

**Ticket: # 1314665 - Data caps aren't not pro-consumer**

**Date:** 11/14/2016 5:21:17 PM

**City/State/Zip:** Bellingham, Washington 98225

**Company Complaining About:** Comcast

---

## **Description**

I recently received an email from Comcast concerning a previous complaint I had. I am doubling down on that complaint.

I am a former Comcast customer and live in a household with someone who is currently the subscriber to Comcast, so bringing that up is irrelevant.

They then claim that data caps are pro-consumer, which is a DIRECT and BOLD-FACED LIE. Data caps exist as a means to generate more profit. Period. There is no factual or logic reason to have data caps besides it being another form of revenue. Data caps are harmful to everyone except Comcast, and are actually very dangerous for the future of the internet.

You need to step up and prevent Comcast from any more data caps, and force them to roll back any existing data caps. It's completely and utterly asinine.

I'm actually offended by the "automatic reply" I received from Comcast with its bold assumptions that I am an ignorant consumer.

---

## **Description**

Hello,

I feel the Comcast data caps are unfair to those people and businesses who work online. Having to pay \$50 extra per month to remove the cap is basically extortion for access to 1's and 0's.

---

**Ticket: # 1315099 - data caps and zero rating**

**Date:** 11/14/2016 10:00:15 PM

**City/State/Zip:** Lafayette, Indiana 47905

**Company Complaining About:** Comcast

---

## **Description**

I live in a small bubble in which Comcast is the only option for internet access (clarification: I can get DSL or wireless, but those speeds are not functional for someone who consumes media in any capacity in 2016). It is what it is. Recently, I received an email telling me that I will now have a data cap. They call it a 'data allowance,' but semantics do not change the nature of a thing. Comcast acts like 1 TB is a ton of data. You probably think it is. Fast forward a bit. You now stream Netflix in 4k. Yeah, that comes to ~7 GB of data per hour. Doesn't sound bad, right? You know, unless you have multiple people watching shows or movies...but that would never happen, right? After all, a family could never average four to five hours of Netflix per day across the entire family, right? And don't forget any general internet usage as well...for myself, I stream HD content pretty consistently. I stream because I cannot afford and do not want a cable package in addition to my internet, and this change is Comcast punishing me for that. Sure, I can again get 'unlimited' internet for an extra \$50/month, but that doesn't solve the problem. Comcast argues it is to 'be fair' and 'save you money.' No. If I don't reach a TB of data usage in a month, my bill doesn't go down. There is no option for a cheaper plan with less data, and as much as Comcast likes to compare internet access to electricity, it is not the same thing. Even if it was, I would then expect Comcast to bill me based on usage and give me unlimited speeds for no extra price...but that is not something Comcast will do. This data cap serves no functional purpose and is solely a money scheme by Comcast because they have a monopoly in so many areas such as where I live. I beg you, please do something to rectify this monopoly; the internet is no longer a frivolity; it is a necessity. It is a basic need at this point in the human experience, and practices like this directly impede and lessen that experience for all of us. In addition to this cap, Comcast has discussed zero rating specific services...such as Comcast's own services or services that pay Comcast to be part of their set-top box. So not only has Comcast instituted archaic data caps that limit usage, they are then considering zero rating specific data which is directly against the spirit of net neutrality, as they would then be allowing certain data to be treated differently (circumventing their caps) if only the source pays them more money. Here's a metaphor to explain the issue for the less technically savvy person from Comcast who will eventually send me a canned response. Imagine a set of privately-owned roads. You get in your car and drive to the store, buy things, and go back. It's a happy life. Then the road company builds a new road. It has more lanes than the older ones, so it's faster, but it only leads to one store. All the others are stuck on the older roads. Now the road company has given the one store an advantage over the others. Over time, the roads decay and need repair. The road company prioritizes repair for the wide road leading to the store they prefer, and the other stores' roads don't get repaired. That's another advantage to the store the road company likes. The roads are the Internet, the road companies are ISPs, and the stores are websites. I'll expand this metaphor a touch to cover zero-rating: Imagine there's a limit to how much gas you can buy. When you reach the limit, you just can't buy any more gas... except if you agree to let the gas station limit where you can go. Then you can buy all the gas you need. Would you like to live in this town? Would you like to use this Internet? I currently am approaching living in that town and using that internet, and that internet directly violates that premise of net neutrality. Data caps and zero rating work together to provide a worse and less efficient experience for the customer while netting Comcast more money due to its local monopolies. Please, please, please...before you lose

the power to protect us from companies such as Comcast, do something to prevent us from losing the internet as it was created.

**Ticket: # 1315113 - Cox Data Caps****Date:** 11/14/2016 10:14:18 PM**City/State/Zip:** West Point, Virginia 23181**Company Complaining About:** Cox

---

**Description**

I am currently a subscriber of Cox Ultimate Internet in the Hampton Roads market of Virginia, and I've been on ultimate for a number of years now with only about a 2 month interruption in service when I moved. Recently I noticed through forums and checking my billing statements, that Cox had dropped my data cap limit from 2TB a month to 1TB a month, and claimed that "your connection has been upgraded to 1TB of usage a month!". This is by far this most awful attempt at a money grab in the history of the internet. Cox says that these caps are only being enforced in a monetary sense in a few "select markets". I for one am smart enough to see the writing on the wall and know that this will roll out nation wide eventually. This is complete garbage. The only reason they are doing this to customers is because of customers removing themselves from TV packages because of the obnoxious cost. I did my homework a long time ago, researched and selected the plans that meet my needs, I chose the most expensive residential internet connection so I would be left alone. Now because I am only receiving internet service from Cox, and Television Service from Sony's PlayStation Vue service, I am directly being targeted because of my high use. I have 11 days left in my billing cycle, and 391GB left to use. My average daily use is 40GB because of my streaming TV service. I am going to exceed my data allowance and this will be the continued course as long as I have a streaming TV service. This is unacceptable, and I will eventually be billed \$10 per 50GB of data over my limit. Please FCC, step in and make a difference. Tell Cox that residential customers at the top service level deserve to be given more data, or remove the data cap all together.

## **Description**

Why is their tiered pricing for home internet if there is going to be a data cap? Is like paying to be on the express lane to move faster but need to pay again or more to go further or longer distance. This practice just seems wrong.. If a data cap is imposed to moderate usage then do away with tiered pricing structure and move to pay by usage structure like other utility services (electric or water). Another issue, most modem doesn't have a user side meter to gauge actual usage for the entire house hold, so consumers are to just left with trusting the ISP reporting their usage with no real way to validate. Already ISPs are very limited in my area, is either Comcast or CenturyLink and both now have a data cap seems like a collusion because there isn't any other competitions. What protection does consumers have? What if next year the ISP decide to lower the cap and charge even more for overage? Please help stop this madness!

**City/State/Zip:** Oakland, California 94608

**Company Complaining About:** Comcast

---

## **Description**

Comcast has imposed a "data cap" on its users nation wide as of November 1 2016. I have been a Comcast customer for years and have routinely used more than 1TB of data a month doing my web design, video editing and other work related data usages. This is unacceptable that the fcc would allow comcast to impose \$10/50Gb overage fee on USING THE INTERNET. The internet is spotty to begin with and now, not halfway into the month I have used 90% of my data. When I get to the cap i will be forced to pay overages because my work uses the internet. This is basically a tax on those of us that work online and move large data around. Please try to keep the internet open and stop Comcast from stifling the relatively inexpensive exchange of information. The foundations of a free internet are being eroded and I have high hopes that the FCC will step in. Thank you.

---

## **Description**

I recently have spent 120 hours dealing with AT&T who said I had an unlimited connection, only to find out later that it was capped at 660gigs per month. This caused me to drop them spend hundreds of dollars and almost get in a legal fight over returned funds because of the lies. I mean I ask them if the service was capped and they said no. They flat out lie to you and then trap you into a contract. I probably use less than 660 gigs a month but since I telecommute it was like the sword of Damocles hanging over my head. What is the point of them selling you a GIG connection if you can only download a limited amount and then you get an unknown charge that is based on unreliable measuring techniques. Another reason this is so horrible is that Microsoft Windows 10 and lots of programs send data to and from the Internet without you being able to control it without unplugging and when you have to do video conferencing you also can't control it or you have to commute to work to save home bandwidth which causes problems with traffic, pollution, lost productivity and a myriad of other issues such that I could go on for days. Now AT&T is about to merge with Time Warner Cable and Comcast is so bad (and also has data caps) that a lot of people in my area are going to have to go back to commuting to work or just living without home internet.

Another effect of this limiting of bandwidth is security. Lots of data streams can be inferred by the way they behave. IE if you have a phone conversation it sends 30 or 50 packets per second someone watching would know that you are using VOIP communications. That means a friend you are talking to in India or another country that makes VOIP communications illegal could get into trouble simply for communicating. The tools used to hide this data gathering send a constant rate stream of data to a secure proxy and then hide the data within the stream such that someone watching see's only a constant stream and is unaware of the type of traffic contained within the stream. With data caps this is also prevented. There are so many chilling effects that this is causing. It would be similar to telling everyone that they can only drive 600 miles a month in their care before a wall would jump up in front of them and they could not go further without paying an exorbitant fee. Everyone would drive slow to avoid hitting the wall, everyone (most everyone) would spend hours calculating their trips and paranoid would rule the day. If we are to have a free and open society, a world where communication is to be free we must not be smothered with data caps and limitations on the type of or volume of free speech. Internet connections that offer 1 meg up and 2 megs down should be sold with the premise that if you choose to run at 1 meg up and 2 megs down all day long for 30 days a month that is in fact what you payed for and what you will get. Not that you can do this data rate for 100 megs and then you pay more, 200 megs and you pay more. This is just wrong for the reasons stated above. Please do something to force these companies to behave in a way that is consistent with a free and open society. Please unhook the sword of Damocles from over our heads.

## **Description**

I had a problem recently where I had to reinstall over 1TB of games due to a computer issue. I had to do this once pre data cap and had no problem. But now I have to wait until the day before the end of the month to download as much as I can before the month ends. This is absurd when you have a full family that does other things, like work from home or use game consoles/smart TV's to have to monitor what I download to stay under a cap that only "1%" of people go over. Sometimes I barely have any room left to do anything and download what I please. I'm sick of it and so are many of my friends. Data is dirt cheap to transmit and all they want is money from "cord cutters" even though they are a multi billion dollar business and give 0 \*\*\*\*\* about their customers. Help out the internet community because I didn't sign up for a cap and haven't had a cap before. I also don't have any other internet options in my area so I am trapped. I am considering going to my grandmas just to download games, How absurd is that? Fix it and help us please.

