I have been a customer of Time Warner Cables since the late 90's when they first put the cable internet system in. I have stayed with them because they are the only ISP that offers high speed and no data cap. Now, with the merger, they wish to charge me an extra \$50 for that privilege. This merger has made my already over priced cable internet more expensive. If only there was viable competition.

**Ticket: # 1264446 - Comcast Data Caps**

**Date:** 10/14/2016 11:30:07 AM

**City/State/Zip:** Naperville, Illinois 60540

**Company Complaining About:** Comcast

---

### **Description**

As a Comcast subscriber, I'm very upset by comcasts recent decision to impose a data cap on my Internet usage. This cap will infringe on what should be my right to unrestricted Internet usage, especially as content quality improves. In my market I'm left with few viable alternatives, so it's almost impossible to "vote with my wallet".

[Ticket: # 1264489 - 1TB data cap](#)

**Date:** 10/14/2016 11:35:04 AM

**City/State/Zip:** Omaha, Nebraska 68106

**Company Complaining About:** Comcast

---

## **Description**

I do not believe in data caps. I do not think the FCC should allow Comcast or anyone to impose data caps on internet use. This is not a value added for the consumer and only limits or controls customer behaviors and actions if they don't pay more money. This is unacceptable.

---

**Ticket: # 1264509 - Comcast Data Caps**

**Date:** 10/14/2016 11:38:16 AM

**City/State/Zip:** Greeley, Colorado 80634

**Company Complaining About:** Comcast

---

## **Description**

Starting November first my internet will be limited to a 1 terabyte data cap which Comcast is rolling out nation wide. As someone who only uses Comcast strictly for an internet connection this is too much. Comcast is fully capable of running their servers if everyone is on unlimited data, they have this whole time. This is just pure greed and abuse of power, plain and simple. Internet is no longer a luxury, it is a utility and is too precious to be limited in the name of profit and Comcast should not be allowed to get away with this. Based on their track record they will increase prices and most likely reduce the 1 terabyte data cap. Data caps are hindering everyone.

---

**Ticket: # 1264568 - Comcast Data Caps****Date:** 10/14/2016 11:47:23 AM**City/State/Zip:** St. Paul, Minnesota 55114**Company Complaining About:** Comcast

---

**Description**

Recently Comcast has announced that they are going to be rolling a 1TB data cap on most of their customers, and once customers pass the cap they will have their network usage throttled and charged for each 50 GB surpassed. If Comcast is able to do this, what stops any other Internet Service Provider from doing this? The Internet has become such an important aspect of modern life that we cannot allow access to it to be limited at all.

The disgusting part is that many residents do not have any choice of who their internet service provider is. If they want internet access in their home, they HAVE to get Comcast service. In the modern world, internet access is a basic human necessity. From completing school work to staying in contact with friends and family. Internet access is simply a basic need to the modern American. Comcast has a monopoly in many regions backed by municipal agreements preventing free and open market. Putting a data cap on internet usage impairs the natural growth and innovation of the internet. It may be true that many people will not use close to that much data, but what about in 5 years? Or even next year. With many services moving to higher and higher resolution HD video, such as the recent move to 4k for many services such as Netflix, data usage will continue to grow.

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

TL;DR: Data caps, or "Data usage plans" are anti-consumer and un-American.

**Date:** 10/14/2016 11:59:23 AM

**City/State/Zip:** Tallahassee, Florida 32311

**Company Complaining About:** Comcast

---

## **Description**

I'd like to voice my concern over Comcast constantly testing the waters in regards to how much money they can squeeze out of their victims. I mean customers. The soon-to-be-implemented 1TB data caps aren't for some kind of infrastructural stress relief, but simply to siphon money from those who use a lot of data per month (and with 1080p video streaming being so common nowadays, it's not farfetched for a household to reach that cap). Some will say "Switch to another provider then!", but Comcast has been allowed to monopolize the cable industry and do whatever the hell they feel like without much backlash from the consumer, because where else are we going to go?

---

**Ticket: # 1264665 - Comcast enacting a 1TB data cap to all customers on Nov. 1st.**

**Date:** 10/14/2016 11:59:39 AM

**City/State/Zip:** New Cumberland, Pennsylvania 17070

**Company Complaining About:** Comcast

---

## **Description**

With the upcoming addition of 1TB data caps to consumers of Comcast, this breaks many, many moral boundaries you have allowed. With this power in Comcast's hands, some people have no access to any other internet company which makes them have a monopoly. This should be illegal and stopped as soon as possible. If you can do anything to help keep the internet free and open, please do. This is not needed and many companies may follow resulting in a 1984 esque age of information.

---

[Ticket: # 1264683 - Comcast 1TB data cap starting November 1st - WHY?](#)

## **Description**

Comcast is enacting a 1TB data cap limit beginning November 1st. This blatantly anti-consumer restriction will restrict innovation and drive the tech innovators to countries with less restrictive practices and better broadband networks. The United States is falling further and further behind in it's network infrastructure and an exodus of the best and brightest is inevitable with companies like Comcast using their monopoly like a bat, threatening consumers to pay more for the services they receive while they introduce caps and remove features. They have the audacity to market changes like this as "value-added" while it's the same service (or worse) we've been paying for, now they want us to pay more. They know consumers have no choice- They have a monopoly in their local markets.

Please, stop data caps, uphold net neutrality, and stymie Comcast's attempts to strangle US innovation for profit.

**City/State/Zip:** Lemont, Illinois 60439

**Company Complaining About:** Comcast

---

## **Description**

After several unsuccessful attempts to get Comcast TV working in my home, we made the decision to "cut the cable" and rely on streaming services like Netflix and AppleTV. I pay 150\$/month for Comcast's 104MB/sec plan, and things have been working smoothly for the last year. They just introduced data caps in our area (Chicago-land), so now we're paying (and no small amount) for an internet connection and then paying AGAIN to use it. We are a house of 9; it takes us about 20 days to burn through a laughable 1TB of bandwidth. It's been proven that costs associated with bandwidth usage are FIXED costs, not variable - meaning that the cost doesn't change based on the amount of data that's being transferred. (<http://boingboing.net/2016/01/07/dear-comcast-broadband-isnt.html>) This is a loophole in Net Neutrality that allows big ISPs to strangle the consumers even more. To make this matter even worse, Comcast MONOPOLIZES the market. There is no other provider in our area that can offer comparable bandwidth. We're locked in, and Comcast knows it.

---

**Ticket: # 1264755 - Comcast Data Caps**

---

## **Description**

Anyone with basic knowledge of how the internet and data works understands that data isn't a tangible object with a limited supply. Various ISP's have enacted data caps in certain areas with the excuse that they put the data cap limit to limit the stress on the network. All data shows that this is untrue and the only thing that happens is people go over and get charged. This should be a non issue anyway as internet usage needs to be reclassified as a utility because not having the internet is not an option anymore in America.

Other issues below -

Lack of consumer choice due to local monopoly

Lagging behind the rest of the world in broadband availability and cost to consumers

Importance of the internet for children to participate in school and for everyday people to participate in the modern economy

This is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

This is blatantly anti-consumer

## **Description**

It is HIGHLY unreasonable in the year 2016 for anyone to implement data caps over internet connections like this. There are so many people that are working from home nowadays that are affected by this. There are so many people who are using UHD streaming services that are using ~7GB per hour. That adds up quick, and there is no GOOD reason other than greed to implement these caps. I believe Comcast had a food analogy awhile back with Oreos, but it was so wrong.

It's also strange to see so many other countries have faster internet speeds and 0 caps. Comcast is WAY too expensive for awful service.

---

**Ticket: # 1268018 - Regarding Comcast & ISP's Data Cap Trends****Date:** 10/14/2016 7:44:37 PM**City/State/Zip:** Alvin, Texas 77511**Company Complaining About:** Comcast

---

**Description**

I'm am contacting you to express my concern over a recent trend of Internet Data Caps that I feel poses an economic and moral threat to the future of our country and its people. Something should be done about being able to go through with this without any repercussions. Comcast has been known time and again to scam customers and get away with unjustified acts just because they hold a monopoly over the internet where they have a larger influence on what can be done, the most recent where they lost a lawsuit which resulted in a \$2.3 million fine for mischarging customers which doesn't even hurt them and they still made such a huge profit over scamming their customer base. Additionally there have been reports that Comcast's "data monitors" do not record accurate usage information and I am concerned about the lack of FCC regulated data consumption measurement standards.

The argument stated on <https://dataplan.xfinity.com/faq/> number 5 that "99 percent of our customers don't use more than a terabyte a month, but for the less than 1 percent of our customers who use a terabyte in a month" means that if only 1 percent of their customers exceed the cap then why would they need to implement it to begin with, it's not hurting them but this is just them trying to squeeze more money out of their customers so the company can profit more and share holders can be richer without caring about their actual customer base and it's wrong given how quickly the world is changing and internet is becoming a necessity for everyone.

High-powered lobbyists for the telecom industry are shaping rules and regulations for what is a consumer right: unlimited internet access for all. In the 21st century internet access is an important as any other utility for daily tasks. It is not a "luxury" that only the wealthy can afford. Comcast and other ISP's have proven to be greedy and hostile to consumers by adding "features" that mean the consumer will have to pay more for less. FCC policy should be dictated by the needs of consumers, not the needs of corporate profits.

Several ISPs try to make the comparison of consumers purchasing tangible goods, however bandwidth and data obviously do not fall into this category. In the past providers have not only been given the resources, but all the the opportunity and reasons to improve our country's infrastructure and improve communications, failing to do so each time. In a world where data usage is becoming more and more prevalent, limiting consumers consumption and access is DIRECTLY anti-consumer practice and should not be tolerated. You have the opportunity yourselves to put a stop to these kinds of practices and enforce the ideals that our country is based on. Those being a consumer driven market where innovation and progress can continue to exist without the restraints of extortive business practices such as the ones Comcast and other ISPs continue to implement and get away with.

Finally here is a list of some talking points in the previous paragraphs why this shouldn't be allowed from any company that provides internet:

- \* Lack of consumer choice due to local monopoly.
- \* Lagging behind the rest of the world in broadband availability and cost to consumers.
- \* Importance of the internet for children to participate in school and for everyday people to participate in the modern economy.
- \* This is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.
- \* Data caps in and of themselves have no positive benefit to network infrastructure and solely exist to increase profit.
- \* This is blatantly anti-consumer.

I would like to point out the internet is getting bigger, video games are getting bigger, the quality of everything that's internet related is growing through leaps and bounds, Comcast wants to put an end to potential internet growth and monopolize on something they shouldn't be doing to us.

**City/State/Zip:** Houston, Texas 77054

**Company Complaining About:** Comcast

---

## **Description**

Comcast enacting a 1TB cap on Internet data usage is a violation of a right to basic utility. Putting a data cap is an attempt to gain more money from customers.

---

[Ticket: # 1264908 - Comcast data cap](#)

**Date:** 10/14/2016 12:26:47 PM

**City/State/Zip:** Conroe, Texas 77302

**Company Complaining About:** Comcast

---

## **Description**

The data cap of 1 terabyte should not be allowed to happen. The amount of data used by a single person increases exponentially throughout the years, and Comcast is trying to capitalize on this a few years down the road when 1 terabyte won't be considered ad much as it is now.

---

[Ticket: # 1264910 - Comcast data cap](#)

**Date:** 10/14/2016 12:27:05 PM

**City/State/Zip:** Whiting, Indiana 46394

**Company Complaining About:** Comcast

---

## **Description**

Comcast's data caps are impossible to stay within if you have high speed internet. People use internet for practically everything and 1 tb is not an acceptable data cap. It discourages internet use and should be stopped.

---

**Ticket: # 1264920 - Comcast imposing data caps on home broadband**

**Date:** 10/14/2016 12:28:01 PM

**City/State/Zip:** Allston, Massachusetts 02134

**Company Complaining About:** Comcast

---

## **Description**

With the size of the internet constantly growing imposed data caps on home internet service will diminish my competitive advantage over time. It is becoming increasingly commonplace to use large amounts of data to educate, entertain, and even survive in the modern world. Burning through 1 terabyte of data might seem like a feat now, but in a year or two it will be a regular occurrence.

Comcast has a total market monopoly in my neighborhood and, though I would like a different ISP, that is unfortunately not a possibility. The market needs to change. Open regulation needs to happen. We need internet to be regulated like a utility. Please don't leave us to fight this alone.

---

**Ticket: # 1264943 - Comcast**

**Date:** 10/14/2016 12:30:13 PM

**City/State/Zip:** Pasadena, Texas 77503

**Company Complaining About:** Comcast

---

**Description**

Comcast is abusing it's power and monopoly of certain areas in the US. Please stand up for your people and stop this.

Stop data caps.

---

## **Description**

Comcast has a virtual monopoly on internet service in my area and nearly all the surrounding areas. It was a monopoly that was backed by politics and under the table dealings. The lack of competition allows Comcast to pretty much do anything they want without recourse. There is no competition. The data caps are arbitrary and unfair. With more parts of our lives on the internet at any time in history, the internet is no longer a privilege. It's bordering on a right because of its' importance for commerce, sharing ideas, communication, entertainment, business, etc. To limit and tax those who use the internet more than others means that those with less means are allowed better access to the wealth of information that the internet holds. Everyone should have equal access to an open and competitive internet.

## **Description**

I am writing you in regards to the situation of comcast putting a data cap on internet services. I admit, this is not an issue I myself experience right now, but Data caps of that amount is not viable or safe in a world where the information age is slowly pushing forward and becoming heavily reliant on not only parallel computing but Server and data centers. To give an example, that data cap is viable only to a consumer who would be able to use a heavily restricted amount of data per day. With the situation of disc becoming less and less used and data storage needed for applications increasing into 30s to 50s of GB, this is a serious hinder on the growth of America and business outside of Comcast. If you can, please bring this issue up as it deals with the new fundamental rights of the world, which has now become mandatory access to the internet. This is no longer just a simple premium but an essential part of the world we know today, and if people simply cannot access it due to fear of the large expense by going over the cap, there is an issue.

---

## **Description**

This data cap is short sighted greed, nothing more. I've done nothing to warrant a data cap, a data cap does not make any technical sense of any kind (I've spent my entire life in tech as an engineer!) and they're grabbing for money as they flail about due to their awful business. Comcast has never once put the needs of the customer first. They should be reprimanded and fined for such brazen disregard of consumers needs. They can ONLY enact changes like this due to the full scale monopoly they possess on the internet in this country in many locations! The USA used to lead the world in technological innovation, and companies like Comcast are doing everything in their power to slow down our internet and hold us back! No data caps and increased competition! This "service" adds nothing and takes away a great deal. Shame on you Comcast. But consumers will not let this stand. Perhaps worst of all, this number will surely not scale with future needs. As our data needs as a nation increase, Comcast will laugh their way to the bank as their "data cap" pays for new yachts for their executives.

Please, please, please we need to improve the internet in this country. Comcast is the problem, do not let them make things any worse than they already are! We can improve!

## **Description**

To whoever may read this,

This needs to stop. What kind of future are we creating? It's as if every turn we take is wrong. Data caps for ANYONE? This is already a problem in other countries. The people hate it. What is the point besides charging what will be more for the same service? We live in a technology age and the sooner we stop giving data caps the better. It is absolutely disgusting that we are limited on these services. The cable and phone companies need to figure it out on their end if there is an issue. I'm sure there is no issue, they just want more money. That's all the world is, is the rich wanting more money. There is no good reason data caps should exist, and if there is, it should be a problem the cable company has to solve on their own.

## **Description**

On November 1st Comcast will be enacting a 1 terabyte data cap for all its customers and I believe this to be extremely wrong. why the hell am I paying \$250+ a month for just internet and then being charged now for using that internet? Not to mention that I don't have any other options because they bully out competitors in my area. You may think this won't effect everyone, but that's misguided. We are on the verge of mainstream resolution/quality/High Definition upgrade from 1080p to 4k streaming. The average consumer will hit this new data cap within a couple of days of streaming and this doesn't include many other sources where the data can be capped from regular use.

Do what's right and ban data caps or we will have very dark days ahead of us in the coming years.

## **Description**

On Nov 1 Comcast is planning to impose a 1TB internet data caps on it's users. The internet is a utility that should not be limited, much like we wouldn't limit electricity or water. It's disgusting that America, what's supposed to be the most technologically advanced country in the world, could limit itself like this. Company should not and can not be allowed to do this. It sets a terrifying precedent for the future of America.

---

**Ticket: # 1265160 - Comcast 1TB Data Caps****Date:** 10/14/2016 12:50:59 PM**City/State/Zip:** Dublin, California 94568**Company Complaining About:** Comcast

---

**Description**

Comcast is implementing a new 1TB data cap on all California customers, such as myself, effective November 1st. This move is 100% anti-consumer and provides no value add to me as the customer. I would now be forced to pay an additional \$50/mo to keep the unlimited data cap I currently have. Comcast seeks to force customers to choose how to use their data allotments or pay more for a service they already have. There is no technological reason for doing this- using more data in a month does not put any additional burden on Comcast staff or their systems. As I'm sure the FCC is fully aware, system capacity is limited by concurrent connections at any given time, not by how much data flows over the course of a month. Please put an end to Comcast's reign of terror over consumers. If I had any other choice for internet I would take it, but Comcast has a monopoly on broadband in my area because they have lobbied to block municipal internet services for their own interests.

### **Description**

Comcast is enacting a 1 TB data cap on home internet usage. Data caps are an inherently anti-consumer practice that have no benefit for network infrastructure. Bandwidth is not a physical good and should not be sold as such. Because Comcast has a virtual monopoly on high-speed internet in my region, I cannot switch to a competitor's service.

---

## **Description**

Comcast is starting to roll out data caps of 1 terabyte. The bills are already very high, and this is an unacceptable move on Comcast's part. Think: digital information went from bytes, to kilobytes, to megabytes. Years ago computers only had 50 gigabyte hard drives, and now you have a 1Tb hard drive to just begin with. This is how computers and digital information have been evolving for years and years now. Comcast cannot be allowed to stall and tax the development and advancement of technology because they want a bigger bank account.

---

**Description**

Hello,

I have recently learned that Comcast is implementing a data cap for home consumers of 1TB per month and I am writing to express concerns about the impact of this on my family. We are heavy internet users for both work and entertainment. Between streaming television, online classes for personal enrichment, days telecommuting, running a home business, and online gaming, we easily foresee our future usage rising over the cap, especially as our son grows. We only have one option (Comcast) for legitimate high speed internet service in our area, and this data cap will force us to curb our internet use. We attempted to use two different services in the past after prior issues with Comcast, but one could not meet our needs (frequent loss of service, slower speeds than we were paying for, etc.), and the other we found couldn't be installed on our block.

How is it a reasonable practice for Comcast, or any other ISP, to implement a data cap on home service? The cost to the company is no different if we use 1gb or 10,000gb of bandwidth so why should the cost be different for me as a consumer? Also, how is it ethical for the company implementing the cap to be responsible of the measurement of data usage? If I as a consumer have no method to measure just how much data is used watching a football game or a presidential debate, then what tools do I have to manage my use as necessitated by this new policy?

Comcast does not just have the market cornered on cable internet in this area, but on cable television as well. By capping home data usage, they are ensuring that they will gain additional revenue through either higher home data packages purchased by households like mine that must pay more in order to accommodate the rising size of high definition videos and online games, or those that choose to reverse their cord-cutting decisions and buy a cable package from Comcast in order to cut down on internet data usage through services like Netflix and Playstation Vue. This then leads to a question of antitrust violations. If Comcast is allowed to data cap home users, they are effectively handicapping their competition. Not to mention the potential for inflating the bandwidth necessary to stream content from competing television networks, as Comcast also owns NBC.

I am also concerned about the method of notification that Comcast plans to use to inform customers that their usage for the month has approached or exceeded the limit. They state that there will be an in-browser pop-up notification, but what if this message is missed? Or blocked by security or adblock software? How is that going to inform me or even give me the tools to make necessary decisions on usage allocation? This implementation seems specifically designed to encourage overages, and thus additional revenue for Comcast.

On your own website, a portion of your statement regarding your agency responsibilities states "Promoting competition, innovation and investment in broadband services and facilities". In the interest of meeting this responsibility, it is paramount that the FCC examines the impact of data caps

for home consumer internet access and how it stifles innovation and investment in broadband services.

Data caps prevent individuals from exercising their opportunity to access information online unless they have the economic means to pay more for their data. As a mother and small business owner, I urge you to consider the short and long term impacts that data caps can have on individual consumers as well as policy-making on the subject of Net Neutrality and modern monopolies in this country and take action to stop the implementation of data caps by all ISPs.

**Ticket: # 1265220 - Comcast Anti-Consumer Actions****Date:** 10/14/2016 12:55:58 PM**City/State/Zip:** Logan, Utah 84321**Company Complaining About:** Comcast

---

**Description**

Comcast is the only provider in my area for high-speed network access, and there is no broadband competition available. With Comcast rolling out the new usage bandwidth restriction of 1TB, it is artificially limiting the availability and access to a reliable internet connection. While many users may not reach the 1TB data cap, online content is becoming more bandwidth-heavy and it may not be long until 1TB of bandwidth usage is no longer sufficient for the average household. Additionally, this 1TB cap is a new restriction that does not add value to the internet service - it is simply a new restriction on existing service that will cost consumers more money with no improvement in quality-of-service.

Comcast forces out local ISP competitors, provides terrible consumer-facing support, and is enforcing new restrictions on current service contracts. Reliable, affordable, and unrestricted access to broadband internet is no longer a luxury in America today - I am appalled that Comcast is acting in ways that hurts its service customers, and these actions show other internet service providers that they can implement equally draconian policies without repercussions.

**Ticket: # 1265222 - Comcast Data Caps**

**Date:** 10/14/2016 12:56:06 PM

**City/State/Zip:** Oxford, Connecticut 06478

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently announced that it is expanding its data caps to more areas. Though Connecticut is currently not affected by this cap, I am concerned for the future when it could be. The lack of competition in the ISP market space is opening consumers up to price gouging and unreasonable data caps. Usage is on an upward trend and as 4K video and digital delivery of other products and services become more and more common this cap will only become more restrictive. In order to continue to support innovation and adoption of new technology we need to take a stand against caps, throttling, and any unknown future limitations on the internet as a whole.

## **Description**

Comcast is forcing data caps not just to me but everyone in my hometown of Houston but also, Alabama in Dothan, California, Colorado, Florida North Florida, Southwest Florida and West Palm ,Southeastern Georgia ,Idaho

Indiana Indianapolis and Central Indiana; Fort Wayne and Eastern Indiana, Kansas, Michigan Grand Rapids/Lansing, Detroit, and Eastern Michigan, Minnesota, Missouri, New Mexico, Western Ohio, Oregon, Utah, Washington, and in Wisconsin and nothing is being done about it. Now before I get the response " But it's 1TB of data it's so much" everyone knows it's going to shrink and cost will go up the email I got from Comcast showed the data my house uses and the remanding data left as if the 1TB of data is a gift when it should be unlimited. Everyone knows that the 1TB will eventually go down to 800GB then 600GB until they are back at the bullshit 300GB cap with Comcast prices will stay expensive as hell or go up event more and it now cost an extra \$50 to get unlimited data. The fact Comcast as well as other massive Monopoly get away with this is completely unfair to consumers and should be abolished. The fact my cell phone plan has actual unlimited data and I mean truly unlimited data where I can use all I want without them slowing the speed is a damn shame that Comcast cant even do the same. Having unlimited data won't cost Comcast any money especially at the price per megabit we are paying. Comcast and the other monopolies needs to get rid of the 1TB data cap and need to start complying with the rights of the people and stop getting away with so much corruption.

## **Description**

I am writing to complain about the Comcast 1 terabyte data cap for myself as a customer of their internet service.

This data cap is unreasonable because data usage will increase over time by the nature of advancing technology.

This data cap will limit the type and quantity of internet data that the population will be able to use, and will create increased class disparity. At the same time the service providers have already paid for their costs.

Allowing Comcast to throttle internet data represents not only demonstrates a complete and total lack of understanding at how technology develops and changes with time, but also the lack of consumer choice due to their local monopoly in my area, lagging behind the rest of the world in broadband availability and cost to consumers, the importance of the internet for children and young adults to participate in school and for everyday people to participate in the modern economy, and is blatantly anti-consumer. Further, this is not a "value-added" service. It's the same service I've always paid for, and now I'll be forced to pay more for it.

How much would you pay for unlimited access to the entirety of human inheritance, knowledge, and experience? Comcast is betting you'll pay a lot.

## **Description**

I would like to register a complaint regarding the implementation of data caps by Comcast. As admitted to by a Comcast representative during (I believe) a testimony to Congress, there is no physical basis for these data caps. Unlike other utilities (eg water or electricity) there is no limited amount of data that must be watched to ensure that certain consumers are not hogging most of it. Rather, data is infinite. The speed at which data can be transmitted is limited by the bandwidth of the transmission line, but that is a separate issue that is handled when customers select their preferred tier of internet speed. With the current system, you pay more for faster speeds. With the proposed new system, you pay more to reach the data cap faster. Consumers are being charged twice for the same product. Furthermore, the services provided by Comcast to monitor your internet usage are woefully inadequate. If each monitoring system provides the consumer with a different amount of data used thus far in the month, consumers are incapable of adequately protecting themselves from being charged for overages. Finally, data caps will hinder technological progress. The world is moving to a steaming system - movies are rented from YouTube, Netflix is booming, families are able to stay in touch despite living on separate continents thanks to services like Skype and Google Hangouts. Ironically, I do not have a cable box, because the reception from Comcast's online streaming service for my cable package is better quality than what comes out of my wall. One terabyte of data might be sufficient now, but as technology progresses consumers will be reluctant to upgrade to newer, higher quality devices for fear of not being able to afford to use them. Companies will, in turn, be hesitant to continue developing better products, and the industry may stagnate. I do not believe that the technology industry and consumers should be charged or made to suffer due to a made up problem.

---

**Ticket: # 1265236 - Comcast Data Caps****Date:** 10/14/2016 12:57:24 PM**City/State/Zip:** Pittsburgh, Pennsylvania 15237**Company Complaining About:** Comcast

---

**Description**

The data caps that Comcast are implementing on their internet usage is absurd. As someone who uses many streaming services to watch television and other videos, I use a fair amount of data every month. And with a multi-person household, it can be used up quickly. I should not have to ration out my internet use in order to avoid paying for extra fees.

The fact that Comcast is my only option in this area is also a problem - I have a severe lack of choice due to local monopoly. And I cannot believe the state of broadband availability to people in the United States. We are severely lagging behind how accessible it is to everyone when compared to other countries in the world where internet access is considered a public right to have.

This practice is obviously anti-consumer. I do not know how Comcast will think they will make more money off of this. I will personally be dropping my service with Comcast and moving elsewhere with better service, no data caps, and better pricing.

## **Description**

Recently Comcast has announced that it will begin enforcing 1tb data caps in November. As has been shown countless times, data caps in and of themselves have no positive benefit to network infrastructure, and as such exists solely as a means of increasing profit. Several ISPs try to make the comparison of consumers purchasing tangible goods, however bandwidth and data obviously do not fall into this category. In the past providers have not only been given the resources, but all the the opportunity and reasons to improve our country's infrastructure and improve communications, failing to do so each time. In a world where data usage is becoming more and more prevalent, limiting consumers consumption and access is DIRECTLY anti-consumer practice and should not be tolerated. You have the opportunity yourselves to put a stop to these kinds of practices and enforce the ideals that our country is based on. Those being a consumer driven market where innovation and progress can continue to exist without the restraints of extortive business practices such as the ones Comcast and other ISPs continue to implement.

**Date:** 10/14/2016 12:59:29 PM

**City/State/Zip:** Mebane, North Carolina 27302

**Company Complaining About:** Comcast

---

**Description**

Beginning November 1, Comcast is placing a 1TB data limit on all customers, with a \$10 charge on every 50GB thereafter, with an optional \$50 unlimited option on top of your current plan.

Not only does this change the agreements already established for unlimited data, this data cap is very small. With approximate 5 hours of videos at 2.3gb a piece per day is near 400GB alone. This is almost halfway to the limit for a single person. With a normal 4 person family, each watching an average amount of video online per day, that 1.38TB.

And as you can see, this is exclusively watching online video. No browsing Facebook, downloading school assignments, operating system updates, nothing but watching video and the cap is breached for the average household.

This is nothing but a greedy grab for money on the part of Comcast. Data is not this expensive. They want users to be forced to purchase cable, and if they refuse, force them to pay for the cable anyways (by means of the \$50 charge for "unlimited" data.)

Please, this is not something to help consumers, or reduce data congestion, this is because Comcast is losing users to Netflix and Hulu, and they are acting in an anti competitive way to artificially force the market in their favor. Since they were caught restricting Netflix speeds, they've come up with their next tactic, to make people give them extra money to use a service they were already provided.

**Ticket: # 1265254 - Comcast Data Caps / Local Monopolies**

**Date:** 10/14/2016 1:00:00 PM

**City/State/Zip:** Seattle, Washington 98122

**Company Complaining About:** Comcast

---

**Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access. This is incredibly true for Seattle the place I live, every residence can only have 1 cable option and 1 DSL option so there is NEVER any competition and the providers know that you can't threaten to leave or do anything because there is no other option.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

**Company Complaining About:** Comcast

---

## **Description**

I am writing to complain about Comcast's 1T Data Cap Limit that is being imposed on customers. I believe this has several impacts on the consumer that are unfair and potentially damaging to the American Public.

First, Comcast is unhindered in doing this due to the local monopolies that ISPs have. I cannot vote with my dollar and switch ISPs, as their monopoly allows them to enact things like this that are inherently anti-consumer, without fear of the free market working to correct it.

This data cap also is unreasonable because data usage will increase over time by the nature of advancing technology. This data cap will limit the type and quantity of internet data that the population will be able to use, and will create increased class disparity. At the same time the service providers have already paid for their costs, so this is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

Finally, as internet becomes closer to being a utility, something that a individual needs to survive (or at least thrive) in the modern world, adding more costs and barriers to internet access can only serve to widen the gap between the US and the rest of the world in broadband availability and cost to consumers. This will stunt the development of the nations youth, and in turn the economy over a long period of time. The internet has become essential for children to participate in school and for everyday people to participate in the modern economy.

In synthesis, this data cap is anti-consumer and takes advantage of Comcast's near monopoly status to take advantage of peoples need for what has essentially become a utility. This in turn will have a negative effect on the development of the nations children, small businesses, and in turn, the economy. I urge the FCC to step in and take action against Comcast and other ISPs who threaten to gouge the consumer and take advantage of unique position in the market.

---

## **Description**

Nationwide data caps while paying the rates we are is absolutely ridiculous. We pay to use the internet, an entity born out of freedom; the freedom to do what we so choose, when we want, how we want, where we want, and for however long we so desire. There is no logical, fact based reason to implement data caps other than companies monetary gain. This is just comcast's next price gouge on an already limited market. I have no other provider option in my area, so I am either stuck with these data caps, or I have no Internet. Please stop this disastrous trend before these companies are allowed total control.

**Date:** 10/14/2016 1:11:33 PM

**City/State/Zip:** Brighton, Colorado 80601

**Company Complaining About:** Comcast

---

## **Description**

As of November 1st, Comcast will be imposing a 1TB data cap limit on my family. I am an IT specialist that works from home. My family on average uses 1.2TB of data a month. This change is being done without my consent and without an alternative service provider to give my business to. Comcast has a monopoly on high speed Internet in my area. A utility which I need to make a living and that I enjoy in my skate time. This is unethical and I would like to see the FCC intervene to protect me and all other consumers who use monopolistic strategies to bleed thier customers dry.

## **Description**

Recently Comcast has announced that it will begin enforcing 1tb data caps in November. As has been shown countless times, data caps in and of themselves have no positive benefit to network infrastructure, and as such exists solely as a means of increasing profit. Several ISPs try to make the comparison of consumers purchasing tangible goods, however bandwidth and data obviously do not fall into this category. In the past providers have not only been given the resources, but all the the opportunity and reasons to improve our country's infrastructure and improve communications, failing to do so each time. In a world where data usage is becoming more and more prevalent, limiting consumers consumption and access is DIRECTLY anti-consumer practice and should not be tolerated. You have the opportunity yourselves to put a stop to these kinds of practices and enforce the ideals that our country is based on. Those being a consumer driven market where innovation and progress can continue to exist without the restraints of extortive business practices such as the ones Comcast and other ISPs continue to implement.

## **Description**

Comcast's roll out of 1TB data caps in November is an unjust burden and blatantly anti-consumer method of limiting what should really be a Utility. Internet has become so ubiquitous in this modern world that it is no longer a luxury and is necessary for children to stay connected and involved in school work. It is necessary for the everyday person to be in touch with the modern economy. The United States of America lags behind the rest of the developed world in regard to broadband availability and cost to consumer. We have no choice in provider because Comcast has a local monopoly and we are forced to take what they give us. This is not a "value-added" service, it is the same service we have always paid for and now we are being forced to pay more for it. With the current trends in technology and media services, much more broadband demanding data is going to be the new norm. With the advent of 4K streaming starting to emerge this act will seek to limit how much media we are allowed to watch each month before being charged for overages. This feels like Comcast essentially getting around the net neutrality rulings by the FCC last year that doesn't let them throttle certain services like Netflix.

## **Description**

Greetings,

I am a concerned customer of Comcast. I find the new addition of data caps by Comcast to be unjust and crippling to the innovation of technology and punishing to the users of the technology. When file sizes increase and 4k video streaming becomes more viable, people will start hitting these data caps easily. I believe there is no reason for Comcast to implement these caps other than to make themselves more money. If these caps are allowed now while no one is going over them, they will be enforced in the future when people start going over them. These data caps need to be stopped in their infancy. Thank you for your time.

**City/State/Zip:** Pleasanton, California 95134

**Company Complaining About:** Comcast

---

**Description**

Comcast data caps are going to shape how the internet grows and negatively affect our future.

Imagine if in the year 2000 cable companies started figuring out how much data the top 1% of users used and set those as "caps". Our internet would look vastly different today. The 1% today, becomes the 10% next year, and the average eventually. Companies like Netflix and Hulu would not exist. Digital distribution of video games, each of which might be 100GB today would not exist.

Comcast's core argument in favor of data caps seems to be the top 1% are using way more data than the average user and should pay accordingly. As we move into the future, metered connections will shape what is technically possible for internet companies of the future. I use around 400 GB per month so I don't fall within their caps, but I also don't have a 4k setup. If I upgrade my TV, I might suddenly see myself breaking the 1TB limit with no changes to my behavior simply because internet companies upgrade their infrastructure to provide 4k.