**Description**

I implore the FCC to address Comcasts data cap practice as it will stifle internet creativity. Currently, I don't hit the cap but the problem is, more and more video services and hd and now 4k. when my children start school, increasingly homework is done online or with video services. Internet is now considered a utility and if Comcast is allowed to start capping internet usage, its going to slow/impeded technological progress and even education as more educational services move to an online portal. If comcast wants to charge for going over the caps at least there should be regulation to limit what they can bill for this. Cost +1% maybe. comcast's bills are already designed so the improvements to infrastructure is built into the bill. If you go over the caps, it shouldn't cost the ridiculous amounts they are charging. Especially since it started as unlimited.

### Description

I was browsing the internet today, trying to upload a simple picture to share with some friends. Comcast hijacked my http session and instead of completing the photo upload they displayed a page stating vaguely that I was sent an email to the account my Comcast email.

There was no email. I didn't receive one on my Comcast.net address, so logging into their terrible website was a complete waste of time. Instead they had decided to send the email to my personal address that I use for billing with them.

The email states that I've used 90% of my monthly data cap. What? I haven't had a data cap since I've been a customer with them... since 2005 (with a break for military service where they didn't provide service another another time when they wanted to play games with my billing rate and I temporarily switched to a competitor as a result).

Apparently according to their AUP site, I'm part of their Terabyte Internet Data Usage Plan program, which, according to their website, covers the following MASSIVE list of states:

Alabama  
Arizona  
Arkansas  
California  
Colorado  
Florida  
Georgia  
Idaho  
Illinois  
Indiana  
Kansas  
Kentucky  
Louisiana  
Michigan  
Minnesota  
Mississippi  
Missouri  
New Mexico  
Western Ohio  
Oregon  
South Carolina  
Tennessee  
Texas  
Utah

Southwest Virginia  
Washington  
Wisconsin

Nearly half of the U.S. population lives in one of these states!

It wouldn't be so bad, except for the fact that they exempt their own Xfinity cable-over-IP data. This move REEKS of a violation of the principles of Net Neutrality. Comcast has in essence placed themselves as a Tier 1 (preferred) data service provider and downgraded every other company's traffic on the web to being a subordinate data provider.

To make matters worse, the data usage amounts reported on Comcast's data usage meter are not accurate. I run open-source, third-party firmware on my networking equipment that shows I've used approximately 12% less data than Comcast is claiming. They're counting overhead at CO, which only exists because of their choice of hardware and I which, as the consumer, have absolutely no control over.

I've kept current over the years of the FCC's struggles with reigning in Comcast and frankly I'm not optimistic that the FCC even has enough power where there aren't already hands in deep pockets, but I wanted to add my voice to the swarm of users who are outraged over this type of move being considered acceptable in our society.

Comcast is a company and is in it for profit. I understand that. And I wouldn't be at all angry if I had a choice in my internet provider. The simple fact is that I do not. Cable companies have been provided regional monopolies nearly universally in the U.S. and my area is unfortunately not immune to this. When the only other "competitor" is ATT offering DSL speeds 1/30th the capability of cable technologies, it's a false alternative. DSL technologies may have been competitive a decade ago, but the copper infrastructure it relies on simply does not have the technological or physical capability to compete with a frequency-multiplexed medium.

Please, end this. Rule cable monopolies illegal or, at the very least, outlaw data caps and force infrastructure owners to lease to third party providers at reasonable rates. We've been lagging behind the rest of the world in speed advances and accessibility for years because we've allowed individual companies to reign unchecked. This is quite likely your last chance to take steps to repair the situation before there's no turning back.

Thank you for reading and, hopefully, taking action on my behalf. Please contact me if you have any questions on this matter.

**Description**

Hello

Comcast has enjoyed a nationwide monopoly/oligopoly for many years, both in the areas of cable television and cable internet. Now, with customers leaving their television service in droves they have decided to flex their monopolistic muscles and begin charging customers more for the same service. Yesterday, I received a letter from Comcast informing me that they would begin enforcing arbitrary "data caps" - a concept which has no technological justification other than a vague, hand-wavey dismissal of 'fairness' - on my account.

In short, if I want to receive the exact same service I have received for years, as a loyal customer, I must begin paying an EXTRA \$50 per month to continue enjoying unlimited data. They claim that they are "increasing" their previous limits, as a courtesy to the customer - limits that were never enforced and never advertised, and therefore never actually existed. They've taken my virtually unlimited access to information, crippled it, and put an additional price tag on it.

This is a clear punishment towards the millions of customers who have opted not to purchase television service, and rely on heavy internet usage for streaming shows and entertainment. It is blatantly anti-competitive against Netflix, Hulu and Amazon, their largest competitors in the television market.

I beg the FCC to put a stop to this. There is no technical reason to enforce data caps, there is no additional cost to provide more bits & bytes to the customer. It is time to break up the Comcast monopoly; force them to rent out their service lines - divide the internet service provider from the cable lines they so greedily exploit.

America is already struggling, with other countries far surpassing us in quality and cost of internet access. We need to take action, to remain competitive in the global marketplace and ensure internet service is as cheap and available as any other utility, such as phone lines or water.

---

## **Description**

I have been switched over from a "data cap is in place, but not enforced" to an enforced data cap of 1TB. Comcast's website is filled with propaganda about how 1TB of data is immense and how it's ever so unlikely to go over. The facts they put up are untrue, and even if they were true, apply to a 1 person household. I have myself, my wife, and 3 children who consume data. We have been pushed by Comcast and others to switch over to digital this, digital that. Oh, why watch on TV? Watch XFINITY channels ONLINE!! Watch the big football game on your iPad over Wi-Fi! Now that everyone is accustomed to this way of using the internet and consuming data, they hit you with a cap that is intended to either A) Force you to pay \$50 more per month or B) cause you to be charged overages on up to \$200.

Let me put this in perspective. I play video games, and so do my children. We have 3 PlayStation 4s in our household. We have iPads, iPods, iPhones, other tablets, PCs, Chromebooks, Apple TVs, etc. The new Call of Duty game came out on November 4th (which Comcast enacted their arbitrary 1TB data cap on November 1st). The game itself was actually 2 games, and was around 130GB of data. I had to download and install this on 3 PS4s. That's close to 400GB of data in about 3-4 hours time. 40% of my monthly data cap limit.

Data, while it does cost to provide data to your customers, is not a "limited resource". 1TB cap is an unreasonable limit. It's so easy to go over that when you have a 4-5 person household who enjoy YouTube, Netflix, HBO GO, PlayStation gaming, etc.

I honestly don't know what to expect to happen with filing a complaint, but I just want to voice my concerns and opposition to this unfair move thrust upon us by Comcast. I feel I was seduced into going digital (By Comcast and others) and now am being punished for it. The cost of producing this data to their customers has been addressed in our monthly billing already. At this point setting this limit punishes customers and forces them into paying higher prices OR ELSE.

If I had another choice at this point, I most likely would leave Comcast, and I have been a LONG TIME customer of theirs. For the most part, they have treated me fairly, and addressed my concerns (only when I write them online such as via twitter or their online chat help because over the phone I'm usually treated poorly, not always, but most of the time). But this move was unfortunate, and unfair.

Thanks for hearing me out.

## **Description**

Xfinity has lied to me for the last time. They promised me extensively they would not be bringing data caps to my area (Houston, Texas) but have now instituted a cap that limits my bandwidth usage from around 70TB a month (seconds in a month x 250Mbps) down to 1TB cap. This is unacceptable and no amount of demanding to their support is getting them to keep their promise. I have no competition in my area and this is completely unacceptable situation. I would like Xfinity to be heavily regulated as a utility and fairness and decency brought back into the companies dealings with consumers. I would like fake concepts like their data scarcity bogus argument to be rejected and for them to be forced to upgrade their networks as needed to meet the bandwidth promises they have made their customers. I would like their support to be regulated to be required to have inter company communication rather than making you call back to multiple useless departments and I would really like some actual competition in my area however we can best foster that a.s.a.p. Please help consumers FCC. We need help.

**Ticket: # 1319187 - Comcast Data Cap - Unfair with regards to Net Neutrality**

**Date:** 11/17/2016 3:32:28 PM

**City/State/Zip:** Bellevue, Washington 98008

**Company Complaining About:** Comcast

---

## **Description**

I am being told that I am subject to a new 1 TB data cap by Comcast for the state of Washington. I believe that this data cap is unfair as it will limit access to any streaming services once 1080p (Hi Def) and 4K streams become the norm. I did not agree to any data limitation when I purchased internet services from Comcast and disagree with their move, which is purely a financial one as they realize people are moving away from cable services.

---

**Ticket: # 1319721 - Data Caps (Comcast)**

**Date:** 11/17/2016 6:43:27 PM

**City/State/Zip:** Riverview, Florida 33569

**Company Complaining About:** Comcast

---

## **Description**

Data caps are bad for society because all they do is limit the customer's ability to watch their favorite shows and download games. The intended consequence of these data caps is to discourage streaming and encourage purchasing cable. This isn't fair to customers because it limits their choices and also limits other companies such as Netflix. It's also unfair to customers because some people have no choice of ISP, and Comcast is the only ISP available in their area. Another big issue with Comcast's data caps is that, if gone uncontested by you (the FCC), they will likely spread to other ISP's, in which case the problem will only grow. Please take action against these data caps. They are not welcome in a world that uses the internet so much.

---

**Ticket: # 1319765 - Comcast data cap to 1TB**

**Date:** 11/17/2016 7:12:34 PM

**City/State/Zip:** Vancouver, Washington 98682

**Company Complaining About:** Comcast

---

## **Description**

Why should comcast limit people to the amount of internet we use? Personally I have a big household and everyone is connected the the router or through wifi. Which goes through the Data cap within about 15-16 days of use. Also charging 50\$ more just to get unlimited data, is bs. We already pay around 85\$+ a month for both TV and Internet with a contract, and now this is gonna raise the price to over 140\$+ a month. Which is unacceptable.

---

[Ticket: # 1319870 - datacap](#)

**Date:** 11/17/2016 8:29:14 PM

**City/State/Zip:** Palo Alto, California 94303

**Company Complaining About:** Comcast

---

## **Description**

Comcast has instituted a 1TB datacap in my area. But they do not provide any means for me to monitor the amount of data that I use. This leaves me at their mercy when they claim I went over the data cap as I have no information to counter their claim. Furthermore when they claim I went over how can I believe it as there is no way for me to check other than the information they provide me.

If Comcast is going to institute a data cap then they need to provide a method to allow its customer to check how much data they have been using.

---

**Ticket: # 1319882 - Centurylink Termination**

**Date:** 11/17/2016 8:41:39 PM

**City/State/Zip:** Baker City, Oregon 97814

**Company Complaining About:** Centurylink

---

**Description**

Today, I got a termination notice from Centurylink for "excessive usage." Which is 250GB. Currently, Centurylink does not have any form of data usage monitoring so how am I to monitor my data usage? I am still under a contract with Centurylink, and on their data cap page, they do not state they will terminate you if you go over your data cap. Centurylink has a DSL monopoly where I live, and if they terminate me, I wouldn't be able to get another ISP. After an hour and a half on the phone and 5 transfers, I am still unable to get through to anyone who can help at Centurylink.

---

**Ticket: # 1319886 - Comcast Data Caps****Date:** 11/17/2016 8:43:14 PM**City/State/Zip:** Wixom, Michigan 48393**Company Complaining About:** Comcast

---

**Description**

Comcast is putting data caps in my area even though i signed up well before this happened which was November 1st. Even though 1TB data usage seems high its only a way to get more money from people who utilize the internet to its full potential. If only 1% use over 1TB like comcast says why even do this at all? They get so much money and don't even invest it back into the infrastructure of their services. Comcast likes to pray on the non IT people of America (which is most of it) to feed them lies of why they need to charge so much for a service that isn't great or fast compared to what is out there. Please tell Comcast they are not allowed to impose data caps because it will hurt everyone that uses the internet. The reason they up the data usage is because they saw that 300GB was nothing. They bumped it up to 1TB so people would hopefully not complain or notice only to later on in a few years make you pay more for services you use because of the connection "type". FCC you need to get into the current year and make/enforce laws that protect the customer today. The laws that govern the internet are outdated and the people that make them don't understand the internet. I am disgusted at Comcast for its continued attacks against the public to make themselves rich off of lies of the service they provide. They lie at the cost of how much it takes to maintain their infrastructure only to impose these data caps to get more money that they don't deserve.

[Ticket: # 1319948 - Comcast Data Caps on Internet](#)

**Date:** 11/17/2016 9:35:38 PM

**City/State/Zip:** Seattle, Washington 98126

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recent applied data caps to the Seattle area. By their own admission, this policy is not due to network congestion, but is simply a way to double charge customers. Since Comcast exempts their own services from the cap, it is clear that they are trying to penalize customers that subscribe to their competitors services. This is an abuse of their monopoly position on cable services, and damages the nation's economy due to it's chilling effect on new business that are possible in a nation connected by high-speed internet.

**Ticket: # 1320018 - Comcast Data Caps**

**Date:** 11/17/2016 10:31:57 PM

**City/State/Zip:** Portland, Oregon 97232

**Company Complaining About:** Comcast

---

## **Description**

Comcast's recently deployed data caps of 1TB of data usage place undo burden without relative support from an equal service. While all ISP's continue to fight regulation, and reclassification as a utility in order to allow them to perform these changes. In addition, most providers are operating as monopolies within their market, yet once a competitor such as Google enters the market place they drop their rates and constraints.

The new data caps are clearly an effort to monetize a market and generate additional revenue without providing additional services. In addition, there is no transparency to the data usage metering process.

**Ticket: # 1320109 - Comcast Data Caps**

**Date:** 11/18/2016 12:22:00 AM

**City/State/Zip:** Sacramento, California 95825

**Company Complaining About:** Comcast

---

## **Description**

I am extremely unhappy with any Internet provider enforcing any sort of data cap. I am perfectly happy paying for different tiers of speed, but data caps have been proven unnecessary many times over, and are currently only used by greedy providers to rake in more money while at the same time sabotaging the free and open internet.

I would understand if their network couldn't support higher speeds with the number of users on it, but I don't believe this is the case. One the cable is there, the physical aspect of the cable doesn't change beyond maintenance needed every once in a while. To suddenly cap the pipe and then start charging more is nothing but greed and I'm very unhappy that Comcast is the only Internet provider with any decent speed in my area or I would switch immediately. This is also an unacceptable state in my opinion where the only Internet provider able to bring any decent speed is Comcast.

## **Description**

Comcast has started enforcing a data cap on internet usage. In this time and age there is no reason for that at all and to me the reason is because so many of their customers like me have dropped their cable subscription and started streaming their tv. With this cap in place and the majority of the offerings in HD the data that is used just using netflix for my family is over their cap by the middle of the month. this is ridiculous.

---

**Ticket: # 1320148 - Comcast Data Limits****Date:** 11/18/2016 1:33:42 AM**City/State/Zip:** East Chicago, Indiana 46312**Company Complaining About:** Comcast

---

**Description**

Comcast has put a cap on our data. We have gone over every month. And we have no option then to pay. My kids stream videos, from netflix and amazon. I pay for their top internet service with over costing over \$99 a month. I've had them for years and now they are screwing their loyal customer base. They don't care either. Sales people are rude and say you have to stop using the internet. Well, why pay for a premium service if they are going to extort us. They don't own the internet. This is like making us pay for air. Very unfair business practices and there is no competition to switch to and they know it. They have a monopoly. We have no way to accurately monitor our usage either. I am currently over my limit and it's only half of the month. This is robbery.

**Date:** 11/18/2016 1:03:48 PM

**City/State/Zip:** Minneapolis, Minnesota 55407

**Company Complaining About:** Comcast

---

## **Description**

To whom it may concern:

The imposed data caps are fundamentally unfair. At this time in the world, access to the internet is absolutely necessary to function as part of society. I host a cloud storage solution for family and friends, as well as utilize other cloud services for personal use and business use. These data caps will limit my ability to freely use and offer these tools. In addition, these caps are unduly unfair to families. If the electrical companies set arbitrary usage caps that did not account for large families, those with the most people in their houses would be unreasonably burdened. The data cap should not exist.

Thank you,

██████████

**Date:** 11/18/2016 2:13:10 PM

**City/State/Zip:** Marysville, Washington 98270

**Company Complaining About:** Comcast

---

## **Description**

Comcast paid the builders of our neighborhood so that they would only run cable and not phone line from the street to the homes to further limit competition.

Now Comcast is going to limit our in-house Internet at 1TB. If we go over the limit we will be unreasonably charged. We already pay way too much for our Internet. There is limited competition in our area so Comcast can charge and do whatever they like.

In the reasoning Comcast has distributed for the change they mention that the purpose is fairness to customers who do not use as much, yet those customers get no discount, or any other benefit for charging some customers more. It just seems less fair if anything. I have a large household with six people, so we use more internet. With the lack of competition in the areas due to Comcast's anti competitive behavior of buying out neighborhoods we have little option but to pay these exorbitant overage fees.

## **Description**

Comcast sent out emails a month ago stating that they are enforcing data caps now in my area. The cap is 1TB. My family decided to "cut the cord" the month prior to that. We didn't hit 1TB when we had cable with Comcast but now that we have moved to streaming , as a family, we do indeed go over 1TB a month which basically forces us to pay an extra \$50 a month just to not have cable and use other means to watch content or go back to having Cable with Comcast. The streaming services+internet cost was saving us money but now Comcast has put us in a position where they get more of our money either way. With 4k becoming more popular, and us having a 4k tv, it's not difficult to have the data add up to the cap by the time we get to the end of the month. The only other ISP in my area doesn't even offer 1/10th of the internet speeds so Comcast pretty much gets to run things as they want.

---

[Ticket: # 1321411 - Comcast is imposing data caps on my internet service at 1TB.](#)

**Date:** 11/18/2016 7:23:30 PM

**City/State/Zip:** Fleming Island, Florida 32003

**Company Complaining About:** Comcast

---

## **Description**

This data cap creates a box that online entertainment services like Netflix would be forced to compete in against Comcast's own entertainment services, such as their Stream TV service, which are not subject to the same restrictions. This dangerous precedent will allow Comcast to edge out its online competitors or force online consumers to pay overage charges in the future as entertainment requires more and more data throughput. It's anticompetitive, anti-consumer, anti-innovation, and I don't think it should be allowed.

---

## **Description**

The Internet is not something that should be tiered, closed off, capped, or restricted from anyone anywhere on the planet. Comcast is implementing new nation-wide data caps on November 1st. The internet is a basic human right in the modern era, and no entity has the right to restrict it.

As a college student at the University of Michigan, internet extremely important to me since most of my work is done online. Assignments are posted and turned in online and readings and lecture powerpoint slides are online.

Comcast went from giving me unlimited internet for \$60 a month to limiting it to 1TB for the same amount of money. There aren't any competitors in the area I could switch to if I wanted to. They have a monopoly on internet in most of the country and can get away with charging whatever they want because of it.

It is the FCC's job to fix this. Data caps should be banned.

---

**Ticket: # 1321583 - Internet data limit**

**Date:** 11/18/2016 10:40:01 PM

**City/State/Zip:** Lakewood, California 90713

**Company Complaining About:** Time Warner

---

## **Description**

I am disturbed that most home internet services around the country limit now the amount of data for home use when it costs next to nothing per GB to provide the service we pay for. Home internet is slower than it should be around the country and now they are limiting the quantity of data we can use? Bullshit.

I live in Los Angeles and the ONLY provider that offers decent speed and doesn't limit our data usage is Spectrum/Time Warner Cable. I wish there were other options so we could change companies if we chose, but if we wanted to move we wouldn't be able to.

My family uses more than 1TB of combined home internet almost monthly, downloading video games, and watching Amazon Prime videos in 1080p is where most of that comes from. I'm glad we at least have 1 carrier who isn't limiting us, but it shouldn't even be allowed with the practical monopoly the ISPs have over most of the country.

Please make it easier for smaller internet companies to spring up so there's more competition, make it required to share wires, and please make it against the law to limit the home usage of internet.

Thank you.

## **Description**

Comcast's new 1TB Data Cap is violating net neutrality and consumer rights. The enacted data cap essentially limits customers from accessing new technologies such as 4K streaming, online gaming, and even basic Netflix streaming. Like myself, those who uses cloud backup services such as Google Drive, Dropbox, Crashplan are now frozen and unable to do anything. This effectively renders households with active internet users numb and unable to use the services they're paying for.

With this new policy, Comcast is forcing companies to pay in order for their services to be excluded from this cap. Big companies who can afford this get access to more customers, while small companies and start-ups will be unable to compete. Comcast is ultimately violating net neutrality, creating an economy in which big corporates stay big and become monopolies.

What angers me more is Comcast's twisted defense of this greedy act: "Those who use more Internet data, pay more. And those who use less Internet data, pay less." Not only those who uses less data DO NOT pay less, those who pay for a faster speed are unable to use their fast internet for many things.

It proves more to consumers that Comcast is a greedy, soulless corporation to see that Comcast is charging customers upward of \$200 for going over data cap while charging \$50/month for unlimited bandwidth.

As a customer, I expect Comcast to treat customers fairly, furthermore respect consumers rights and net neutrality. It is not only Comcast, but other cable companies are keeping on this greedy, villain-like act. I urge the FCC to step in and work with companies such as Google, Netflix, and others to fight against this oppressive act and keep the internet open and free for everyone.