I pay for a 100 mpbs connection that I'm only allowed to fully use for 22 hours in a month before I run out of data. I would argue Comcast has a duty as an ISP to upgrade their infrastructure to support their customers as they use more data. Limiting bandwidth is the only way to do so, not limiting data used. Limiting data changes behavior, which will affect how the internet grows and develops.

Please stop Comcast from shutting down innovations of tomorrow by limiting based on the usage patterns of today.

---

## **Description**

Data caps are just a proxy fight for net neutrality! The internet is no longer a luxury item, but a necessity and allowing companies like Comcast to get away with the most unethical cash grab to a world wide resource and ecosystem is pretty nasty. There are not a lot of other companies that we (as users) can look towards so it becomes a choice of the lesser of the evils. If you set a strong presence now you can gain the trust and the respect from essentially everyone who understands how the internet works, although companies may not like it, remember that we are all citizens first and then business people. So please put the citizens first.

## **Description**

The new data caps imposed by Comcast are a step backwards in the advancement of modern technology and standard of living for Americans. I have no other choice of cable providers due to Comcast's monopoly in my area. As the rest of the world is investing in the development of better high speed internet access, Comcast is incentivizing lower resolution video streaming and rationed use of the internet in order to stay below the cap. This is unacceptable. With 4K video becoming more prevalent, we cannot be expected to pay extra just to stream the same content as others because we have invested in better technology to enjoy our TV shows and movies. It is outrageous to think about. The internet has become an integral part of modern society. It is where most people get their news, information, entertainment, how they communicate with friends and family, and how they utilize their home automation and protect their homes with security systems. This cap is unfair towards larger families who use more data on a daily basis. Children need to be able to use the internet to keep up with schoolwork by doing research and through online tutoring. There is no added value for the new exorbitant cost to "upgrade" to unlimited data. Before the new data cap, data was already unlimited and the price hasn't changed. Charging nearly double for the same service is absolutely deplorable. This is blatantly anti-consumer and serves to bully consumers who rely on their internet connection for resources to cave in and order cable TV service and phone service as well to supplement their data usage. It also serves to stifle our progress as a nation by limiting our access to global information. The internet is a free and open platform. It is not owned by any one company. Just because Comcast is the only provider in my area does not give them the right to control how or how much or why I use it. By all rights the internet is a utility. It is essential to every day life of Americans, just as water and electricity are.

**Company Complaining About:** Comcast

---

## **Description**

I'm concerned about the data caps that ISPs such as Comcast are rolling out nationally. In my area I have TWC for internet, which is currently not allowed to implement caps due to their recent merger, but I worry that Comcast is normalizing these data caps and charging for "premium" video stream services, which is clearly a money grab and violation of net neutrality. It's anti-competitive and has no technical merit.

The internet has profoundly changed the way we communicate, and should be a public resource that's available for innovation and learning. With data caps on the service, we are more likely to have reduced competition and poorer options as consumers.

Please stand strong behind net neutrality and disallow ISPs from instituting data caps.

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

**Date:** 10/14/2016 1:48:56 PM

**City/State/Zip:** Boulder, Colorado 80301

**Company Complaining About:** Comcast

---

## **Description**

Due to lack of competition and local monopoly status, Comcast is implementing data caps in my market. These caps are only a method of increasing profit without providing better service. When competition is allowed in a market, the incumbent providers quickly increase their speeds and drop their prices to prevent the new competition. (see markets where google fiber or local municipal ISPs have been implemented). This is terribly anti-competitive and I will complain about this until ISPs are brought under a much stronger and competitive regulatory framework.

## **Description**

I understand that internet service providers (such as Comcast or one of their many aliases) have begun to introduce data caps. This is absolutely unacceptable. The internet has evolved to be such a critical part of all of our lives that we cannot live without it. The majority of all business is done online, the majority of all job applications are done online, the majority of all communication is done online, the list goes on and on. To expect the consumer to withhold to these heavily anti-consumer measures - which I might add are impossible to avoid due to Comcast's local monopoly damn near everywhere - is ridiculous. It's not like they're being charged by the bit, and they have more than capable infrastructure to withstand a lot more than that 1TB/mo data cap. These restrictions are EXCEEDINGLY arbitrary, and are a transparent cash grab.

Time Warner Cable is much the same, except that instead of capping your data, they throttle you down to dial-up speeds after your usage exceeds a certain amount. This is also an arbitrary decision that has more to do with money and less to do with infrastructure.

The internet is open and free to all, and a society in and of itself. Don't allow the greed of these companies to throttle our ability to use it - especially when it is such a core part of our lives.

## **Description**

Data caps are rolling out nationwide for all Comcast customers when Comcast is the only provider of high speed internet. This is not acceptable due to the structure of the high speed internet market. We currently do not have any other options as Comcast owns a monopoly within the area. There is not a free market structure available for others to come in and compete for the same service. By allowing data caps, we are telling Comcast that it is okay to extort their customers and there will be no recourse. Additionally, Comcast has failed to install fiber lines to the local community as promised and subsidized by US government dollars. We are not encouraging innovation by allowing these practices to continue. I'll also remind you that US high speed internet speeds are worse than any other civilized country (1gbps speeds are common in many countries, even over the air speeds to cell phones run at 300mbps compared to the 40mbps here in the states).

### **Description**

Comcast is enacting a 1TB data cap, which is outrageous and shouldn't be allowed to keep the internet fair and equal

---

**Ticket: # 1265874 - Comcast Data Cap**

**Date:** 10/14/2016 2:01:41 PM

**City/State/Zip:** Crystal Lake, Illinois 60014

**Company Complaining About:** Comcast

---

## **Description**

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

## **Description**

Hello,

I recently received a letter from Comcast/Xfinity notifying me that, beginning Nov 1st, there will be a 1TB cap on my internet data usage. Exceeding the limit incurs extra charges, and an unlimited plan now costs an extra \$600/year. This was not part of the contract I agreed to less than 2 months ago.

As two college students, my room mate and I depend on unfettered internet access for school, work, gaming, music, movies, etc. As anyone my age will tell you, having cheap, fast internet service is a must-have; unfortunately the reality (in Seattle and much of the rest of the country) is that the lack of choice of internet providers allows Comcast to change prices with impunity.

Our country is already far behind other rich nations in broadband access, choice, price, and speeds. Residential data caps exacerbate all of these problems, in addition to stifling future innovation in an increasingly web-connected economy. This is nothing but a greedy money grab by Comcast to make up for lost revenue from people like me not paying for cable TV.

They will claim that "less than 1%" of users exceed 1TB a month, but that is beside the point-- as it has with mobile data, usage caps will lead to blatant net neutrality violations as companies pay for the privilege of not counting against the cap. This gross behavior by mobile companies like T-mobile, which offers promotions for cap-free music from Spotify among other services, will surely creep into the residential broadband market. Not only do these paid promotions violate the FCC's own guidelines on net neutrality, they limit consumer choice while lining the pockets of providers. To continue the example of mobile data, when caps were rolled out several years ago the same "less than 1%" argument was made. Since then consumer data usage has surged and the average person is in a constant state of worry at exceeding their data limit for the month. Now the same story is playing out with my home internet.

To sum up, I'm extremely unhappy with Comcast's decision to impose data caps on its internet customers. Not only will it cost me more money in addition to the absurd sum I already pay, data caps are bad for consumers, encourage non-net neutrality, and will certainly slow the growth of the internet economy.

Thanks

---

**Ticket: # 1265896 - Comcast imposing predatory data caps on high-speed internet**

**Date:** 10/14/2016 2:05:45 PM

**City/State/Zip:** North Bend, Washington 98045

**Company Complaining About:** Comcast

---

## **Description**

I, like the majority of Americans, live in an area that is only serviced by one high-speed internet provider, in my case the company is Comcast.

They have recently announced that they will begin imposing a data cap of 1 Terabyte (TB), stating that it is for the "benefit" of those who do not consume very much data.

However, my profession requires that I consume enormous amounts of data, and 1 TB will surely impose difficulties and hardship in my career and life. The fact that I have no alternative to Comcast high-speed internet is appalling, and Comcast should be thoroughly investigated for monopolization, predatory business practices, and abusing their egregious stranglehold on the free market.

Comcast has continuously lobbied and pursued legal injunctions in my state of Washington to prevent municipalities, new service providers, and any other companies private OR public to provide high-speed internet service. They have successfully shut-down many services from starting, causing the companies to either declare bankruptcy, or significantly reduce operations, damaging their ability to capitalize on the free market.

The behavior of Comcast and other telecommunication companies is illegal according to current free market laws, and the fact that companies like Comcast, Time Warner, Verizon, AT&T and others are able to continue this behavior with no repercussions is a disgrace to our justice system, and willfully negligent. They should be prosecuted to the full extent of the law, and penalized appropriately for the laws they refuse to adhere to.

[Ticket: # 1265897 - Comcast data caps on my home broadband Internet service](#)

**Date:** 10/14/2016 2:05:47 PM

**City/State/Zip:** Bloomington, Indiana 47401

**Company Complaining About:** Comcast

---

## **Description**

To whom it may concern,

My Internet service provider, Comcast/Xfinity, recently instituted a one-terabyte data cap on my home internet connection. The new data cap is certainly unwarranted when considered as a simple cost-saving procedure. Caps of this sort will also have a chilling effect on innovation and competition among companies across the nation. How many novel ideas, how many future educational, scientific, artistic, and economic developments, will be quashed under such onerous limits? What would the Internet be like today if providers had implemented these supposedly generous data caps in the 1990s?

I am in favor of whatever regulatory actions prove necessary to revoke such restrictions for all Americans.

Thank you.

**Ticket: # 1265902 - Comcast home internet data caps**

**Date:** 10/14/2016 2:07:03 PM

**City/State/Zip:** Philadelphia, Pennsylvania 19115

**Company Complaining About:** Comcast

---

## **Description**

Comcast is beginning to enforce 1 terabyte data caps in some states this November for home internet. Although my state is not currently one that will be affected, I believe I need to raise my voice in opposition of it. Comcast is doing this only because people are watching less cable tv. They are losing customers on that front, and trying to make internet customers pay the difference. This is simply unfair. I want to pay for internet, and internet only. And I want it to be at a fair price, not at a price that is dictated simply by how much money Comcast feels like they deserve this year. These limits were not in place before, and do not need to be in place now. Once Comcast starts to limit people on how much data can be used, they will charge as much as they possibly can without bankrupting people. Even worse, many of us need the Internet to work. I shouldn't have to pay extra money to do my job just because Comcast feels like it.

---

**Ticket: # 1265911 - Comcast Data Cap**

**Date:** 10/14/2016 2:08:20 PM

**City/State/Zip:** Minneapolis, Minnesota 55403

**Company Complaining About:** Comcast

---

**Description**

The new data cap imposed by Comcast is nothing but an obvious attempt to extract more money from consumers.

This is blatantly anti-consumer. Imposing data caps discourages usage of the internet, and I'm now paying the same amount of money for less service.

Comcast also has a history of not updating their data caps. Going from 250/300 GB 5 years ago, to "suspending data caps" since then, they've only increased the cap to 1 TB. What happens in a couple of years when internet usage increases even further due to streaming services, video conferencing, etc. Consumers will be forced to pay for an "unlimited" plan.

---

## **Description**

Comcast has planned to roll out a 1TB per month data cap on home internet starting Nov 1 despite there being no evidence that it is at all necessary for their business to be successful. There is not a limited amount of internet to use, this is simply a money grab by a company taking advantage of their de facto monopoly in many parts of the country. These data caps are completely anti-consumer, even moreso now that our daily lives depend so heavily on internet usage. The FCC and other federal entities need to take action now to prevent Comcast from continuing this destructive policy and their peers Time Warner and Verizon from doing the same.

## **Description**

I am a current Comcast customer. This is not entirely by choice - it is the only high-speed option that services my building, despite receiving competitor's marketing attempts regularly. (The voluntary monopolies/agreements between ISPs to non-compete, and therefore avoid monopoly charges, is another issue of which I have major concerns, but is not the point of this message.

Today, I am contacting you to express my concern over a recent trend of Internet Data Caps, one which I feel poses an economic and moral threat to the future of our country and its people. We have already seen the effect of data caps among wireless providers - however wireless providers are unique, because they directly compete with each other. There is business incentive to provide the best product. Now we are seeing it in the wired internet space, and I hope to prevent it from going further.

As the FCC ruled this year regarding net neutrality, the internet is a utility, not a luxury. However, unlike, water, gas, or electricity, the input and output of a broadband line cannot be easily measured and verified - nor do they need to be. Data is different. While heavy data users will perhaps increase the strain on their infrastructure, the difference in cost between transmitting 1 GB and 2 GB of data is minuscule compared to the difference between providing 1 gallon and 2 gallons of water. The pipe is being used no matter what - the question is what is a fair price to charge for its use. Not to mention, there is no accuracy of metering efforts - there are already multiple reports of people being erroneously charged for use of data that is impossible with their current internet speeds. Who is regulating Comcast's data restriction? How are we to now how much data is actually being used?

As Comcast tries to frame this on their FAQ page: <https://dataplan.xfinity.com/faq/>, "This data plan is based on a principle of fairness. Those who use more Internet data, pay more. And those who use less Internet data, pay less." Yet they are still charging everyone a (too high) base price for their service - and then vastly overcharging to punish those who are heavy users. With no competition to undercut their pricing practices, they can do so with minimal repercussions. When the internet is necessary to daily life, what choice do consumers have? We can either pay, or go without a necessity to modern life. Not to mention, as telecommute options increase, they are also effecting the ability to work from home. I, for example, work for a company that does not have physical offices. If I were to go over my data cap, I am not only being effected for my entertainment purposes (some of which, like video games, are not in any way competition to Comcast's base service), but for my business purposes. This damages my economic input in the economy, because my company either must pay more to provide internet to its employees, or its employees must pay more to continue to do their job. Either way, less money goes into the larger economy, and more into Comcast's extensive coffers.

Companies such as Comcast are attempting, in any way that they can, to place limits on consumer's consumption, rather than to innovate their service offerings. I believe this is being done as an effort to combat cord-cutters, who prefer to use online services rather than Comcast's own cable service

(which is often an inferior product to newer innovators like Netflix or Sling TV). This is in violation of the spirit of net neutrality, if not the exact letter of it.

While I am fortunate enough to not be in a market that is being forced to accept the new data cap plan starting November 1 (the XFINITY Terabyte Internet Data Usage Plan), I am highly concerned that my state (Maryland) will be next in their long-term roll-out plan.

I wanted to make you aware of the following aspects of the internet market that I feel data caps either cause or exacerbate:

- Lack of consumer choice due to local monopoly (Oligopolies), as mentioned above. When Comcast is my only option, why should they improve? What capitalist incentive do they have?
- Lagging behind the rest of the world in broadband availability and cost to consumers. (Internet infrastructure improvement has been disincentivized by the existence of these oligopolies.)
- Importance of the internet as infrastructure for an intellectually competent society, capable of sustained function and development in the modern world economy.
- Similarly, the importance of the internet for children to participate in school and for everyday people to participate in the modern economy. As I mentioned above, this applies to modern business as well.
- Arguments for them hinge on non-comparable tangible goods - such as water, gas, electricity.

Comcast's new data caps are not a "value-added" service. They are the same service consumers have always paid for, but now we're being forced to pay more for it.

It is blatantly anti-consumer.

I appreciate your time and consideration of these issues.

**Ticket: # 1266006 - Comcast Data Caps**

**Date:** 10/14/2016 2:22:38 PM

**City/State/Zip:** Pottsville, Pennsylvania 17901

**Company Complaining About:** Comcast

---

## **Description**

Recently Comcast has announced that it will begin enforcing 1tb data caps in November. As has been shown countless times, data caps in and of themselves have no positive benefit to network infrastructure, and as such exists solely as a means of increasing profit. Several ISPs try to make the comparison of consumers purchasing tangible goods, however bandwidth and data obviously do not fall into this category. In the past providers have not only been given the resources, but all the the opportunity and reasons to improve our country's infrastructure and improve communications, failing to do so each time. In a world where data usage is becoming more and more prevalent, limiting consumers consumption and access is DIRECTLY anti-consumer practice and should not be tolerated. You have the opportunity yourselves to put a stop to these kinds of practices and enforce the ideals that our country is based on. Those being a consumer driven market where innovation and progress can continue to exist without the restraints of extortive business practices such as the ones Comcast and other ISPs continue to implement.

**Date:** 10/14/2016 2:23:14 PM

**City/State/Zip:** Fairfield, Iowa 52556

**Company Complaining About:** Comcast

---

## **Description**

Comcast is placing a 1 terabyte data cap on consumer internet connections beginning November 1st. It is obvious that corporate greed is the only motivation for this. The more they throttle users' bandwidth, the more they can oversell their own bandwidth for greater profit. Throttling the user experience, which by the way is already painfully flooded by advertisements, does not foster growth and innovation. It fosters anger and grassroots efforts to break the imposed rules illegally. Over capitalization on any commodity or activity creates a strained system that risks collapse. The only way to support progress in an increasingly data-dependent world is to support a growing internet. Data caps are the antithesis of that growth. To support the future of the American people, the FCC should disallow internet service providers from throttling user connections and overselling upstream bandwidth.

---

## **Description**

The fact that Comcast is getting away with data caps is down right appalling. This is not a technical issue, and not an issue of network congestion. This is a pure money grab, and is directly targeted at those who stream majority of their media. If the FCC true is in place to to protect the American people, then some serious investigations need to start happening. As you know Comcast is not considered a monopoly, but in very many places it is the only option for hundreds of thousands Americans, so they don not have a free choice away from this despicable company. So please FCC do something you're our only hope!

---

**Ticket: # 1266048 - Comcast Data Cap**

**Date:** 10/14/2016 2:27:03 PM

**City/State/Zip:** Pittsburgh, Pennsylvania 15202

**Company Complaining About:** Comcast

---

**Description**

Comcast is instituting a data cap of 1TB per month. While I can "stream" as much cable television from Comcast as I want without affecting my cap, if I tried to watch 5 or more hours of UltraHD television from Netflix per month I'd hit my cap.

1 (legal) video game download through Xbox or Playstation can be upwards of 10% of this cap.

Once Comcast is allowed to institute this cap, there's nothing that will force them to change it. In 10 years when when video games are 250GB, or when 8k television is becoming the norm, Comcast will still have a 1TB cap.

That's anti-competitive and hurts other businesses.

**City/State/Zip:** Wauwatosa, Wisconsin 53213

**Company Complaining About:** Comcast

---

## **Description**

A 1GB data cap limit? This is a joke right?

Even if they allow you to surpass it twice a year with no charge, that is a ludicrous limitation on internet users. I would probably chew up more than 1GB watching a single season of a show on Netflix. What about people who download large amounts of content, like games? PC and console game players all download huge applications and system updates all the time. Windows or Apple might put out security patches that approach a GB in size, so what am I supposed to do? Simply NOT download critical updates to systems with security risks and flaws?

You cannot allow this. It is absolutely obscene and it's nothing but the latest and one of the more egregious attempts by Comcast and other providers to force cable subscriptions on customers who don't want them. Comcast is blatantly encouraging a massive online security problem because they're going to prevent huge swaths of the population from getting the software updates they need to protect themselves and their personal information. Due to the monopolies that you (the FCC) continue to allow them to hold, there will be no workarounds for many users and they will be forced to choose between using a very limited amount of the internet or keeping their devices secure and abstaining from internet use entirely (which completely defeats the purpose).

I am so sick of this crap happening. You guys are the regulators, you guys have the power to do something. Please support the American people and swat this Comcast lunacy into the garbage bin where it belongs.

**Date:** 10/14/2016 2:35:10 PM

**City/State/Zip:** Ann Arbor, Michigan 48104

**Company Complaining About:** Comcast

---

## **Description**

Comcast's enactment of data caps on myself and it's other customers is another example of the monopolistic type power it has over consumers that have little to no Internet service provider competition in their area. Comcast claims it won't affect very many of its users but as online streaming becomes more ubiquitous and the video quality increases everyone will reach the 1Tb cap in a few years time. It is unlikely Comcast will raise its cap level with internet usage and soon many people's internet bills will double in price. Please stop Comcast and all ISPs from being able to exercise their control of the market and extort money from American citizens. Make the internet a utility to give equal access to all at fair and reasonable prices.

## **Description**

Dear:

Tom Wheeler, Chairman (Tom.Wheeler@fcc.gov)

Mignon Clyburn, Commissioner (Mignon.Clyburn@fcc.gov)

Jessica Rosenworcel, Commissioner (Jessica.Rosenworcel@fcc.gov)

Ajit Pai, Commissioner (Ajit.Pai@fcc.gov)

Michael O'Rielly, Commissioner (Mike.O'Rielly@fcc.gov)

Subject: Data Caps

I'm am contacting you to express my concern over a recent trend of Internet Data Caps that I feel poses an economic and moral threat to the future our country and its people. Specifically I wanted to make you aware of the following aspects of the internet market that I feel data caps either cause or exacerbate.

Lack of consumer choice due to local monopoly (Oligopolies).

Lagging behind the rest of the world in broadband availability and cost to consumers

Importance of the internet as infrastructure for an intellectually competent society capable of sustained function and development in the modern world economy. (This adds no value to and disincentivizes improvement of the internet infrastructure.)

Arguments for them hinge on non-comparable tangible goods.

It is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

It is blatantly anti-consumer.

I appreciate your time and consideration of these issues,

(b) (6)

**Ticket: # 1266151 - Comcast's New Data Caps****Date:** 10/14/2016 2:37:20 PM**City/State/Zip:** Olean, New York 14760**Company Complaining About:** Comcast

---

**Description**

Comcast is implementing a new 1TB data cap on its home internet service. Limiting data is limiting people's access to specific services and information. Comcast's article states that "You can do a lot with 1TB of data" but people have been saying for years that "You'll never need more than X specs on a PC" for years. By allowing this thinly-veiled money grab to stand, you'll be setting a limit on how PCs can expand and the services that can be provided. This will most certainly lead to further monopolization of Internet services and a much worse Internet for all of us. Tim Berners-Lee did not monetize or limit the Internet when he invented it. Don't be the organization that allows corporate America to ruin one of the few truly free places we, the people, have left. Please, make a stand for us.

## **Description**

I would like to lodge a complaint about Comcast's upcoming changes to their programs. They are enacting an unfair, national data cap for it's users. This data cap will raise prices for "heavy" internet users, including people that pay for 3rd party streaming services, such as Netflix and Hulu. This change is being implementing despite their being no changes on Comcasts side, such as rising speeds or lower rates. There has been no push for upgrading infrastructure for the company, which could alleviate any perceived "data" issues. Comcast also has a monopoly in some areas, so they are the only option. User's do not have a choice in canceling their services to the company. They have unfair business deals with Time Warner that stifles innovation and competition within the industry, consumers pay for this. Comcast has disgusting business practices, as in today's day and age access to base level internet should be a right, and regulated as a utility.

## **Description**

Due to the high cost of cable tv, my family and I made the choice to cut cable tv and use online services such as Netflix, Hulu, Amazon and so on. Unfortunately, the only company that provides internet service in my neighborhood is Comcast and I am stuck paying almost \$100 a month for just internet service.

I am now advised that Comcast has implemented a data cap in our area, that we regularly exceed. It's funny that they have only implemented these caps in areas where they don't have competition from services such as Google Fiber.

It seems that every time we try to save money, these greedy corporations find a way to charge us more.

We need the FCC to force these companies to remove the arbitrary data caps and to promote competition between ISP's. That is the only way the consumer will ever have a chance. Please do something.

**Company Complaining About:** Comcast

---

**Description**

Comcast is placing a data cap on my service at 1TB per month beyond which I receive unreasonable additional charges. Because AT&T is the only other provider in my area, and they have begun rolling out data caps as well, a data capped internet connection is my only option as a consumer.

The cost of internet service in my area -- and the United States as a whole -- is already at an extortionate level. Compared to the the rest of the developed world internet speeds and reliability are severely behind, yet we are charged a premium for sub-par service. Placing caps on data usage is only further limiting an already poor service, note that the price of my service has not gone down since data caps have been in place, but has, in fact, increased. I am now paying more than I was before for inferior service.

This is not a service that I have the ability to opt out of. Both the demands of the modern world and my career require that I have constant access to the internet from my home. This service is necessary for my livelihood, and the livelihood and education of millions of other Americans.

It is clear that Comcast and other cable providers are instituting data caps in order to retard the progress of their competition. Data caps have nothing to do with quality of service, but instead are in place to protect profits on cable television while stifling the progress of competing streaming services that rely on ISPs to deliver it's content.

All of this behavior is blatantly anti-consumer.

## **Description**

Comcast data caps are simply a money grab by the company to keep people from switching off of their cable tv and will only impede people in the future. Sure, 1 TB seems like a lot of data now, but remember that only decade or so ago, 1 GB seemed like a lot of data. If 99 % of your users aren't even hitting the data cap then why have them in the first place?

If I had another option, I would vote with my wallet and just find another ISP, however the current state of ISPs in most areas mean that we don't have a choice as to who we go through. It's either have internet with these data caps, or have slow to no internet instead. What kind of choice is that?

---

**Description**

Comcast's recent announcement to roll out data caps is troubling on many fronts: lack of choice due to their current local monopoly, not a "value added" service as this is the same service I already pay for...now with the worry of being charged additional fees for going over the imposed data cap, and probably the most important that I now have to quash my childrens educational video resources provided from their school district as all the videos are full hd and above which goes without saying that it consumes a lot of data.

Comcast makes it extremely difficult to determine usage as well as if the data cap actually effects or will be imposed upon the consumer. This is extremely troubling as we are on the cusp of major consumer adoption of 4k televisions and 4k content. This will have an adverse effect that spans further than the internet service provider space. For me, this is a deterrent to spend my money on new televisions, gaming systems, or anything else that will produce or consume 4k content. This means stagnation of multiple industries due to one companies greed.

Currently, my families internet data usage hovers around 500-600GB per month. If we use online video as a baseline, HD consumes 3GB per hour whereas 4k consumes 7GB+ per hour. Making an assumption that lower resolution content will become more scarce as the months progress, this means that making the assumption that a bulk of the data used by most families is through video media consumption and currently reported as a 250GB median. This indicates that Comcast is simply positioning themselves to exponentially charge consumers more for an inevitable increase in media consumption. Keeping in mind this is not a "value added" service, it is a well thought out plan to impose these data caps so that they will be able to yield gross profits in the coming months.

**Date:** 10/14/2016 2:55:10 PM

**City/State/Zip:** Santa Fe, New Mexico 87505

**Company Complaining About:** Comcast

---

## **Description**

On November 1st, Comcast intends to implement data caps on their service, forcing customers who take advantage of bandwidth intensive services such as offsite backups to pay extra to get the same level of service that they were previously assured. This doesn't affect the majority of Comcast's clients, but it does punish those who wish to make the most of their broadband connection.

If there were reasonable alternatives in the marketplace, this sort of policy setting would be punished by the free market, as those who don't agree with it could move to another service provider. However, this competition does not exist, in part due to lobbying on a local/municipal level and price-setting collusion between Comcast and Verizon as the country's two primary broadband service providers.

## **Description**

The act of expending the already existing data caps (And the existence of the data caps to begin with) serves to further inflate the already monopolized and predatory practices of Comcast in certain parts of the country.

This is purely anti-consumer. We are being forced to pay extra for a service we already enjoyed long before.

This is crippling to several key entertainment and business services that have been springing up recently, such as Streaming and HD online television services.

The internet is an essential and important aspect of modern Americana. To see it degraded to far worse than other countries in terms of price and quality is embarrassing, and coupled with the fact that it is due to greed makes this travesty even more appalling.

I urge the FCC to take action against this problem, lest the internet becomes even more overpriced and inaccessible.

## **Description**

The company has a monopoly on our area it is impossible for people to get another provider sometimes because they are allowed to have this monopoly. We all know they dont own the rights to all the lines they are using, most of them are owned by the city or the government in general, they only have to provide a short run of there "own cable". Now they roll out a data cap on people who are literally forced by to use this service if they want fast than dial up internet. Its sad that they are allowed to run this way stopping the advancement of technology so they can make more money.

They are also only rolling this out to residential customers not business.

**Ticket: # 1266406 - Comcast Data Caps****Date:** 10/14/2016 3:09:12 PM**City/State/Zip:** Spring, Texas 77386**Company Complaining About:** Comcast

---

**Description**

To whom it may concern,

I have recently received notice from Comcast that they will be enforcing a 1 Tb data cap on my internet connection starting Nov. 1, 2016. It is my sincere belief that this type of restriction is anti-competitive, designed to stifle competition under the guise of "fairness" and at the consumer's expense.

Comcast claims that data caps ensure that there is enough data to go around to all of their customers, resulting in a landscape that is "fair" for everyone. Data is not a finite resource like water or electricity. The only limit to the amount of data that Comcast can deliver is the maximum throughput of their infrastructure. If their systems are not capable of delivering adequate bandwidth to their users concurrently, I would suggest that they have oversold their capabilities.

The data cap will penalize users who exceed their allotted bandwidth. However, users can opt to pay more to raise their cap for the month or to eliminate the data cap entirely. If the data cap is about "fairness" as Comcast claims, why is it possible for users to exceed the data cap? Suppose that all of the users on my street maximize their usage while I am trying to use my internet. Suppose that they have all paid to remove their data cap, but I have not. Comcast claims that users who use more data should pay more to make it "fair" for everyone, but in this scenario we would all have terrible service until some of the streams are throttled or shut down. Presumably, Comcast would use the extra funds garnered from the cap charges to provide better infrastructure; I'll believe that when I see it.

I believe that this data cap policy has two purposes. The first is to generate additional revenue for Comcast and their contemporaries in the immediate future. Comcast claims that few of their users ever even approach the cap so no one should worry. However many users there are, any funds generated by the caps are pure profit, creating income without costing Comcast anything. Furthermore, 4K Video and accompanying HD Audio formats are rapidly entering mainstream media. Data streams for these types of media will be several times heavier than the current standard, meaning that Comcast's reassurances that few users will ever exceed their cap are shallow and shortsighted. In my household of two, we use almost half of our allotted data ever month. If streaming begins to consume 2 to 3 times that amount with the advent of 4K, we'll exceed our cap every month unless we settle for inferior quality content.

Which brings me to the second purpose of the new data cap. Comcast wants to make streaming content from anyone but them as undesirable as possible. Watching cable TV will not count against the data cap, so Comcast will encourage users exceeding their limits to try their cable offerings instead of streaming. This is blatantly anti-competitive; Comcast and the like are bleeding customers and choking their competition is the easiest way to stem the flow.

I am fortunate to live in a market where options are available to me. If Comcast's cap becomes untenable, I can switch to another provider. Not everyone has this convenience, however. Many consumers have no other options and will be forced to bow to their telecom's every whim or go without internet access.

I urge you to consider the ramifications. Comcast believes that they can assert authority over the internet; a common and absolutely vital tool in today's world. Please consider the consequences of the stranglehold telecoms are attempting to establish on their consumers. Stopping this problem before it becomes a disaster is important; once a precedent of anti-competitive, anti-consumer policies is established, it will be much more difficult to reverse.

Thank you for your time.

I'm am contacting you to express my concern over a recent trend of Internet Data Caps that I feel poses an economic and moral threat to the future our country and its people. Specifically I wanted to make you aware of the following aspects of the internet market that I feel data caps either cause or exacerbate.

- Lack of consumer choice due to local monopoly (Oligopolies).
- Lagging behind the rest of the world in broadband availability and cost to consumers
- Importance of the internet as infrastructure for an intellectually competent society capable of sustained function and development in the modern world economy. (This adds no value to and disincentivizes improvement of the internet infrastructure.)
- Arguments for them hinge on non-comparable tangible goods.
- It is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.
- It is blatantly anti-consumer.

I appreciate your time and consideration of these issues.

---

**Description**

Comcast enacting a 1 TB data cap per month on customers is absolutely horrendous. We are currently paying for unlimited data, and this is a blatant cash grab by a company that charges obscene prices in an effort to make even more money. They don't improve their infrastructure and consistently do everything in their power to be as anti-consumer as possible.

With the growing dependence on internet usage and the availability of 4k streaming, online gaming, etc, these data caps will be quickly met, forcing people to pay more for normal service. Why is America lagging behind the rest of the developed world?

**Ticket: # 1266428 - Comcast Cable Data Caps begin November 1**

**Date:** 10/14/2016 3:12:09 PM

**City/State/Zip:** Taylor, Pennsylvania 18517

**Company Complaining About:** Comcast

---

**Description**

I have Comcast Cable. I don't like Comcast. I hate Comcast, but they have successfully bought all local high-speed ISP competitors or have blocked them from using the existing coax cable infrastructure. They have a local monopoly. So, I'm left with the options of using low-speed internet or Comcast.

Comcast charges me much more than fair, and because they are the only game in town, I have to pay it or lose internet. There's no competition.

Now, they are putting a cap on the amount of data I can use monthly. I use a lot because I have a family, and we are all online. We watch movies online; we play games online; we communicate online.

This data cap is just another way for Comcast to take advantage of their monopoly. This new cap does not add any value, and it's anti-consumer.

Please look into this, and please stop Comcast from taking advantage of their local monopolies.

## **Description**

I wanted to make an official complaint regarding Comcast's up coming data caps. Though for some, the level of bytes they have allotted until penalties kick in will not be reached, this is a slippery slope. It clearly will not be long until they decrease that limit more and more as they feel they need more capital. I can easily see this ending up becoming a tier system where different people pay different prices for something that doesn't cost Comcast anymore money to service. I hope that the FCC will look into this and stop this illegal and ridiculous action Comcast is perusing.

Thank you for your time,

## **Description**

On Oct. 6th I received an email from Comcast stating that they will be implementing a 1TB cap on data usage and will price usage beyond this tier.

In our area, Comcast is a virtual monopoly for high-speed internet as well as television service. There are other options, but they are substantially slower or offer fewer channels or internet speeds or higher latency.

I believe these data caps are a violation of net neutrality because if you stream video from Comcast, it doesn't count against your 1TB cap but if you stream from Netflix or Hulu or Amazon Prime you do. They treat their own packets differently than they treat packets from other companies and this violates Net Neutrality precepts. This move also leverages their monopoly in internet data delivery to unfairly push their TV cable product - which is a violation of antitrust "tying" restrictions.

Lastly, this will likely lead to more tiers of service in the long-term. Eventually, it will probably be 500 GB and then 250GB and so on. Soon you'll be buying data bundles much like you do with a cell phone. They want to meter you like a utility without being subject to the laws that govern utility companies and using a metering method that they developed and that doesn't match other data measuring methods.