---

**Ticket: # 1321968 - New Comcast Data Cap****Date:** 11/19/2016 3:26:52 PM**City/State/Zip:** Fort Wayne, Indiana 46815**Company Complaining About:** Comcast

**Description**

I just received a notice from my Xfinity app stating i was almost over my 1TB data cap. I was unaware there was even a data cap (received first notice when I had 90GB left for the rest of the month which is 11 days) and after searching google I found out that it was imposed on the 1st of November without any notice to me. According to xfinity after 1TB of usage I will be charged \$10 for 50GB up to a \$200 limit for overages. I am on disability with Agoraphobia so I do not make it out of the house much if at all and I do not believe this is a fair practice. It seems like different areas are charged different rates for an unlimited option which is \$50 here. My bill is already \$120 and i'm on a fixed income. Please stop Comcast from this unfair business practice!!!

**Company Complaining About:** Comcast

---

## **Description**

Comcast is limiting monthly data usage for the purpose of penalizing customers who prefer streaming video to their own Cable TV programming. Where I live, there is no alternative to their internet service. I pay them (a lot) for 100 Mbps of bandwidth, yet they are not honoring that agreement because actually transferring 100 megabits of data would reach their one-terabyte cap in less than ONE DAY. One terabyte of data per month averages to just 3 megabits per second, which is only 3% of what I am paying for.

---

**Ticket: # 1322654 - Comcast Data Caps Complaint****Date:** 11/20/2016 6:35:46 PM**City/State/Zip:** Columbus, Indiana 47201**Company Complaining About:** Comcast

---

**Description**

I recently received a notification from Comcast that there will now be a 1 TB data cap with a fee for going over, and that this cap has been implemented based on "fairness" and that "people who use more should pay more and that people who use less should pay less". They tell me that I come in way under that cap, so it should be fine (see attached). Sure, it's fine now, for me, a single person. But what about a family of 5 with 3 kids who are all streaming tons of HD video constantly, and downloading games that are 32 GB themselves? As people cut the cord on cable and move to streaming subscription services the more data people will use. And as we move to 4k (and beyond), these shows/movies/games will only increase in size. They say 99% of users don't go over. Ok, so why is the cap even needed then? Is that 1% such a burden or cash cow? This seems like Comcast is laying the groundwork so they can gouge all of us when this happens, and then once the complaining gets bad enough they'll bump the cap. Rinse and repeat. What really irks me is the "people who use less pay less", but I'm not paying any less if I come under the cap by 800 GB or 5 GB. I only pay less if I pay for slower speeds (and that's "up to" anyway). There is an option for those who use under 5 GB a month who could receive a credit, but I would think this is a minority and will continue to decrease in number. There is an unlimited option, but it is another \$50 a month, \$600 a year. I imagine that's more than most are willing to pay on top of what are seen as already high prices. People want to be able to move larger amounts of data, faster on the internet more than ever. And Comcast is unwilling to update infrastructure and would rather squeeze as much money as possible out of their customers. What I would like to see (since Google Fiber is slowing down expansion and so no real competition is in the market) is the internet become a utility like water or electric, with municipal fiber as the setup, where cost is directly related to how much data you are using. No more ISP regional monopolies, just good consistent internet connection at reasonable prices, especially as our society becomes more and more dependent on it. Thank you for taking the time to read this. Good luck.

## **Description**

Now that Comcast has rolled out their data cap in my area, I've already been warned that I have used 125% of the data cap, and its only the 20th day of Nov. We already pay for our speeds, now they want to double dip and make us pay for overages? We're in an age of digital streaming, where we download our copies, and in effect have to keep our goods "in the DVD player" constantly because if we ever want to remove it we run the risk of overages when we reinstall games/movies/shows. We're basically being forced to limit our choices and how to use our own goods or pay extra to use them freely. That is wrong, not to mention the fact that most of these providers have their own Cable offerings and their main competitor is digital streaming like Netflix. Red flags should be thrown everywhere on this.

**Ticket: # 1322788 - Comcast data cap in area of very poor competition****Date:** 11/20/2016 9:33:43 PM**City/State/Zip:** Holladay, Utah 84117**Company Complaining About:** Comcast

---

**Description**

On behalf of my family, I want to protest against Comcast's newly implemented data caps in an area where the company is the sole high-speed broadband provider (>25Mbps downstream). Please allow me to state some history: My single income family only subscribes to an internet package from Comcast due to the high (and growing) cost of cable TV programming. All our "TV" is accomplished via streaming from the Internet through a multitude of connected devices. The four of us consume between 600-800 GB of data per month (I will not allow torrenting or bandwidth hogs, due to their possible illegality or because we just cannot afford the bandwidth). We only stay under the 1Gb data cap by limiting all video streams to low-to-moderate bandwidth, occasionally splurging for an HD movie if we've been scrupulous enough with our monthly data cap allotment. With my children about to enter Junior High and High School, I am greatly concerned that our bandwidth will exceed Comcast's data cap and I'll have to pay more money to keep my family connected to the Internet. Personally, I would be okay with paying for bandwidth if there were other viable Internet competitors in our area. However, CenturyLink hasn't had greater than 3Mbps downstream in our neighborhood for more than 8 years. Other satellite, microwave, or other options are cost-prohibitive. I'm hopeful Google Fiber will expand beyond their current footprint in Salt Lake City and will gladly pay connection fees to enjoy their greater bandwidth. However, at this time, we have no choice but to subscribe to Comcast's Internet plan to stay connected to the world and I am compromised to pay for that luxury without any other recourse.

**City/State/Zip:** Pensacola, Florida 32526

**Company Complaining About:** Cox

---

## **Description**

I have Cox communications in Florida.

My sister is the account holder, and we pay the bill together for internet. We just received a notice for an increase in our monthly rate, and then found out that the provider is enforcing a data cap now.

This is not something that should be allowed. People aren't charged more for the amount of tv they watch-they shouldn't be charged more for using the internet in the same manner. I'm not sure how they can get away with increasing our bill AND limiting our data to a certain ceiling-which was certainly never there before-in the middle of a billing cycle without warning. That said-the issue here is the data cap above all else!

This move by Cox and other ISPs in the news lately has been nothing but a blatant cash grab, and I certainly expect the FCC to say and do something about this. I know we're not the only ones complaining.

I will continue to write every day if need be and encourage others to do the same until the FCC puts the ISPs back in their place.

## **Description**

Hello,

I am not one to normally write in to my representatives / government entities complaining, or pointing the finger. During CASAA (e cig legislation), I wrote a few letters to state senators and representatives, because it was the right thing to do, and it proved to really not be too hard- unfortunately though, it didn't pay off. I suppose with E-cigarettes, there is just too much "unknown" still, and until the research/science is in, it will be hard to prove or promote otherwise (IE "healthier" alternative - even though it absolutely is).

But I'm not writing to discuss e-cigs and CASAA. I'm writing you sir's and madam's, today, to discuss something that has been spreading like a cancerous growth upon the very fabric of our digital lives and society: Comcast. To keep this short, I will sidestep the burgeoning goliath of a monopoly that comcast is, and the effect this has on a fair and open market. As much as it aggravates me, if they were simply to be more in tune with the PEOPLE, and internet rights in general, I wouldn't have a problem with fat cats getting richer (please don't assume from my prose or language that I am a liberal- I am a decidedly average moderate), and everyone getting free and open internet.

Comcast, however, along with a number of other conglomerates and ISPs that I don't wish to name for the benefit of your already precious little time, sirs/madams, has instead decided that they outright OWN the internet coming to your home, by the very toxic and fallacious logic that is "we own the CABLES bringing internet to your home, therefore we own whatever passes through them". I've always had an issue with this philosophy as well, as numerous other public and private entities, some as large as comcast, share a similar scenario, but don't claim such preposterous and convoluted policies. The closest similar example I can think of is the airlines charging additional fees for more than 1 carry on, and all cargo luggage- however there is one problem with this: such increases were implemented during a time of severe oil price hikes and increases, and less utilized air transportation due to the recession. So to combat their ever dwindling profits and layoffs, most airlines decided to begin charging for things they hadn't in the past- meals, luggage, priority boarding even! This however, wasn't a perversion of the system to make them richer; no, it was simply a business practice evolution to keep them alive and relevant in an ever changing world.

Sorry, I have not held to my declaration to keep this short and sweet, however we are almost to the finish line if you can only continue hearing me out for a short while longer. Comcast may argue that today, with the netflixes, Hbo go's, cable cutters, and more and more cellular data plans, they are also imposing such a cap to keep their business alive. We all know this is outright false, and a lie at that. It may hold true for comcast's television business, but if the cost of comcast and other television service providers slowly losing business and customers is to frivolously increase and artificially inflate the price on the one thing they are NOT short on- home internet subscribers- then they have gone completely awry of their original mission and need public and government interference. For the PROTECTION of the public and the "free and open internet", and its usage not only for our generation, but for generations to come, we MUST declare what comcast is attempting to be irresponsible and immoral and swiftly struck down, possibly even severing their internet arm from the rest of their business.

But again, I digress...my most sincere apologies for the lack of control I am displaying in expressing my frustrations. They have grown to such magnanimous proportions that sometimes they ebb, and other times they flow, hence the rant you are reading ;). If there is one thing I wish to see come from this, it is to gather our elected representatives (all of whom are also receiving this letter), and at the behest of the public at large, and the very internet as we know it to be, free and open, STOP COMCAST'S BLATENT VIOLATIONS OF CORE AMERICAN VALUES AND TENANTS, such as freedom of speech, religion, and protest.

Comcast insists this "data cap" is not being placed to merely generate income and restrict legitimate users who are ALREADY paying MORE than they should be for the lackluster services they receive; no, comcast instead says this is an engineering requirement, and a matter of fairness for all customers usage, and simply an issue they should police internally with little to no outside interference. However, they have contradicted this very position NUMEROUS times, with different excuses and justifications.

Now, we get into the true meat and potatoes of my plea to you good sir's and madam's: Don't let comcast lie to you or the public another day to bully their way into abusing the privilege of being an internet service provider (if for nothing else, for the interest of free market and capitalism!)

#### COUNTER POINTS TO COMCAST'S EXCUSE OF "ENGINEERING NECESSITY":

- 1) Comcast employed the data cap for people abusing the service, pirating and sharing large content such as movies and games. This was back in 2007. They have NOT adjusted this to current day, however. Today, the vast majority of american's get some form of entertainment online: be it through netflix, amazon, or traiditonal providers online services/counterparts. One very "convenient" thing to note, is that XFINITY doesn't count toward this cap. So on-demand programming is accessible all you want. Netflix, however, will eat up that cap QUICK, especially with the upcoming mass-scale adoption and advent of 4k video.
- 2) Comcast also doesn't take into account services such as youtube, twitch, and the gaining popularity of user-created content and streaming. These also take up a huge amount of data, especially with the incoming 4k video.
- 3) Gaming has also moved to the digital platform- today the average game is 50-100 gb (yes, GB!!!), and at least 1/3-1/4 of these games are ONLY available as a digital download! Now, I'm by no means a professional video game player/reviewer, however I EASILY but 5-10 games a month, it's a hobby I enjoy! Just by downloading my LEGALLY PURCHASED GAMES, to play at home OFFLINE, I could in essence use 500gb a month!!!

I could go on and on, but I really should cut short as I said I would and give you some time to digest and reflect. Think of your own usage- in 2 years, when 4k video is out, your average netflix show will consume 4-5x the data it does now. So binge watching house of cards? YOUR ENTIRE DATA CAP RIGHT THERE.

**Ticket: # 1323380 - Comcast Data Caps**

**Date:** 11/21/2016 1:43:50 PM

**City/State/Zip:** San Jose, California 95128

**Company Complaining About:** Comcast

---

**Description**

Comcast is taking the profit driven approach to capping people's data usage, without reasonable competition in their service areas for people to show their displeasure by changing to another provider. If you want to keep the unlimited access you've had for years? It's now an extra \$50. For the same service.

<https://www.engadget.com/2016/10/06/comcasts-1tb-data-caps-start-to-roll-out-nationwide/>

It's a bigger deal than that because they'll show that they aren't losing many customers after the move, which will show other ISPs that they can do the same thing, overall worsening the internet access of millions of people for the benefit of a few board members and investors.

America is already behind most of the other major countries in the world in terms of our access to the internet in both pricing and speeds, and this tactic is absolutely not going to help.

Weren't we supposed to be fostering more competition between companies, and improvements to internet access overall? How is this game of chicken race-to-the-bottom approach helping anything but Comcast's bottom line?

## **Description**

I entered a contract for internet only with Comcast about four months ago. At the time there was no data cap. My family utilizes streaming services for tv and now I feel I am being punished for it. I don't see how it is legal for a company to all of the sudden add a restriction to a contract. I feel they do this to get you to buy their television subscription. I also feel they know that some people have little or no choice on internet service providers, so they now you won't jump ship to another provider. I spoke to a Comcast representative who said they can't change contract pricing or give me the unlimited service at no extra charge, but yet they can change pricing when it conveniences them and not the customer. Something has to be done about these huge companies and them taking advantage of customers and monopolizing the market in some areas.

## **Description**

The data cap put in place on 11/1 is not enough bandwidth for a family of 5, with computer updates, software updates, video game updates plus streaming video and music, we use up the data pretty quickly. This cap will hurt consumers as well as businesses. Comcast already has a monopoly on internet service in my town, we need the FCC to protect the consumers from Comcasts unfair business practices.

**Date:** 11/23/2016 1:10:40 PM

**City/State/Zip:** Parker, Colorado 80138

**Company Complaining About:** Comcast

---

## **Description**

I became a comcast customer 4 months ago without a word about dat caps. After three months of regular use, I have been placed on a data cap of 1 terabyte a month. I have a very large family with no extended family living with me. I have 6 kids, My wife and I both work from home. Now I will have to pay \$50 above the \$70 I pay now for "unlimited" data or pay \$10 for every 50 gig block I go over. Comcasts response to this is that this is a Policy change and not a breach of our contract, which I find ridiculous. Please STOP THE CAP!

---

**Ticket: # 1326380 - comcast 1 terabyte data cap**

**Date:** 11/23/2016 1:13:31 PM

**City/State/Zip:** Kalamazoo, Michigan 49009

**Company Complaining About:** Comcast

---

## **Description**

Comcast's "new" 1 terabyte data cap is completely anti-consumer, monopolistic behavior. This new billing/business practice is a blatantly obvious attempt to dissuade people from "cutting the cord," and consuming what was once television-only related content on their computers and other streaming devices. Comcast claims that "One percent or less of their customers consume one terabyte a month." I feel this statement is grossly misleading and flat out false. I complained about this issue before back in late september/early october where they sent me a letter claiming that my household only used 1.1 terabytes in a three month period, but offered not information other than that. In a 23 day period my house hold at the time of writing has already allegedly consumed 900 gigabytes of data. At any one time there are 16 wireless and wired devices using the internet at varying times of the day. At least half of these devices, including phones, tablets, and roku streaming devices (My household is a "cord cut" household.) That constantly transmit data every second of every day, no matter how small. Over the course of a month this adds up to a lot of data, not including the high-definition videos/music that are streamed through these devices, or games that are played/downloaded online. It is completely unreasonable for Comcast to charge customers for a service they had no problem providing just a few months prior, let alone charging extra for essentially the same service they previously offered. There service has not improved in any manner to warrant such a change or egregious pricing changes, asking customers to cough up an extra fifty dollars for something they had access too not just one month ago at the time of writing this complaint. I respectfully demand the FCC stand up for consumers and for an internet free from monopolies like Comcast, who charge what they please for sub-par service and then go out of their way to spend tens of thousands or millions of dollars to bully competitors with the help of our so called legal system, just so they don't have to offer their services at a competitive rate. From now until the foreseeable future, I will be logging a complaint everyday until the FCC takes the right steps to protect American consumers from greedy monopolies such as Comcast and AT&T. I do not want to hear from Comcast as to why they think they can cap my data usage this month, when the prior months and years they haven't. I don't want an apology from Comcast. I want to be able to browse the internet as I see fit, for however long I see fit, as consumers have rightfully done so in the past. If Comcast really wanted to make more money, they would offer better services and options to their customers than they do currently. I shouldn't have to pay an extra fifty dollars for a service that is already costing me nearly one hundred, when they bully prospective competitors such as Google Fiber from coming to areas like mine who offer a better service for a reasonable price.

---

**Ticket: # 1326416 - Data Caps****Date:** 11/23/2016 1:34:51 PM**City/State/Zip:** Atwater, California 95301**Company Complaining About:** Comcast

---

**Description**

The company is attempting to charge me \$50.00 extra to remove this new data cap. When I ordered the service a man name Jake came to my home and I asked him about data caps and he confirmed and reconfirmed with his supervisor that they would not impact me.

It appears that they have rescinded this promise and are charging me for exceeding a data cap of 1024GB. My children, my wife, and myself are almost constantly streaming HD video services. This data cap is laughably small. It appears that they are doing this because they want me to keep their inferior entertainment services. I did not need television as we stream HD video over the Internet. This is just another example of what happens when a single company monopolizes the market for Internet connectivity. They're attempting to force us into their vertical integration.

I have spoken to over 20 people at Comcast in an attempt to resolve this injustice. The last person I spoke with on Saturday was a Toni, Comcast operator ID 3280. They promised they would remove the data cap. I had them reconfirm that this would be resolved, and they said I would have to do nothing else and it would be taken care of.

This morning, I'm still receiving messages maliciously injected into the HTML of various websites that I've exceeded my data cap. I called back and spoke to a man who identified himself as Diego and refused to provide me with an operator ID. I asked to speak with his supervisor, and he transferred me to a support person, not his supervisor. I then spoke to Venessa operator ID 259 who provided me with no positive interaction.

This company is disgusting and unscrupulous. They make promises that they have no intention of keeping. They have purposefully isolated the department that handles data caps from the rest of the organization and no one is on the same page.

---

**Ticket: # 1326686 - COX INSTITUTING DATA CAPS ON INTERNET ACCESS**

**Date:** 11/23/2016 3:57:37 PM

**City/State/Zip:** Gainesville, Florida 32608

**Company Complaining About:** Cox

---

**Description**

I am filing this complaint once again. You sent my complaint to Cox, who in turn sent me a pre-printed form letter. This is NOT what my tax dollars are paying for. I don't care what Cox has to say about their own behavior, and I certainly reject any explanation of theirs behind their anti-consumer business practices.

I expect and demand YOU, the FCC, to do something about it. Their data-cap behavior is a blatant violation of the net neutrality ruling, especially when examining how their internet and telecommunications services are delivered.

Without any action on your behalf, you are admitting that you lack the conviction to stand behind the 2015 Title II ruling, rendering it meaningless to consumers.

DO NOT FORWARD MY COMPLAINT TO COX. I DEMAND THE FCC TAKE ACTION. I AM STATING IN ADVANCE THAT FORWARDING MY COMPLAINT TO THE CARRIER IS NOT AN ACCEPTABLE SOLUTION.

Both I and consumer groups that understand this issue will continue to demand acceptable action from the FCC until this problem is solved in favor of taxpayers, and not corporate interests.

Without notifying customers, Cox has instituted a cap on data access, as shown on their website:  
<http://www.cox.com/residential/support/tv/article.cox?articleId=2fd6ccb0-b13a-11df-4be3-000000000000>

This type of behavior is inherently anti-consumer and is a blatant attempt to circumvent net neutrality principles by being able to provide certain services that "don't count" against consumers' data caps. This is preferential treatment of web traffic, which is anti net-neutrality. Until the FCC takes action against this behavior, your ruling on net neutrality is meaningless. Consumers expect that you will protect this ruling and not stand idly by while cable companies invent ways that skirt the decision. This is a serious issue that will impact the future of broadband access in this country, a state of affairs that is sorely behind many other countries in the rest of the developed world.

As a taxpayer, I expect and demand that you put an end to this behavior immediately. Allowing this to continue is a statement that you are unwilling to stand behind consumers to police toxic behavior by ISP's.

Cox is also in blatant violation of the Title II ruling right now:

<http://www.cox.com/residential/support/tv/article.cox?articleId=2fd6ccb0-b13a-11df-4be3-000000000000>

"Content managed by Cox included in Cox-provided services do not count toward data usage."

So, they are prioritizing certain traffic (their own) by not charging consumers for it, but potentially charging them for the rest. This isn't about today. This is part of their plan to get data caps to be common place in the mind of consumers so that 10 years down the road when the average Joe uses over 1TB of data through normal activities, the cable companies can bill them through the roof.

This is not acceptable. As a taxpayer, I demand that the FCC stand up to this practice now before it becomes too late. These companies, instead of investing in their own infrastructure, are investing in lobbying to keep consumers held down as long as possible.

Imagine if water and power companies, instead of figuring out how to make the grid more efficient and stable, instead decided to launch political campaigns dedicated to persuading people that they don't really need water as much as they think they do. That's what the cable companies are doing right now. It's the FCC's job to stop exactly these types of activities. You need to step up to the plate now.

**City/State/Zip:** San Jose, California 95134

**Company Complaining About:** Comcast

---

## **Description**

Comcast is penalizing video streamers with this 1Tb data cap.

If you stream video using services like Netflix and Amazon Prime, it is VERY easy to hit that 1 TB limit by the 15th of the month. I just did, and it is frustrating to have to pay Comcast another \$50 extra for an internet connection.

Any household streaming tv services like Netflix where you have 2 or more people using it at any given time of the day on a daily use as your main tv entertainment source is going to breach that gap, guaranteed and Comcast knows it.

When it comes down to it, this is nothing more than Comcast regaining the money lost from everyone dropping their cable service for such services as Netflix. They had to find a way to let you still stream Netflix and get their money. They figured out a way, and consumers in multiple states are paying the price.