## **Description**

I read a news article this morning where I learned that comcast was now attaching 1tb data caps to their Internet subscribers, effective November 1st. I did not sign up for capped internet, and such data caps are, quite frankly, anti-consumer price gouging.

I am in a household with two other people. Three of us total, all heavy Internet users, be it for entertainment, work, or school.

Because of comcasts monopoly in the area we can't "just get another provider" meanwhile they are free to gouge their customers on price. This is not in the spirit of this countries values (at least the values I was told it stood for when I was a child). These data caps cannot be allowed to stand, they are anti-competition, and anti-consumer, and are part of why American Internet service is falling behind that of the rest of the industrialized world.

---

## **Description**

Concatenation implementing data caps on their consumers is nigh criminal. They have no excuse for these practices other than to try and limit people's use of streaming services such as Netflix (comcasts direct competitor) and to squeeze more dollars out of their internet service to compensate for their failing cable service. There is no logical reason for this farce of a restriction. How have they operated for over decades until now?

Please do something about the monopoly the telecom companies have over us. Your 2.3 million lawsuit meant nothing to the hundreds of millions they made doing their illegal practices. You need to step in and do something for the people of this country who rely on good internet to run businesses, find jobs, or even connect with family. This is criminal, it's morally bankrupt, and we, the people, need our governments help to stop this travesty.

Thank you,

---

## **Description**

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

A user streaming 4k video over the internet will exhaust their 1TB data cap in around 2 days. Considering the cost of the service, this is ridiculous.

**Date:** 10/14/2016 3:43:00 PM

**City/State/Zip:** Richmond, Virginia 23221

**Company Complaining About:** Comcast

---

## **Description**

I am strongly opposed to Comcast's expansion of the 1TB data cap policy, as detailed here: <http://corporate.comcast.com/comcast-voices/a-terabyte-internet-experience>.

My complaint is based not on my current circumstances, as this cap has not been expanded to my market yet, but on those in the not-too-distant-future. Technology is increasingly being pushed to the cloud, bringing with it increased data use. Game and video downloads will only get bigger as 4K resolution gradually becomes the new standard of HD. In the coming years, 1TB of data will be considered normal use, and Comcast customers like myself will be forced into paying overage fees or paying for truly unlimited data, something that has historically been included in the monthly internet charge.

In my neighborhood there is no alternative high-speed internet service, so I am at the mercy of Comcast's whim to introduce whatever artificial data caps and policies they so choose. I am facing an anti-consumer situation, and my only recourse is to express my discontent with the FCC in the hopes that something gets done.

Thank you for your time.

**Description**

Hello,

I'm writing in response to the upcoming data caps proposed by Comcast. I'm an entrepreneur in San Francisco. I purchased Comcast's Xfinity internet service as it had high speeds and unlimited data. I was up-sold on a higher speed package about a year ago, during which I was also told there were no data caps. With this change I feel a victim of a bait and switch. They've given me a faster "data car" but didn't tell me about the "data cliff" they dug a terabyte down the road. If I had viable alternatives in the neighborhood I would switch. I also feel like they're abusing their dual relationship as a internet & cable oligarchy. While they're placing caps on my data they're also upselling me on (audio/video) content via their cable services, which I wouldn't need if I could continue to stream it online as I have in the past.

**Company Complaining About:** Comcast

---

## **Description**

Comcast is trying to impose a data cap in our area, this is not acceptable for obvious reasons - please do something about this as thousands of students like myself are trying to get by and charging for additional data when the rates are already so high is simply ridiculous.

---

[Ticket: # 1266737 - comcast data caps](#)

**Date:** 10/14/2016 3:53:00 PM

**City/State/Zip:** Puyallup, Washington 98374

**Company Complaining About:** Comcast

---

## **Description**

Comcast should not have the right to institute data caps because of the numerous tax dollars a lot of ISPs have already garnered from every day tax payers to upgrade their networks, however the ISPs never used that money for the upgrading and instead more or less pocketed the money. Internet doesn't need data caps because there is no such thing as internet congestion with fiber optics. DSL is a highway with 5 lanes and fiber optics are roughly 300 lanes per house. It's just a new way to acquire more money for offering the same product.

## **Description**

The flagrantly anti-consumer data cap recently announced by Comcast to be enacted on November 1st of this year must be blocked. The sheer breadth of transgressions that such a cap brings with it is beyond comprehension. If one were to write an economics book on monopolies, anti-consumerism, and spineless regulatory bodies, they could simply follow along Comcast's meandering path in the last decade.

There is no tangible reason for this data cap to exist other than to further extract and exploit consumers. These same consumers have no other options available to obtain what is now an essential resource in modern existence. This is monopolistic behavior through-and-through.

I understand Comcast is a business, and in a capitalistic society such as ours, its primary goal is to earn more money. "Earn"... that word implies that Comcast has done something to deserve more compensation. A data cap is no such thing - Comcast has not added value, nor have they incurred additional cost, in this situation. Instead, as a business, they are exploiting every revenue channel they can find... which again, as a business, is its duty. The FCC (and arguably the FTC) have their own duty to protect US consumers - this shameful display of apathy isn't so much frustrating as it is saddening. Aren't you supposed to be the good guys?

Comcast's data cap - which in all actuality is an arbitrary line in the sand used to exploit its customers - will stymie so many things, it's impossible to properly list them. Beyond the direct effects of limiting data, the lack of action on the part of the FCC and FTC will set a precedent of weakness and irrelevancy. If an outright monopoly like this can exist - or even flourish, as Comcast appears to be doing - then I suppose my true complaint is that my tax dollars shouldn't be spent on regulatory bodies that doesn't actually regulate anything.

## **Description**

Directed to the following people:

Tom Wheeler, Chairman (Tom.Wheeler@fcc.gov)

Mignon Clyburn, Commissioner (Mignon.Clyburn@fcc.gov)

Jessica Rosenworcel, Commissioner (Jessica.Rosenworcel@fcc.gov)

Ajit Pai, Commissioner (Ajit.Pai@fcc.gov)

Michael O'Rielly, Commissioner (Mike.O'Rielly@fcc.gov)

I'm am contacting you to express my concern over a recent trend of Internet Data Caps that I feel poses an economic and moral threat to the future our country and its people. Specifically I wanted to make you aware of the following aspects of the internet market that I feel data caps either cause or exacerbate.

Lack of consumer choice due to local monopoly (Oligopolies).

Lagging behind the rest of the world in broadband availability and cost to consumers

Importance of the internet as infrastructure for an intellectually competent society capable of sustained function and development in the modern world economy. (This adds no value to and disincentivizes improvement of the internet infrastructure.)

Arguments for them hinge on non-comparable tangible goods.

It is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

It is blatantly anti-consumer.

I appreciate your time and consideration of these issues,

## **Description**

I'm one of the customers in Michigan who is going to have a data cap in November. Data caps are wrong and violate the concepts of net neutrality and are an attempt to punish businesses for streaming (like Netflix and Amazon Prime) and consumers who don't want a cable TV subscription and stream their television programs online.

A data cap of any kind is a purely punitive measure for "cord-cutters". Conveniently, of course, Comcast's own streaming options do not count for your 1TB monthly allowance.

**City/State/Zip:** Champaign, Illinois 61821

**Company Complaining About:** Comcast

---

## **Description**

Dear FCC,

I am a customer of Comcast, not by choice, but by necessity. Internet connection is essential in all lines of work, including but not limited to software engineering, teaching, administration, customer service, health services, and information services. It is also essential to the education of our youth, the information needed for patients' health concerns, and for communications between parties in order to exchange information. Due to a local monopoly, Comcast has made it impossible for a customer to have any choice in internet service provider. Since I rent, I cannot install satellite.

Within a week of signing up for service, a very sassy Comcast representative called me at night (not during work hours) to sell me upgrades and add-ons. This is unacceptable. I ordered the service I wanted for a reason, and I expect the provider to respect my time and precious evenings with my friends and family. The timing was too close to be any coincidence--it's not unreasonable to suspect that they called me \*because\* I became a customer. This is harassment.

Now, Comcast has decided to implement a data cap, then sell the exact same previous service for \$50 more (see <http://www.theverge.com/2016/10/6/13192832/comcast-xfinity-home-internet-data-caps-one-terabyte>). Putting a cap on the service in order to sell the same previous service for more money is NOT value-added and is blatantly anti-customer.

Thank you for your time and attention.

Best,

**(b) (6)**

## **Description**

Where I live, there is ONE option for high speed internet, not counting the the 12 megabit per second DSL my phone company happily charges \$40 a month for. Three houses down, on both sides, can have 25 mbps or greater (which happens to be what the FCC now defines as "high speed" internet), but my house is stuck with Comcast (Xfinity) if I want anything resembling what the FCC calls high speed.

With that in mind, it is very disappointing that Xfinity has just announced nationwide data caps on residential plans. While the cap at 1 terabyte of data might seem like a lot, if (like me) you regularly stream high definition Youtube videos, Amazon and Netflix movies and television (especially newer, ultra high definition "4K" content), regularly download large amounts of data (for example Steam video games), 1 terabyte is not an extraordinary amount of data to consume in any given month. If such caps on consumption are effected nationwide, there is suddenly a strong disincentive to continuing to consume digital goods.

Such business practices might be permissible in a typical industry with substantial competition, where consumers have a variety of choice in providers. However, high speed internet is not such an industry; the monopolies that the few existing providers have enable them to continue increasing their fees, and to introduce expensive (and, from their point of view, lucrative) new limits on the consumption of digital goods. Unless the FCC disallows such behavior. I urge the FCC to do so.

---

[Ticket: # 1266832 - data cap?](#)

**Date:** 10/14/2016 4:12:18 PM

**City/State/Zip:** Boston, Massachusetts 02128

**Company Complaining About:** Comcast

---

## **Description**

Comcast data cap is immoral business practice. I was promised with Unlimited internet when I sign up for their internet service, but what I received was not even half of the speed that they promised and most importantly they put a 300 data cap on my service which my family often pass over that. Either they stop using the term unlimited or provide what they promised. Shady business practice like this should not be tolerated especially by our guard, FCC.

**City/State/Zip:** Sperry, Oklahoma 74073

**Company Complaining About:** Comcast

---

## **Description**

Comcast is going to start enforcing monthly data caps in select states. Please do not let this happen. The internet is fast becoming an essential service for millions of Americans. As such, it's vitally important that it remains open and accessible to everyone. If data caps start being enforced, it's simply adding more cost to a service that many people already pay for. The USA is already lagging behind the rest of the world in broadband availability and speed. Data caps are blatantly anti-consumer, and due to the severe lack of ISPs in most places, Comcast has a monopoly in many markets across the country. Most people will have to choose between no internet, limited internet, or paying more for a service they already pay for if data caps are allowed to be enforced.

Please do the right thing and stand up for the consumer: do not allow data caps!

Thank you,

(b) (6)

## **Description**

I'm outraged Comcast is enacting a data cap. I have no other choices for internet due to a local monopoly. The United States is lagging behind the rest of the world in internet service, speed, and quality. This is the same service I've always paid for, and now there's a data cap. The costs of an ISP are so low, establishing an arbitrary data cap makes no sense and is only being used to establish precedent and further profit. This is blatantly anti-consumer and greedy.

---

[Ticket: # 1267031 - Comcast 1 TB data cap](#)

**Date:** 10/14/2016 4:41:21 PM

**City/State/Zip:** Olathe, Kansas 66062

**Company Complaining About:** Comcast

---

## **Description**

Comcast's new data caps represent an unreasonable restriction on my internet usage and unfairly favor their cable tv offerings over new and innovative internet companies. They have admitted that there is not technological reason for the caps to exist other than to charge more money for the same service and to adversely affect their competitors. I am lucky to have an alternative ISP to switch to, but I have not always had this luxury. Comcast is abusing it's monopoly to harm it's competitors. They would prefer to block or limit our access to these new technologies rather than improve their infrastructure. Please consider regulating this abusive behavior to protect american ingenuity and preserve the great freedoms that an unrestricted internet offers us.

---

**Ticket: # 1267055 - Comcast 1 Terabyte Data Cap****Date:** 10/14/2016 4:45:11 PM**City/State/Zip:** Webster, Texas 77598**Company Complaining About:** Comcast

---

**Description**

I live in the Houston, TX area and I am filling a complaint against comcast for the proposed 1 terabyte data cap they will soon be imposing. I live in. An apartment complex and unfortunately they are the only providers available. I have had constant issues with their service, which includes outages and outdated equipment being issued to me. If I had an option to switch providers I would but they have a monopoly in my area. When I signed up for comcast Internet I signed up for a specific plan which never had data caps and now I am expected to pay more if I exceed 1 terabyte which with how streaming 4k movies and TV is becoming more prevalent I would easily hit the cap.

[Ticket: # 1267068 - data caps should be illegal](#)

**Date:** 10/14/2016 4:47:34 PM

**City/State/Zip:** Hopkins, Minnesota 55343

**Company Complaining About:** Comcast

---

## **Description**

Comcast is now implementing data caps in my area. While most people do not use 1tb of data in a month, comcast is planning to cash in on overages in the coming years once people start streaming 4K content in the coming years. They are putting things in motion now to gradually ramp up that effort.

There is no reason to include a data cap. Increased data usage puts no more burden on the provider. it is NOT analogous to electricity or water utilities in that regard. This is simply a cash grab by comcast from it's customers over whom comcast holds a monopoly.

Cable internet access needs to be regulated like a utility.

**Date:** 10/14/2016 4:48:33 PM

**City/State/Zip:** Magna, Utah 84044

**Company Complaining About:** Comcast

---

## **Description**

Wired internet functions as a utility, like water or sewer connections. Those utilities do not have service caps. Internet must not have a service cap, either. This behavior is anti-competitive and a symptom of a broken monopoly. If Comcast wishes to continue as a monopoly (and impose data caps), it must be regulated like any other utility.

---

**Description**

Starting November 1st, 2016, Comcast will be rolling out new 1TB data caps for its customers (See <https://dataplan.xfinity.com/faq/>). While 1TB may seem like a lot, it really isn't as online video platforms such as Netflix and Hulu start implementing 4k. I see this move as anticompetitive and against Net Neutrality. As a software engineer that depends on the internet for his livelihood, I would like to see action taken to prevent this cap from being implemented.

**City/State/Zip:** Vancouver, Washington 98665

**Company Complaining About:** Comcast

---

## **Description**

Comcast has implemented a 1TB data cap on consumer internet. This negatively affects larger households like my own. It also negatively impacts technological growth. As technology like streaming becomes more and more commonplace, and the quality of streaming services continue to increase it puts a larger burden on data usage. If data caps are implemented it discourages the development of higher quality streaming services. It also is a conflict of interest for Comcast, as they directly are hurt by people no longer subscribing to their cable service, and they will benefit from the "cable-cutters" returning to cable because they can no longer stream services like HBO, Netflix or Hulu due to the data cap. This data cap will also not be accompanied by a price reduction even though many customers will lose services and stand to lose data.

## **Description**

As of November 1st 2016,

Xfinity/Comcast is instituting 1TB data caps per month.

I'm am contacting you to express my concern over a recent trend of Internet Data Caps that I feel poses an economic and moral threat to the future of our country and its people. Specifically I wanted to make you aware of the following aspects of the internet market that I feel data caps either cause or exacerbate.

Lack of consumer choice due to local monopoly (Oligopolies).

Lagging behind the rest of the world in broadband availability and cost to consumers

Importance of the internet as infrastructure for an intellectually competent society capable of sustained function and development in the modern world economy. (This adds no value to and disincentives improvement of the internet infrastructure.)

Arguments for them hinge on non-comparable tangible goods.

It is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

It is blatantly anti-consumer.

## **Description**

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but

for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

## **Description**

Hello,

I am writing because of the recently rolled out data caps from Comcast. As a programmer second and tech-minded citizen first, I worry about the chilling effect this would have on technological advances in our nation. Technology companies like Netflix, Google, and others have undergone a huge boom in the last decade because of the advances in networking technology as well as computing power. With a declining manufacturing industry, technology is the United States' greatest strength and the data caps will have a limiting effect on the amount of content and technology citizens can consume. Data caps shouldn't be necessary in an era about to herald in the new 5G technology, which can transmit at 22 Gigabits per second clocked in by Ericsson. That would be mobile broadband. Comcast's data cap, designed to lengthen the life of their decades-old technology, would be six minutes of 5G mobile data. Even at my current 100Mbps, I am only buying 22 hours of internet a month for \$70. Please look into the data caps in the context of the technological marvels we are on the verge of deploying, and understand how a 1TB data cap is backwards and will hold our industry back. Thank you.

**Company Complaining About:** Comcast

---

## **Description**

Comcast is enforcing data caps starting November first. This effectively increases my price of internet. As much as I would love to choose a different provider, there are no other ones with speeds comparable to Comcast. They essentially have a local monopoly and are free to control the pricing and access to something that everybody should be able to utilize. The internet is not a luxury anymore but required for many people to do their job, get the news, stay in contact with family and friends, et cetera.

I strongly urge you to remove this local monopoly and the restrictions that Comcast can put in place at will.

---

## **Description**

With the growing popular of UHD 4K streaming with providers like Netflix - Comcast's data caps are going to stifle innovation and growth in technology. If I could I would discontinue my service with Comcast, but there simply isn't any other choice due to Comcast's monopoly of the industry.

---

[Ticket: # 1267242 - 1 tb Data cap enacted by Comcast](#)

**Date:** 10/14/2016 5:19:11 PM

**City/State/Zip:** Riverside, California 92517

**Company Complaining About:** Comcast

---

## **Description**

Enacting a data cap is unjust. First: some communities have limited options for an internet service provider. Allowing Comcast to enact caps means customers of Comcast can be charged if they pass the data limit without having the option to switch ISP's . Second, internet is an essential need. Homework, phone, ability to pay bills on time would be possible without internet. Lastly, pop-up ads and advertisements consume data. If there is a cap, then the consumer should have the right to say who can use the data. But if this is true, then internet ads would be consuming data that is not theirs. For these reason Comcast should not enact a data cap.

**Date:** 10/14/2016 5:28:46 PM

**City/State/Zip:** Vallejo, California 94591

**Company Complaining About:** Comcast

---

**Description**

Comcast has enjoyed a nationwide monopoly/oligopoly for many years, both in the areas of cable television and cable internet. Now, with customers leaving their television service in droves they have decided to flex their monopolistic muscles and begin charging customers more for the same service. Yesterday, I received a letter from Comcast informing me that they would begin enforcing arbitrary "data caps" - a concept which has no technological justification other than a vague, hand-wavey dismissal of 'fairness' - on my account.

In short, if I want to receive the exact same service I have received for years, as a loyal customer, I must begin paying an EXTRA \$50 per month to continue enjoying unlimited data. They claim that they are "increasing" their previous limits, as a courtesy to the customer - limits that were never enforced and never advertised, and therefore never actually existed. They've taken my virtually unlimited access to information, crippled it, and put an additional price tag on it.

This is a clear punishment towards the millions of customers who have opted not to purchase television service, and rely on heavy internet usage for streaming shows and entertainment. It is blatantly anti-competitive against Netflix, Hulu and Amazon, their largest competitors in the television market.

I beg the FCC to put a stop to this. There is no technical reason to enforce data caps, there is no additional cost to provide more bits & bytes to the customer. It is time to break up the Comcast monopoly; force them to rent out their service lines - divide the internet service provider from the cable lines they so greedily exploit.

America is already struggling, with other countries far surpassing us in quality and cost of internet access. We need to take action, to remain competitive in the global marketplace and ensure internet service is as cheap and available as any other utility, such as phone lines or water.

---

**Ticket: # 1267294 - Comcast data caps**

**Ticket: # 1267325 - Comcast Internet Bandwidth Cap**

**Date:** 10/14/2016 5:33:04 PM

**City/State/Zip:** Sacramento, California 95831

**Company Complaining About:** Comcast

---

**Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is:

- 1) not interested in upgrading existing infrastructure,
- 2) wishes to take advantage of tiered usage through bait-and-switch, and
- 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

**(b) (6)**

**Date:** 10/14/2016 5:38:26 PM

**City/State/Zip:** Boulder, Colorado 80301

**Company Complaining About:** Comcast

---

## **Description**

Comcast's decision to add 1 TB data caps is at best a greedy money grab, and at worst a stifling of informational flow on what should be a utility (the internet).

Comcast has repeatedly shown anti-consumer behavior and violated the trust of the public, in cases such as the recent lawsuit where Comcast charged customers for services they did not order as well as the past 20 years where Comcast has received huge amounts of taxpayer money to implement fiber...and then did not.

Comcast repeatedly, time and time again, displays its anti-consumer and greedy practices, this 1TB data cap being simply the next step in their quest to extract as much money from the population as possible.

It's time the FCC stood back up as a champion of the people and fought back against the greed of Comcast.

## **Description**

To whom it may concern,

I'm am contacting you to express my concern over a recent trend of Internet Data Caps that I feel poses an economic and moral threat to the future of our country and its people. Specifically I wanted to make you aware of the following aspects of the internet market that I feel data caps either cause or exacerbate.

Lack of consumer choice due to local monopoly (Oligopolies).

Lagging behind the rest of the world in broadband availability and cost to consumers

Importance of the internet as infrastructure for an intellectually competent society capable of sustained function and development in the modern world economy. (This adds no value to and disincentivizes improvement of the internet infrastructure.)

Arguments for them hinge on non-comparable tangible goods.

It is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

It is blatantly anti-consumer.

I appreciate your time and consideration of these issues,

(b) (6)

## **Description**

Comcast is forcing data caps on consumer internet. I have no other choice for cable internet. I already pay a fair amount for my internet access. How does data caps help? Internet is still in its infancy. In 1990, high end hard drives were only 1 gigabyte and people never imagined being able to use all that space. In 2001 the average person's home internet was a dial-up connection using a 56k modem. 15 years later I have a 150mb connection. That is a 2678 times increase over the last 15 years. Imagine if the same increase happens over the next 15 years. We could have a 40gb a second connection or possibly even faster. If a data cap of 1TB is still in place we would have gone over the data limit in less than 30 seconds. If a data cap is allowed to be put in place then who is going to force comcast to up the data cap as file size/ internet speed increases.

Why is a data cap needed except to have Comcast force customers to pay more. Data transfer is not something that needs to be manufactured. It doesn't cost Comcast a dime to have a customer use more than a terabyte a month. It's only for Comcast to collect more money out of the areas that it is monopolizing. Comcast has tried this in the past due to losing customers to streaming services like Netflix. A data cap will force customers to pay more to Comcast to use Netflix or be forced back to using Comcasts cable tv service.

## **Description**

Recently Comcast has announced that it will begin enforcing 1tb data caps in November. As has been shown countless times, data caps in and of themselves have no positive benefit to network infrastructure, and as such exists solely as a means of increasing profit. Several ISPs try to make the comparison of consumers purchasing tangible goods, however bandwidth and data obviously do not fall into this category. In the past providers have not only been given the resources, but all the the opportunity and reasons to improve our country's infrastructure and improve communications, failing to do so each time. In a world where data usage is becoming more and more prevalent, limiting consumers consumption and access is DIRECTLY anti-consumer practice and should not be tolerated. You have the opportunity yourselves to put a stop to these kinds of practices and enforce the ideals that our country is based on. Those being a consumer driven market where innovation and progress can continue to exist without the restraints of extortive business practices such as the ones Comcast and other ISPs continue to implement.

## **Description**

The imminent 1 TB per month data cap, soon to be imposed by Comcast, is nothing more than an unnecessary, backdoor way for Comcast to charge customers anywhere from \$50 to \$200 more per month for the same service currently offered, with no added value.

1 TB per month may be enough bandwidth currently for most people, but very soon that will be untrue; as 4k hdr streaming becomes the norm, people - especially families - will very easily blow past 1 TB in a month, and will be hit with exorbitant overage charges.

As is the case with most of the country, I only have a single "high speed internet" company available to me in my area, so my options are to either take whatever abuse Comcast decides to aim at their customers, or live without internet (which isn't really an option, as the internet has essentially become a necessity in most people's work and life).

The state of the internet in this country, as compared to the rest of the civilized world is an embarrassment - and the gulf is only getting worse - and the blame lies with the telephone companies and their anti-consumer policies, and the FCC's unwillingness to provide any meaningful motivation for change. Meanwhile, all the consumer suffer - forced to pay more and more for service that is increasingly losing ground to the advancement of technology.

**Description**

As it is now known Comcast is introducing data caps to their service which would be okay if it were a pure capitalist system. It is not a pure capitalist system because many people including me are forced to use Comcast if we would like to use internet. Being in school and a Computer Science major student, the internet is literally essential in order for me to do any sort of work. ( I literally can not do labs without it because I need to log into a remote server). In my apartment complex currently there is two providers being Dish and Comcast. However, Dish is only available in a few spots in the complex and in my apartment I can only have Comcast. So forcing me to have to use them is already a basic monopoly. The service is already very profitable for internet companies and everyone knows it. It is strictly anti-consumer to allow them to limit my usage on a service I'm already paying 100\$ a month for. There is literally no way that they can claim that they are "adding" to our service. How does introducing a limit to our usage add value? It is not like we are getting cheaper bills for the cap. It is literally the same service I have been paying for but now if I happen to use it a little too much I get charged an arm and a leg for a service that is literally the same thing it was last month. The Internet is a key tool in my learning, as well as many other children's learning capabilities. How exactly am I supposed to take an online course? Why should I have to pay for the class then pay for the internet and then pay more because I have to watch the class? It is absolutely disgusting and extremely anti-consumer. It is not even like they provide the best service either. There are many people including me that would ditch them the second we could for google fiber but we can't because of the monopoly reason. Again there is no value added and is a blatant money grab and should be stopped. Thank you.

## **Description**

I am submitting my complaint to put a stop to Comcast's impending data cap that is set to begin on November 1st, 2016. This cap should not be allowed for several reasons:

1. There is a lack of consumer choice options due to local monopoly.
2. This cap is not adding value to current service, but now I'm being forced to pay more for it.
3. This cap is very anti-consumer.
4. Having access to unlimited data is important to everyday life, my education and my ability to participate in the modern economy.

These actions by Comcast are un-American! They are using their monopoly in my area to price gauge their customers. The FCC needs to put their foot down and assist American's with putting a stop to Comcast's anti-consumer behaviors.

**Company Complaining About:** Comcast

---

**Description**

Bellow is a short list of the problems with in acting data caps on internet users, besides the blatant; an excuse just to gain more money and solidify the monopoly owned by Comcast.

Lack of consumer choice due to local monopoly

Lagging behind the rest of the world in broadband availability and cost to consumers

Importance of the internet for children to participate in school and for everyday people to participate in the modern economy

This is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

This is blatantly anti-consumer

Additionally there have been reports that Comcast's "data monitors" do not record accurate usage information and am concerned about the lack FCC regulated data consumption measurement standards.

This choice by Comcast is meant only to game customers and force them to pay more while limiting the market. There is virtually no reason to enact data caps as there is no such things as a "data shortage"

Comcast also alleges that data caps are in some way related to how one would view a bag of cookies. Except if i don't eat all my cookies, i still have some next month. This data cap has no roll over of data unused. No honest manufacturing that hasn't already been in place for years. The Computing data needed to run and operate this company is no where the amount of money they charge customers.

---

## **Description**

I believe that a near monopolistic company like Comcast should not institute a data cap. Seeing how poor our internet is compared to other developed countries, it's infuriating that we pay as much as we do. Internet availability needs to be treated like any other public utility. In this day and age the internet is no longer a luxury, but a necessity. When companies can abuse the needs of their customers for profit, something needs to change. The service is not "value-added" in any way. There is no positive benefit to this for anyone other than Comcast, who are just looking for more profits at the expense of their customers, who likely may not have another option for an ISP. Providers in the past have had many opportunities to improve the communications infrastructure, but have failed to do so. They should not continue to be rewarded for their poor decisions by being allowed to continue this behavior.

**Date:** 10/14/2016 6:11:49 PM

**City/State/Zip:** Minneapolis, Minnesota 55414

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently enacted a 1TB data cap, rolling out on November 1st. Comcast is, in many areas, the only choice for many consumers and by setting data caps they are locking consumers into either paying overage fees or living without internet in a world that is increasingly reliant on internet. Also, Comcast refuses to upgrade its infrastructure in many areas, putting the United States as a whole behind many other countries in terms of broadband availability and cost to consumers. In today's world, the internet isn't a toy or a silly timewaster, but an ever so important tool that people use from school to work and well into old age.

The new charges are not adding any value, but rather restricting the same service that consumers pay for. Comcast has not made any efforts towards transparency as to how they will be allocating the new funds from these data caps. They are not required to, but simply instating a new cap with a fee does not bode well for the consumer.

**Ticket: # 1267571 - Internet Data Caps**

**Date:** 10/14/2016 6:13:15 PM

**City/State/Zip:** Ankeny, Iowa 50021

**Company Complaining About:** Mediacom

---

## **Description**

I would like to see strong, loophole-free rules passed against Data Caps. There is no legitimate or technical reason for these data caps. There have even been other internet service providers that admitted these caps are not about network congestion. If/since this is the case, there is no argument that these data caps are based on any fair costs that internet usage causes.

As technology continues to increase, users that have upgraded to "high broadband use" devices (see 4k resolution capabilities) are penalized simply because outdated providers like Mediacom do not have to compete with companies actively trying to change the industry with high speed internet AND no data caps. By allowing data caps (and penalty fees for exceeding these caps), there is no incentive for Mediacom to stop taking advantage of consumers in a highly technology driven and 24/7 internet connected world.

**City/State/Zip:** Independence, Missouri 64057

**Company Complaining About:** Comcast

---

## **Description**

Comcast is enacting data caps of 1TB per month in several states where they have a local monopoly on service. Additional data past the 1TB is not a "value-added" service, it is them now forcing consumers to pay more for the service they already have.

Their argument is that less than 1% of customers use more than a terabyte of data a month. While this may be true at the moment, online video services have been consuming more and more data as video quality improves. In a very short time consuming more than 1TB of data will be the norm and not the exception. If comcast is allowed to place these data caps now they will do so just in time to punish consumers in the near future.

**Date:** 10/15/2016 12:08:28 AM

**City/State/Zip:** Colorado Springs, Colorado 80905

**Company Complaining About:** Comcast

---

## **Description**

It has recently come to my attention that Comcast will begin to apply a 1TB data cap to my internet plan starting on the 1st of November 2016. I am outraged at the blatant anti-customer policies that Comcast and other big internet providers have been able to get away with.

I have no choice but to subscribe to Comcast. They effectively have a monopoly in my area. The only other option in internet service providers are snail-pace DSL companies. Comcast has absolutely no competition in my area, and this lets them do whatever they want at the expense of the customer.

The USA has some of the slowest internet for some of the highest prices and it's a disgrace. We're lagging behind the rest of the world in speeds and prices because companies like Comcast and Time Warner Cable are allowed to do whatever they want with no consequences. At this point in history, internet should be a right, not a luxury. It should be a utility, not a service. Internet now more than ever is a necessity for things like work and education.

I am outraged because I am already paying out of my ass (excuse my language) for a service that is laughably slow compared to other countries with fiber internet. I am outraged because companies like Comcast do everything they can to prevent competition, especially to companies like Google Fiber. I am outraged because companies like Comcast are restricting the growth of technology and availability of information. And most of all I am outraged because Comcast is now going to be charging me more for the exact same service I have already been paying too much for.

Please, for the good of America, do something about this. If we let Comcast roll out data caps and get away with it, they'll become the standard for all internet service providers. That is a terrible thing to everyone but the CEOs who will be stuffing their wallets with money while not providing any improvement in service. This data cap thing is a money grab from a greedy company that already makes a profit from screwing over us tax paying citizens. This can not stand.

Thank you

- (b) (6)

Comcast has begun implementing data caps for service. Violation if these caps incurs a cost well beyond reasonable. The Internet is not like gasoline, it is close to a fixed cost for the provider, like a land line telephone. All comcast is trying to do is to regulate the Internet to stop the decline of their cable TV business

---

**Ticket: # 1272472 - Data Caps and Cable One Monopoly in South Mississippi**

**Date:** 10/17/2016 6:07:15 PM

**City/State/Zip:** Biloxi, Mississippi 39531

**Company Complaining About:** Cable One

---

## **Description**

Cable One is out of control here in Biloxi and I really hope you guys can look into them. From their extreme pricing to the way they handle their internet services, TV, Etc.

If you can, look here at the reviews for this company:

[https://www.consumeraffairs.com/cable\\_tv/cable\\_one.html](https://www.consumeraffairs.com/cable_tv/cable_one.html)

They are causing so many headaches for people who live here and no one can do anything about it. The only other service down here is AT&T and all they offer is 12Mbps which is abysmal compared to other internet service in the world. Essentially, anyone who uses internet here for anything other than loading pictures has to use Cable One.

I am just going to touch on their Internet issues, let alone their TV issues. The internet here is 100Mbps, which sounds amazing, but you can't fully utilize since they put a data cap of 300GB on it! With games and videos now entering the realm of 4K resolution, we no longer have any excuses to have such low data caps, or data caps at all for that matter! For example, I downloaded a new game that came out this year and it was 80Gigs. That is already 26% of my data used with a SINGLE game!

That doesn't even include streaming 4k videos, that is just a single game alone. Games have now passed the 50 gig mark and are beginning to enter 100 gigs. For example, the new Call of Duty coming out is 130 GIGS! Games and other parts of the entertainment industry are growing but this cable company refuses to grow and innovate along side them.

Instead, this company continues to charge its customers absurd prices for services they don't even want!

I know this all sounds small in the grand scheme of things since it is just entertainment, but it is a matter of what we allow these companies get away with and the example we set. I really hope you guys can look into this and enact some change, even if it is just getting them to raise their data cap to 1TB like Comcast did. Just anything, we need help.

When you go to look me up as a customer in their system, I will not be in it. I cannot give you the real information out of fear they will further damage our current services. The last time I wrote a complaint our services became even worse.

## **Description**

m am contacting you to express my concern over a recent trend of Internet Data Caps that I feel poses an economic and moral threat to the future of our country and its people. Specifically I wanted to make you aware of the following aspects of the internet market that I feel data caps either cause or exacerbate.

Lack of consumer choice due to local monopoly (Oligopolies).

Lagging behind the rest of the world in broadband availability and cost to consumers

Importance of the internet as infrastructure for an intellectually competent society capable of sustained function and development in the modern world economy. (This adds no value to and disincentivizes improvement of the internet infrastructure.)

Arguments for them hinge on non-comparable tangible goods.

It is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

It is blatantly anti-consumer.