This is a ridiculous burden on consumers that stream video and download files from the internet, and Comcast should be stopped from doing this.

**Ticket: # 1327218 - Comcast Data cap**

**Date:** 11/24/2016 2:06:46 AM

**City/State/Zip:** Pasadena, Texas 77505

**Company Complaining About:** Comcast

---

## **Description**

Comcast is imposing data caps on my internet service at 1TB.

This data cap creates a box that online entertainment services like Netflix would be forced to compete in against Comcast's own entertainment services, such as their Stream TV service, which are not subject to the same restrictions. This dangerous precedent will allow Comcast to edge out its online competitors or force online consumers to pay overage charges in the future as entertainment requires more and more data throughput. It's anticompetitive, anti-consumer, anti-innovation, and I don't think it should be allowed.

## **Description**

Hello, I am filing this complaint against Comcast due to them having placed a stupid, cheat skate way to try and screw over consumers in the regards of a "data cap". I am a very big media consumer, i.e Video games, movies, music and software. I also upload digital 3d models for friend and family to use. This cap hurts me financially because with all of that, I easily can go over the bogus "1tb" of allocated bandwidth. Comcast has already admitted that its costs them nothing to keep the cap unlimited. I am not pleased at them trying to screw me over for money they claim they don't need. Secondly, the price per 1gb over is stupid. In my area they told us it would be as much as \$50 USD per 1gb of overages. Please step in and put a stop to this horrible practice!

**Ticket: # 1327526 - Data Limit****Date:** 11/24/2016 7:32:34 PM**City/State/Zip:** Eugene, Oregon 97401**Company Complaining About:** Comcast

---

**Description**

Comcast has elected to begin imposing a one terabyte data usage limit on the Eugene, OR area, which I find in stark disagreement with the original sale of my service. Where my original service was, and continued to be until November 1st of 2016, unlimited, as of this date of policy change my service will be limited to one terabyte or 1,024 gigabytes of data allotment with a \$50 surcharge (71% of what I currently pay as a monthly cost for my service) added to my monthly bill to return to having unlimited data, or an additional \$10 for each 50 gigabyte block of overage, capped at \$200 in overage charges. These changes benefit the wallets of Comcast's corporate branch with absolutely no benefit to its customer base. This is simply another way for them to attempt to inflate their profits without having to provide a better service to customers who have taken to Netflix, Hulu, HBO Go, and other media streaming outlets over the traditional cable set-top box.

Furthermore, Eugene has a large student population. Many of these students have multiple devices (my household of five roommates included) that they use to work, study, and in their free time, use the internet including streaming services. Many of these students (my household included) do not have the financial means to pay these exorbitant data overage charges or pay more for unlimited data. It is absolutely ridiculous to impose these data caps on students, many of whom already subscribe to Comcast bundled TV/Internet services.

Given that my service includes Comcast TV, this is simply another attempt by Comcast to line their pockets with extra money and take advantage of those already paying their services. This data limit is clearly an attempt to make up lost profits from less people subscribing to cable service and the lost subscriber fees.

---

**Ticket: # 1327635 - Dish enforcing 5GBs data caps**

**Date:** 11/25/2016 12:20:07 AM

**City/State/Zip:** Floresville, Texas 78114

**Company Complaining About:** Dish Network

---

## **Description**

Floresville is a small town in Texas with few Internet Service Provider options, and one of them is Dish Network. Dish Network is offering satellite internet to Floresville, but with tiny data caps and throttling heavily when the data allowance is met; the data caps range from 5 gigabytes to the highest of 15 gigabytes. We contacted Dish Network and the ONLY options they gave us was to upgrade from a montly allowance of 5GBs to 15GBs or to cancel our plan outright. They have no intentions of offering unlimited data or working with us beyond upgrading our plan.

I put that I'm filing on behalf of someone due to the fact that it is my grandmother's house and her name is on the bill, not mine. I am living with her, my grandfather, and my mom in her house so I feel the effects of the limiting data caps, but I wasn't sure if I should mention that my name is on the bill or not.

---

**Ticket: # 1327645 - Comcast Data Cap Implementaion****Date:** 11/25/2016 12:46:03 AM**City/State/Zip:** Milwaukie, Oregon 97222**Company Complaining About:** Comcast

---

**Description**

I would like to file a complaint towards my ISP, Comcast. Due to their monopolistic hold over my area they have gone ahead and inacted this data cap for home users. The cap is at 1TB which my today's standard is ever-so shirking. I and thousands of other customers feel that we as consumers are being held hostage. Comcast has free reign to do what the so choose to their customers due to lack of competition.

This data cap also hinders the development of new technologies because some developers might have to worry about their internet usage rather than to focus on developing new ideas. I also feel that this problem also is possible due to the corruption in your agency and the majority of other federal government agencies. I will leave it at that. Its sad that there are other countries which have a fraction of our economy yet have found ways to offer better broadband at lower prices to their citizens.

---

## **Description**

I am writing to you to complain about the newly instituted data caps by Comcast Xfinity. The introduction of these caps are concerning to me. While Comcast claims fairness, it appears that they are simply acting with greed to extract more money from consumers. They claim that it is "only fair" that those who use more, should pay more. In this case, I disagree. My family uses the internet for a host of reasons; homework/education, research, surfing, video streaming, and backing up our important data to an offsite location. As a result we regularly go over the new caps that Comcast has introduced. While they claim that I am among a small percentage who use this much data, that population will grow as people become more and more dependent on internet usage. Additionally, as streaming content grows in quality, the bandwidth required will also grow. This will result in more and more people going over their new data caps. This "limit" is unacceptable and appears to be an unscrupulous attempt to combat users utilizing video and other services they aim to sell.

Unfortunately, I have very limited options at alternate service providers who can offer the speeds which Comcast does. I hope that this letter is met with reception in looking into the practices of Comcast and this unacceptable behavior that they are engaging in. I'm not a fan of regulation, but in this case I'm hoping that you can step in to right this wrong. Thank you for your consideration and understanding of a very frustrated consumer.

**Ticket: # 1327965 - Comcast Data Cap Number Issues****Date:** 11/25/2016 3:05:04 PM**City/State/Zip:** Lansing, Michigan 48910**Company Complaining About:** Comcast

---

**Description**

I am writing on the issue of Comcast's data numbers for my households internet plan. When we first heard news of the implementation in October we catalogued our data usage and decided to adjust our usage based on that. As shown in the attached image on our October usage we were 400 GB below the 1 TB cap at the end of October. However yesterday we received a message from Comcast that we had only 99 GB left for this month. Today that number has gone down to 45 GB when we woke up and now 33 at the time of this message shown in the attached picture despite no internet data usage that severe since that time. Let alone enough to justify such a large increase in our used data.

Contacting Comcast has given us little answers beyond standard talking points on what we 'must' be doing to justify the high data usage we have. I have cited Comcast's own data usage estimate as shown in the third attached image to say how our average internet usage in this household should be well below the 1 TB cap yet have received little to assure us they will look into this. I am writing then to ask for assistance as by every piece of information I have available to me our data usage should currently be far lower then it is given previous months and Comcast's own estimates. If the FCC needs any more information beyond what I have provided here please e-mail me as I would like to resolve this issue before the two courtesy months Comcast gives out are gone.

**City/State/Zip:** Lansing, Michigan 48910

**Company Complaining About:** Comcast

---

## **Description**

Ever since Comcast enacted their 1 tb a month plan my family and I have cut down on our internet usage. Before it was instated we barely went over 1tb if at all, and afterwards for the first month we were way below it. Now, inexplicably, we only have 30gb left this month - and we started the day off with 43gb, just a few hours earlier! Yesterday night we had 99gb left! We have not downloaded any games or anything, and these low numbers in the first place had us barely using the internet. It's frankly unbelievable that they can skew numbers like this to extort more money out of us. When we tried to contact Comcast about this our internet very suspiciously turned itself off for about 10 minutes in the middle of the call.

---

**Ticket: # 1328015 - Comcast 1TB cap anti-competition**

**Date:** 11/25/2016 3:50:23 PM

**City/State/Zip:** Grass Valley, California 95945

**Company Complaining About:** Comcast

---

**Description**

I am suddenly being capped to 1 TB of usage when i previously had unlimited for the same price. I am already paying \$70 a month just to get decent speeds and now i'm being asked to fork over another \$50 on top of that just to keep my unlimited data which i require to watch TV through other non-comcast services such as netflix, amazon, and playstation.

I have a family of 4 who all stream tv and movies, download video games, and regularly back up their PC's to the cloud. This causes my usage to spike as high as 2TB during months multiple new games or movies are released. This cap is nothing more than an attempt by comcast to force consumers to pay for their own subscription TV service which uses no data - comcast thinks they can simply use a loophole to force users to come back to them.

In addition I have been unable to even see how much data I use without calling their customer service and sitting through their sales pitch because both their website and their mobile app give me errors when i try to see the usage - these errors have been showing up continuously for months .  
ATTACHED IS A PIC SHOWING THIS ERROR.

I also worry about data injection comcast is using to make pop-ups appear on my browser when i go over the cap, this is clearly a breach of privacy and worries me greatly.

In conclusion, my family is being forced to cancel Playstation Vue, Netflix, and Amazon Video due to the new data cap. We are not willing, nor could we afford to pay an additional \$50 just to continue watching my shows. COMCAST EFFECTIVELY IS FORCING MY FAMILY TO CANCEL THEIR COMPETITORS TV STREAMING SERVICES IN AN ATTEMPT TO REGAIN SUBSCRIBERS TO THEIR CABLE TV - I REFUSE TO PAY EXTRA SO I AM BEING FORCED BY A MONOPOLY TO CANCEL THEIR COMPETITORS SERVICES. COMCAST'S MONOPOLY NEEDS TO END.

**Ticket: # 1037337 - XXXXXX XXXXX's complaint re: ISP Zero Rating**

**Date:** 6/15/2016 10:28:06 AM

**City/State/Zip:** East Windsor, New Jersey 08520

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

First a little about me personally. I have Verizon DSL. My ONLY other choice would be Comcast. I have no idea which level of Government is doing this to me. All I can do is try to choose the lesser of two evils as the rest of the civilized, "free" world enjoys <much> faster, <much> cheaper internet without having to try to fight off their internet providers on a nearly daily basis. There are people much more qualified to let you know how crooked Comcast is, so let me tell you about Verizon (I like to call them Verslyzon) a little bit. They were going to raise my rates a few months ago for no particular reason other than they felt they could get away with it until I said the magic word: Comcast. I had to threaten them with cancelling on the spot. I have to withstand a barrage of FIOS commercials everywhere! I can't watch TV, get my mail, look at one of their trucks or live my life without being urged to get FIOS, WHICH I WANT (in spite of the outrageous price) and WHICH I CAN'T HAVE because they won't use any of their money to build up the network. On the contrary, they don't even seem to be maintaining their network from a throughput standpoint. I own my DSL modem and it's a good one. They could easily provide me with <AT LEAST> double the speed I have now; probably more. They've admitted that. They insist on making me jump through hoops, cancelling my phone line and installing a business line, at exorbitant cost, in order to do what requires only typing in a command on a computer running some DSLam's and removing a block!! I understand they not only didn't pay any taxes, but got a several hundred million dollar tax refund one year!? Don't you find this at all shameful!? Is this the American way!? How about letting me have just a little of my money back so I can afford to move somewhere else; would that be feasible?