I appreciate your time and consideration of these issues,

(b) (6)

**Description**

Comcast is implementing a 1 TB per month data cap in my area. In recent years, I have stopped paying for cable television because it was not offering content of the quality I wished to watch for a competitive price. And, more recently it has refused to offer content in 4K quality, which its online competitors do offer me. As opposed to improving their service, Comcast is choosing to charge me the same price while offering me less service through implementing a data cap, which will limit my ability to watch and download content online through its competitors. This severely devalues technology I have invested in, such as a 4K television. And while competition should in theory solve, capitalism has failed because I have no option for internet besides Comcast because they have a monopoly in my area through anti-competitive practices through which they have killed off local businesses.

Comcast is actively hamstringing new technology, damaging manufacturing brands while taking advantage of the fact that it has gained a near-monopoly on the gateway (aka cable internet) to its only competitors to take steps to restrict access to competition. This has become ridiculous, and Comcast needs to face more than yet another mere slap-on-the-wrist fine so that it ends these practices.

## **Description**

Good evening,

Thanks for the service you provide our country. I am writing regarding my concern with Comcast's new 1 TB data caps coming out soon. I understand there is a balance between their capacity as one of our country's leading ISPs (~47% market share) and their customers' growing data needs. But in many parts of the country, our inability to choose other companies, due to their market share, forces us to use them. This data limitation will eventually limit access to some services, or type of services, the equivalent of anti-net neutrality. They are effectively preventing or overcharging for access to high data use services like Amazon Prime and Netflix. Just like the choking of data to these services should be illegal and regulated against since multiple ISPs have held those services ransom, blackmailing them for unchoked throughput, so should the effective choking of these services be prevented by regulating data caps. I hope the FCC will consider the effect that this type of service restriction will have on our internet utility and decide to prevent future ill-willed manipulation of our internet service data flow.

Thanks again,

Nick

**Description**

Comcast recently instituted data caps of 1TB in my area and offered to charge me \$50/month more to have unlimited. This is purely a move to stop people who don't purchase cable television and hurts all young people the most. I regularly stream my television from various online services, as I do not want or intend to purchase cable television. This is an anti-open internet move as it prevents me from being able to use internet services to Even back up my computer. I would need 4x the data cap to simply use an online backup service. Even streaming regular video uses between 300-500 GB/month. This anti-consumer behavior will lead to less use of the internet as people struggle to NoT use internet services, which will only increase in the future. This will effectively stop any chance of 4K video streaming or even uploading video. Normal people cannot afford to use the internet when draconian policies are put into place to prevent our open use of the internet. I have no other options besides Comcast, for true broadband (over 25mbps) internet speed and am held hostage to whatever they decide to charge. I don't want to have to stop using the internet for fear of downloading a video game that are now around 50gb each, or uploading too many photos to Facebook, or choose to stop watching television programs I stream. Please help normal Americans like us from companies like Comcast. We need help.

## **Description**

Data caps are unethical and essentially cash grabs. We were never charged extra for watching too many TV shows, only the single cable bill. We were never charged extra for making too many phone calls, just the phone line bill. Why should charging people for using extra data be any different when we already pay to use their service, just like we do/did with phone and tv? Charging people for using data in an increasingly data-reliant world is simply wrong. Comcast thinks they can get away with it and that's an issue.

## **Description**

Comcast recently informed me that my internet service will have a monthly data cap of 1TB. This action clearly threatens net neutrality, in turn threatening our quality of life and our right to information. I've lived in several cities during my adult life, and in each location there was a monopoly or near-monopoly among internet providers. It's unusual that my current residence has two different broadband providers that will provide service, though the choice is between the lesser of two evils. The US is pitifully behind the times on this issue, largely—if not exclusively—due to FCC's lack of initiative. We should have a broad choice of internet providers, and FCC should do all it can to encourage competition. Increased consumer selection is good for everyone on many counts, though primarily it will make broadband internet more widely accessible. That basic accessibility is fundamental to our daily lives, though it's incredibly important for children and students, most of whom could not complete their education without the basic information resources humanity depends on the internet for.

As for this data cap in particular, I do not expect my monthly usage to exceed it. However, this action by Comcast heralds further "value-subtracted" policies in the future, and should be addressed immediately. I call this a "value-subtracted" policy because I and my fellow consumers are now being charged additional fees for the exact same service as before. I am not opting in to a higher internet speed, nor am I seeing a reduction in my bill in exchange for this data cap. This new policy is blatantly anti-consumer, and an affront to our citizens in the absence of a truly free market. We rely on FCC to protect us, and it is time for that protection to be brought to force.

## **Description**

This month Comcast began setting a 1TB bandwidth limit. I do not always cross this boundary, but on occasion, I do. For example when I got an xbox one and download a bunch of games for it. I also have a growing family, with 2 children already here and with cloud platforms growing the way they are, I believe more and more content will be streamed over the internet. Some content like 4K content can really eat up your bandwidth allocation quickly.

I currently subscribe with a 150mbps down, 8mbps up connection with Comcast. This new data cap is concerning to me because they increase the amount you pay based on the speed you receive, but if you have a data cap, you can just run into your data cap faster.

At 150mbps, assuming a PERFECT network, it is possible to hit the 1TB data cap placed by Comcast in a mere 16 hours. Why is it that they can charge me monthly for a service that would only be provided for 16 hours? This is completely illogical. Even with a much lower 5mbps network speed, the data cap would still be hit within 20 days, again not even a full month of service.

To top all of this off, there isn't even a hint of competitive service in my area. I literally have no choice but to pay Comcast an extra 50\$ a month for service that they already sold me for less. How can this be?

## **Description**

Comcast is enacting data caps on us starting in November. Unfortunately, we have very minimal choice in providers here due to a local oligopoly condition - Comcast or ATT, and as such we will be forced to accept their new terms. I find this wildly inappropriate given the relatively low costs of providing internet service compared to the now high added costs from the caps. We already had cap-free service before, and now we are simply being upcharged for additional usage because Comcast practically controls the marketplace locally.

This is extremely anti-consumer and certainly also is intended by Comcast to hurt its cable TV competitors like Netflix, Amazon Prime, etc, by imposing added costs to streaming shows/movies. This is an abuse of their position in the supply chain, and at this point they should be treated as a utility rather than a market competitor, as there is no real market with 2 competitors, and as almost all of their costs are in sunk infrastructural investments.

Comcast is implementing data caps that interfere with an open internet

---

**Ticket: # 1268085 - Comcast Data Caps****Date:** 10/14/2016 8:02:15 PM**City/State/Zip:** Bolingbrook, Illinois 60490**Company Complaining About:** Comcast

---

**Description**

Comcast is enacting data caps on us starting in November. Unfortunately, we have very minimal choice in providers here due to a local oligopoly condition - Comcast or ATT, and as such we will be forced to accept their new terms. I find this wildly inappropriate given the relatively low costs of providing internet service compared to the now high added costs from the caps. We already had cap-free service before, and now we are simply being upcharged for additional usage because Comcast practically controls the marketplace locally.

This is extremely anti-consumer and certainly also is intended by Comcast to hurt its cable TV competitors like Netflix, Amazon Prime, etc, by imposing added costs to streaming shows/movies. This is an abuse of their position in the supply chain, and at this point they should be treated as a utility rather than a market competitor, as there is no real market with 2 competitors, and as almost all of their costs are in sunk infrastructural investments.

**Ticket: # 1268097 - Comcast Data Caps**

**Date:** 10/14/2016 8:04:58 PM

**City/State/Zip:** Blacksburg, Virginia 24060

**Company Complaining About:** Comcast

---

**Description**

Comcast imposed a data cap on my account, with no notice or explanation of this fundamental limitation. This is unacceptable for many reasons:

- I have no choice in ISP for high-speed internet (meaning >50 Megabits per second) so I cannot avoid this limit
- The price for internet is already much higher than comparable service across the globe
- Data is not a consumable resource - paying for water by the gallon or electricity by the kilowatt-hour makes sense, as there is a direct cost to produce those resources. For data, the same infrastructure must exist no matter what - how can you charge more for the same facilities (minor increases in electricity use should be negligible when considering cost of infrastructure)

## **Description**

Hi, my name is Jacob and I'm a student at Michigan State University. The students here in East Lansing, myself included, live in houses with several roommates. Being in college, we use the Internet a lot, and have little money to spare. The data cap that Comcast is attempting to impose will be exceeded by many of us due to the amount of data needed to succeed in our education, and paying the fines is simply an extreme burden to place on students. There is no competition at my address due to heavy regulations, though another company has been trying to make pushes into the area with reasonably priced high-speed Internet. Myself and the people who I share Internet with, however, have already been harassed by Comcast enough with invalid fees, two hour phone calls attempting to fix my bill, not receiving the Internet speeds that were promised, and forcing us to rent a Television box from them for \$10 a month even though we don't watch television. It has become ridiculous, and the data cap that they're trying to impose on us now is totally unreasonable. I believe that I'm representing all students in East Lansing when I ask you to please help us deal with the company who has been harassing us for too long.

## **Description**

Implementation of data caps is a move in the wrong direction, especially when more and more Americans depend on the internet for their daily lives. These caps only serve to illustrate comcast's refusal to upgrade infrastructure to reflect this trend, and they are taking advantage of government awarded local monopoly to take advantage of customers who have no other viable option. These caps are contrary to the idea of net neutrality, and will surely be succeeded by proprietary services which don't count towards the caps, ensuring customer retention and use of their proprietary offerings in the face of overage charges. With the insane amounts of revenue and profits posted each year, there is no logical reason as to why they should be allowed to limit the ability of Americans to learn, be entertained and just generally be connected to each other without excess limitation.

## **Description**

I feel that Comcast's plan to roll out a 1TB data cap is unreasonable and ridiculous. Their monopoly in my area gives me no other choice because I often work from home, requiring massive amounts of data usage per month. I feel that my rights are violated because the cost of data is uncountably low, yet after November First, I will be required to pay \$10 for every 50GB over 1 TB of internet usage. The miniscule cost of data leads me to believe that Comcast is charging extra solely for the purpose of raising revenue. I have no ISP to change to, so I am stuck with an unexplained and unwarranted data cap. With all the money they get from lying about unreturned equipment that was in fact returned, as happened to multiple friends in my area, it's surprising that the internet connection to my home suddenly costs more after the first terabyte. My data will be inappropriately priced for no reason.

## **Description**

Never in my life have I seen a move so obviously geared toward the exploitation of consumers. Normally a data cap might not be a bad thing, obviously with wireless mobile providers it's prevalent but unlike home Internet there are up to a dozen different choices for consumers in any given region of the country. Home Internet on the other hand, as I'm sure is abundantly obvious, is nowhere near as readily available in as many choices as wireless providers. There is no conceivable way charging for data is good for the market. Where I live there are only two ISP's to choose from and many areas of the city are locked in exclusive contracts that only allow me to have only one of those companies. Comcast is walking the line to see what they can get away with, they aren't interested in an open market all they care about is getting more money. They should not be allowed to impose data caps on consumers and measure their usage with tools that aren't available to the consumer. Imagine if a gas station didn't show you how much gas you pumped while filling up your car and charged you outrageous amounts that are physically impossible to achieve. That's what they are doing and they must be stopped please for the love of the Internet.

## **Description**

Hello, I am a current subscriber to Comcast Xfinity internet in Washington state, and have recently been notified of the incoming implementation of a 1TB data cap to my internet service before being charged additional fees. This practice was not foreshadowed during the creation of the initial contract, and is an anti-consumer practice. I would prefer to switch to another carrier, however due to essentially a local monopoly, there are no real comparable choices in my area. They are now raising prices (due to the fact that my house regularly uses over 1TB of data) for the same services as before, simply adding a new fabricated cost. Data does not cost their infrastructure per MB, in the way that water costs per gallon to transport. It does not cost them more to maintain, so why are they charging more for usage? Internet is not a luxury, it is a utility that I and many others use for their livelihoods.

**Date:** 10/14/2016 9:49:51 PM

**City/State/Zip:** Houston, Texas 77095

**Company Complaining About:** Comcast

---

**Description**

Comcast recently emailed me a notice that a terabyte data cap was being introduced to the Houston, Texas market. The email states the cap is being put in place in the spirit of "fairness." That 99% of Comcast customers won't exceed the limit. But I'm wondering if that's really the case, why punish 99% of your customers if only 1% exceed an arbitrary data limit.

The email also states that I can pay an extra \$50 a month for unlimited data. You know, the very same unlimited data plan I had a month ago, but for \$50 more. Or I can buy "buckets" of data, \$10 for 50 gb after the terabyte cap.

I don't have a cap for the amount of cable tv I watch. Internet should be no different. It doesn't help that Comcast and AT&T are pretty much the only options within a metro area of more than 4 million people. A virtual monopoly gives Comcast the power to institute an arbitrary data cap. If there were proper, fair market competition, prices would be driven down, service improved.

But just the opposite is happening.

## Description

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

Chase Willis

(To add some math, the current speed that Comcast sold me was 150 mbps for a month, however if I use 150 mbps for 16 hours 17 mins 21 secs i will use up 1TB of data, so essentially they sold me something they said I can use for a month that will actually be used up in less than a day. This sort of behavior is only possible because of their monopoly status.)

## **Description**

I am contacting you to express my concern over a recent trend of Internet Data Caps that I feel poses an economic and moral threat to the future of our country and its people. Specifically I wanted to make you aware of the following aspects of the internet market that I feel data caps either cause or exacerbate.

- Lack of consumer choice due to local monopoly (Oligopolies).
- Lagging behind the rest of the world in broadband availability and cost to consumers
- Importance of the internet as infrastructure for an intellectually competent society capable of sustained function and development in the modern world economy. (This adds no value to and disincentivizes improvement of the internet infrastructure.)
- Arguments for them hinge on non-comparable tangible goods.
- It is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.
- It is blatantly anti-consumer.

Go fuck yourselves, Cuntcast.

## **Description**

Recently, Comcast has announced that it will begin enforcing 1TB data caps in November. As has been shown countless times, data caps in and of themselves have no positive benefit to network infrastructure, and as such exist solely as a means of increasing profit. Several ISPs try to make the comparison of consumers purchasing tangible goods, however bandwidth and data obviously do not fall into this category. In the past providers have not only been given the resources, but all the the opportunity and reasons to improve our country's infrastructure and improve communications, failing to do so each time. In a world where data usage is becoming more and more prevalent, limiting consumers consumption and access is DIRECTLY anti-consumer practice and should not be tolerated. You have the opportunity yourselves to put a stop to these kinds of practices and enforce the ideals that our country is based on. Those being a consumer driven market where innovation and progress can continue to exist without the restraints of extortive business practices such as the ones Comcast and other ISPs continue to implement.

Additionally, 1TB over 30 days is only a speed 3.3Mb/s for 1 Device. The Federal Definition of Broadband is 25Mb/s. Always on (streaming, gaming, apps phoning home) in a month uses 7.4TB of data a month. This data cap, therefore, does not adhere to federal broadband guidelines.

## **Description**

I am filing a complaint about Comcast enacting their 1TB data caps. I believe that this goes against net neutrality and only punishes customers who don't even have a choice in their provider. It is criminal that we're just forced to take this when we don't even have the choice to go with another provider. Amazingly enough, in areas where there is actual competition for Comcast, customers get a better service at a better price with no data caps. Not only do we not get a choice, but it actively hurts streaming services like Netflix which offers 4k streaming and uses around 7GB an hour. This sets a horrible precedent and should not be allowed to continue. Who's to say what our online usage will be like in a year or two, so even if someone doesn't use 1TB now, they could easily become restricted in what they do down the road when more services pop up or improve and people begin consuming more and more digital media.

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

## **Description**

I was notified on October 7th 2016 that my internet provider - Comcast - will be instituting a 1 tb data cap on my home internet beginning November 1st. This is less than the 30 days notice that Comcast has agreed, in writing, to give me before instituting such a limit. This arbitrary limit places me considerably behind my peers in Europe and other parts of the world, and will significantly affect my ability to conduct work and other activities from home. I do not have any other options for home internet in my apartment complex, rendering Comcast an effective monopoly for myself and many people in Seattle. This is not a value-added service, this is a blatant attempt to extort more money from consumers without providing any additional services. It is therefore blatantly profit-driven and anti-consumer.

---

**Ticket: # 1268543 - Arbitrary 1TB Data Cap****Date:** 10/14/2016 10:55:00 PM**City/State/Zip:** Grand Rapids, Michigan 49503**Company Complaining About:** Comcast

---

**Description**

It is public knowledge that Comcast has trained their techs to reply that "In fairness to other customers" caps are necessary; but this is untrue. This cap limits a service I have been paying for, whether the 300GB cap was suspended or not, they have set a precedent by providing me the ability to download/upload as much as I want/need. Now eventually when I push into the 4k entertainment and go over my cap I will now be charged -more- for the -same- service. Nothing about the service changes when we hit this magical 1TB...the copper/fiber doesn't melt, it doesn't get saturated...I'm not 'taking gigabytes' from my neighbors---this is a money grab pure and simple.

The current 1TB data cap MAY only impact <1% of the customers but that is RIGHT NOW. With the direction data consumption is going (4k, large video game installs, ETC) this cap will need to be regularly raised. I'd also like to make known that there have been reports that Comcast's "data monitors" do not record accurate usage information and am concerned about the lack FCC regulated data consumption measurement standards.

The cap is anti-consumer and serves to stifle innovation in technology. I'm an IT professional so internet access is a UTILITY my family and I depend on to LIVE our lives. Comcast is a monopoly in my area when it comes to Cable internet, the few 'competitors' offer much slower DSL connections.

## **Description**

The news is widely reporting that Comcast is starting to roll out a 1TB data cap nationwide.

These limits are artificially imposed, and it should be obvious that this an anti-competitive measure to hurt competition on television service from HD streaming services. That's not just my take, it's what those in the industry are saying. (See Sonic.net CEO Dane Jasper's remarks on BGR's site, dated June 5th, 2014.)

Where I live, Comcast is the only reasonable broadband Internet offering. Due to the high costs of TV plans, I pay Comcast only for Internet. I rely on sites like Netflix, Hulu, and Youtube for watching TV and Internet. These data caps are an obvious attempt to make streaming more inconvenient, and to force customers to purchase Comcast's television service. With Netflix offering 4k video, consumers like me will quickly hit these limits and be forced to either pay Comcast for TV service or forego HD content.

Additionally, this move represents a decrease in service. Comcast has been able to deliver high-speed Internet without caps for years. To suddenly impose these caps on existing plans decreases the utility customers receive without any price reduction. We are suddenly able to use less of the data plan we've been paying for all along.

It should be plainly obvious that the intent of this move is anti-competitive and anti-consumer, and without technical merit.

## **Description**

Comcast has rolled out data caps in Colorado. This is unacceptable. This is just another way for Comcast to nickle and dime people. They are not upgrading service quality, customer service or infrastructure that would make them more competitive. Prices go up and services go down because they have no competition. There is no incentive for them to behave better because they have a monopoly. The internet is not a luxury in this day and age. Stop allowing companies like Comcast to treat it like one. I can't trust their service to be reliable, how can I trust them to accurately log how much data I'm using? Honestly, I cannot. I am for capitalism, but capitalism require competition. Competition can bring about innovation and lower prices. Companies, like Comcast, can do better, but they won't unless they are forced. Step up. Fix this.

**City/State/Zip:** Wilmington, Delaware 19801

**Company Complaining About:** Comcast

---

## **Description**

Comcast will soon be implementing a 1 terabyte data cap on my internet connection beginning in November. I, as many others, have many problems with the data cap.

1. Comcast has a monopoly on in my neighborhood. That's right. A Monopoly. I can't get high speed internet (50+ Mbps) from anyone else except Comcast. This means they can charge what ever price they want to and I have to succumb to that price because there is no where else to go. No competition. This is a problem.
2. Because there is no other competing business allowed to operate in my neighborhood, and many other neighborhoods across the US, the, availability, speed, and cost of high speed internet is lagging behind the rest of the industrialized world.
3. There is no value being added to my current subscription. A cap will limit my abilities to send and receive data, but I will pay the same rate, or it may even go up. There is no "value-added" to the service..
4. Moving to a data cap is blatantly anti-consumer and takes advantage of the monopoly they own.

**Ticket: # 1268669 - Comcast Data Limits****Date:** 10/15/2016 12:08:18 AM**City/State/Zip:** Muncie, Indiana 47303**Company Complaining About:** Comcast

---

**Description**

I'm afraid Comcast is stepping over a line this time by enacting a data cap in my area. With the creation of 4K content available online, and the ability to stream said content via the internet, putting a limit on how much data a user can consume without extra charges is asinine. This is essentially putting a limit on the evolution of technology, and since there are no competitors, and Comcast is one hell of a monopolized corporation, I'm stuck with it. I, for one, look forward to a day in which multiple companies can compete for my business and not make stupid decisions just to protect their bottom line. If they're so concerned with Netflix beating them, (which is why I believe this cap is being enforced), maybe they can offer a better service at a better price so consumers won't continue to cut the cord and move on. I would like to have something done on the behalf of the consumers to protect us from the gigantic corporations trying to manipulate us day in and day out. Hell, by now, the internet should be considered a utility considering how necessary it is to function nowadays. Maybe when the decrepit old bastards that "run" this country are all gone, we can have the equality necessary to prevent shit like this.

Good day,

(b) (6)

Muncie, IN

## **Description**

I'm writing FCC Chairman Wheeler to urge him to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

## **Description**

The imposed data caps are blatantly anti-consumer and are a very overt ploy to penalize customers who choose to use streaming services that aren't a part of Comcast. This is being done in order to restrict free and open access to the internet, which has already become absurdly expensive when compared to similar services in other developed nations. It is yet another example of an all consuming mega corporation feeling entitled to take advantage of the general public. Sadly the corruption is so powerful and deeply imbedded in our governing bodies that this practice is allowed to continue. It is only through the complaints of millions of people who see this for what it is. This is just like the disgusting leasing of subpar equipment to customers, and the abhorrent CISPA and SOPA legislature that was thrust upon us in recent years. To restrict a free and open Internet is to stifle innovation and the freedom of communication with millions of others around the globe in an exchange of ideas, discussion, criticism, and much more. I know this complaint will likely be skimmed over before being disregarded but it is my sincere hope that with enough justified complaints someone will be forced to take action.

**City/State/Zip:** Grand Rapids, Michigan 49548

**Company Complaining About:** Comcast

---

## **Description**

This isn't right. Comcast is imposing a data cap on internet usage. They say 99% of users never hit the cap, so then why bother imposing it in the first place?

There is lack of consumer choice due to local monopoly

We are lagging behind the rest of the world in broadband availability and cost to consumers

Don't forget the importance of the internet for children to participate in school and for everyday people to participate in the modern economy

This is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

This is blatantly anti-consumer

Furthermore: 1TB over 30 days is only a speed 3.3Mb/s. For 1 Device.

The Federal Definition of Broadband is 25Mb/s. Always on (streaming, gaming, apps phoning home) in a month uses 7.4TB of data a month. I'm no longer getting exactly what I'm paying for, despite being under a contract. How can Comcast unilaterally change the terms of our agreement without the FCC doing anything?

## **Description**

(Read in the voice of Trump) I live in a city where the only high speed internet -I mean, if you can call 20 gig download/ 7 upload high speed, and I'm not calling it that, folks, but if you could - the only high speed internet is available through one and only one company. How is that fair? It's not fair, people. You ask my supporters and I have, I really have. You ask my supporters and they'll tell you it's not fair at all. One company, folks. One company in my entire city offers high speed, and then they go and put a cap on it. Total shambles. It's jut wrong, it's wrong. What this country needs is more internets, not caps on the one internet we have, and this Internet if you look at it you'll see is old. Really old, like it was made so many years ago, but here we are, made to use this one really old internet by Comcast, and then they put a cap on it. Totally wrong folks, if you ask me. This country needs more internets, more companies, faster speeds. You know who's beating us on internets? China, that's who. China has all the internets, and they're not stuck with just Comcast and their data cap with no option for other companies. China is beating us.

[Ticket: # 1268763 - Comcast data caps](#)

**Date:** 10/15/2016 1:20:18 AM

**City/State/Zip:** Seattle, Washington 98105

**Company Complaining About:** Comcast

---

## **Description**

Comcast is enacting data caps of 1tb per month. This is not a matter of increasing costs, or availability of services. It is anti-competitive and indicative of monopoly power and opens the door to a violation of net neutrality by exempting some services from data caps and prioritizing delivery of others. Please act to regulate the services that ISPs can provide in a manner consistent with consumer interests. That is why you exist.

**Date:** 10/15/2016 1:29:29 AM

**City/State/Zip:** Cupertino, California 95014

**Company Complaining About:** Comcast

---

## **Description**

I am writing this complaint to express my distaste with the 1TB data caps that Comcast is rolling out nationwide. There is no good reason for Comcast to be rolling them out. If you want cap-free internet, you have to pay extra per month now, over the cost you were paying before. These caps clearly exist to stop people from streaming content from websites such as Netflix, Hulu, or Amazon Prime Video, and will instead force customers to use cable (that Comcast provides) in order to enjoy TV shows or movies.

**City/State/Zip:** Washington, District Of Columbia 20036

**Company Complaining About:** Comcast

---

## **Description**

Comcast will soon roll out 1TB monthly data caps nationwide. This is equivalent to a speed of 3MB/S over 30 days. That's a fraction of the federal definition of broadband, which is 25MB/S. I find it appalling that your organization is not preventing Comcast from taking this action.

Comcast's data cap is also representative of criminally misleading business practices. I did not see any mailings or updates about this new data cap, even though I constantly receive unwanted mail advertisements from Comcast. They should be held to account for these actions.

Shame on you and your organization for standing by while your friends at Comcast continue to pillage consumers. Stop Comcast's data cap now.

---

**Description**

Comcast's 1TB is anti-consumer. It is obvious and apparent that data caps need to die with the companies who use them as tools to profit as much off of American citizens as possible. Comcast holds a cable internet monopoly in my local area and while I was supposed to have access to networks paid for by taxpayers like myself, instead these conglomerate companies have decided the money I work hard for serves them better lining their pockets than honoring their agreements with the government. America is supposed to be a forerunner, but every step backwards companies like Comcast take leads us further and further away from technological and economic superiority on the global market. Comcast is not providing us with any new service or upgraded performance, they are only charging us more money so they can do less for their customers. Comcast is wasteful selfish scum that needs culling. It is well known that Comcast's own data monitoring services are skewed to achieve the affect they desire, and I have no faith in their ability to manage my data monitoring without FCC regulated standards for doing so. Comcast knows that data use will increase with the incoming standardization of 4K media from providers like Netflix, and they want to hurt American citizens, taxpayers, and children who rely on the internet to compete in education in the modern world simply to increase their already outlandish profit margins. Comcast has never given back to the people, opting instead to bolster the pockets of politicians to aid in maintaining their monopoly and suppressing the voice of the people. If the USA wants to remain a world leader we need to create an environment where we can compete with other developed nations with our internet speed, availability, and pricing. As an American, I believe the FCC should base their policy on the good of the people, the consumer, and not the profits of the companies who drain away our wealth so their executives can live more lavishly.

---

**Ticket: # 1268820 - Comcast Cable Internet Data Cap**

**Date:** 10/15/2016 2:11:50 AM

**City/State/Zip:** Roy, Utah 84067

**Company Complaining About:** Comcast

---

## **Description**

I pay for unlimited access to the Internet that's already capped artificially by my download speed which I pay more money for a faster "blast" speed. Now Comcast is implementing a data cap slightly higher than my current usage each month. Our household usage is based on my wife and my usage. Once my children are a bit older they'll have their own devices and eat into that data cap as well. Once this happens I'll surpass the data cap every month. They are artificially limiting data to force users to use their cable service more once you can no longer stream television because you've run out of data. Especially since Netflix is now offering 4K video streaming which will burn through this cap in no time at all.

**Ticket: # 1268889 - Comcast Data Cap**

**Date:** 10/15/2016 4:21:52 AM

**City/State/Zip:** Fremont, California 94536

**Company Complaining About:** Comcast

---

## **Description**

Hi, I am a Comcast cable customer in Fremont, California. I am extremely concerned about the 1TB data caps that they are rolling out nearly nationwide. I see that my area will be an area affected by this new data cap. I am worried about the net neutrality implications and the blatant price gouging that Comcast is clearly attempting to do. For example, this seems like an obvious maneuver to attempt to force online video streaming companies out of business by abusing their monopoly on fast internet in many areas. In my area, Comcast is the only option if I want internet faster than 25 mbit, which is the fastest speeds that AT&T provide via DSL. Also, the price that they are asking for for additional data is quite ridiculous. \$10 per 50GB is quite an insane amount of price gouging. I'm sure they will not share their true cost per GB, but it is likely thousands of times less than what they are attempting to charge the consumer for "overages".

---

**Ticket: # 1268893 - Comcast 1 TB restrictions**

**Date:** 10/15/2016 4:39:27 AM

**City/State/Zip:** Sacramento, California 95826

**Company Complaining About:** Comcast

---

## **Description**

I signed a 1 year contract with Comcast, to have unlimited data for the bandwidth of 30 mbps upload and download. Now they are enforcing a blanket 1 TB restriction on me, and I cannot get out of the contract and it isn't what I signed up for. I am stuck in my apartments with no other choice. It is absurd, in other first world countries, internet is cheap. Korea, for 10 dollars a month get 500 mbps connections both upload and download. With no data cap. With things moving into the future for higher definition. Why would we want to restrict it. This is not a "value-added" service, I have already signed a contract with Comcast for it, but now I am forced to be restricted further and pay more to something which has been previously agreed upon. Additionally, I can easily exceed the 1 tb just from downloading games to play, which I legally own. I don't have room for all the games on my library, so I delete some old games to make room for new ones. I cycle through them ,but with this data restriction, I can easily run through 20% of my data just from video games alone. Not including every day usage.

## **Description**

Recently Comcast has announced that it will begin enforcing 1 tb data cap in November. As has been shown countless times, data caps in and of themselves have no positive benefit to network infrastructure, and as such exists solely as a means of increasing profit. Several ISPs try to make the comparison of consumers purchasing tangible goods, however bandwidth and data obviously do not fall into this category. In the past providers have not only been given the resources, but all the the opportunity and reasons to improve our country's infrastructure and improve communications, failing to do so each time. In a world where data usage is becoming more and more prevalent, limiting consumers consumption and access is DIRECTLY anti-consumer practice and should not be tolerated. You have the opportunity yourselves to put a stop to these kinds of practices and enforce the ideals that our country is based on. Those being a consumer driven market where innovation and progress can continue to exist without the restraints of extortive business practices such as the ones Comcast and other ISPs continue to implement.

**Ticket: # 1268989 - Complaint against Comcast Data Caps**

**Date:** 10/15/2016 9:29:37 AM

**City/State/Zip:** Bellingham, Washington 98229

**Company Complaining About:** Comcast

---

**Description**

I am extremely against what Comcast is doing with a their data caps. There is no consumer choice due to a monopoly so consumers are forced into this. The rest of the world does not do this kind of thing, yet America is behind by its cost of broadband service and the lack of availability.

In this day and age, children need the internet to flourish in school and people around this country need it to participate in the economy.

Comcast is doing an anti-consumer move here where they aren't giving you anything more, rather they are putting restrictions on a service people have had for years and then making people pay more if they want to go over the data caps. Comcast wants to charge people more and this is how they will do it. They say not a lot of people use more than a certain amount of data, but this is WRONG to put a price on how much you use. Many of us stream using services like Netflix, Twitch, download video games, etc and these take up a lot of bandwidth. The anxiety that it brings to always worry about how much you are using is too much for the consumer and Comcast knows this. They want you to pay more to get rid of the anxiety. It is wrong.

Please look at this as anti-consumer. This needs to stop. People are outraged by what Comcast is doing and if something is not done now, a standard will not be set.

Thank you,

---

## **Description**

Comcast is enforcing a 1TB data cap starting Nov. 1, 2016 in my area. America is significantly behind most 1st world and some 3rd world countries when it comes to internet speeds. It is unacceptable for internet service providers to so behind in this regard. Data caps will only perpetuate the current situation and only preserve the current monopoly they have.

We need to open the free market to other ISP's and increase innovative pursuits for better internet access as the rest of the developed world is starting to leave us behind.

Why this is flawed:

There is no guarantee of accuracy or transparency: Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit. This isn't just for videos of course, people who use services for work will be hit just as hard especially as the size of applications increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

## **Description**

Thank you for your time,

I am filing a complaint against Comcast and the new 1TB monthly data cap that will come into effect November 1st.

Comcast considers this a "huge" amount of data but with four people in one house, that cap comes very very quickly.

Comcast has itself admitted that this is not for the sake of network congestion, but rather for people like us who cut their cable TV and decided to just stay with internet. We have NO OTHER ALTERNATIVES in our area, and are now cornered into paying whatever Comcast wants.

This data cap is not about fairness, it is about money.

Please do not let allow comcast to install 1tb caps as homes like mine will be severely affected.

**Description**

I'm writing to add my voice to those speaking out against the data caps currently being tested and imposed by Comcast and TWC. They're a clear and absurd money grab, and also transparently violating the spirit and letter of the regulations set forth by the current FCC chairman.

There is absolutely no justification for such practices other than greed born of near-monopoly status. To allow these restrictions to continue is to ensure a total freeze on the development of our internet infrastructure, which would undoubtedly be catastrophic for the development of our country in both the near and far future.

I realize this sounds overblown and dramatic. I assure you it's not. Data Caps cannot be allowed as a legal business practice. Thank you very much for your time.

**City/State/Zip:** Oklahoma City, Oklahoma 73135

**Company Complaining About:** Cox

---

## **Description**

These caps needs to be made illegal and soon. Cox Cable Internet just raised their caps to 1TB across the board. The problem I have is now I'm paying \$100.00 a month for 300MB down and 30MB up, but yet the Preferred package is only paying \$59.99 with 50MB down and 5MB up. Cox continually breaks the law and never tells of the data caps, nor do they ever tell you when they make changes to them as well. This goes against the open internet and I should not have to worry about how much videos, movies, and games me or my family downloads/watches. Data is not like Oreos and data is not limited. I just want to prove this by saying cable TV runs off the same cable and is data as well, but yet there is no cap and you can watch as much as you want. Netflix is in the right for wanting data caps banned and so am I. It's funny how Cox was able to raise all their data caps after Netflix filed a complaint with you. It's a control factor, because they want you to spend more money watching their stupid cable TV and not streaming on the net. I implore you took make data caps no more and let people be free to watch what they want when they want. Thank you.

---

## **Description**

I'm emailing FCC Chairman Wheeler to urge him to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

## **Description**

Recently Comcast has announced that it will begin enforcing 1 TB data caps in November. As has been shown countless times, data caps in and of themselves have no positive benefit to network infrastructure, and as such exist solely as a means of increasing profit. Several ISPs try to make the comparison of consumers purchasing tangible goods, however bandwidth and data obviously do not fall into this category. In the past providers have not only been given the resources, but all the the opportunity and reasons to improve our country's infrastructure and improve communications, failing to do so each time. In a world where data usage is becoming more and more prevalent, limiting consumers consumption and access is DIRECTLY anti-consumer practice and should not be tolerated. You have the opportunity yourselves to put a stop to these kinds of practices and enforce the ideals that our country is based on. Those being a consumer driven market where innovation and progress can continue to exist without the restraints of extortive business practices such as the ones Comcast and other ISPs continue to implement.

---

## **Description**

Comcast has announced that they will be placing a data cap of 1 TB in many areas across the country, including my city of Fort Wayne, Indiana. The vice president of Comcast has said that they are doing this for business purposes, not for technical limitations of their infrastructure. This data cap will be unfair to consumers as now both the speed and amount of data is being limited, where as before it was only speed being limited. I am now paying the same amount for less data then I initially signed up for, even though I am on a contract with Comcast. Also, Comcast has yet to formally inform me of this data cap.

**Date:** 10/15/2016 9:05:36 PM

**City/State/Zip:** Novato, California 94947

**Company Complaining About:** Comcast

---

## **Description**

I have several complaints revolving around the prices, advertising and one-sided contracts of Comcast and other ISP's.

Internet prices in California are significantly higher than that of the East Coast, and if we go to other countries, internet prices are significantly cheaper for significantly much more bandwidth (with no data caps)! How can this be constructive to Americans to compete globally when our internal isp's are gouging the customers?

ISPs main selling points are emphasize "speeds up to X MBPS" - now they are putting Data Caps and claiming "more than 99 percent of customers will not hit this cap" - and then threatening to charge overage costs. It seems like False Advertising, that the company cannot actually yield "full" bandwidth to all customers and they now must impose a Data Cap to discourage internet usage - and they are backing it with skewed statistics (because, as any educated individual should know, statistics can favor any side of an argument and is thus fundamentally flawed advertising when a company like Comcast gathers its own data, and sells it with no non-partnering third-party's review).

I have even checked out the horribly defined Comcast monthly bandwidth estimator - how can 1 hour of HD video only be 1.7 GB of data - Blu-Ray disks are 25-50+ GB's of data per movie (and movies range from an hour to two and rarely 3). (I could go on about all listed 'data types' and the false numbers but I do not want to sit here and complain all night).

Streaming video's from service like NetFlix or YouTube is cost-efficient and convent and with newer high-resolution TV's being sold (4k, 8k and beyond) - Comcast and other ISPs are setting users up for a massive trap to catch consumers on overage costs. Add 4 movies up for the average household and the 1 TB Data Cap is fundamentally aimed at charging consumers overage fees!

Please help remove the data-cap and lower internet prices; there is no need to be as greedy as an ISP! (They don't even send out their own service technicians anymore, they send out "qualified contractors"!)

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

**Ticket: # 1270093 - XXXXXXXXXX XXXXX's complaint re: ISP Zero Rating**

**Date:** 10/16/2016 11:25:39 AM

**City/State/Zip:** Westminster, Colorado 80031

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

When I started my internet plan with Comcast I was not informed that they would be putting a data cap on my internet. I was recently notified that by Comcast that they will be introducing a 1tb data cap to my plan, something I was not planning on. This will directly affect me and others and having a cap is extremely absurd. In their promo video for their new Data Cap, they explained how we should not have to worry because less than 1% of their users actually exceed 1tb of data a month. If such a small percentage exceeds this limit, why limit it at all? These are shady practices that need to be handled and that is why I am sending this complaint to you, the FCC. Thank you for taking the time to read this.

**Company Complaining About:** Comcast

---

## **Description**

I am highly disturbed by the trend and precedent that Comcast and others are setting by imposing data caps on Internet service. This arbitrary 1TB cap that is imposed on my service is pointless and will only become a reason for them to charge more in the future as the internet content becomes higher and higher quality. Perhaps they should be spending their record profits on upgrading infrastructure instead of executive bonuses and buying each other up? These caps serve no purpose. If the network can't handle the data being imposed on it, then it needs to be upgraded. Not throttled, metered, or restricted. It's bad enough that my upload is 10 while my download options go as high as 150.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Comcast is adding data caps to my Internet to extort the users of my state. As an IT professional that manages a network infrastructure this is not how the flow of data works and is extortion. Once an infrastructure is in place there is no difference on performance or cost of how much data it passes through. So keeping track of our data then trying to extort us for more money is extortion. If I lived in an area that had another Internet option then I would leave comcast but it's the only thing that's available to me. The Internet is a priority service that is required in this day and age it needs to be protected not throttled and then used to extort users.

## **Description**

Comcast imposing data caps on services purchased by them before data caps were even a possibility is one thing, but the very nature of them is pushing back technology and progress in America for nothing more than a cash grab. TVs are getting more pixels, games are getting more complex, streaming and the internet of things continue to grow, and Comcast is limiting the amount of data you can use. This would be a much smaller issue if Comcast wasn't the only provider of internet, but for millions of Americans, they are, and want to be as powerful as a utility but refuse to be treated as one. If you're the average Comcast user and want to unlock your internet, you have to either pay them more to access what you already paid for or go to a much slower service running through outdated lines or cancel your internet service altogether, something that few in today's world can live without.

There is no substantial reason for data caps other than the cash grab and to keep users paying for cable and other Comcast-owned sources that won't eat up your limited data. There is not a limited amount of data and Comcast's servers are and have been running 24/7. If they can handle processing data on the busiest night of the week, they can handle it all day every other day, and if they can't, they can upgrade their systems or lower their price for their then lower service. Comcast has been vehemently against the Open Internet and all attempts to make internet a utility and thus, against the public good and the advancement of technology with the only benefit being to their pockets. Something needs to be done.

**Date:** 10/16/2016 1:20:51 PM

**City/State/Zip:** Louisville, Colorado 80027

**Company Complaining About:** Comcast

---

## **Description**

Comcast is imposing data caps on my internet service at 1TB.

This data cap creates a box that online entertainment services like Netflix would be forced to compete in against Comcast's own entertainment services, such as their Stream TV service, which are not subject to the same restrictions. This dangerous precedent will allow Comcast to edge out its online competitors or force online consumers to pay overage charges in the future as entertainment requires more and more data throughput. It's anticompetitive, anti-consumer, anti-innovation, and I don't think it should be allowed.

---

**Ticket: # 1270303 - Implementation of Data Cap**

**Date:** 10/16/2016 2:16:23 PM

**City/State/Zip:** Park Ridge, Illinois 60068

**Company Complaining About:** Comcast

---

**Description**

Comcast has recently implemented a data cap on my current internet service plan. I have been a customer with them for several years and my bill has been constantly getting more expensive over the years. The implementation of this data cap is just another method that Comcast is using to gain more profits by charging high usage customers. It is unfair to implement the data cap and charge more for unlimited data when unlimited data was previously available at the same rate.

---

[Ticket: # 1270314 - Data caps](#)

**Date:** 10/16/2016 2:29:47 PM

**City/State/Zip:** Bellingham, Washington 98229

**Company Complaining About:** Comcast

---

## **Description**

Comcast is instituting data caps throughout the state of Washington, along with most of the US. In most places, including where I live, Comcast has a monopoly and there is no competition for us to switch to.

Data caps are absurd, as people exceeding the amount they posted costs Comcast nothing. It is not lessening their burden, it is just increasing the burden on the already over-paying customer.

## **Description**

Hello. I'm writing a formal complaint about the 1 Terabyte data cap that Comcast has recently implemented. The company gives examples of a normal user's data usage patterns evening out at about 600GB per month. The issue is largely with power users, gamers, and households with more than one member. As a video game programmer and avid gamer, I fairly often use more than 1TB per month. My family of 4 in another household easily uses 2TB, and they are more average internet users just watching Netflix and other streaming services.

On top of all of that, their website and advertising does not adequately inform prospecting customers of their caps. Their mail flyers fail to mention the cap and their website does not mention it in an immediately obvious location. Their video explaining the cap is only on YouTube, and is heavily biased. For example, it's standard of video stream quality is 480p, when the standard has been 1080p for over 8 years, and the emerging standard is 2160p/ 4K, likely to be fully supported within the next year.

In short, the data caps implemented are at best completely unreasonable within the near future due to the popularity of streaming services and video games, and at worst are unreasonable even in the current customer's normal usage of the internet.

Finally, there is not an actual reason for the data cap to exist beyond the excess profitability of the company. They claim that their networks are overloaded when in fact, even on high traffic days such as Christmas and on release of popular video games and TV shows, their network does not slow.

**Ticket: # 1270722 - Comcast Data Cap**

**Date:** 10/16/2016 9:22:46 PM

**City/State/Zip:** Taylorsville, Utah 84123

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

---

**Description**

Comcast is implementing a data cap starting next month that is set to 1 TB (terabyte). This is an unacceptable practice that has no merit to stand on. Their commercials/advertisements argue that an individual that uses 2 TB should pay more than a user that only reaches 500 GB in a month. This is a deceiving act as that is not how the internet works. The internet is unlimited and it does not cost them more to transfer a massive amount compared to a small amount. The real limited factor is bandwidth, or the speed of data. In order to have faster download and upload speeds, you need the infrastructure to support that. So they're claim that using more data should cost more is absolutely diabolical and is only to take advantage of the monopoly they have on the internet services to a majority of consumers. In reality, higher speeds should be the driving factor in price, as that is a limited resource that they must pay to build, support, and expand as more users gain access and higher speeds are required. As determined by netflix, 4k video streaming can reach 7 GB per hour. so  $1 \text{ TB} = 1024 \text{ GB}$  divided by  $7 \text{ GB} = 146$  hours of 4k video, or just over 6 days. This may sound like a lot, but this doesn't include multiple users or any other downloading. A video released by Microsoft, Forza Horizon 3, was 50 GB. That is already reaching 5% of the 1 TB data cap they are starting. Along with that, we have a home office that is used every day for a significant duration and in that office, Netflix is used during that time as well. Although at HD resolution, that is 3 GB per hour which is 720 GB of video assuming 8 hours per day per month. That leaves 280 GB for the other uses such as another Netflix stream in a bedroom, a video game download, or Youtube. 4k content is already readily available on Youtube and will take up the most if not the rest of that data. The main point is they are trying to charge for the amount of data transferred, which is unlimited, where the real cost comes from data transfer speeds. Other competitors are not an option as AT&T does not support speeds high enough for our household and the same for DirectTV.

**Ticket: # 1270847 - Comcast Data cap**

**Date:** 10/17/2016 1:10:40 AM

**City/State/Zip:** Seattle, Washington 98115

**Company Complaining About:** Comcast

---

## **Description**

Comcast is putting in a data cap and creating a monopoly because there is no other service in my area. Lack of consumer choice due to local monopoly

Lagging behind the rest of the world in broadband availability and cost to consumers

Importance of the internet for children to participate in school and for everyday people to participate in the modern economy

This is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

This is blatantly anti-consumer

Additionally there have been reports that Comcast's "data monitors" do not record accurate usage information and am concerned about the lack FCC regulated data consumption measurement standards.

---

**Ticket: # 1270850 - Comcast 1TB Data Cap**

**Date:** 10/17/2016 1:12:56 AM

**City/State/Zip:** Enumclaw, Washington 98022

**Company Complaining About:** Comcast

---

## **Description**

Allowing Comcast to add this 1TB data cap will create a monopoly in my area due to the fact that there are no other providers that offer similar services. Having access to the internet without a data cap is important in this day, as it is vital to education, economy, and entertainment.

Furthermore, internet services in countries other than the USA are much more advanced than what we can choose. This would not be a "value-added" service, it is the same exact service we pay for now, but we would be forced to pay more for the same service. This is blatantly anti-consumer. Additionally, there have been reports that Comcast's "data monitors" are inaccurate, and I am concerned about the lack of FCC regulated data consumption measurement standards.

Comcast should not be allowed to put this data cap into action.

---

**Ticket: # 1270854 - Data Cap Complaint****Date:** 10/17/2016 1:14:17 AM**City/State/Zip:** Mukilteo, Washington 98275**Company Complaining About:** Comcast

---

**Description**

Comcast has recently instituted a data cap in my area. First of all, this is not what I contractually agreed to when I signed up for service. Secondly, and perhaps more importantly, this creates a dangerous precedent where a private company is allowed regulate my access to the internet. The internet, in this day and age, is nothing more than a utility. Just like electricity and natural gas, it is virtually required. Although--technically speaking--one can live without it, to do so puts a person at a major disadvantage compared to his peers. Data caps play into Comcast's virtual monopoly in my area, allowing them to scalp prices off the consumer. Since the internet is virtually required for modern life, and Comcast is virtually the only provider in my area, they should not be allowed to regulate my access via data caps. They have not increased their quality of service to me in any way--instead they are just demanding that I pay more for it. Finally, there is absolutely no oversight in the way that Comcast measures my data usage. There have been reports that they have been inaccurate in their measures. As there is no Dept. of Weights and Measures oversight on this transaction, it is unfair for Comcast to charge me as such. This is a BLATANTLY anti-consumer move, and it must be stopped.

**Ticket: # 1270892 - Comcast 1TB Data Cap****Date:** 10/17/2016 5:55:33 AM**City/State/Zip:** Houston, Texas 77074**Company Complaining About:** Comcast

---

**Description**

Comcast is introducing a new 1TB data cap on internet usage with overage fees of exceeding it. Comcast claims that only 1% ever go over this limit and with the way cloud storage and media over the internet is improving on quality data usage is going to rise exponentially. What a 1080 video over 6 hours will turn the equivalent of a 1hour 4K video. The data caps are completely unnecessary for home internet where everybody in the family uses internet and people that work from home need to use the internet and not worry about overage charges. My point is, data caps are a punishment for cord cutters not wanting to get cable and data cap overages are a way to increase profits from a service that has become as important as electricity, water, and gas. The difference between those utilities and internet is that utilities cost resources that get eaten up while internet traffic cost literally pennies per TB and we are already paying more than enough for it through the service agreements. Google charges \$70 for a gig of speed and no data caps, yet I am paying 80 for 150mbps/s and 1TB of usage? I strongly encourage you to take action and if not to at least open the market so other competitors can move in and change the industry how T-Mobile is doing for the wireless industry.

**Ticket: # 1271588 - Cox instituting Data Caps on Internet Access**

**Date:** 10/17/2016 1:34:49 PM

**City/State/Zip:** Gainesville, Florida 32608

**Company Complaining About:** Cox

---

**Description**

Without notifying customers, Cox has instituted a cap on data access, as shown on their website: <http://www.cox.com/residential/support/tv/article.cox?articleId=2fd6ccb0-b13a-11df-4be3-000000000000>

This type of behavior is inherently anti-consumer and is a blatant attempt to circumvent net neutrality principles by being able to provide certain services that "don't count" against consumers' data caps. This is preferential treatment of web traffic, which is anti net-neutrality. Until the FCC takes action against this behavior, your ruling on net neutrality is meaningless. Consumers expect that you will protect this ruling and not stand idly by while cable companies invent ways that skirt the decision. This is a serious issue that will impact the future of broadband access in this country, a state of affairs that is sorely behind many other countries in the rest of the developed world.

As a taxpayer, I expect and demand that you put an end to this behavior immediately. Allowing this to continue is a statement that you are unwilling to stand behind consumers to police toxic behavior by ISP's.

**Date:** 10/17/2016 3:45:06 PM

**City/State/Zip:** Fort Collins, Colorado 80526

**Company Complaining About:** Comcast

---

**Description**

On Oct. 6th I received an email from Comcast stating that they will be implementing a 1TB cap on data usage and will price usage beyond this tier.

In our area, Comcast is a virtual monopoly for high-speed internet as well as television service. There are other options, but they are substantially slower or offer fewer channels or internet speeds or higher latency.

I believe these data caps are a violation of net neutrality because if you stream video from Comcast, it doesn't count against your 1TB cap but if you stream from Netflix or Hulu or Amazon Prime you do.

They treat their own packets differently than they treat packets from other companies and this violates Net Neutrality precepts. This move also leverages their monopoly in internet data delivery to unfairly push their TV cable product - which is a violation of antitrust "tying" restrictions.

Lastly, this will likely lead to more tiers of service in the long-term. Eventually, it will probably be 500 GB and then 250GB and so on. Soon you'll be buying data bundles much like you do with a cell phone. They want to meter you like a utility without being subject to the laws that govern utility companies and using a metering method that they developed and that doesn't match other data measuring methods.

**Ticket: # 1272509 - Data Caps****Date:** 10/17/2016 6:30:35 PM**City/State/Zip:** Redmond, Washington 98052**Company Complaining About:** Comcast

---

**Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, telecommuting, file backups, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for.

The Internet is not something that should be closed off, capped, or restricted from anyone anywhere on the planet. The Internet is no longer a luxury and according to the recent ruling from the US Court of Appeals and supported by the FCC, broadband internet has been declared as an essential utility, much like electricity. Comcast is implementing new nation-wide data caps on November 1st, and they are a violation of freedom of speech and personal liberty. The internet is a basic human right in the modern era, and no entity has the right to restrict it.

Data caps are unreasonable and unlawful.

ANY cap is unacceptable, because data per se is an UNLIMITED resource. ALL data caps are 100% arbitrary and this can easily be proven with the laws of physics. Bandwidth is the limited resource. Congestion can ONLY happen by over-saturation of bandwidth. When ISPs start capping services, they are not trying to prevent congestion, instead they are arbitrarily limiting your service to for profit. This allows them to negate competition based on quality of service, and will allow them to 'compete' on arbitrary restrictions, ultimately for the worse of all customers.

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps are not about network congestion. Instead, Comcast claims these data caps are about "fairness," and do not serve a traffic management function. They have been described alternatively as a way to align consumers' use of the network with what they pay. As a method of price discrimination however, data caps and usage based pricing are redundant to the speed tiers that consumers are used to. The broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes.

By exempting only its own online video application from the cap, Comcast gives their own services an advantage over all competing online video applications.

## **Description**

I have recently been forced into having a 1TB data cap, with absurd fees of \$10/50 GB for going over, or \$50/month for unlimited. This would double my monthly rate.

This data cap is absurd, considering that it would take me merely 8.5 hours at my 250 Mb/s speed to break the cap. That is just over 1% of the month that Comcast allows me to use the full internet speed before deciding that I am "taking up too much traffic".

Considering I constantly download videos from colleges for the purposes of editing, there are often times where I will go over the cap because of how many projects I have to work on. This was the reason why I purchased a higher speed of internet in the first place. With this data cap, I am being targeted to micromanage my usage, or be forced to pay more.

## **Description**

I live in Washington state and Comcast is about to impose data caps on us that require us to pay an extra \$600/year to maintain our current service level. They have admitted on several occasions that the data caps are not at all technically necessary, but simply a business decision, designed to make them more money. Since there is basically no choice in ISP, we are stuck with this and it puts undue hardship on people for no reason other than to give a giant corporation more money for the same service we have had for years.

**Description**

Unfortunately since Comcast has a negotiated monopoly on cable Internet service in this area and AT&T has all but abandoned its copper lines in pursuit of more unregulated wireless subscribers, Comcast has been able to add a 1TB data cap onto my internet connection. To relieve myself of this cap, I would have to pay an additional \$50 on top of the \$120 I already pay for my service. If I am to move to Internet only and pursue a streaming service for programming, I will be charged overages over 1TB/mo. They claim they want to charge people for what they use and that is perfectly understandable, then they shouldn't be allowed to charge for merely accessing their network. I do not pay for access to my gas, water, or electricity, I pay for what I use. Comcast not only is allowed to double dip charges against their customers and continue with their poor customer service but they also are allowed to leverage an artificial scarcity of a resource (bandwidth) which they themselves are responsible for providing this puts an undue burden on the consumer as they must now balance out paying \$120 just for (unlimited data) Internet and an additional service fee for a separate streaming service, or continue on with the monopoly allowed double-play from Comcast and suffer through poor customer service and a total lack of competition.

## **Description**

I was recently informed by Comcast, my internet provider, that they will be instituting data caps on our internet service. I want to strongly express my opposition to this and I hope the federal government can do something to stop them.

While there allotment may seem generous, there is no telling what kind of high bandwidth essential internet products or services will require massive amounts of data and it seems like Comcast is giving a little now in the expectation that in a couple years they will be able to reap massive overage fees when the next big thing comes out.

As a small business owner and citizen of the USA, these data caps are stifling and unrepresentative of a society that is seeking to provide equal access for all.

Thank you!

## **Description**

Comcast recently rolled out their 1TB data cap nationwide. I believe that this infringes on the concept of open internet because it encourages you to pay for their TV service and not use internet streaming services. They also mentioned that the caps should only impact 1% of users, which is still ~300,000 customers. My concern is that they could impose smaller and smaller data caps in the future if there is no action taken now. It is the ISPs duty to provide me with a decently fast, unlimited internet connection, given I pay \$90 a month for it. Please put a stop to the ISPs that treat their paying customers like this.

Thank you.

**Description**

I'm writing FCC Chairman Wheeler to urge him to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

Comcast also has a vertical monopoly, owning both their own content and the means to distribute it. Comcast then has reason to apply different data usage for their own content vs someone's content they don't own. There is no guarantee to any kind of accuracy or transparency other than what Comcast provides to its customers (which is a HUGE conflict of interest). In my household my options are Comcast or Century Link, and do to the work I do, Century Link is just too slow to meet my business needs. This means that Comcast has a monopoly over my cable as well for me to do business. This is not right, and as a consumer, I should have more options to choose from, to create competition and keep the market fair and balanced. Please Chairman Wheeler, fix this.

## **Description**

The concept of locking down how much data can be used in the middle of the growth of the data/computer industries is a huge disservice to the general populace of the US. Seeing that we are on the verge of a giant increase in data size (such as 4k video streaming and much more) it is more than likely that, in the near future, 1 terabyte will be a part of a general users monthly lifestyle, NOT some near unreachable goal like comcast is advertising for its soon to come data cap. I could understand an increase in cost for things like laying out new fiber to get better access for more people and maintaining those cables (which they generally dont care about upgrading, so long as they can get you to pay for a service that is just above some of the lowest world averages in some areas), but to gouge extra money for a service that is becoming an absolute necessity is ridiculous. We already pay an amount to Comcast that is allowing them to thrive, so why should they be able to limit something that is so important to everyone for their own personal gain?

If managing all this data truly cost them enough to validate these caps, then just maybe I could understand, but seeing that they have only grown and prospered in the current 'unlimited' system justifies that there is no reason to allow them to put this tight of a collar on its users.

And, on top of this, to allow their own streaming services to have no data cost is an obvious attempt to stifle the largest streaming services and promote their own from the inside. Preposterous.

Lets aim to make US internet something other countries only wish they could have, not a joke that they can all laugh at.

---

## **Description**

I would like to register a complaint regarding the implementation of data caps by Comcast. As admitted to by a Comcast VP, there is no physical basis for these data caps -- it is a business decision. Unlike other utilities (e.g. water or electricity), there is no limited amount of data that must be monitored to ensure that certain consumers are not hogging most of it. Rather, data is intangible. The speed at which data can be transmitted is limited by the bandwidth of the transmission line, but that is a separate issue that is handled when customers select their preferred tier of internet speed. With the current system, you pay more for faster speeds. With the proposed new system, you pay more to reach the data cap faster. Consumers are being charged twice for the same product.

Furthermore, the services provided by Comcast to monitor your internet usage are woefully inadequate. If each monitoring system provides the consumer with a different amount of data used thus far in the month, consumers are incapable of adequately protecting themselves from being charged for overages. Finally, data caps will hinder technological progress. The world is moving to a streaming system -- movies are rented from Youtube, Netflix is booming, families are able to stay in touch despite living on separate continents thanks to services like Skype and Google Hangouts. Ironically, I do not have a cable box, because the reception from Comcast's online streaming service for my cable package is better quality than what comes out of my wall. One terabyte of data might be sufficient now, but as technology progresses consumers will be reluctant to upgrade to newer, higher quality devices for fear of not being able to afford to use them. Companies will, in turn, be hesitant to continue developing better products, and the industry may stagnate. I do not believe that the technology industry and consumers should be charged or made to suffer due to a made up problem.

## **Description**

I'm mostly a gamer, steam and netflix are my only real online activities that can consume easily hundreds of gigabytes per month. Where I currently live I'm having a hard time finding an alternative cable provider (none). Comcast's own services are exempt from this limit though. As someone just looking for internet for entertainment and comcast also being an entertainment provider I feel as though the data caps are intended to corner customers into paying additional fees for using the entertainment outlets. They are a monopoly so I can't exactly go anywhere else either. Online gaming really doesn't allow me to use satellite providers.

How can I a consumer protect myself? This is a conflict of interest and serves no purpose other than to punish me for using non comcast services. What is the point of the internet if not to be open to let any one provide entertainment an information?

**Description**

I am greatly concerned about the 1TB Data Caps that Comcast will be implementing in November. My concerns are

- 1) this will stifle development and deployment of super high-res (4k and the like) by internet video sites (NetFlix, Hulu, YouTube, etc). There does seem to be a push, especially in the gaming and independent communities, to utilize higher resolution and higher framerate video production. Both of these add data to video files, and thus would greatly increase the usage of our 'alloted' 1TB. As more mainstream shows push into 1440p/4k resolutions and as families grow, there will be more usage of data and a quicker cap ceiling hit.
- 2) Noncompetitive practices. With the 1TB cap in place, people will be dissuaded from using streaming services (i.e. Netflix, YouTube, Hulu, etc.) for fear of hitting their cap and incurring charges. With Comcast offering streaming services and (from what I've talked to representatives about) not having those services count against the cap, this seems highly anti-competitive. This creates a market where Comcast can force other businesses out of the way by being a gatekeeper of sorts.
- 3) unfair billing practices. Comcast states that users should be charged for what they use. But this gate only seems to punish those who use a lot of data, and does not scale down. There is no discount for only using half of your allotted cap. Only a marginal (I think it was 5 dollars or something like that) reward for voluntarily lowering your cap.
- 4) a focus on money grabs, rather than customer satisfaction. This whole data cap issue seems to be a way to get another revenue stream, rather than try and work the problem by improving infrastructure and their product. If I recall, most telcoms were given taxpayer money to bring FiOp to the consumer a few years ago. Was that money misused? Why am I now paying penalties for using a product that antiquated infrastructure cannot maintain?

If comcast were not a regional monopoly, I would switch in a heartbeat. Century Link has begun to roll out FttN in my area, which would give some choice. However, I fear that if Comcast is not sanctioned for this business move, that other ISPs will follow suit.

**Ticket: # 1273585 - Comcast 1 TB data plan violates principle of net neutrality**

**Date:** 10/18/2016 12:01:53 PM

**City/State/Zip:** Edgewood, Washington 98371

**Company Complaining About:** Comcast

---

## **Description**

Comcast has introduced a "data plan" in the Seattle area beginning November 1 where the subscriber will be charged \$10/50GB of data service in excess of 1 TB per month. The consumer can opt in to an unlimited plan, the same that is offered today, for an additional \$50 per month.

It's important to note that Comcast's xfinity streaming service is exempt from this data cap. Netflix, Amazon, Hulu, Youtube, and Plex are not, and these are the video streaming services used by my household. Typical usage of these services, according to Comcast's measurement, put my household's usage in excess of the data cap at 1.3 TB / month on average.

This appears to be nothing more than an anti competitive move on the part of Comcast to prioritize their streaming services over their competition (Netflix, etc.) by making it more expensive for the consumer to use their competition's services over their network. This violates the very principle of net neutrality and it is the responsibility of the FCC to act in the interest of the consumer in cases like this.

I would willingly choose an alternative carrier given the option, unfortunately Comcast holds a monopoly on cable internet in my service area and there are no competing fiber services available.

It is increasingly clear that internet service is rapidly becoming a necessity to households all around the globe and when there is a domestic market without competition because service providers and content providers are the same entity, and when one company services the majority of the domestic market, the consumer pays a higher price for an inferior level of service.

This is unacceptable and frankly should be illegal. I have chosen to do business with companies in a competitive market that offer a fair price for their product and provide good customer service (like Netflix) and companies like Comcast who provide an inferior product at a higher price with terrible customer service are seeking to undermine my choices because they have a government sanctioned functional monopoly.

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

## **Description**

Comcast decided to introduce 1tb data cap. This is certainly to monetize on that fact that people are increasingly using HD digital subscriptions over cable. The 1tb cap is nowhere close to a few 4k UHD movies from Netflix, 1-2 1080p tv shows from amazon/Hulu/Netflix/direct-to-consumer network provided video (such as CBS, NBC, ABC etc) and youtube.

Experts already agree bandwidth is not limited and internet providers already created monopoly in most of the markets. This rather random data cap is no other than monetizing the monopoly further.

---

**Description**

I live in a central part of Portland Oregon, but have only two choices for home internet. CenturyLink, which despite advertising 1gbps internet, can only supply my house with a maximum of 3mbps, and Comcast, which can supply up to 100mbit speeds.

I am a software professional and need fast access to the internet to be able to work and live. 3mbps is not fast enough for my needs, so that means that there is only one provider that can serve me, Comcast. Now Comcast has decided that they're going to impose a data cap on my internet usage, despite there being no such condition on my usage at the time I signed a contract with them.

I find this unilateral change to their service highly objectionable. I would like to vote with my dollars, and switch to another provider without these policies, but since there is no competitive choice I am completely stuck.

I do not believe that Comcast's introduction of these data caps fits with the principles of an open internet, and has far more to do with them wanting to prevent people from using internet video streaming services. I implore the FCC to do something to stop internet providers from rolling out data cap policies like Comcast is doing.

## **Description**

As you are aware, comcast is instituting a 1TB soft data cap for residential users. While their goal is to get people used to data caps, there is no reason that they should be allowed to implement an arbitrary limit for the amount of data that can be used during a particular timeframe. Paying for time instead of usage will only lead to further increases in cost for consumers without an improvement in service. Many ISPs have stated that most users don't use what they have. While that is true, this is a long-term ploy to get their customers paying more without any additional benefit.

## **Description**

A great threat facing innovation for our country today is the monopolized market of internet service providers. The Internet has quickly gone from a luxury to a necessity for everyday life, and even more so for people like me who work from home.

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency: Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit. This isn't just for videos of course, people who use services for work will be hit just as hard especially as the size of applications increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any online conversation regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

We need to open the free market to other ISP's and increase innovative pursuits for better internet access as the rest of the developed world is starting to leave us behind.

**City/State/Zip:** Tucson, Arizona 85741

**Company Complaining About:** Comcast

---

**Description**

I am a resident currently affected and very unhappy about Comcast's new data cap plan they forced upon my home and my community. Data plan is not about fairness, it is not about congestion, it is a way for Comcast to pad their profits.

Let's talk about fairness; Comcast claims they are charging data like how any other utility charges for water, electricity, and gas. However, once the infrastructures are put in place, sending and receiving data costs almost nothing to them. They are already charging enough to post record profits last year. Now, let's talk about congestion, data caps have nothing to do with network congestion, as was evident when Comcast accidentally leaked an internal memo confirming so.

Increase in profits is the only reason left, and while a business has every right to make as much money as they can, Comcast, being a monopoly in many areas, should be held to a different standard. There is no competition, nowhere to turn. With the increase in high data-utilization applications such as 4K streaming and more Internet connected devices in our homes, this data cap is just an unfair way to get in on the money without actually innovating.

## **Description**

Whatever or not you believe data caps are fair, there can be no argument that the meters used to measure usage should be accurate and transparent -- only they're not. For all that Comcast CEO Brian Roberts likes to claim that broadband data is exactly like electricity, and customers who use more should pay more, the company has fought tooth and nail against being regulated like a utility. There is no agency akin to FERC regulating broadband metering devices.

Unsurprisingly, there are abundant reports of ISPs charging consumers for usage while they aren't home, while their modems are disconnected or the power is out. According to DSLReports, the FCC has received 13,000 complaints about Comcast's data caps this year, many of them claiming the company's meters don't match users' own router statistics.

Ars Technica this month recounted in exhaustive detail the experiences of four Comcast customers in different parts of the country who were walloped with exorbitant overage fees -- more than \$1,500 in one case -- for broadband they insist they couldn't possibly have consumed.

Comcast's response in all cases (surprise!) was to tell customers the meters were accurate and should not be questioned. "We know that our meter is right ... with our meter, we give you a guarantee that it is perfect," a Comcast customer service rep insisted to a subscriber who disputed data charges. Who says the customer is always right?

Comcast is so confident about the accuracy of its meters because NetForecast, the firm that Comcast pays to conduct periodic assessments of its usage meters, conducted measurements in 55 homes last year -- an infinitesimal fraction of Comcast's 23.8 million broadband customers -- and found that Comcast met its goal of 99 percent accuracy.

Tech-savvy customers often turn to third-party firmware like DD-WRT to measure their usage. One subscriber has used free Tomato firmware to measure his Comcast data usage since mid-2013 and found repeated discrepancies -- with Comcast's data meter frequently producing readings at least 10 percent higher than his own readings -- and on occasion as much as 52 percent higher. At other times Comcast's readings were lower than his own or nearly identical. The company never gave any official word on what could have caused the differences.

In no case of disputed overage charges would the company provide proof the data was consumed or say what websites it was used on or by what method it was measured. "If Comcast, the nation's largest internet provider, can't determine what's pushing its subscribers over their data caps, why should customers be expected to figure it out on their own?" Ars asked.

This is not a new problem -- it's been going on for years. ISPs have an obligation under the Open Internet Transparency Rule to disclose accurate information about the performance and cost of their

services. If they are unable to provide that, there's a simple solution to usage meter problems: Abolish caps.

They exist solely to price gouge users

The accuracy of usage meters is only part of the problem with data caps. Fact is, caps on home broadband use aren't necessary in the first place. Data caps are the result of ISPs taking full advantage of a lack of competition in the broadband market to gouge consumers.

Back in 2012, a law was submitted in the Senate that would have restricted ISPs' use of data caps solely to addressing network congestion. The Data Cap Integrity Act came in response to a study from nonprofit group The New America Foundation, which concluded that data caps on broadband usage serve only to bilk customers and stifle online innovation, rather than ensuring that internet data travels the network lines unfettered.