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. ## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As a Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules. Thank you. Not surprisingly, ISP's are trying creative ploys to give unfair advantages to those who can afford to pay: they're charging websites and apps to be exempted from customers' data caps.

These programs create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

These plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**City/State/Zip:** Land O Lakes, Florida 34639

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

<https://www.techdirt.com/articles/20160603/06530234613/broadband-ceos-admit-usage-caps-are-nothing-more-than-toll-uncompetitive-markets.shtml>  
~~~~~

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

A while back cox increased their data cap for the "Ultimate" tier to 2TB. Recently, however they have cut it back to 1TB. This type of bait-and-switch tactic is blatantly unethical, and should be illegal. Data caps need to go.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have. I want an Internet where I can use any service regardless of what my ISP thinks.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use. The artificial scarcity principle AT&T uses to make me pay more for "data" is downright stupid. Also, I shouldn't be limited to certain sites when I'm out of "data" just because my ISP says so.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As a Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. [Ticket: # 1039334 - Data Caps / Charging for Extra Data](#)

**Date:** 6/16/2016 6:23:47 AM

**City/State/Zip:** Waynesville, North Carolina 28786

**Company Complaining About:** AT&T

---

## **Description**

The only internet service available in our area is AT&T, and they only offer us their DSL, not their fiber service (UVerse). We have a data cap and have to pay extra whenever we go over the cap. This seems to be an arbitrary cap and feels like gouging as we have no alternative. Data caps are unreasonable, especially when AT&T has no competition. Thank you for your time.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Internet providers everywhere have already said that Data Caps serve literally no purpose other than to get more money from customers. I believe this is a net neutrality/open internet issue because it is severely limiting the public's ability to use the internet in ways they see fit. We should NOT have to plan out how much data we are using per month because of some outrageous data caps that the ISP has brought down upon us. We actually had to upgrade our internet once already in order to have a "higher bandwidth limit" so we would not get charged crazy amounts of money per month every month. Instead we now pay an extra \$10 per month instead of \$20 for going over the cap. We now are paying for unnecessary speed and higher data limits. We would change over to another ISP if they didn't also have data limits and lower speeds. Mediacom is a Comcast company and it is showing it. The reason I am saying that about Comcast is because they are literally a company made up of only greedy people.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

I have had service with CenturyLink since June of 2014. When I first set up service I asked the rep if they had a data cap and she said no. When the installer was at our house he told us no data caps have fun. I pay for 40mbps and the following is taken directly from your website about buying 40mbps:  
"40 Mbps

Perfect for a family with tons of Internet-connected gadgets

Bring more speed to every online game

Everyone in your home can download, stream, create and share all day, every day."

That is a lie because you are capping data usage on that plan if you use too much you get canceled or buy business class so how can you use it all day everyday with multiple users and not violate excessive use policy?

On June 8, 2016, I received a popup saying that I was in violation of their excessive use policy and that I had the option of upgrading to a business plan or have my service cancelled. I was confused so I first chatted and asked why I was being sent warnings because since I have been a customer my data usage did not change. They told me that it has always been the policy and that after 6 months they cancel service. I asked what my usage has been for the year. Customer service could not answer that question so I had to email tech department. They told me that I have been going over their data allotment since July 2014. I was told there was no data cap in June 2014 when service was installed. I was still confused because my usage had not changed since service started so why was I now being threatened to pay more or get service canceled. I called customer service to get dates of policy changes since they do not date their updates. I also asked where the data usage tool is because the last service provider who had data caps at least gave a tool to monitor. There is no such tool. I was told that I should not stream on Hulu or Netflix because they consume too much data and the rep said the solution to my problems was to bundle DirectTv with my internet so I do not use so much data. This seems to be in breach of open internet policy because it benefits them to get money for DirectTv bundle. I wasted two hours of my life when trying to get questions answered and the run around of being transferred to 6 different people and waiting for two hours to chat with someone. on June 15,2016. Then I tried to talk to a person in tech department about my data usage and he tells me that there is no data cap. I read him the email and explained that I received a popup. He apologizes and tries to help me at first, but then comes back and reads excessive use policy which I already read when I got the popup on June 8, 2016. It was the first notice that I had seen. Why a popup and not an email? Seems shady to me. I asked for a supervisor who started talking over me and would not answer a single question. Then he transferred me to someone in the "policy" department who would not let me talk or answer any questions. He told me I had been sent two popups another in March. I never received one in March. He said the one on June 8th was my last warning and I had two options upgrade to business class and pay more money or cancel service. This sounds like a business that has gotten too big and is monopolizing the business. They are trying to block users from streaming movies because they also are in business with DirectTV which is a

violation of open internet. My usage has been the same, but all of a sudden I am a problem and CenturyLink wants to force me into a more expensive business class or leave. I have paid my bill faithfully since June 2014 when service started. I was told by the "policy" department I was lucky that they did not cut me off sooner. He said it did not matter if all the people I talked to gave me wrong information. How does a business get away with lying and saying that it does not matter? Violation of open internet, horrible customer service with supervisors condoning flat out lies, and not informing customers that a new policy was being implemented until they receive a popup which can be easily missed. CenturyLink has become too big to provide decent customer service, and there are many people voicing the same issues.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1040350 - Cox Cable Monthly Data Plan (cap)**

**Date:** 6/16/2016 2:58:36 PM

**City/State/Zip:** El Cajon, California 92021

**Company Complaining About:** Cox

---

## **Description**

Hello,

Today I found that Cox Communications had lowered my allotted monthly data usage by 50%...from 2TB combined upload/download, down to 1TB.

It is bad enough that an ISP (who charges me BANDWIDTH) already limits the amount of DATA I consume with that BANDWIDTH, but now they've gone and reduced the amount of Data I can consume by 50%!

When I sign up for service with an ISP, I choose different plans that list the amount of BANDWIDTH I am going to be provisioned and pay accordingly. DATA caps for an agreement like this do not make sense.

If I were to fully utilize the BANDWIDTH I am provisioned (300Mbps right now) I would run out of the DATA Cox Communications is capping me at (1TB) in 8.1 hours...I wouldn't even make it through half of a day.

So why am I being charged for BANDWIDTH if I cannot fully utilize it?

If Coc Communications wants to limit DATA, why not provision all users the Max BANDWIDTH available, and then cut them off at the DATA cap?

See what I mean? It doesn't make sense.

In this day of HD video, where US citizens are consuming more of their media over the internet rather than through cable/satellite/OTA data caps not only don't make sense, they're illogical to begin with.

To use an example, I watch Netflix at my home; Netflix uses: "3 GB per hour for HD and 7 GB per hour for Ultra HD".

Lets say I alone watch 3 hours of Netflix a night for a month, I am already at 270GB (for just HD, and I watch UltraHD from time to time)...but for the sake of the argument we'll stick with HD.

That is MY usage only, there are 2 other people in my home who ALSO watch netflix, at the same or at a greater rate than I do.

That puts us at the very minimum 810GB of DATA usage (from Netflix ALONE...).

This doesn't account for any other traffic on the network, it is very easy for us to go over 1TB...last month I hit 1556.96GB, the month prior I was close to the 2000GB mark.

Media consumption over the internet is only going to increase, and with higher quality media being more readily available DATA usage is going to increase exponentially.

Please help the average American's plight against the mega monopolies our ISP's have become.

The internet has reached the point of necessity, it is no longer possible for citizens to exist in our world without internet access so why isn't the internet being treated the same way as Electricity and Water are...as a utility.

Please help us, citizens themselves simply don't have the power to force large corporations to change, we need the help of our government.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 1041031 - COX Internet monthly data cap](#)

**Date:** 6/16/2016 6:19:25 PM

**City/State/Zip:** Phoenix, Arizona 85042

**Company Complaining About:** Cox

---

## **Description**

Hello,

COX has placed a Data Cap on my Internet service, this places undue burden on me as being a software developer I need a high bandwidth connection with no cap on data usage as I sometimes need to transfer large files & backup my data to the cloud. The basic task of backing up my data on the cloud would cause me to go over on my 1TB limit. This is a burdeon on me as there is no other ISP in town who serves residential customers with the data speeds that I need, so I am stuck with COX.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

**Ticket: # 1041338 - Cox Ultimate Internet Package Data Cap****Date:** 6/16/2016 8:59:27 PM**City/State/Zip:** Midwest City, Oklahoma 73110**Company Complaining About:** Cox

---

**Description**

For the past year that I have subscribed to Cox Ultimate Internet, my data usage cap has been 2TB. Just this month I noticed that Cox has reduced that data usage cap to 1TB. When I contacted their customer service, they explained that they lowered it from 2TB to 1TB because nobody uses over 1TB. Yet, several times a year my family does use well over 1TB, especially during the holidays! They say that they will not charge overage fees, but they already are in one market (Cleveland, Ohio). Cox needs to restore the data cap to where it was and really should not even have a data cap for the \$99/mo they charge. I have attached a copy of their "Data Plan and Usage" page from May 2016 for reference.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Comcast has implemented a 1TB data cap on my account without informing me. After calling their customer service, I was informed that I was correct that my plan had a data cap. I told the rep that at no point had anyone ever told me about a data cap and I would have made different choices if I had known that.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1044649 - Comcast internet cap**

**Date:** 6/20/2016 12:28:59 AM

**City/State/Zip:** Davie, Florida 33325

**Company Complaining About:** Comcast

---

## **Description**

Comcast has a 250gb data cap in my city and between my niece (who we adopted) watching netflix, me playing video games, my father's smart TV, and having other devices connected to wifi and needing updates; we go over the 250 limit by the 20th of the month. We then need to disconnect the internet to avoid extra fees. We pay 60 dollars a month and have no other ISPs that offer anything over 6gb speeds. Comcast knows this and shows it through their poor customer service. After all the things they have done we have no other options and now they have enforced this limit to drain more money from people and it is to the point where we are not sure what to do. This company is getting out of control and they over charge for poor services because people have no other options. Also many people I have talked to have similar issues with Comcast.

[Ticket: # 1044683 - AT&T charging extra for standalone Internet](#)

**Date:** 6/20/2016 3:09:28 AM

**City/State/Zip:** Fremont, California 94539

**Company Complaining About:** AT&T

---