Comcast admitted to the FCC in a disclosure document that data caps "do not address the issue of network congestion, which results from traffic levels that vary from minute to minute." A Comcast exec admitted caps are a "business policy" rather than a technical necessity.

Instead, Comcast likes to claim, data caps are about "fairness," to ensure that customers who use more pay more. But a study from the National Bureau of Economic Research found that people on unlimited data plans effectively pay less per gigabyte of data compared to those on metered plans -- about \$1.68 versus \$3.02, respectively, or a difference of nearly 80 percent. And you don't see Comcast offering to reimburse the difference to customers who consume less than their data allowance each month. Where's the fairness in that?

"Supporters of internet data caps want to have things both ways: admitting that the monthly usage limits have nothing to do with congestion, while simultaneously arguing that those who use the most should pay more (but not that those who use the least should get any discount)," Consumerist writes.

Americans already pay some of the highest broadband rates in the world. Increasingly, ISPs are gauging subscribers with overage fees on top – or urging customers to sign up for an unlimited data plan, which in Comcast's case adds a whopping \$50 more per month.

A Pew Research Center study found that adoption of home broadband has plateaued at 67 percent of Americans, down slightly from 70 percent in 2013. The monthly cost of service is cited by non-adopters as the most important reason for not having home broadband, even though not having service is seen by two-thirds of Americans as a major disadvantage to finding a job, getting health information, or accessing other key information.

Comcast's profit margins on high-speed Internet exceed 90 percent, and Time Warner Cable's broadband margins were 97 percent in 2013, CIO reports. Comcast posted its strongest earnings in years, racking up a \$2.13 billion profit on revenue of \$18.8 billion in the first quarter. The company's expanding use of data caps will ensure that revenue stream continues to grow.

Discourage cord cutting and limit innovation

As I wrote last week, "cable providers are pulling out the stops to make [cord cutting] an expensive proposition. Broadband data caps have become streaming's Achilles' heel."

A study from The New America Foundation found that data caps undermine competition by discouraging consumers from turning to services like Netflix, Hulu, and Crackle. Another point of contention: The streaming services offered by ISPs like Cox and Comcast are exempt from their data caps, while streaming from rivals like Netflix and YouTube is not.

Research from the National Bureau of Economic Research shows home broadband data caps have a dramatic effect on consumer behavior. "We see people pull back substantially when the possibility of overages comes up," Jonathan Williams, co-author of the paper and an assistant professor of economics at the University of North Carolina at Chapel Hill, told the Washington Post.

The Government Accountability Office (GAO) has raised concerns that usage-based pricing could cause consumers to limit their use of data-heavy content and applications. Limiting heavy users could in turn "limit innovation and development of data-heavy applications," the GAO warned.

The New America Foundation report concurred: "The future [of the internet] is not just about streaming movies or TV shows, but also access to online education or telehealth services that are just starting to take off. Capping their future may mean capping the nation's future as well."

No market recourse for broadband users

The root cause for data caps -- apart from greed -- is that the U.S. broadband market is growing ever less competitive. Last year the Justice Department noted that 70 percent of U.S. homes have access to only one or no provider that offers 25Mbps speeds -- the standard definition of broadband. Thanks to industry-backed/written state laws banning competition from municipal broadband, that situation is unlikely to improve any time soon.

Participants in the GAO focus group on home broadba

---

## **Description**

Please end this. In 2008 I lived in South Korea. for \$38 per month I had 100MB fiber connection ran straight to my house. When I did a speed test I would get 98MB down and 78Mb up. Online streaming sites was the only way for us to enjoy American content. Why cant I have internet like this in the US in 2016? What good is having a 300 down 22 up connection if I can only have 1TB per month. I have internet cameras installed in my retirement home in Indiana. All together they generate 3gb per day in traffic. I should be able to have a constant video feed to my home in Indiana if I want to. Under these data caps. If I ran a 720p feed it would use over 68% of my data cap. Do these companies really expect a family of five to only get by with this. What happens 3 years from now when everyone is streaming the 8K football game that uses 14GB per hour. Please save us from this crap.

**Ticket: # 1275563 - Comcast Data Cap and throttling data**

**Date:** 10/19/2016 8:56:35 AM

**City/State/Zip:** Lake Jackson, Texas 77566

**Company Complaining About:** Comcast

---

## **Description**

Comcast's use of throttling of Data and use of Data caps is in direct conflict with prioritization of traffic. Comcast has chosen it's cable service over the rights of those who have purchased internet service. Considering its market share of internet consumers, which should have been never allowed to happen, it is a monopoly presently price gouging customers "because the can". Data caps have nothing to do with helping their customers "because few people using more data than others " with the issue of network being overloaded. I'm tired of getting screwed by these companies who have been given grants "tax payers money" and then screw over the people have given them money. As to throttling data, never has a company been able to deceive its customers selling one thing then giving them another. Its not like Ford is allowed to sell you a GT40 and then deliver a Focus. So why are these hucksters allowed to get away with this?

**Description**

I am a resident currently affected and very unhappy about Comcast's new data cap plan they forced upon my home and my community. Data plan is not about fairness, it is not about congestion, it is a way for Comcast to pad their profits.

Let's talk about fairness; Comcast claims they are charging data like how any other utility charges for water, electricity, and gas. However, once the infrastructures are put in place, sending and receiving data costs almost nothing to them. They are already charging enough to post record profits last year. Now, let's talk about congestion, data caps have nothing to do with network congestion, as was evident when Comcast accidentally leaked an internal memo confirming so.

Increase in profits is the only reason left, and while a business has every right to make as much money as they can, Comcast, being a monopoly in many areas, should be held to a different standard. There is no competition in my area, Comcast having a monopoly in my market. With the increase in high data-utilization applications such as 4K streaming and more Internet connected devices in our homes, this data cap is just an unfair way to get in on the money without actually innovating.

## **Description**

I object to this new policy of capping internet usage. My generation is one that has cut most cables, our main phones are our cell phones, it is also a source of entertainment. With data caps on cell phones we rely on our home internet for the data on our phones, for the entertainment from our gaming consoles, Netflix, shopping. It has truly become a public utility much like electricity. Could you imagine if there was a cap on how much electricity you used a month or would be hit with extreme overage fees? With everyone using internet these days more and more companies have started requiring ads before watching videos (such as YouTube) which eat up that data on top of it. With Comcast being about as close to a monopoly (you have few real options if you want to have any internet that is feasibly usable) the government needs to do something to stop them from unfairly capping their customers.

---

**Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, telecommuting, file backups, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for.

The Internet is not something that should be closed off, capped, or restricted from anyone anywhere on the planet. The Internet is no longer a luxury and according to the recent ruling from the US Court of Appeals and supported by the FCC, broadband internet has been declared as an essential utility, much like electricity. Comcast is implementing new nation-wide data caps on November 1st, and they are a violation of freedom of speech and personal liberty. The internet is a basic human right in the modern era, and no entity has the right to restrict it.

Data caps are unreasonable and unlawful.

ANY cap is unacceptable, because data per se is an UNLIMITED resource. ALL data caps are 100% arbitrary and this can easily be proven with the laws of physics. Bandwidth is the limited resource. Congestion can ONLY happen by over-saturation of bandwidth. When ISPs start capping services, they are not trying to prevent congestion, instead they are arbitrarily limiting your service to for profit. This allows them to negate competition based on quality of service, and will allow them to 'compete' on arbitrary restrictions, ultimately for the worse of all customers.

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps are not about network congestion. Instead, Comcast claims these data caps are about "fairness," and do not serve a traffic management function. They have been described alternatively as a way to align consumers' use of the network with what they pay. As a method of price discrimination however, data caps and usage based pricing are redundant to the speed tiers that consumers are used to. The broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes.

By exempting only its own online video application from the cap, Comcast gives their own services an advantage over all competing online video applications.

---

## **Description**

I was just informed that Comcast is imposing data caps on my internet service at 1TB.

This data cap creates a box that online entertainment services like Netflix would be forced to compete in against Comcast's own entertainment services, such as their Stream TV service, which are not subject to the same restrictions. This dangerous precedent will allow Comcast to edge out its online competitors or force online consumers to pay overage charges in the future as entertainment requires more and more data throughput. It's anticompetitive, anti-consumer, anti-innovation, and I don't think it should be allowed.

## **Description**

Hello,

I am writing to you today about the recently established data cap that Comcast is imposing on the majority of their consumers. In the age of technology, there should not be a cap on the usage of data on any consumer. We should not have to worry about going over a cap while we are using the internet for homework, streaming etc. It is extremely concerning that in parts of the nation, Comcast is the only internet provider. What happened to free market and competition? There isn't any. Comcast is a monopoly and will continue to operate as a monopoly until other competitors are able to move in and provide internet to these areas. Is it not concerning that in most areas this is the only option for internet? Comcast is frequently viewed as one of the worst companies in the world and yet they still are sucking money from out of the consumers pockets. I believe the data cap is unlawful and Comcast is using this as just a money grab by a corrupt company who does not care about their consumers. They did not care about data caps until they realized that a growing number of consumers are cutting the cord and going to internet only. Then they decided to enact data caps to restrict users from freely accessing the internet that we already pay too much for and does not guarantee the speeds we paid for. If we go over our cap, we would have to automatically pay 200 dollars and most families cannot afford that on top of the low quality internet that they overcharge for already. I am asking that you please consider stopping this greedy corporation from establishing this cap as it will effect the majority of Americans and further increase our distrust in corporations such as Comcast. I would not be writing to you if I did not find this issue so troubling. If I had any other options, I would not have chosen Comcast as my internet provider. They were the only provider in my area and it is downright appalling how they essentially have created a monopoly on internet service.

**Description**

Comcast has decided to implement a data cap of 1 TB per month in the Jacksonville, FL area. They are planning on charging \$10 per 50GB over the 1TB. This is egregiously overpriced, especially considering the anti-competetive nature of their business and already preposterous profits. This is a blatant money grabbing scheme that is anti-innovative and should be banned immediately. No other utility could ever get away with such absurd actions as this. The caps are completely artificial. They claim that only 1% of user reach this cap but they fail to mention that internet usage will be climbing substantially in the years to come with the introduction of 4k video streaming services. This is a further step on their long history of price gouging and thievery. They claim this will increase innovation but with the monopoly they have and artificial caps in place innovation will plummet while their profits climb.

**Date:** 10/19/2016 12:39:14 PM

**City/State/Zip:** Jacksonville, Florida 32246

**Company Complaining About:** Comcast

---

**Description**

I'm deeply concerned about the nature of the data cap Comcast instituted in Jacksonville and elsewhere in Florida, per an email sent out by them this morning. While I'm currently well under the cap limit, I recognize that online gaming and streaming of 4K content are both activities I enjoy and that will grow in usage. Also, while I'm presently a one-person household, that will be changing next year, and it's easy to see how this rule most directly impacts larger families.

I would completely understand a rolling data cap being instituted, at the level of 90th-95th percentile usage on a semiannual basis, but instituting a hard cap on a service that has no effective competition in my market and many others can only serve to inhibit competition, as Comcast seeks to drive customers to its own content and obstruct them from using their service to do otherwise.

Please investigate this new policy and consider any possible courses of action to ensure that consumers aren't harmed, while also ensuring Comcast retains the right to reasonably balance its network load. Please also continue in your efforts to promote competition in the broadband space, including efforts by both other companies and municipalities to provide service in areas where just one or two options for modern-speed internet access presently exist.

---

## **Description**

The cost of internet service through Comcast is already high, and now they are implementing data caps. Previously the internet service I have through Comcast has been for and advertised as unlimited. They have been trying data caps on a trial basis elsewhere, while in a leaked memo, Comcast employees were instructed to state that the policy is for "Fairness and providing a more flexible policy to our customers", and not for controlling network congestion.

The FCC required Charter Communications must not implement data caps as part of their approval for Charter's purchase of Time Warner Cable. Comcast must not be allowed to operate as a monopoly with the benefit of charging its customers by changing the service terms for a service that they pay an already high price for.

Comcast is attempting to create further profits based on their monopoly power while the Wall Street Journal has said "Cable executives and analysts say that about 90% of the money cable operators charge for broadband goes straight to gross profits, since there are minimal operational costs for providing Internet service."(Wall Street Journal November 13, 2012)

Comcast is also using scare tactics to pull even more money out of their customers. They are threatening overage charges up to \$200 a month unless you agree to pay an extra \$50 a month to avoid any overage charges.

It is time that the FCC regulate internet service providers as a utility like telephone companies.

**Description**

Comcast is enabling data caps on my account and others in my area. The problem with this is they are limiting our ability to choose what products I want to use and how much. Of course if I use their TV, or their streaming service then it won't count against the cap. Choose Netflix or Hulu or something else and now I have to pay... A lot more. I pay \$50 currently for internet and to get unlimited I have to pay another \$50 or risk getting charged up to \$200 in overage fees and rates. That's a 100% increase in my bill minimum. On top of that Comcast is the only real provider in my neighborhood for actual high speed internet. At&t has admitted to me they can't really get higher than 10-20 megabits to my house. Verizon isn't available, google isn't available, there are very few to no options. So if I want to continue to have high speed internet I need to allow Comcast to double my bill. This is unfair usage and monopolizing on the internet. They are forcing who I'm allowed to use for services.

## **Description**

I got an email from Comcast letting me know they're implementing a 1TB data cap next month and included the fees they will be charging for overages. I am still in a 2-year contract and cannot afford additional fees or the cost of upgrading to their unlimited plan they are creating. They told me my average data usage for the last 3 months was 977GB/month and that less than 1% of customers go over the 1TB mark. Comcast thinks it is fair as they say "Those who use more Internet data, pay more. And those who use less Internet data, pay less." That is not entirely true. Those who use less pay the same they were paying before, and those who use more must pay more. There is only 1 data cap no matter what internet package you have.

I am against the data cap, overage fees, and the way Comcast is handling the entire deal.

I am a loyal customer; I pay my bill every month and I have never missed a payment. Coming near to the end of my 2-year contract, I get an email saying they are adding a 1TB data cap to my plan, with a \$10 fee for every 50GB over, that can reach up to \$200 per month. That's slightly more than my bill is already, and adding that would double it.

Or I can pay 25%-30% (\$50) more to upgrade to an unlimited plan, and have no worries about getting hit with extra fees.

I understand they are doing this because people are "cutting the cable," but I am not cutting the cable, and I have the highest internet package they had to offer with their middle package for TV. It is not fair that I am paying to make up for their lost customers.

Also, they say that using their On-Demand service and DVR will NOT count towards my data usage; which is an attempt to get their customers to use that, rather than their competition (such as Hulu, Netflix, Youtube, etc). Per Public Knowledge, that exemption is a straight-up violation of the merger conditions the FCC placed upon Comcast when allowing them to buy NBCUniversal back in 2011, and is "inconsistent" with the Open Internet Rule (net neutrality)

Comcast's actions could harm consumers by turning the online video distribution marketplace from an open and competitive market to one dominated by cable incumbents such as Comcast.

Because I have their highest internet package, I feel it is wrong to be limited to how much I can use. I am paying for high-speed internet, but if I run out of their allotted allowance, I am given a week before the end of the month to unplug my modem or pay newly added fees.

I have a household of 6 people. We have 5 desktops, 3 laptops, an iPad, an iPod, 3 iPhones, 2 Samsung phones, an Xbox One console, and an Xbox 360.

We play a lot of video games, and I don't feel that it is fair to have overage fees for playing video games, while Comcast is trying to make up for lost customers due to "cutting the cable."

What will happen when we move on to gigabit? 1TB data cap won't last long with gigabit bandwidth. Technology advances very quickly and we are headed to gigabit internet, soon.

## **Description**

I'm writing FCC Chairman Wheeler to urge him to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

## **Description**

I know this has been in a test market but it seems as though they are slowly expanding it or making it nationwide. Comcast has added a data usage cap to their broadband internet. To me this breaks the rules of net neutrality, as it limits what you are able to do on the internet now. Even with a 1 TB cap which the defense they use is that <1% of consumers use this amount, the only thing is as our society moves towards more towards digital only, this becomes a huge problem. Streaming 1080p videos takes 4-5 GB per hour and 4k videos which are becoming more common can go up to 20-30GB an hour. That's not even including if you are downloading games or anything like that. A typical PS4/Xbox One game is around 30-40GB of space if not more now. Data caps for broadband plans are not in accordance with net neutrality and this needs to be made illegal for companies to do this. Please protect our right to data and do not let big companies determine what we can or cannot do on the Internet.

**City/State/Zip:** Fort Myers, Florida 33908

**Company Complaining About:** Comcast

---

## **Description**

Comcast is enacting data caps that are going to do nothing but hurt consumers. Here is a short list of reasons why:

Lack of consumer choice due to local monopoly

Lagging behind the rest of the world in broadband availability and cost to consumers

Importance of the internet for children to participate in school and for everyday people to participate in the modern economy

This is not a "value-added" service. It's the same service you've always paid for, and now you're being forced to pay more for it.

This is blatantly anti-consumer

Additionally there have been reports that Comcast's "data monitors" do not record accurate usage information and am concerned about the lack FCC regulated data consumption measurement standards.

Do whats best for American citizens and stand against this!

**Company Complaining About:** Comcast

---

## **Description**

I am writing to complain about the Comcast 1 terabyte data cap for myself as a customer of their internet service.

This data cap is unreasonable because data usage will increase over time by the nature of advancing technology.

This data cap will limit the type and quantity of internet data that the population will be able to use, and will create increased class disparity. At the same time the service providers have already paid for their costs.

Allowing Comcast to throttle internet data represents not only demonstrates a complete and total lack of understanding at how technology develops and changes with time, but also the lack of consumer choice due to their local monopoly in my area, lagging behind the rest of the world in broadband availability and cost to consumers, the importance of the internet for children and young adults to participate in school and for everyday people to participate in the modern economy, and is blatantly anti-consumer. Further, this is not a "value-added" service. It's the same service I've always paid for, and now I'll be forced to pay more for it.

How much would you pay for unlimited access to the entirety of human inheritance, knowledge, and experience? Comcast is betting you'll pay a lot.

## Description

Dear FCC,

Comcast recently rolled out a 1TB usage plan which is really enacting data caps on all of it's existing plans.

This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is:

- 1) not interested in upgrading existing infrastructure,
- 2) wishes to take advantage of tiered usage through bait-and-switch,
- 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access and
- 4) are positioning themselves to stifle forward innovation and limit the adopting of technologies such as 4k streaming, IoT, media sharing, and application/service delivery.

The arguments that this service should be like a utility don't make sense either. The current plan only punishes usage of their service but doesn't reduce cost materially when the service isn't in use.

Further studies have show that our Internet services continue to falter behind other nation's and yet costs 3.5x more than it does in Europe for similar service.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

**Description**

Comcast notified me recently that I soon be susceptible to a 1TB / 1024GB data cap. When I signed up for my service, no such cap existed. I signed a 2-year agreement with Comcast, and now they are changing to way they want to deliver that service. There is no valid reason to implement a data cap on my service. If I want to achieve the same level of service I had previously, I must now pay an extra \$50 per month for unlimited data - even though that is what I already agreed to pay for.

<https://customer.xfinity.com/help-and-support/internet/data-usage-plan-opt-out>

I pay for premium internet speeds - 250Gbps. That means if I wanted to use the full speed of the service I pay for, I would reach this new Comcast cap in less than 10 days. Now keep in mind, that is if I am only downloading data. Comcast is not being very clear, but their new data cap is upload and download combined.

<https://customer.xfinity.com/help-and-support/internet/data-usage-what-counts-towards-my-data-plan>

Please enforce the free and open internet that we all want and need and help me get the service that I have already paid Comcast to provide.

**Description**

Comcast's data cap policy is a flawed anti-consumer measure that's a blatant anti-competitive measure against competitor services such as Netflix and Hulu.

Why this is flawed:

1.) There is no guarantee of accuracy or transparency, I may be charged extra for a service based on a metering method that's contracted out to a third party with no guarantee of transparency or accuracy. Unlike electricity which has a third party government agency monitoring the measuring methods Comcast has no such restriction.

2.) Users have little choice in what ISP they must subscribe to:  
In a market with proper competition I could simply go to a competitor who does not employ such a draconian policy, unfortunately even in a major city all competitors besides Comcast don't even meet the legal definition for broadband. My livelihood rests on a modern connection so I have no choice but to go through Comcast, it's functionally a monopoly.

3.) Discourages cord cutting and stifles competition:

This is a direct anti competitive measure against companies that compete directly with Comcast in the entertainment business. This measure is essentially a streaming tax with no extra services rendered with a shaky justification that crumbles under the barest of scrutiny for those that "cut the cord" and have only an internet connection in their homes.

If the FCC prevented Charter and Time Warner from imposing data caps as a prerequisite to their merger why does Comcast get a free pass in this matter?  
I urge the FCC to take measures against this practice.

**City/State/Zip:** Fort Lauderdale, Florida 33317

**Company Complaining About:** Comcast

---

## **Description**

Regarding complaint #1203569, Comcast did contact me and they explained that lost packet issues and the routers request to resend does not use data. I have to take their word for it since a packet to re-request is in fact data originating from the router -- However in their letter they stated that they explained to me that "the data cap" is there to help keep costs down and some how implied I was still ok with it.

This isn't 1999. Data cap restrictions of any kind I believe is criminal. 1 TB of data through their nodes costs them as much 2 TB. Their infrastructure is paid for. They are making a profit right now WITHOUT data cap limits in MOST areas. I do not agree with their scheme to get richer. I said it would be BEST to have more aggressive plans. Especially with 4K TVs on the rise, and 4k programming available ONLY through Internet. Comcast is trying to beat consumers into the stone age with this archaic limit idea. They need to be stopped.

---

## **Description**

Comcast recently announced data caps. I believe data caps are a power play by cable companies who couldn't get their way in Net Neutrality cases. Looking at their figures, only a small percentage of their users consume at or above the data cap, but then why is there a need for a cap? I believe it's just a way for them to gain ground such that they can "optimize" their caps in the future to cause an increase in overages and maximize their profitability. We shouldn't allow a company to game the system like this. Their goal is monopolization and allowing them even an inch in this space will enable them to take miles upon miles over the years.

---

[Ticket: # 1277998 - Xfinity \(Comcast\) is imposing data caps](#)

**Date:** 10/20/2016 10:00:31 AM

**City/State/Zip:** Tallahassee, Florida 32312

**Company Complaining About:** Comcast

---

## **Description**

Comcast is imposing data caps on my internet service at 1TB. This data cap creates a box that online entertainment services like Netflix would be forced to compete in against Comcast's own entertainment services, such as their Stream TV service, which are not subject to the same restrictions. This dangerous precedent will allow Comcast to edge out its online competitors or force online consumers to pay overage charges in the future as entertainment requires more and more data throughput. It's anticompetitive, anti-consumer, anti-innovation, and I don't think it should be allowed.

---

[Ticket: # 1278077 - Data Caps are forcing me to pay \\$40+ extra a month](#)

**Date:** 10/20/2016 10:38:44 AM

**City/State/Zip:** Mckinney, Texas 75071

**Company Complaining About:** AT&T

---

## **Description**

AT&T has recently implemented a data cap system of 1024 gb of data you can stream a month. Not only is there any logical reason behind it, they want me to pay more money in order to make my data unlimited. Their reason behind even starting the data caps is that too many people on one network cause it to slow down. There is no proof behind this and they are just doing it to make money. AT&T needs to either get rid of these ridiculous caps or make them more friendly to Internet users that use up to 2 tb of data a month. They are monopolizing on a market and forcing more people to pay more money to get the same basic service.

---

**Ticket: # 1278144 - Comcast data caps**

**Date:** 10/20/2016 11:11:12 AM

**City/State/Zip:** Los Altos, California 94024

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently introduced a data cap for me. While I'm usually below that cap, they want \$50 extra per month to give back the freedom I used to have.

While I recognize that a private company in theory should have the right to do whatever they want since I'm not forced to buy this, I don't think that applies here. Comcast has a de facto monopoly on providing fast internet in the Los Altos, CA area. Local, state, and federal governments have made it extremely difficult if not impossible for companies like Google to provide their 10x faster unlimited data internet (which is cheaper by the way) due to regulations. Thus, Comcast has an effective government-supported monopoly and should be treated as a common carrier of internet data.

The internet is vital to the success of the economy and placing artificial limits on land-line connections is a step too far. How can companies like Netflix or Youtube/Google expect people to start using 4K video streams or the next great improvement with data caps based on "covering 99% of 2016 usage"? If they made these caps 10 years ago, they'd be 50 GB and people would go over their Netflix usage within a day. Except they wouldn't because there would be no Netflix at all. There'd be no video streaming market, a market a Google search tells me is expected to be a \$70B market by 2021.

Not only is that just terrible for innovation and improvement, it directly impacts Comcast/NBC's bottom line by propping up the Cable and Broadcast television industries since usage of cable or antenna gives HD content without using any data. This violates violates the "Paid Prioritization" rule of the open internet standards set forth by the commission in 2015.

---

## **Description**

Unpleased with Comcast's new plan with a 1 terabyte data cap. As a household that cancelled cable TV in favour of Internet, our household uses quite the amount of data each month. We also decided because of our internet usage, we would pay extra and upgrade the speed to 200mb/s down to enjoy faster speeds and use more internet. Because of Comcast's new data cap, this basically neglects our reason to upgrade our internet. In the decade where we are booming in internet, where a lot of people prefer to watch videos online and ditch cable TV, I just feel like this is unfair for us.

---

**Ticket: # 1278191 - Comcast Bandwidth Limits****Date:** 10/20/2016 11:33:09 AM**City/State/Zip:** Elkhart, Indiana 46516**Company Complaining About:** Comcast

---

**Description**

Internet Data Caps from Comcast is my complaint. I believe this practice of setting "Data Usage Caps" for internet should be illegal. They are taking advantage of markets where consumers don't have other options for High Speed internet. Their argument that only 1% of users consume this much data (1 terabyte or more) is slowing down service for the other 99% is flawed and a lie. That is evident in markets where Google Fiber and other high speed internet options are available, suddenly Comcast is able to provide Much higher speed plans to its consumers with No data cap limits in place, and yet are able to provide these services to an entire region without bandwidth issues. They are price gouging us. In today's society, data usage is only going to go up, with High resolution 4k content on the horizon, no one will be able to stay under this artificial made up limit, and Comcast will benefit from overage charges.

---

## **Description**

I object to being subjected to a monthly arbitrary data cap for a service that incurs negligible incremental cost in order to provide in an unlimited fashion.

As a 1-person household who is a moderate user I often use 30-40% of the existing cap. If I were a power-user or had more people in my household, the cap would place an undue burden on me as a consumer.

---

**Ticket: # 1278208 - Comcast Data Cap****Date:** 10/20/2016 11:41:25 AM**City/State/Zip:** Cape Coral, Florida 33904**Company Complaining About:** Comcast

---

**Description**

Comcast will be imposing a 1 TB (Terabyte) data cap on my home internet connection beginning on November 1, 2016. This goes against any sort of net neutrality that the FCC has tried to protect. I am very angered by this data cap that will be imposed as I AM part of the "1%" that Comcast claims to go over the 1 TB limit they are imposing. I know other people that have already had this restriction imposed and as soon as they would hit the data cap, Comcast would mess with the HTTP connection to inject a message stating you have reached your limit (picture is included). That alone is very frightening and concerning as they have the ability to look into my traffic and inject their own content as they please, as I'm sure it is also illegal to mess with the customer connection and inject possibly malicious content into a data stream. I ask of Comcast to remove this restriction from all customers as the data cap only benefits them. It is ludicrous for a company to charge \$10 for every so many gigs over the data cap or to pay \$50 to remove the data cap, we have paid the same cost for a very long time for UNLIMITED internet access and to add on a cap and having to pay to get around it is unfair to the customer. The cap only benefits Comcast because they are making money by claiming it is to help the other customers who don't use much data, although their network should definitely be capable of handling the load of many people using large amounts of data at once. This is not about the customers in any way, it is about corporate greed.

---

**Ticket: # 1278213 - Data Caps****Date:** 10/20/2016 11:42:50 AM**City/State/Zip:** Madison, Alabama 35756**Company Complaining About:** Comcast

---

**Description**

I have been in a Comcast "test market" for years with a 300 GB data cap. This was upped (without my knowledge) to 2 TB (see <http://i.imgur.com/ZQMt7QP.png>). It has now been reduced to 1TB (again, without notification, consent, or any other communication). Please see <http://i.imgur.com/IHFZD1D.png> for the noted reduction without knowledge or consent.

1) 1 TB for a family (or a heavy single user) is absolutely ridiculous. In today's modern world of ever-increasing content resolution (4k here we come!) this cap will not be sufficient.

2) Data caps go against the FCC's open Internet rules. That is, data caps, although not specifically mentioned, "impair or degrade lawful Internet traffic on the basis of content, applications, services, or non-harmful devices."

Data caps are a restriction from Comcast for their dying cable tv business model to limit users from getting their content via streaming services (e.g. Netflix, Hulu, Amazon) instead of purchasing outdated, commercial laden cable tv. This data cap business model is solely to maximize profit while capping the user's open Internet (unless you wan to pay overage fees of course!).

---

## **Description**

Comcast has recently decided to impose data caps on their subscribers. I am writing to the FCC to voice my concern that, as I had contract with Comcast prior to their announcement of this imposition which at no point mentioned a maximum usage cap, Comcast has performed a bait-and-switch on their internet subscribers. By unilaterally altering the nature of the contract Comcast has, in my opinion, violated FCC regulations. Furthermore, the imposition of data caps has NOTHING to do with regulating traffic on Comcast networks, but rather is a cash grab by a company that enjoys something like a 97% profit margin on their internet services. Furthermore, I am asking the FCC to force Comcast to adhere to their multiple promises to deliver low cost, high speed internet as they sought approval for mergers and regional monopolies.

**Description**

Comcast has recently issued a data cap to my location, a house where the only "Competition" is slow and unreliable DSL. This cap is anticompetitive because comcast is exempting their own content from this cap. It goes against net neutrality and the FCC needs to do something about it.

They are going to say that a small majority of their customers go over the cap, and that might be true for right now, but data usage is constantly increasing and it will become more and more widespread.

## Description

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

**Ticket: # 1278281 - Comcast Data Cap****Date:** 10/20/2016 12:06:58 PM**City/State/Zip:** Grand Rapids, Michigan 49504**Company Complaining About:** Comcast

---

**Description**

Comcast is currently implementing a data cap on our wireless service and charging for overages, which, 1., was never in our contract, and 2. only exists to extort users out of money in the promise of an "open internet". Paying \$50 for an overage is ridiculous, as \$50 is nearly the entire price of my bill. Living with 5 people in the same house, the data cap can easily be hit by us. Saying that only a certain number of their users hit this data cap is not an adequate reason and us using 1TB of data will not affect the speeds of those around us. Comcast also has no official way of measuring data used, and this business practice is sickening.

**Company Complaining About:** Comcast

---

## **Description**

We all know why Comcast has implemented these data caps, it's an effort to silently combat Netflix and other TV streaming services. This is utterly ridiculous, look these days, let's say I were to purchase a couple of digital PC games, when I download them, it could be pushing near 200GB or over, already reaching 20% of my usage for the month. Netflix streaming with a family of four, that quickly adds up, and often times does push us over 1TB. If I want to find a service without these caps, I simply can't, because first and foremost, there are only 2 services in my area AT&T and Comcast, and both have 1TB caps. I simply have no options and fall prey to these caps regardless of if I even tried to escape them. As a citizen of this country, we deserve better. Our country was built on free markets, so why are these companies restricting our free markets. You guys represent us, do something about this, there is no educated consumer that finds these caps appealing. Let the markets operate freely, and don't let these monopolies control the internet, causing harm to services like Netflix and Sling TV. If you have taken a basic economics course, you would know that market power is a cause of market failure, and with these ISPs having complete market power, it is limiting the growth of other companies.

Do your job, and go down in history as those who represented the people's interest, not those who threaten the very essence of our democracy.

**Date:** 10/20/2016 12:45:50 PM

**City/State/Zip:** Tallahassee, Florida 32301

**Company Complaining About:** Comcast

---

## **Description**

Comcast is imposing data caps on my internet service at 1TB. This data cap creates a box that online entertainment services like Netflix would be forced to compete in against Comcast's own entertainment services, such as their Stream TV service, which are not subject to the same restrictions. This dangerous precedent will allow Comcast to edge out its online competitors or force online consumers to pay overage charges in the future as entertainment requires more and more data throughput. It's anticompetitive, anti-consumer, anti-innovation, and I don't think it should be allowed.

**Date:** 10/20/2016 12:57:55 PM

**City/State/Zip:** Elk Grove, California 95757

**Company Complaining About:** Comcast

---

## **Description**

I recently received an email from Comcast stating that they would be imposing a 1TB data cap onto my service. I don't want that:

1. Comcast has the current capacity to handle all of its users in my city/state. If they do not, then they are falsely advertising their service.
2. I would like to see a rule imposed by the FCC that forbids data caps by any company.
3. I would like to see some competition in the broadband industry. As it stands now, there are two service providers for my address: Comcast and Frontier. Neither are very consumer oriented, but because of current regulations and contracts, nobody else can compete.
4. Comcast plans to modify my data if I reach my cap by packet injection. They are scanning my data and modifying it without my consent.

Ultimately, I would like to see more regulation around the broadband industry to protect consumers from companies like Comcast. Normally, I would just go to another provider, but when there's only two, you don't have much choice.

**City/State/Zip:** Indianapolis, Indiana 46260

**Company Complaining About:** Comcast

---

**Description**

Comcast is implementing a data cap of 1 TB with my account in the next month. They claim it is to do with "fairness" of use where those who use more data pay more. The problem with this claim is that it in no way reflects their actual costs. The marginal cost of data is so low that even 1TB would not make a blip in the costs.

This is problematic for future innovation. As we move to a more widely connected world where entertainment for a family, news, work, and financial transactions are all happening more and more online, with more emphasis on detail and fidelity (raising the data usage of each service), we need to recognize that data caps do nothing but line the pockets of the ISPs, with no effect on service quality for the users. This wouldn't be a problem if we had higher competition, but most consumers are lucky to have 2 services (in my case AT&T and Comcast) who might share the same rules and price structure negating any meaningful competition.

Added in to the fact, that in monitoring my own data usage, I've found that Comcast is reporting numbers 3 to 4 times what my modem (the only connection Comcast is saying is used) is reporting.

## **Description**

The major telecom companies in this country have worked together to create regional monopolies so that they can get away with whatever they want in regards to internet, and they have for years. Data caps placed on landlines is the most anti-consumer move I've ever seen a company implement, but the only other options is no internet at all, consumers have no other choice than to pay for data capped internet. It costs telecoms no more money when someone uses over any arbitrary amount of data, and upload speeds are already throttled to prevent people running their own servers through a provider's network. These implementations are made for no more reason than to bleed the consumer of even more money than they already waste on these companies, it's unacceptable, and they need to be reigned in.

## **Description**

Hello,

This complaint primarily stems from Comcast's recent decision to implement 1TB data caps across the country. These data caps have proven to be counterproductive to the growth of the internet as a whole, as can be seen by many companies in Canada (for one example) stifling users with very low caps.

Moreover, the problem being that the only way users can protest such things would be by not using Comcast's services, but this is not feasible in the majority of the areas in which Comcast operates. There simply is not available infrastructure for this, and Comcast stifles their competition by 'sponsoring' / 'lobbying' / basically bribing local politicians into reducing options for competition to even take place (in some places making it outright illegal). Such a monopoly also significantly hinders the future possibilities of the internet.

The internet is a valuable resource to everybody in the country. Not only for entertainment purposes such as movies, games, and what have you, but for learning and working. The availability of education for children through online schools, resources for many skilled trades (such as cooking, mechanics, carpentry, engineering, and many more), the ability to look anything you need to know up, and learn new abilities such as languages and what have you. It's more extensive than any encyclopedia in the world, and we have never had this much information available to us. To allow companies to hinder this and the further spread of knowledge for their own personal gain would not only be irresponsible, but it would be selling away our potential as a country to them.

**Ticket: # 1278710 - Data Caps with ISPs**

**Date:** 10/20/2016 2:11:04 PM

**City/State/Zip:** Battle Creek, Michigan 49015

**Company Complaining About:** Comcast

---

## **Description**

I've noticed my ISP is trying out data caps in areas - essentially working to bring "internet premium fast lanes" into existence.

I am vehemently against this and can not stand by idly as these conglomerates work to screw the customer over. Our lives are becoming more woven with technology as time goes on, and these companies are looking to extort the consumer for every penny they have. The internet should be classified as a public utility so that the industry remains fair and uninhibited like our water, electricity, and other basic utilities.

---

**Ticket: # 1278713 - Comcast Data Caps**

**Date:** 10/20/2016 2:11:53 PM

**City/State/Zip:** Saratoga Springs, Utah 84045

**Company Complaining About:** Comcast

---

## **Description**

I was recently informed that Comcast would be imposing a data cap on my internet connection. I was not informed of this until after I had signed up for service - it was not mentioned anywhere on their information for the service.

This is not only a shady business move, but it also hurts internet freedom. We should be moving forward with internet technology here in the US, not backward.

---

**Ticket: # 1278769 - Terribly Low Data Caps****Date:** 10/20/2016 2:24:22 PM**City/State/Zip:** Boise, Idaho 83709**Company Complaining About:** Cable One

---

**Description**

Cable One is way behind the times with these painfully low data caps. Even Comcast, who was voted "the worst company in America" in 2014, has raised their cap to 1TB. Then to make matters worse, instead of any reasonable overage charges they just force you into a higher cost data plan with only a minor increase in the data cap. It is a pretty obvious ploy to cash in on the decline of cable/satellite TV. Set arbitrary low limits for the customer, knowing that anyone who streams video content or downloads games will blow through the limit, then double the cost of their internet service. Why even offer such high speeds if it going to cause so much "congestion" that they need to cap data? I would gladly take 1/4 the speed with no data cap. I was planning on buying Battlefield 1 tomorrow, but it is a 50gb download so I guess I will have to wait for a "slow" month and see if I can fit it into my data plan. These data caps are a horrible setback for the internet in general, but Cable One takes it to a whole other level.

**Date:** 10/20/2016 2:51:22 PM

**City/State/Zip:** Santa Cruz, California 95060

**Company Complaining About:** Comcast

---

## **Description**

In the Santa Cruz area, my ISP is installing data caps on their services. This is not okay for me, nor my fellow residents and neighbors. There are numerous reports as to the futility and unnecessary need for data caps. Data caps have been scientifically, and even been revealed, that data caps are in the business of profit. It is not about keeping the network healthy, nor keeping things uncontested. So long as the the FCC gives time of day to these invalid arguments, the FCC is allowing ISPs to perpetuate this artificial scarcity of internet and manipulate the pockets of American citizens. For the sake of backing up my claims. the FCC can take a look at OTI's June '15 report on the effects of data caps.

As for debunking arguments for Data Caps, I found a popular and frequently cited article written by Daniel Lyons. I will admit, his accreditation are valid, but the arguments listed in his article are, well, too simple, easily argued against as listed-

1. Semantics. Also, he did not realize that by accepting the data cap, a consumer would suddenly have to shell out an additional fee for maintain their previously unlimited services, regardless. The argument that you pay for what you use by Daniel Lyons is only taken in favour of the ISP. ISPs will say this is all in fairness, though I have not found any evidence of a ISP lowering the bill of a consumer for using less than the data cap imposed. Data caps seemingly only benefit the ISP.
2. Lyons argues that consumers can offload their services onto a "less constrained wifi networks". I do not know about you, but I do not see this as a possibility. My house has one provider. I can't "switch" and ease the apparent load I am placing on the network. Also, if everything was data capped, there is no point in switching; you would still be paying for the data you are consuming, wireless or wired broadband.
3. Prices. Lyons argues that lower income consumers would be dis-proportionally affected by offering unlimited internet to all users. We should understand that Lyons is trying to bias us with the unsupported claim made that the price for internet would be somewhere in between the prices listed; these prices are cherry picked to incite a more concerning response from readers. We already know that data caps are not for network health. Though, if I presume like Lyons that a lower income consumer uses less data than an American who makes more and follow the logic that Lyons has taken, looking at current AT&T prices in my area, a consumer could potentially increase their internet bill by 333% if they are invested in a 6Mbps package that is capped if they surpass their cap. ISPs that have provided unlimited internet for years can now bleed you for a service that is as natural to this generation as electricity was to the previous. Also argued is public pressure to create new compression techniques. I won't argue that creating new compression techniques is the solution or not the solution, what matters is allowing ISPs to continue to exploit Americans while this is continuing to be researched. This argument insinuates that data compression techniques will become suitable enough to counter the need for a data cap. I do not believe this is true. The size and quality of our information is only going to increase as time goes on, and we cannot rely on data compression for our internet services.
4. Lyons argues that capitalism will succeed in light of data caps due to the number of ISP providers available. Fact is, there are those out there who only have one ISP provider and cannot escape data

caps. I have three potential ISPs, two of them have these unnecessary data caps, one of them is out of line of sight and does not have the infrastructure to provide competitive internet. Also, ISPs have done unlimited internet for years, why only now are there data caps.

5. I may be out of my breadth for this argument, but I can just say that this is a cause effect fallacy. This is an extrapolation that two studies of increased smartphone purchases and lower price per MB justifies the postpaid data revenue.

At this point, I don't know what else to tell you; clearly, American citizens are being taken advantage of, bad rhetoric is being slung by ISPs, and science continues to disprove the need for Data Caps.

The FCC must protect a resource that is integral to our everyday lives. Stop ISPs from exploiting the people.

**Ticket: # 1279100 - Comcast Data Caps**

**Date:** 10/20/2016 3:50:32 PM

**City/State/Zip:** Spokane, Washington 99205

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently sent out communication that data caps of 1TB will be enforced starting in November. While entirely within their rights as a business to do so, I feel these caps have potential to cost lots of additional money or cause significant usage impact to heavy internet users like me and my family. I regularly use around 600GB per month and this will only be growing with the increase in higher resolution video availability on the internet. Right now these caps will only hurt the top 1% or less of users, but that may quickly change as more and more services and business come online.

I believe it is in the best interest of consumers if these types of caps are not allowed, especially from monopolies like Comcast where users have very few if no other choices in Internet provider.

## **Description**

Comcast has notified me that they are turning ON data caps. If I don't want the data cap I can pay a \$50 extortion fee each month. The data cap is completely arbitrary and bears no significance in real life. Paying \$50 doesn't grant me new hardware or a better connection. It's just a binary bit flipped from "data capped" to "not data capped". If I don't pay the extortion fee and go over the limit, they'll charge me a ridiculous \$10 fee for every 50 GB. That \$10 fee does nothing in the real world other than line their pockets. They say only 1% of their users go over as if that is a good thing, but the way I read it is they're openly admitting they're now extorting thousands of their customers with these new fees. It is only the 20th of the month and Comcast says I've used 880 GB. Microsoft Windows forces update downloads in the background and even uploads enormous amounts of data to Microsoft servers, video games are pushed to retail in a broken form and have enormous day-one patches, and Netflix streams in UltraHD which uses serious bandwidth. I now am going to have to think "oh no, am I going to go over my data plan?" every time I watch a movie or turn on my computer. This is completely unacceptable in 2016.

Worse yet, who is to say they aren't saying I use twice as much bandwidth as I actually use? How is my data connection not a physical device that is regulated like my power and water meter? There are no metrics. I have to log into their website and look at some arbitrary number and trust it. With my water line I can go outside and shut off the valve to stop the water flow. I can look at my power meter and see the actual usage. With Comcast, I have no control. This is unacceptable. They are acting like internet data is a utility without having to follow any regulations.

Comcast didn't even try to pretend like this was good for consumers. They didn't try to spin it by saying this will reduce congestion in the internet pipes or anything that some politician might be gullible enough to believe. No, they just openly said, "We're forcing you into arbitrary data cap that you didn't agree to, give us another \$50/month if you want to opt-out". This is so anti-consumer that I am in shock.

This is my first time writing to the FCC. Please don't let me down.

## **Description**

Hello,

With the recent Comcast rollout of nationwide 1TB data caps I feel it is crucial that I submit my complaint. Data caps are a problem and without swift action will be a much larger issue in the near future limiting not only innovative uses of the Internet but the entire global flow of information.

Data caps are not only an inconvenience to those customers but are simply against net-neutrality at its core. This is nothing more than a money grab and attempt to get people to stick with the dying cable TV model. It even excludes Comcast related data from that cap!!

It unnecessarily impedes emerging video technologies such as 4k streaming while simultaneously punishing those that dare to download large games or files. It's not even rooted in network congestion: <https://www.techdirt.com/articles/20130118/17425221736/cable-industry-finally-admits-that-data-caps-have-nothing-to-do-with-congestion.shtml>

For example: streaming 4k content according to Netflix uses roughly 4.7GB per hour. Doing that math that's ~7 hours PER DAY before hitting said 1TB cap. Multiply that by 2 or 3 other members of a household and you can watch at most a few hours per day. This is assuming you do absolutely NOTHING else with that Internet connection.

The further encroachment of data caps sets a dangerous precedent that unchecked will stifle innovation and let ISPs control the flow of information into households. This is something that needs to be curbed quickly to prevent ISPs restricting the flow of information simply to benefit themselves.

I urge you to please consider restrictions or outright banning of data caps on hardline Internet connections such as cable and DSL. I further ask that you investigate data caps on cell data to determine if there is actually any legit reason they exist. T-Mobile is a great example. They allow very specific traffic to NOT count towards a data cap. This is also against net-neutrality.

I'll say it a second time, please consider a ban on data caps. This is nothing but the stifling of innovation, holding onto an archaic business model, and lining of pockets of ISP executives. What we ACTUALLY need is more innovation, more competition, and a stronger Internet presence as a country.

Thank you

**Company Complaining About:** Comcast

---

## **Description**

I must add my voice to the tens of thousands (or more) of previous customers who have expressed displeasure over the rollout of Comcast's 1TB data caps. I currently pay for 105Mb/s service from Comcast, and this cap would cut my service download capability by over 97 percent per month, and including upload it is cut to a fraction of one percent. That is frankly disgusting. In no other industry could the customers receive 97+ percent less for the same price and Comcast is no different.

In addition, Comcast themselves have admitted that caps are not a technical necessity, they are entirely a business decision (most certainly to dramatically increase profits in the countless markets where they have an effective monopoly): <http://arstechnica.com/business/2015/08/comcast-vp-300gb-data-cap-is-business-policy-not-technical-necessity/>

This is especially alarming as we are on the eve of 4K content to the consumer being the norm, and 1TB caps are an obvious way to extract overage charges from consumers that don't realize that 4K content requires much more bandwidth than HD content. We also rely on more and more internet and cloud services that are heavy users of bandwidth as each year goes by.

There is simply no reason for these caps other than to squeeze the wallets of Americans even further, despite Comcast's already high prices and low customer satisfaction, especially when compared to Google Fiber and other small/municipal fiber ISPs that offer much more for less. Not to mention, fast internet connections without caps have been demonstrated time and again to drive innovation in the tech industry. Comcast is quite literally hurting further innovation, jobs, and profit in dozens of industries by capping connections.

I implore Comcast to reconsider this policy and to revert to unlimited downloads and uploads, as you have said there is no technical reason to do so.

I implore the FCC to investigate this and ban any ISP from capping or throttling internet connections in any way to ensure innovation and competition by the United States on the world stage.

---

## **Description**

Comcast's data caps are unreasonably low, especially now that 4k content is starting to emerge as the norm. Personally, I haven't hit the cap yet, but I've seen numerous accounts of others online who've hit the limit and have to pay overage charges.

It's unfair because I don't really have another option for an internet connection in my building. Technically I can get DSL but the bandwidth available is fraction of what Comcast offers for the same price.

I feel frustrated and trapped by this development. Comcast knows that most of it's customers don't have an alternative so they can just enact policies like this as they please. In my opinion this shouldn't be legal

## **Description**

Hi. I noticed that Comcast is issuing data caps in a large number of areas for their internet service. I'm really upset to see this as this is a direct conflict in the advancement of future technology. Although I don't live in an area where this has come in to effect just yet I do know that Comcast plans to roll this out nationwide eventually. I work in technology and greatly care about the future of technological advancements and think this is ridiculous that they would put caps on the amount of data usage that they provide. I know that the current 1 terabyte limit that they are issuing is above what the average person uses but when you consider where technology is heading with 4K streaming and beyond it will only be a matter of time before we're in a world where that amount of monthly usage becomes more and more common.

## **Description**

I awoke this morning to find out that Comcast has decided to Cap my internet usage, something that is a Human Right, and should not be monitored unless under extreme conditions. 1TB is not enough for a family of 4 where everyone uses Stream Services such as Netflix, Playstation Vue, and downloads video games as well. Not only this, but Comcast is purposely intercepting unencrypted traffic send through HTTP to inject a message that forces me to acknowledge these Anti-Consumer practices (as you can see in the Attachment). This alone is a privacy concerns, even if it is automated, this means anyone at Comcast if they want can look at my browsing history to unencrypted websites. I ask that Comcast removes these archaic data caps as we are not some third world country, we are a first world country, and should be leading by example, and not taking this metered garbage.

**Ticket: # 1279514 - Comcast Data Caps****Date:** 10/20/2016 5:54:33 PM**City/State/Zip:** Castle Rock, Colorado 80109**Company Complaining About:** Comcast

---

**Description**

The recent news of 1TB data caps on my Comcast Xfinity account spells bad news for net neutrality. This data cap will soon be used as a method of increasing scarcity of Internet access, against which certain websites will eventually be given preferred status. By tagging this artificial scarcity on internet access, Comcast can skirt around net neutrality laws. Nothing whatsoever about this change is good for the consumers, who are already largely overpaying for Internet access to begin with, since their ISP often has a local monopoly.

Digital jobs are in demand, and these jobs are often filled with remote workers who "telecommute". I am one such person. I require the use of the internet to do my work. This means I may wind up having to spend more money for net access simply because I am part of this virtual workforce. In this sense, the imposition of data caps could be interpreted as a price gouge, as well.

**Company Complaining About:** Suddenlink

---

## **Description**

Dear Sir or Madam, I have internet only service from Suddenlink in the Bossier City area (zip code 71111) Suddenlink has instituted a 250GB per month data cap where each additional 50GB is charged at a rate of \$10. It is my understanding that cable TV customers do not have video programming traveling over the same wires counted against their data cap, my viewing of any audio or video programming is logged against my data cap. This seems to privilege the video programming sold by Comcast over competing video services. Why can a cable TV customer watch 24 hour HD programming Without this usage counting against their data cap, while my viewing of YouTube, Hulu, or Netflix accrues against the 250GB limit?

Approximately 3.5 hours of HD programming a day in a month with 30 days by one individual within a household would be impacted by suddenlink's data cap. We have five members in our household and do not wish to select low quality video feeds or agree to all watch the same programs at the same time to manage our internet usage. I view the limit as arbitrarily low and the implementation of only metering signals not originating from Suddenlink as a preferred programming provider as opposed to the fair playing field intended by the FCC. I have attached my latest monthly bill for proof of these charges.

## **Description**

I was furious when i found out that my Comcast provided internet will now be capped at 1024 GB a month! not only have this not been mentioned in the contract i signed, but they just decided to implement it without even seeing if the customers would accept this, customers weren't even given an alternative! (all they sent was an email)

This is really bad, this will only allow Comcast to steal money from customers by adding even more data caps on particular services! I'm a video editor and computer programmer, i though that by going with Comcast i will get reliable high speed internet. I have high-bandwidth usage and so do MILLIONS of other internet users. We're almost in 2017, and Comcast believe that 1 TB is more than enough for an average household, this just shows how out of touch they are with reality and how consumers actually consume data in this generation. It will only get increasingly worse for the customers as games, video, and other media increase in size every day!

I never agreed to this and they are doing it anyway, this has made me (and several thousands of other people) furious.

I know you probably got a lot of complaints about this already but i just wanted to voice mine as well. I will be canceling my subsumption because of this. Comcast has always been the worst internet provider there is, and now they are trying to set precedent for other ISP's to follow.

Please stop this from happening.

**Company Complaining About:** Comcast

---

## **Description**

Hello I currently pay for Comcast internet and they are also the only provider in my area. I have used their services for the past couple years and just recently they have restricted me to a data cap of 1TB. I have always payed for unlimited usage and now they have stripped me of this and are now imposing fees if I go over. Considering that everything these days revolves around downloading, this is completely unfair and unconstitutional. I though monopolies were illegal in America. Most third world companies dont even impose data caps.

---

**Ticket: # 1279748 - Comcast 1 TB per Month Data Cap****Date:** 10/20/2016 7:23:51 PM**City/State/Zip:** Billerica, Massachusetts 01821**Company Complaining About:** Comcast

---

**Description**

Comcast has placed a limit on the amount of internet data their customers can use; any usage beyond 1 TB per month incurs extra charges. These charges are only aimed at making their company more money. Comcast is the only internet provider in my region and does not tell you about this data cap during the advertisements of or communications about the specifics of an internet contract with them. No new service has been provided (such as fiber optic capabilities and/or higher speeds) and Comcast is charging its customers more for the same level of service. Operating costs have not gone up significantly during the past year and Comcast's internet infrastructure has not been upgraded; Comcast has traditionally provided unlimited data for its customers and never voiced concerns about this practice.

In Comcast's recent YouTube video "What can you do with 1 TB?" the company produced many "examples" on what a user could do with a terabyte of data every month. Not only was this video clearly produced to frame the narrative in a specific way, Comcast severely underestimated the amount of data necessary for many "examples" they used and absolutely ignored the concept of multiple people (and multiple devices) sharing the same internet connection. It is misleading and, in my opinion, false advertising.

This move by Comcast to charge its customers more for the same (or less) service is strategic. As data amounts increase with the introduction of 4k streaming and video games with large amounts of data steaming, Comcast is setting the stage to charge its users more and more for each byte. Our markets is supposed to provide competition to encourage companies to provide better services for lower prices, but this is exactly the opposite. Comcast is leveraging its monopoly in my region (and many others) to drive prices up for lower quality services.

---

**Ticket: # 1279780 - Comcast data caps**

**Date:** 10/20/2016 7:46:48 PM

**City/State/Zip:** Brooklyn Park, Minnesota 55444

**Company Complaining About:** Comcast

---

## **Description**

There is no justifiable reasoning for data caps and I feel that Comcast is moving this direction only to charge its clients more while not providing a better service.

Further, data caps will only work against other companies that rely on the Internet to deliver product.

Comcast is using its lack of competition to shake down consumers and eventually work around net neutrality. By forcing these limits on consumers it is only a matter of time until Comcast opens new business ventures that will not count against data caps, this is an awful outcome for American consumers and American businesses.

**Ticket: # 1279858 - Data Caps**

**Date:** 10/20/2016 8:39:28 PM

**City/State/Zip:** Larchmont, New York 10538

**Company Complaining About:** Comcast

---

## **Description**

I am very concerned with the recent trend of cable companies imposing data caps. While I understand the argument for throttling speeds, no valid argument can be made for data caps. Sure, if data transfers caused physical damage to the cables and equipment then it would be understandable. The thing is, there is no wear-and-tear on any piece of equipment for transferring data. The only reason companies like Comcast are creating data caps is to prevent "cable-cutters" getting rid of their TV plans and replace them with online streaming services. There is also no way around data caps due to the lack of competition.

Creating data caps hinders the USA and its citizens by limiting the ability to access knowledge.

Thank you for your time,

██████████

## Ticket: # 1279878 - Anti-consumer Data Caps from Comcast

**Date:** 10/20/2016 8:53:32 PM

**City/State/Zip:** Indianapolis, Indiana 46241

**Company Complaining About:** Comcast

---

### Description

I've recently become one of the poor souls who've been notified of Comcast extending its 1TB data cap internet plan. I've been aware of these plans' existence for awhile, but I never suspected it would carry on further than the initial 300GB data cap trials Comcast was experimenting with months ago. Now that I'm inflicted with this plan and have no other alternative other than Brighthouse (which is mainly for Business class internet), I feel like I have enough information and experience to solidify my complaint against Comcast's and any other ISP's restrictive data plans. My complaint is that these data plans, regardless of how large or small, are anti-consumer and provide no additional benefit other than to line the pockets of Comcast and which ever other ISP that implements the same plans.

For decades since the Internet came into existence, ISPs have been charging their consumers for bandwidth, or the speed of data transfer. The ISPs and cable companies throughout all those years continued to expand and improve their Internet infrastructure without impediment as more and more people began to utilize the Internet. Now we're in an age where almost everyone and everything is connected to the internet. The issue is that we've been in this age since at least 2001. Back then Comcast, Time Warner, Cox, Charter, etc. didn't have data caps for their internet plans. Back then they were still charging for bandwidth.

Fast forward a bit more to 2014, a point where Internet traffic could easily be considered a mirror reflection to the volume of internet traffic in 2016. Lots of internet use, Internet of Things taking off, extreme technology improvements, fiber optic internet plans becoming more popular, video games becoming more and more advanced, and the list just keeps going. Back in 2014, most ISPs were still charging for Internet by bandwidth, not data used. Comparing the plans, internet traffic, and infrastructure from 2014 to the current ones being rolled out for the end of 2016 and beginning of 2017, I've run into some interesting questions.

If the past internet infrastructure in America was able to maintain Internet traffic from 2014, 2015, and now with everyone on various bandwidth sizes with no data caps, what's the point of enforcing a data cap for 2016+? Paying Comcast an extra \$50/month for unlimited data is essentially "buying back" the experience from 2014. Or another way of putting it, if everyone who ever ordered Internet service from Comcast paid an extra \$50/month for the unlimited plan, we'd be right back in the same spot as 2014 (where everyone has unlimited data) but with everyone's internet price increasing by \$50/month. Or a third way of putting it, the \$30/month someone puts down for 10Mbps internet from Comcast now is worth MAGNITUDES less than the \$30/month someone put down for 10Mbps internet from Comcast back in 2014. Either way you slice it, Comcast artificially increasing the price of the same internet access from previous year which is inherently anti-consumer.

Secondly, if Comcast states that this is intended to target those users in the top 1% of data usage, how can they justify not imposing such a data cap on businesses? Lots of software these days have a model that allows the software to be used individually for free, but commercial entities must buy licenses. Wouldn't it be more beneficial for Comcast to follow the same route but with their data plans? Software companies generate extreme amounts of traffic on the internet which would allow Comcast and other ISPs to thrive, yet ISPs don't do this.

Thirdly, and I think this is my biggest complaint about data caps, I still have to pay for bandwidth on top the data cap. The data cap wasn't something that was implemented to remove

charging consumers for bandwidth, it's an additional cost. Put this billing model in an alternate universe where consumers pay their water companies for pressure and not the amount of water used. It would be like the water company charging an extra fee for using too much water. Now that would make sense in situations where there's a shortage of resources, like if a drought came by so the cost of water goes up. But Internet doesn't suffer from this problem because there's no such thing as a shortage of data. There's no need to ration data like there was a need to ration gas during hurricane Sandy. Comcast's data caps are anti-consumer and provide no additional benefit for the consumer as they still have to pay for the bandwidth but now they also have to pay for using too much of their bandwidth.

---

**Ticket: # 1279908 - Comcast implementation of arbitrary data caps**

**Date:** 10/20/2016 9:12:16 PM

**City/State/Zip:** Santa Clara, California 95054

**Company Complaining About:** Comcast

---

## **Description**

From November 1, 2016, Comcast is implementing an arbitrary 1TB data cap on its residential internet customers. This move is anti-competitive, anti-consumer and defies net neutrality principles since:

- Comcast enjoys a monopoly on internet services \*of useful speeds / quality\* in the area and therefore customers have no option but to accept the cap and the punitive additional fees charged if the cap is exceeded;
- Internal documents from Comcast themselves show that the cap is not being implemented to serve any network management / congestion purpose, but raise revenues;
- Bandwidth is already priced according to need, however actual data usage is an unlimited resource. The true cost of data transit is a fraction of a penny per GB, therefore even the highest use customers do not incur any material variable costs that the Company would need to pass on;
- The proposed overage rates are punitive. In the limited markets (e.g. hosting services) where data usage is metered, the fair market rate for such data is significantly lower than the \$10 per 50GB (i.e. \$0.20 per GB) overage rate to be charged by Comcast. For example, Amazon Web Services' ('AWS') most expensive rate (note - consumer rate, not B2B) in the Northern California market is \$0.03 per GB - 7 times lower than Comcast.
- While 1TB may appear a not unreasonable limit today for the broad base of users, there is nothing to prevent Comcast from subsequently reducing it with impunity.
- With the use of streaming services ever increasing and 4K video beginning to be adopted by more and more customers, the 1TB limit will soon become burdensome to more and more customers.
- Comcast intend to 'zero-rate' their own video streaming services but count all others (e.g. Netflix / Hulu etc.) towards the cap;

Lastly, Comcast has routinely shown itself incapable of reliably metering data, as it includes data which may never be delivered to the customer (i.e. while a customer's modem is switched off, data within the Comcast network will still be counted against usage, even though no data was delivered to the customer's home network). With accurate metering now an absolute requirement to achieve fair billing for all customers, it is likely that significant errors may be made with customers having little or no recourse in this situation.

I would ask the FCC to investigate this matter as well as all other complaints regarding competition in the residential broadband internet market, with a view to implementing strong regulations to prevent

these caps and other such practices from stifling innovation and keeping service prices artificially high.

**Ticket: # 1279977 - Comcast and Data Caps**

**Date:** 10/20/2016 10:01:55 PM

**City/State/Zip:** Tampa, Florida 33611

**Company Complaining About:** Comcast

---

## **Description**

Data caps have long been a common complaint from users in third world countries, but now Comcast has brought the absurdity of data caps to the United States. Capping internet data usage at any level for consumers sets a dangerous precedent for the market and the economy generally. People have to spend more money on internet monthly in exchange for not being able to purchase and download as much content as possible. Data caps punish those whom help the economy most while helping the already monolithic company that is Comcast make more money for less service.

**Ticket: # 1279990 - Comcast and Data Caps**

**Date:** 10/20/2016 10:07:49 PM

**City/State/Zip:** Brunswick, Georgia 31525

**Company Complaining About:** Comcast

---

## **Description**

Xfinity, owned by Comcast, is putting a data cap of 1024 gigabytes for all of their services starting on November 1st. I feel like, due to my right of Net Neutrality, I am having my rights broken. Comcast is knowingly breaking the rights of hundreds of thousands of people, and all for nothing. Data caps are an unreasonable measure of usage when it comes to using internet. I ask that the United States, and the FCC, put an end to this unconstitutional action.

---

[Ticket: # 1280058 - Internet data caps for Comcast](#)

**Date:** 10/20/2016 11:26:31 PM

**City/State/Zip:** Modesto, California 95358

**Company Complaining About:** Comcast

---

### **Description**

I can't believe there is data caps. Internet is not like water. You can't use so much it runs out. I can't believe what a detriment this will be for people. They are killing innovation it's very sad.

---

**Ticket: # 1280063 - Comcast Data Caps****Date:** 10/20/2016 11:28:16 PM**City/State/Zip:** Seattle, Washington 98133**Company Complaining About:** Comcast

---

**Description**

Comcast has stated that they are implementing data caps as of November 1st 2016. This is an affront to open access to the internet and it is a downgrade to all their current customers implemented without notice. By the base presumption that internet bandwidth is restricted, there is already a limit to the amount of data that can be accessed per month. Artificially limiting it further not only is negative for customers, it in fact punishes those paying more for faster internet bandwidth- after you use up your data allowance more data comes at a premium. Comcast has justified this as the cap is higher than the majority of people use, but I think it sets a dangerous precedent where Comcast can sell a service, and when the customer tries to use it completely, they penalize them by cutting their their internet access through exorbitant surcharge. Comcast has sent no literature to me yet describing this change in services provided. I dislike how they are attempting to sneak this past their customers, so when they lower the cap to 500 GB or even 50 GB, they can point to now and say the customers were compliant all this time. I am strongly considering downgrading my service to DSL (because due to cable monopolies there are no equal competitors in my neighborhood) due to not wanting to allow this precedent to occur under my name. Please do not let the cable monopoly to continue to find ways to overcharge people who do not have an equal competitor to turn to.

---

**Ticket: # 1280124 - Data Caps**

**Date:** 10/21/2016 1:38:53 AM

**City/State/Zip:** Santa Clara, California 95054

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently enacted data caps on its cable Internet service. This practice is anti-competitive and a threat to an Open Internet. Comcast is not implementing these caps to protect the integrity of the network. They are simply a way to make money in the short term while stifling competition in the long term. If these data caps are allowed to continue to exist, it is threat to other high-data-rate services like Netflix. With the data caps, it will be much easier for Comcast to promote their own TV products which do not contribute to the data caps, and thus have an unfair competitive advantage.

I urge the FCC to take action to block these data caps from taking effect and threatening the Open Internet.

---

[Ticket: # 1280101 - Data Cap on fixed bandwidth plan](#)

**Date:** 10/21/2016 12:41:43 AM

**City/State/Zip:** San Jose, California 95131

**Company Complaining About:** Comcast

---

## **Description**

Comcast has imposed a 1TB limit on its customers, while at the same time offering upgraded speed for their internet service. If I am getting the service that I pay for (120Mbps download speed) I could utilize the service for approximately 19 hours before reaching the cap. They are charging extra for an unlimited plan, despite selling the service as a fixed upload/download allocation originally without a data cap.

---

**Ticket: # 1280110 - Monopolistic Data Capping from Comcast**

**Date:** 10/21/2016 12:47:00 AM

**City/State/Zip:** Oakland, California 94608

**Company Complaining About:** Comcast

---

**Description**

I was given notice that I would be charged for using more than a certain amount of data per month. Data Caps are just another way that ISPs are harming Net Neutrality and stifling innovation and competition. Other countries around the world provide cheaper and better internet at faster speeds without data caps and the U.S. is falling behind. Comcast is a monopoly and it needs to be regulated. I am not the only person that this is happening to. You can read about it all over the internet.

---

[Ticket: # 1280122 - Data caps on home internet with comcast](#)

**Date:** 10/21/2016 1:29:32 AM

**City/State/Zip:** Kirkland, Washington 98033

**Company Complaining About:** Comcast

---

## **Description**

I have data caps set on the internet offered in my area, no other option for another internet provider. I am not happy and want to switch providers but I can't and forced to buy product I don't want. Why is this ok for one company to install data caps and be the sole internet provider in certain area, where is the competition?

---

[Ticket: # 1280128 - Data caps](#)

**Date:** 10/21/2016 1:43:12 AM

**City/State/Zip:** Lynnwood, Washington 98087

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently imposed a 1TB data cap on many customers, including me, allowing users to remain uncapped for an additional fee. This is particularly troublesome in areas with little or no competition (most of the US, it seems). I feel that this is anti-competitive against untraditional media sources such as Netflix, Hulu, or Amazon, as their services depend upon users ability to stream, and I fear that it will only get worse as more customers change viewing preferences to those services.

---

[Ticket: # 1280546 - Data Caps Unfair](#)

**Date:** 10/21/2016 11:51:36 AM

**City/State/Zip:** Chicago, Illinois 60634

**Company Complaining About:** AT&T

---

## **Description**

AT&T and Comcast are my only choices in my area of Chicago due to monopolistic practices. They have offered the same speeds for the past 5 years with promises to increase them when the FCC threatened fines or new laws. They have not brought in fiber or activated faster speeds as promised. Now they have all started putting in so called data caps. What a load of bull shit when they say it is needed and only 1% of users will go over it. This is a preemptive strike on 4k video streaming from places like Netflix to keep their services and lines on lower valued and worse quality. While places like Europe and Korea can get 4k streaming with ease we in the USA are being held hostage by monopolies.

---

**Ticket: # 1281348 - Data Caps with Comcast in Jacksonville, FL**

**Date:** 10/21/2016 7:19:46 PM

**City/State/Zip:** Jacksonville Beach, Florida 32250

**Company Complaining About:** Comcast

---

## **Description**

Recently I received an email from our service provider Comcast informing us that customers in our service area (Jacksonville, Florida) would be subject to a data cap starting in November. I believe that this new data cap policy infringes upon existing Net Neutrality rules and is harmful to open and fair competition in online markets.

Firstly, Comcast is owned by NBCUniversal--an entertainment conglomerate that has a vested interest in stamping out competitors like Netflix, HBO Now, Twitch.tv, YouTube and many, many others. Sites and services such as these serve as cheaper alternatives to watching cable television (provided by Comcast). Regular use of these services combined with rapid advances in high-definition video quality add up to massive amounts of data used per second. Comcast claims that their 1 terabyte data cap allows for 600-700 hours of HD video each month, but not only does that fail to take into account new technologies such as 4K video (literally 4 times the quality/data of regular HD), but households with larger families can easily exceed that data cap. Imagine a family of five watching five different 4K HD videos separately in their free time--they may not make it through the month without exceeding Comcast's new data cap. And the internet isn't just for entertainment--it's also for education.