## **Description**

AT&T used to be good alternative ISP to cable companies. In the past year or so, they have become arrogant and as bad as Comcast.

- 1) They are automatically charging extra \$5 for being a standalone Internet customer
- 2) They have started enforcing Data Caps for standalone Internet customers. For their TV subscribers, caps go away magically. This is effectively forcing customers not to cut cord.
- 3) In general, AT&T Internet pricing is now more than Cable providers'.
- 4) AT&T has become arrogant and is not willing to negotiate or offering rebates as it used to in the past 20 years I've known them.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

If you can't see how that's a problem, you need new glasses... or new eyes. The internet is the future. Cable has had a monopoly on entertainment for so long that they can't bear to give it up. We are the United States-- the epitome of Capitalism. We should be able to show the world how GOOD that system can be... not how fucked up it becomes when you let "Free Trade" (aka monopolies) run rampant.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

I have already started to notice slowed service to YouTube and I have noted that with them, with no real response. They do not care; don't let them police themselves-- IT DOESN'T WORK.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet

loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

After having internet service with AT&T for a little over two years, they have (under short notice) instituted data caps. They have never mentioned that there was one in the first place, nor allowed me to view my usage prior to the institution of their caps. They "graciously" allow me the option of unlimited data, which now means I have to pay more to continue to use my service in the same manner as when I first became a customer. My only other option is to package TV service, which holds no value to my family and I. This is simply a grossly consumer-unfriendly way to boost TV subscription numbers at a time when more consumers are dropping TV services. It is my sincere hope the FCC puts a stop to this extortionist practice.

**Ticket: # 1047519 - CableOne's use of data caps come from a profit standpoint and not a network quality/stability perspective.**

**Date:** 6/21/2016 1:54:55 PM

**City/State/Zip:** Meridian, Idaho 83646

**Company Complaining About:** Cable One

---

## **Description**

By setting the data cap for their various plans at an obscenely low value, CableOne actively discourages the use of online streaming services such as Netflix and Hulu for high-quality video, in favor of the lower quality programming provided by CableOne's television offerings.

[http://support.cableone.net/app/answers/detail/a\\_id/738/kw/reduce%20bandwidth](http://support.cableone.net/app/answers/detail/a_id/738/kw/reduce%20bandwidth) and

[http://support.cableone.net/app/answers/detail/a\\_id/1017/kw/reduce%20bandwidth/related/1#gs=eyJndWlkZUIEljozMywicXVlc3Rpb25JRCI6MywicmVzcG9uc2VJRCI6NiwiZ3VpZGVTZXNzaW9uljoiN19rYy1DVG0iLCJzZXNzaW9uSUQiOiJlJm9uU0NubSJ9](http://support.cableone.net/app/answers/detail/a_id/1017/kw/reduce%20bandwidth/related/1#gs=eyJndWlkZUIEljozMywicXVlc3Rpb25JRCI6MywicmVzcG9uc2VJRCI6NiwiZ3VpZGVTZXNzaW9uljoiN19rYy1DVG0iLCJzZXNzaW9uSUQiOiJlJm9uU0NubSJ9) both show where CableOne encourages users to choose a lower quality video streaming. After exceeding CableOne's data caps, they will force a customer to upgrade their service to a higher speed plan with a larger data cap, but I don't quite see how paying more per month suddenly increases CableOne's capacity to accommodate "excessive" usage. If CableOne is advertising a 100 megabit (100Mbps) connection, then it's a reasonable expectation to use that 100Mbps for the duration of the billing cycle, otherwise I would expect to receive service at a speed that could be sustained throughout the billing period without exceeding the data cap.

That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1056220 - Zero Ratings**

**Date:** 6/26/2016 9:16:59 PM

**City/State/Zip:** Tucson, Arizona 85739

**Company Complaining About:** Comcast

---

## **Description**

Hello,

Comcast may have recently extended their data caps but the fact remains that there is a cap and Comcast still exempts its own content from counting towards it. This is clear favoritism of one content over another content and an obvious affront to net neutrality. It does not take a technological genius to understand that data usage increases over time as advances in technology and content drive up the size of files. Increasing a cap only serves to delay this same argument until a later day while enshrining the business model as not harmful to competition. Without forcing internet service providers to abide by the same standards they hold other content providers to we can never hope to effectively deal with this situation. There has to be an open and public discussion of zero ratings so that we can move forward in a way that is effective for the entire economy. The internet is a business but that cannot be used as an excuse to limit commercial activity on it. Our current model is harmful to innovation and competition. Investors may be unwilling to support emerging technologies for fear that ISPs could unfairly change the playing field mid game to combat competition to a similar paid service offered by said ISP, or a favored competitor. It's asinine we even have to discuss this. The major ISPs have made profits well in excess of their capital investments and have not innovated anywhere near the extent that they claimed their predatory business models would support. It's profiteering plain and simple. Steadily offering less for more is not innovation. Please do the right thing and curb this behavior before it has further reaching consequences.

**Ticket: # 1049519 - New Usage Caps stop cable tv competition**

**Date:** 6/22/2016 1:07:53 PM

**City/State/Zip:** Richmond, Texas 77469

**Company Complaining About:** AT&T

---

## **Description**

AT&T recently started enforcing data limits on internet. They said they doubled the cap, but they have never enforced it before June, or allowed me to see how much data I was using. So doubling the cap is just marketing. I do not purchase cable from AT&T, so I stream Netflix and Slingbox cable tv. I hit the 300GB cap and had to stop watching tv. AT&T does not have a cap on people who buy cable tv from them. I can pay an extra \$30 a month to drop the cap (\$30 more then I paid the month before for the same internet) or buy cable tv from them, get a discount for bundling and drop Sling TV. I will save money. This is all a plan by AT&T to stop competition on Internet Streaming TV providers like Sling TV. AT&T already capped my data speeds to prevent to many people using the same resources. It makes no sense to cap data speed and use data caps, except to prevent internet streaming competition. And that they take off the data caps when you use their TV service, just shows they are charging more money to use someone else's content. When I called to complain about the cap, AT&T told me I could pay \$30 more a month for unlimited internet, or bundle Cable TV. The AT&T rep then tried to sell me cable tv.

---

**Ticket: # 1050248 - Comcast Xfinity Data Cap****Date:** 6/22/2016 4:34:59 PM**City/State/Zip:** Villa Park, Illinois 60181**Company Complaining About:** Comcast

---

**Description**

I am making a formal complain to Comcast about their Xfinity data cap. I have gone over 300 GB of internet data during multiple months and I am complaining that Comcast has not yet raised the data cap to 1,000 GB in my area (Chicagoland). This pathetic corporate lobbying has stifled a free and open internet to the American people. In my household, multiple family members use the internet to become successful citizens. For example, one family member works from home. This individual commonly engages with coworkers on internet servers, video chat streams, and wifi calls. Three other family members utilize the internet for studying and completing schoolwork. This may include watching educational videos, downloading school materials, or taking tests live online. Another family member also uses the internet for mandatory work purposes.

With the modern technological advances in today's age and with a family of 5, 250-300 GB is simply not enough. The corporate greed must stop. This completes my formal request for a data limit of 1000 GB and the cessation of overage billing to everyday American people.

I am also adding in an additional complaint on the grounds that for multiple days (at least 10) over the course of 3 months, there have been hourly and even daily outages of the Xfinity internet. This is not what I have paid for and it is frankly unacceptable.

Thank you for your time and considerations.

**Ticket: # 1051077 - Data caps on Cable one**

**Date:** 6/23/2016 12:56:14 AM

**City/State/Zip:** Eagle, Idaho 83616

**Company Complaining About:** Cable One

---

## **Description**

Cable one has data caps on their connections, These do nothing expect hurt the customer and make the isp more money for no work at all. Do not even try to tell me that they are fair, Its simply used to make the ISP money. Data is not like water, there is no substance, there is no "pool" of data. So the you use more you pay more simply dose not apply. I believe that the only reason these are in place is Cable One is loosing cable customers to Netflix and other video streaming sites. These sites consume a lot of data so they are able to make customers pay a lot more for there connections.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1053141 - AT&T Data Cap**

**Date:** 6/24/2016 7:58:52 AM

**City/State/Zip:** Columbus, Ohio 43235

**Company Complaining About:** AT&T

---

## **Description**

I don't feel that data caps are fair to consumers. AT&T has recently started to enforce a 600gb data cap for users of their 75mb Uverse plan (in Columbus, OH). They're trying to use this to push people into buying cable packages. My internet bill is already \$79/mo and if I opt for the removal of the arbitrary data cap it would push it up to \$110/mo. I can pay the extra money, but I worry for those who will have to make the unfair choice of not worrying about data caps vs. saving money or paying other bills.

## **Description**

I currently have Cable and Internet service with AT&T. I am seeking to remove my paid cable services and retain only access to internet, as is my prerogative as a consumer. On Tuesday, June 21st, at approximately 5:07PM EST, I called AT&T to inquire about my options and abilities to reduce my services.

I was told by the representative that I was able to remove television services upon expiration of my contract in August, and was asked about why I wanted to remove television service. I informed the representative that the cost of television services were too great, and that I wanted to retain internet as it was a requirement for me to be able to work. The representative then told me that if I planned to use the internet to stream, play games, or other services in lieu of paying for television, I should be aware that cancelling my television services would make me subject to a data cap. I was informed that my best option was to retain television services. I rejected this notion on the basis of net neutrality.

I was offered additional options to downgrade my television package, or engage in changes that would extend my contract with AT&T, but I have declined. It is my intention to fulfill the rest of my contract (through August) and seek internet service through a provider that does not violate net neutrality by imposing a data cap in effort to force me to bundle television services that I do not want.

## **Description**

My Uverse account has never had a data cap imposed before. I do not subscribe to a cable or satellite service and I use my internet connection to stream all of the video content I view so a new cap on monthly data transfer is a big deal to me.

Recently I received a letter from Uverse stating that they will now be imposing a 600GB/month limit on my account unless I pay extra or sign up for Uverse TV service. I do not believe it is fair for them to use this tactic to pressure me into signing up for TV service I do not want. It also seems to be inconsistent with the FCC's open internet policies. Please do something about AT&T using its nearly exclusive monopoly on internet service in my area to punish people like me who do not want to subscribe to traditional pay TV services.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1055369 - U-verse data cap: anti-competitive**

**Date:** 6/25/2016 2:15:46 PM

**City/State/Zip:** Decatur, Georgia 30030

**Company Complaining About:** AT&T

---

## **Description**

I have internet from AT&T U-verse. They recently unilaterally rolled out a data cap on my account of 600 gb per month, which would be exhausted in 74 hours based on the advertised speed. My account was penalized with the cap because I do not buy cable TV from them and they are using the cap to punish customers who choose to stream video. This is clearly anti-competitive behavior. Please make them enforce data caps on video customers or eliminate my data cap. Also, they should drop the price because they are reducing service.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.