These advancements in internet capability and HD video encoding combined have allowed for students around the country (and the world) to learn using both pre-made videos and live tutoring sessions. In fact, my significant other has just started working as an online video tutor. Is it really fair for us to have to worry about how much data she is using not only while working, but helping others learn?

Other, less wealthy nations in this world not only have access to better, faster internet, but they don't have to worry about data caps because excessive data use is simply not a problem. If it was, our internet connection would suffer because we live across the street from a large apartment complex, but it never has and it never will. Comcast claims their data cap is about fairness--about charging high-use customers for using more data. But data scarcity is an artificial issue to excuse charging customers more money for data they need to learn, or work, or just relax after a long day.

The great equalizer of the internet is that it is open and free for us all. If my neighbor has an idea to work from home and starts using a lot of data, he is free to use whatever he needs to make his dreams come true. And the great magic behind the internet and increasing bandwidth is that, no matter what my neighbor does, my access to the internet is unaffected. He can grow his business and contribute the economy and I can watch cat videos in high-definition until my eyes bleed. Comcast's data cap is unfair to customers and inhibits the free enterprise of the internet.

Now more than ever, people have turned to the internet to make a living. There's online tutoring, creating content for YouTube, independent software distribution, live-streaming video content, and so much more. All of these businesses require unfettered access to an open internet and Comcast's decision to cash in on that demand is bad for consumers, small businesses, and Comcast's major entertainment competitors. They claim their 1 terabyte data cap is "impossible to exceed" for most users. Well most people I know get most of their entertainment, education, software, and communication directly from the internet. I'm one of those people. Just yesterday I downloaded 200 gigabytes (or one-fifth (1/5th)) of Comcast's "impossible to exceed" data cap. One fifth in one day.

That's because I get everything from the internet: the entertainment I watch, the games I play/download, the news I read/watch, my communication, and my work is done through the internet.

In fairness, my average data usage isn't as high, but in this day and age--in what we claim to call the most advanced and innovative country in the world--should I or anyone else have to worry about how much data I use at my house? Not at all. In a country where Comcast monopolizes internet service and actively hinders progression and development in the telecommunications industry, this latest data cap policy spits in the face of American innovation and I feel the FCC should put an end to unfair and unnecessary data caps once and for all.

Thank you.

**Company Complaining About:** Comcast

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

---

**Ticket: # 1282120 - Comcast Data Caps**

**Date:** 10/22/2016 4:29:55 PM

**City/State/Zip:** Seattle, Washington 98117

**Company Complaining About:** Comcast

---

## **Description**

Comcast has decided to arbitrarily add an internet data cap to our internet plan, which was never part of the original agreement. Unfortunately, there is a lack of alternative unlimited options to Comcast in my area (surprisingly, in Seattle), so we as consumers are stuck. We need to do something to open up the internet so competitors can come in and "force" Comcast to roll back this data cap plan.

Clearly, this is not a way to make service better for the rest of us (as they have admitted to), but to make more money off us consumers, with little alternative for us to take. As data demands become greater, I would hope something could be done to prevent these types of predatory tactics to extract more and more money from the consumers. Thank you

**Date:** 10/22/2016 5:05:25 PM

**City/State/Zip:** Seattle, Washington 98125

**Company Complaining About:** Comcast

---

## **Description**

Comcast is deploying a 1tb Data Cap nationally next month. This cap is designed to shore up their flagging TV subscription numbers and is not because of any technical limitation. Their PR has been asserting that this will only affect the top 1% of users (over 230,000 people by my estimate). Additionally they are extorting \$50 a month from those people for "unlimited" internet. The numbers they use to dilute their restrictions claim 600 hours of video. The math on this is pathetically inaccurate but really it has nothing to do with today, it has to do with 4k and the future of their TV service.

In the next few years 4k video will be regularly available for the average consumer. 4k BluRays have hit stores and netflix has already been streaming 4k content. 4k video can run upwards of 30gb an hour, severely tightening the "generous" limit comcast gives consumers. This will have a chilling effect on all future video services as many consumers will have to hold back on their consumption of higher resolution video, or other web content. This is in addition to them creating a "fast lane" for their own streaming content which does not count against these caps.

I live in Seattle and despite this being a big tech city there are almost no comparable options for internet service at my address. Comcast has had an extensive monopoly in this area and as the only solution to having comcast internet is to move physical address they are clearly a utility and not a normal business.

Please take steps to regulate Comcast and other companies who are attempting to stifle all creativity and innovation on the internet.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## Description

This is a follow-up to your previous request #1205313 "Cable One Data Caps"

Ms. (b) (6)

I am writing this because I have not heard anything further regarding my complaint. I believe Cable One is responding to my complaint on a daily basis, through further threats to move me to yet another tier of service and by actively throttling my service, but I would like to know the status of the complaint with the FCC. I look forward to your response.

Sincerely,

(b) (6)

> On Oct 11, 2016, at 5:25 AM, (b) (6) <stevem49@me.com> wrote:

>

> Ms. McKenrick,

>

> There is one final point I did not make in my previous reply, and it regards competition. Competition drives innovation, not collusion and micro-monopolies. I live less than two miles from the Albuquerque city limit, which, coincidentally, is where Comcast's service ends and Cable One's begins. That city limit delineates 1 Terabyte, or no data cap (Comcast uses one at that limit, or none at all) from the industry-low 300GB Cable One data cap. That seems capricious and punitive, on Cable One's part, since the infrastructure cannot change appreciably within that corridor. If both companies were forced to compete, which is one of the cornerstones of the capitalism both companies extol, then I would have a choice. But due to arbitrary lines drawn by corporate internet service providers, there is no competition, therefore no choice for consumers, and Cable One can offer lesser, poorer quality service for the same prices as Comcast offers to Burqueños.

>

> That concludes my response. Thank you for allowing me this opportunity to respond to Cable One's justification for industry-low, artificial and arbitrary data caps. Have a great day.

## **Description**

Comcast added a data cap to my internet service. I don't see how it's not abusing a monopoly, as Comcast is the only available cable internet service in many cases. Additionally, Comcast has shown they have the capacity, as every time google gigabit fiber goes into an area, suddenly Comcast has a matching service/price. This abuse is aiming to knock out players like Netflix. If you Netflix instead of watching cable TV then you can very easily hit the data limit. Perhaps we should force comcast to limit the number of hours of cable TV can be watched?

## **Description**

Dear FCC,

Please listen to the consumers affected by the companies you are supposed be regulating.

Supposedly we now have net neutrality blah blah blah.

Sadly what I see is Netflix getting throttled until they pay up and now the new Data Caps in my area for 300Gb. Now mind you here is the math. I only get cable tv because it's "bundled" cheaper with internet then internet alone (some marketing ploy). But now I'm being asked to pay 30\$ more a month for the same internet I use.

Both people in this household are permanently disabled but here is some basic math taken from Netflix website.

1hr of HD TV streaming = 3Gb of data.

Lets go with average american tv watching from this source of 24hrs per week per person so 96 hrs of tv watching / person.

Basic math again for average household with just netflix

$3\text{Gb HD tv} * 96\text{hrs} = 288\text{Gb} / \text{person} / \text{month}$

Since we are two people and rarely watch tv together that equals 576GB per month with just TV alone and netflix.

Add to this downloading games for PC or Xbox and playing (20-30gb per game?), streaming music and radio all day, and using internet for our phone.

All things that now i can't do since i'm using double the internet cap of what I was getting for free before for just watching TV. That's it.

The sad part is as a consumer I have ZERO competition due to monopolies in my area. Nobody can provide fast internet from the local ISPs, Comcast has all the cable pipes, and ATT is capping at 250GB. even lower and I can't go anywhere else. I HAVE to pay Comcast 30\$/month more to just stream internet.

Then when comcast decides to offer their Stream TV BS they can claim to be using their own internet vs my 300GB.

The issue needs to be resolved NOW before America follows with cord cutting or our younger generation continues to use internet with no cable.

In addition as was shown with the Netflix blackmail it's obvious to anybody with half a brain that Comcast has ZERO bandwidth issues. They have plenty to go around as was seen when Netflix played the blackmail and all of a sudden everybody was getting tv again (I was affected by that too). The "hogs" as we're called don't put a strain on the system and Comcast has plenty of bandwidth to go. It's just a monopoly marketing ploy and if nobody takes action (FCC looking at you here) now then they'll just take it for granted and keep screwing us over.

Internet is now a Utility, I need it for work, I need it to stay connected to the world since I'm Disabled , and I need it for TV since I don't use cable and haven't for a decade.

This "cap" will only grow as an issue as 4K video and larger games become available. That has been the trend for decades and Comcast has ZERO incentive to lower or change the cap thus forcing more and more innocent and normal usage people into their web.

PLEASE DO YOUR JOB! Get the powers to regulate or if you think you have them at least raise the issue.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

I am submitting a complaint about Comcast data caps. Bandwidth is not really a resource that we are running out of. It isn't something that needs to be doled out like candy to a child so they won't get sick. It doesn't need to be hoarded in an effort to protect our safety. It is blatant and obvious Comcast is placing caps on their user's service in an effort to control bandwidth usage and monetize these controls. I have a cap of 300 GB. DO you know how large video files are? Quite large, actually. In fact, some of the video files I download from Netflix and Amazon can be very hefty and burn through the data cap quickly.....wait, hang on. Comcast owns NBC and produces content and also delivers video cable content....Netflix and Amazon do that too....but Comcast is limiting what I can download and view from other content producers?.... I mean it looks like it, but no, surely there's no way a large faceless entity would try and control our usage in an effort to reduce our usage of other providers.

Anyway, I was digressing. You see, they are telling us how often we can walk up and down a hallway. Doesn't that seem quite ridiculous? We have to stay aware of just what has been used each month so we don't go over and incur more fees. Isn't that ridiculous? Well, not with things like wine and bacon, that makes sense to regulate. Or maybe not, live your life, I don't judge.

We, or at least I, ask for the FCC to take seriously any complaints of these caps and address them with Comcast in order to eliminate them. PS, as I send this letter to you, that is data used that I cannot get back, that counts towards my cap of 300GB. Use it wisely.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

**Ticket: # 1022169 - XXXXXX XXXXXX 's complaint re: ISP Zero Rating**

**Date:** 6/7/2016 10:25:15 AM

**City/State/Zip:** Memphis, Tennessee 38125

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**City/State/Zip:** Shreveport, Louisiana 71106

**Company Complaining About:** Comcast

---

## **Description**

I have been a Comcast customer for over a decade. I've always happily paid my bill. Now suddenly they tell me I am capped at 300GB/month, even though we do not have heavy congestion in our area. This apparently includes both upload and download bandwidth. There is no way to verify what comcast is reporting is correct.

Also, they are doing this at a time when online streaming services are taking off. 300GB/month is not very much if you have multiple members of the household watching netflix, hulu, etc daily. With 4K video just around the corner, this promises to get even worse soon. 300GB is a ridiculously low threshold.

Additionally, many devices frequently get updates that are multiple gigabytes. PC Updates. Game updates on Xbox, Playstation, or Steam. Operating system updates and application updates on smartphones and tablets. All of this happening quietly in the background without the home user actively doing anything. Since it includes upload bandwidth as well, it also counts photo and video backup from my phone, despite those being uploaded in the wee hours of the night.

To make matters worse they are specifically exclude comcast services from the data cap, or at least they claim they do (there is no real way to verify this.) This is extremely anti-competitive behavior. They are trying to force customers onto their services and hurt competing online video services.

Unfortunately, there is very little competition in the internet market in our area. There isn't really any competing service available for users to switch to. This is probably the reason our area was chosen for the comcast data cap "Trial"

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

This is a follow-up to your previous request #1042241 "Re: [FCC Complaints] Re: Re..."

Never got a response however just a quick update. STILL haven't received the visa gift cards from when i signed up or transferred service STILL haven't received the one for referring a customer nor has she gotten hers for signing up. STILL not receiving the speed I pay for from Comcast, they blame my router which I've replaced twice and it's one of the highest rated routers on the market coupled with the fastest modem avail to consumers and the WIRED speed directly from the modem matches the wireless speed delivered through the router. I still DONT have a choice in isps because there are only two in my area comcrap and att uverse uverse only offers 10 Mbps here. The data cap still threatens net neutrality and isn't justified as outlined in the memo cited and uploaded in my original complain the FCC has received a deluge of complaints about this but has taken no action. I've given Comcast ample opportunities to resolve my issues and have been offered laughable resolutions.

This is a follow-up to your previous request #1261271 "Comcast data caps"

Hi,

Comcast replied with a very generic email filled with complete misinformation about their data caps. I think it's the FCC's responsibility (and in it's power) to address this issue.

I signed up for internet with them without any data caps. Now they're imposing data caps and saying I can pay up to \$200/month more (I pay \$75/month now) for unlimited data. This is absolutely unacceptable.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

This is a follow-up to your previous request #1246450 "Internet data cap"

Hello,

I received this email in November saying that I would be mailed a copy of Comcast's response to this complaint. I have not yet received any communication from Comcast in regards to this complaint.

I know the previous email says that my complaint was closed, but I have not received a response from Comcast after two months of waiting.

Is there any way for me to get a proper response to this complaint? Or should I open a new ticket?

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1020348 - XXXXXX XXXXXXXXXX's complaint re: ISP Zero Rating**

**Date:** 6/6/2016 3:45:15 PM

**City/State/Zip:** Asheville, North Carolina 28805

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

Just like a telephone line, the Internet is a means of communication between customers and those they wish to be in touch with, whether that's other customers or businesses. That's all it is, that's all it should be. The regulations that support that need to remain intact.

I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination. This isn't enough. They're wrong. The Internet is under attack once again! And this proposal spells big trouble for net neutrality. Last year, the FCC put in rules for net neutrality. But those rules could get overturned or repealed. That would be disastrous for online users. Since I use and surf the Internet everyday, the FCC must not interfere for what websites I visit and go to. The Internet is not something to be messed with. It needs to stay open, protected and free for all. Americans deserve better. Net neutrality is

extremely important to me, and it must stay in place. We can't afford to be pushed backward. Action is now.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice (appallingly mind you) for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending these letters to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them. And also, with the asinine service from these providers citizens of this great nation have to deal with, we absolutely need more options to choose, given especially how behind we are compared to the world.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an IMPARTIAL FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. **Ticket: # 705669 - Data caps**

**Date:** 12/12/2015 11:55:51 PM

**City/State/Zip:** Nampa, Idaho 83687

**Company Complaining About:** Cable One

---

## **Description**

The data caps enforced by Cable One are far too small for the average consumer and are unfairly enforced by forcing consumers to either upgrade to more expensive plans or have their service cut off. There is no option to upgrade to a plan that just has more data, instead being forced to pay for a higher speed to have a higher data limit. This has become especially bad since Cable One rolled out new plans and getting rid of old plans, forcing most consumers to pay more for the same amount of data, while also getting double the speed making it even more difficult to not go over the limit.

I was personally forced from a 50mbps plan with 300GB per month to 100mbps plan with the same 300GB per month, while also paying an additional \$5 per month.

This limit of 300GB is ridiculously low to begin with. At a constant 50mbps, that limit could be reached in about 13.3 hours. With the new 100mbps speed, it can be reached in 6.7 hours. 6.7 hours of data usage at advertised speeds for an entire month is ridiculously small. With 720 hours in a month on average, I can only use my internet at the advertised speed for roughly 1% of the month.

This problem only gets worse on higher plans. The biggest data cap on residential plans is 500GB at 200mbps. 5.5 hours at the advertised speed to reach the limit, on average using the advertised speed for about 0.7% of a month.

Plus even this highest limit of 500GB is completely insufficient for an average family. A modern family of 4 likely has 4 smart phones, 1-2 televisions that can stream internet video, and at least 1 computer. If that family did nothing on the internet except watch Netflix, they could only watch 125 hours of SD video or 42 hours of HD video before reaching the limit. So even doing nothing besides watching Netflix, an average household member could only watch for 5% of the month before reaching the limit.

Once any family has exceeded that 500GB limit on the most expensive residential plan for any 3 months over the lifetime of the account, they are forced to either cancel or upgrade to a prohibitively expensive business plan.

There is no reason for the existence of these data caps since the transfer of data is not a finite resource. It is completely unfair to consumers to both enforce such ridiculously low data caps and to have doubled data speeds while keep data caps the same, making it even more difficult to not exceed to limit.

---

**Ticket: # 731905 - Data Caps are Killing Internet Access**

**Date:** 12/30/2015 10:19:52 PM

**City/State/Zip:** Walnutport, Pennsylvania 18088

**Company Complaining About:** Blue Ridge Communications

---

## **Description**

I am writing once again to communicate of a serious incident encountered with Blue Ridge Communications in Eastern Pennsylvania.

As of September 1, 2015, they have implemented draconian data caps of varying degrees on their rural customers who have Blue Ridge Communications as their only choice (which is the case in most of their market). They had unlimited data before that between the hours of 1AM and 5PM. Our regular data consumption pattern for the last few years was not problematic, and we attempted to comply with the 250 GB cap during the hours of 5pm-1am, with success in almost all the time. Currently, since their caps have been implemented, we have been unable to do the usual day to day household consumption, and has caused severe stress as we are a family of 5, some of us students. Windows updates, video conferencing, and Netflix, among other things outside our control, have been consuming data in ways we cannot minimize. The speeds are 10 MBPS and the price is almost \$60, which is higher than anything I have ever paid. Elsewhere, I pay 39.95 for 75 MBPS with Comcast, among others previously, such as RCN or Atlantic Broadband.

I have called multiple times, and they have declined multiple times to roll back the data cap, and provide unmetered internet. The alternative is to pay a tremendous amount of money per 50 GB or upgrade to a slightly faster plan (15 Mbps) and gain an additional 100 GB, which is still insufficient. We are being severely punished, financially, for doing what we have always done as loyal customers, and have ALWAYS been told that what we had done in the past is nonproblematic and compliant.

I believe this move has nothing to do with network congestion, and entirely to do with maximizing profits and killing the competition to cable television from online streaming services. I also believe that these data caps are against Net Neutrality regulations.

I would also like to report that their customer "service" is amongst the worst I have ever encountered in my life, and I have experienced horrific CS in the past. Reaching a CS agent typically takes an hour, and have even been deliberately dropped at times when call volume is high (which has never happened elsewhere when I call and wait in line). They have extremely inflexible CS, often needing escalation to a supervisor to get necessary information or a simple credit.

They have been unable to change the plan type, or the price structure, for multi-year, loyal customers like us, and decide to continue their hostile and greedy campaign of fleecing the customer, and insulting them with virtually nonexistent customer service, low quality connectivity, and an unreliable, outdated network, and most importantly, excessively high prices. In my neighborhood (Magellan Drive), they are a cable monopoly and we have no other choices for internet access via cable (the alternative service is Verizon's DSL, with a maximum speed of 3 mbps).

As a result, I have canceled my service as of January 2, 2016 and switched to an alternative means of connectivity, until they correct the hostile and untenable violations listed above.

---

[Ticket: # 1020409 - XXXXX XXXXXXXXX's complaint re: ISP Zero Rating](#)

**Date:** 6/6/2016 3:57:31 PM

**City/State/Zip:** Chesapeake, Virginia 23321

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1020410 - XXXXXXXXXXXX XXXXXX's complaint re: ISP Zero Rating**

**Date:** 6/6/2016 3:57:58 PM

**City/State/Zip:** Williston, Vermont 05495

**Company Complaining About:** Comcast

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**City/State/Zip:** Johnson City, Tennessee 37604

**Company Complaining About:** Comcast

---

## **Description**

Comcast is enforcing a data cap and they are the only Internet provider in area. The 300gb limit has nothing to do with Internet congestion, rather it is another way for Comcast to overcharge for their service.

---

[Ticket: # 733084 - Comcast's Data Cap](#)

**Date:** 12/31/2015 10:44:47 PM

**City/State/Zip:** Atlanta, Georgia 30342

**Company Complaining About:** Comcast

---

## **Description**

Comcast's cap puts me into a terrible position. I'm going to be moving with 3 others in just a few months and our only reasonable choice is Comcast. Their 300gb data cap makes it impossible for us to all use Netflix or any other streaming service for a reasonable time period. They offer the chance to pay \$30 to remove the cap, but only in certain areas and Atlanta isn't one of the lucky ones. Please do something about their unreasonable data caps.

---

**Ticket: # 733198 - Comcast 300GB Data Cap**

**Date:** 1/1/2016 1:28:09 AM

**City/State/Zip:** Brentwood, Tennessee 37027

**Company Complaining About:** Comcast

---

**Description**

Comcast's 300GB data cap is bad business in two ways:

1) There is no technical justification for the data cap. Even Comcast admits this. So....why are they still allowed to use this cap as a revenue enhancement?

<http://bgr.com/2015/08/16/comcast-data-caps-300-gb/>

2) I have five children - the data cap is set arbitrarily and cannot be changed based on home situation. To hold my family to a 300 GB limit with 5 children is not feasible compared to a typical family of two children. I am being penalized and when I call about the cap, I am told there are no options.

I currently pay nearly \$70/month for internet service and with the caps, I am pushing upwards to \$100 once the courtesy period ends.

---

[Ticket: # 733397 - Data caps require customer pay for advertising](#)

**Date:** 1/1/2016 5:42:01 AM

**City/State/Zip:** Afton, Tennessee 37616

**Company Complaining About:** Comcast

---

## **Description**

Isn't it illegal to require customers to pay to receive a company's advertisement? Data caps whether via cell phone or broadband require customers to pay for advertising through pop-ups or when watching videos on YouTube, broadcast TV websites, Hulu or other sources. Please affirm the illegality of data caps and force communication providers to stop profiteering with them.

---

**Ticket: # 733449 - Data Caps and lying customer service representative****Date:** 1/1/2016 10:28:53 AM**City/State/Zip:** Tucson, Arizona 85704**Company Complaining About:** Comcast

---

**Description**

On 12/30/15 I called Comcast at 8002662278 and spoke with a male representative, I was looking at starting service with Comcast and wanted to know the speeds and restrictions regarding Internet services, I specifically asked the rep if my area of Tucson, Arizona 85704 had any data caps that I had read Comcast was trying in select markets. The representative advised me that no their where no caps in my area and that is was mainly east coast trails not in the west cost. I then proceeded to complete my order for internet. Due to issues with Comcast wiring I as of this moment still do not have any internet but I am also finding that my area is yes indeed a data cap area and when I called back to Comcast on 1/1/16 I spoke with a rep Lee who stated first she did not know anything about caps to the internet, but then when I offered to send her the website from Comcast own website about the caps and markets they are in she then remembered everything about the caps and then tried to inform me that I can move up to a higher speed internet package to get a larger cap. I now have two instances where Comcast representatives are pretending ignorance regarding the data cap then the only resolution I am offered is to pay Comcast more money to get a higher data cap. This miss information and bait and switch is very troubling, and since Comcast is the only high speed internet provider in my area and has monopoly on cable services I have to either deal with their lying and deception or simply go without internet. Being that I do not subscribe to tv service and Internet is my main source of communication and information this places me at disadvantage. I do not think that a company can get away with flat out lying about their service details and restrictions and not providing any official way to receive that information is bad business practice and should be guarded against by the FCC. Being that Comcast has monopoly on high speed internet service in my area and they are imposing a cap on service that others and themselves provide unrestricted in other areas of not only my city but also the country, I am needing assistance as this is restricting my choice and rights as a consumer. Also since they have monopoly on cable high speed internet I find that they do not have competitive rates, I had originally wanted service from Cox as they are lower price but Comcast owns all the rights to my zip code, so in other parts of my town they have choice and competition to offer fair and reasonable rates but due to the monopoly of Comcast I have to deal with whatever lies and rates they decide to offer.

---

**Ticket: # 733595 - Unfair Practice with Data Caps**

**Date:** 1/1/2016 1:47:43 PM

**City/State/Zip:** Fayetteville, Georgia 30214

**Company Complaining About:** Comcast

---

## **Description**

Comcast is conducting itself in a blatantly anti-competitive and anti-consumer manner. While there are many issues with how the company conducts itself I want to focus on their data caps.

First of all, the data caps do not make sense from a technical standpoint as data is an unlimited resource and the only possible limitation is bandwidth. They even acknowledge this in their pricing structure where you pay more for more bandwidth. They then bring in their data cap in order to gouge consumers for using the bandwidth they are already paying for. They try to refute this with the line of "Well if you use more internet you should pay more", but that makes no sense as bandwidth is a volume issue and they should have the capacity to service all of the customers they take on with the bandwidth they pay for and the amount of data the individual customers use in a month is irrelevant.

Next this becomes anti-competitive as Comcast is also a TV provider and blatantly tries to shut down internet based alternatives to it's TV service with moves such as the data caps. When actually using internet based alternatives such as Netflix and the myriad of other services you will use the data cap quickly. They then turn around and state that their streaming services will be exempt from data caps. They then also make it more expensive to have internet only plans, artificially inflating their TV subscriber counts with people like me who watch no TV but had to buy the bundled packages to pay a price that isn't completely ridiculous. I am then basically punished and have to pay them MORE money when I don't use their TV service and instead use internet alternatives which use the internet bandwidth that I have already paid for.

Data caps should not be allowed as a practice, and it is ridiculous that they can still get away with this.

---

**Ticket: # 733614 - Local ISP Problems****Date:** 1/1/2016 1:57:04 PM**City/State/Zip:** Murphysboro, Illinois 62966**Company Complaining About:** Zitomeia

---

**Description**

Local ISP "Zitomeia" issued data caps for people who have the internet service as of 1/1/15 last year. They did this without telling us as customers that have the internet service and without the general consent of anybody in our family who uses the lowest internet speed in which "Zitomeia" provides. It is also the only internet some may receive in rural areas. After we have passed their newly inputted data caps without our knowledge, they began throttling our internet down to at least to a range of 0.20mb to 0.55mb instead of what we are paying for each and every month. We only recently discovered this as of 4 weeks ago from when this request was filed. We also have tried talking to "Zitomeia" to fix this problem in which we payed for our internet with no data caps or limitations before they inputted these regulations, but to no avail. I urge you to fix this matter.

---

**Ticket: # 733800 - Data Caps**

**Date:** 1/1/2016 7:02:29 PM

**City/State/Zip:** Boone, Colorado 81025

**Company Complaining About:** Verizon Wireless

---

## **Description**

It is ridiculous how much I am being charged for data. How can we have open internet if data caps are in the way. As a student in college, I need to use internet for research and job applications. I can not do what I need to with my data cap being so low as 20 GB a month spread across three people. And on top of that, the only thing that even reaches my house is Verizon so they have a monopoly for the region. Every time the contract is renewed they either lower the cap (before I renewed I was paying the same amount I am now but had 30 GB of data per month) or raise the price. As things are getting more advanced, the file size of things are getting larger and larger and I can't keep up. Data caps are nothing but a scam for money and limit the freedom of people on the internet.

---

[Ticket: # 733831 - Comcast DATA CAP](#)

**Date:** 1/1/2016 7:44:30 PM

**City/State/Zip:** Homestead, Florida 33033

**Company Complaining About:** Comcast

---

## **Description**

My complaint is about how the data cap that Comcast has on my account is unfair. I have called several times to ask about this issue and have not found a real solution. This is just bad because I have a family of six who use the internet for educational purposes. I have to pay way more on my cable bill just for my family can be able to learn. This is just unfair.

---

**Ticket: # 733853 - Suddenlink Data Caps****Date:** 1/1/2016 8:29:53 PM**City/State/Zip:** Lubbock, Texas 79410**Company Complaining About:** Sudden Link

---

**Description**

Suddenlink is capping my data at 450 gigs even though they sent me a letter informing me that would raise that cap to 550 gigs (letter attached). I have called sudden link to complain and for two months they strung me along saying the issue would be resolved. Finally I called a third time and the representative explained the mailer was sent arbitrarily to everyone?! The service I get (speed wise, at least) is actually fairly good, but I work from home, I stream netflix and video games, and Suddenlink has me constantly looking over my shoulder, checking if I have exceed some arbitrary data cap.

I mean, you (the you that is reading this at the FCC?) knows this is bad business and basically a complete lie, right? They are instituting these caps to make people buy cable because that business is dying and they are not forward thinking enough pivot and meet their customers where they want to be. I think that internet providers should not also be content providers. Cable companies and ISPs also need to be separated and regulated if we are ever going to make it somewhere on this issue

---

[Ticket: # 734021 - Comcast Data Caps in Hattiesburg MS.](#)

**Date:** 1/2/2016 2:49:56 AM

**City/State/Zip:** Hattiesburg, Mississippi 39401

**Company Complaining About:** Comcast

---

## **Description**

Comcast has instituted a 300 GB data cap per month in my area. It is outrageous to pay for the speed of the internet provided and then have to pay again for the amount of data used.

---

[Ticket: # 734264 - Armstrong utilities is stifling competition](#)

**Date:** 1/2/2016 2:57:47 PM

**City/State/Zip:** Ashland, Kentucky 41102

**Company Complaining About:** Armstrong Utilities

---

## **Description**

Armstrong utilities has a data cap of 200GB, which is draconian, but fair, if applied equally to all customers. However, it is not. Armstrong raises the cap substantially, up to 500GB, if you subscribe to their phone and cable television services, a system designed to gouge customers who do not want standard cable, but instead prefer OTT services, such as netflix, or satellite TV, such as DirecTV. This is anti-competitive behavior, and possibly a violation of net neutrality, as it is an ISP limiting bandwidth for the purpose of pushing other products.

---

[Ticket: # 734437 - ISP Data Caps and ISP content purchases versus Net Neutrality](#)

**Date:** 1/2/2016 6:24:15 PM

**City/State/Zip:** Atlanta, Georgia 30305

**Company Complaining About:** Comcast

---

## **Description**

Why are ISPs such as Comcast are allowed to put a data surcharge on content available from other providers, but then sell the same content over the same wires without similar surcharges? I thought this is exactly what Net Neutrality regulations were supposed to guarantee would not happen.

Comcast has put me in a position where I must pay more for content purchased from other providers. Comcast should not be allowed to sell on-demand content, or they should not be allowed to levy data cap based surcharges, one or the other.

---

## Ticket: # 734493 - Comcast will not do a thing regarding WiFi hacking while enforcing their Data Cap

**Date:** 1/2/2016 7:41:52 PM

**City/State/Zip:** Miami, Florida 33196

**Company Complaining About:** Comcast

### Description

Since October of 2015 Comcast has enforced a Data Cap on my account. This has been a nightmare trying to regulate in my home due to internal and external issues that Comcast will not acknowledge. I have attached an audio recording of my last conversation with 3 representatives at Comcast. I'm sorry I did not edit the waiting periods of the clip. Please use Windows Media Player and fast forward. The recording details the problems I have had dealing with the Comcast Data Cap. I will describe it here to elaborate on the audio clip. Since October of 2015 I've been getting emails, calls and screen pop up advising me that I am getting close to passing the 300gb cap. Even though I could not figure out why this kept happening I tried my best to investigate why this was happening. Comcast would and could not help me, they just advised me to investigate myself. After 2 months that I passed 300gb I decided to check my Comcast Modem/router for anything that could help me. Keep in mind this I am doing with out Comcast advising me. When I logged on I noticed 2 unkown connections. One was a MoCa connection and the other was a wifi connection. I checked to see if it was something in my home but it was not. I decided to block them both and reset my wifi and modem passwords. I restarted and logged back in the modem to find that both connections were still there. The wifi eventually disappeared but the MoCa stayed. I decided to contact Comcast Tech Support. The Tech logged on to the Modem and attempted to block the unknown connection also, but again it returned. He then decided to completely hard reset my modem and rename everything. After he did that the unknown connection stopped. After analyzing the situation The Tech determined it was a Range Extender type adapter that had hacked into my wifi signal and was stealing my internet. This explains all the unknown data use and why I had been going over my Cap. The next morning I called the Data Cap department at Comcast and explained the situation and gave them the Tech report number for reference. I asked them to remove the months I had gone over the 300gb but they refused telling me that it was my problem I was hacked. They would not be responsible for it and they were not going to do anything about it. This is wrong. The data cap policy is wrong. Comcast is wrong! Please help me. I did nothing wrong to have to deal with this. This problem has caused conflicts at my home and arguments because I was blaming other users in my home. Please Help Comcast understand there is a problem with what they are doing to their customers. Please do not have Comcast contact me with excuses on what has happened by pointing the finger at me because that is wrong. The system is broken and what they are doing is wrong. My Comcast leased Router/Modem was hacked from the output signal, there was nothing I could do to stop or prevent it. also Comcast never helped to inform or prevent this before they started the data cap policy. I cannot be the only customer this has happened to! FCC please help!

## **Description**

Recently Comcast has started a 300 GB data cap in my area. With the exorbitant prices current broadband providers already charge, compared the actual cost of providing Internet access, this cap is absolutely absurd. Comcast has no interest in maintaining an open Internet, or in actually serving their customers the way they should be. Data caps on home Internet connections are an utter joke and this is just further reason why all these telecom giants are killing any chance we have at gaining comparable infrastructure to our neighbors in Europe and Asia.

**Ticket: # 734716 - Comcast Data Caps**

**Date:** 1/3/2016 2:45:17 AM

**City/State/Zip:** Miami, Florida 33186

**Company Complaining About:** Comcast

---

## **Description**

Comcast is instituting data caps as if data is some finite resource. Their methods of tracking the amount of data used have not been proven to be accurate. When I signed up there was no data cap and with speeds getting faster this is an excuse to gouge the consumer down the line. With 4k broadcasts coming to Netflix at a rate of 18.8 GB/hr the entire allotment of data can be blown through by binge watching a season of House of Cards.

---

## **Description**

My internet provider seems to be structuring their internet service to promote use of their other products (cable tv, streampics, video on demand) at the expense of competing services (such as HULU, VuDu, Amazon Prime, Netflix, other web based streaming video) through use of restrictive data caps with their high speed internet services when content is from any source other than through their services such as streampix or Xfinity On Demand. This seems to me to be some way of circumventing net neutrality laws and beyond that, it is just unnecessary and shady. They effectively have a monopoly on high speed internet in my area so they can basically force us to do whatever they want if we want to be able to access high speed internet utility. Please stop these unfair and exploitative business practices.

---

[Ticket: # 734859 - Data cap for already overpriced Internet access](#)

**Date:** 1/3/2016 1:17:00 PM

**City/State/Zip:** Miami, Florida 33186

**Company Complaining About:** Comcast

---

## **Description**

I recently received notification from comcast stating that if I reach a new data cap that they just imposed I will be charged more for my Internet use that I am already paying a small fortune for. At the point that I signed up there was no such cap. Since there really is no competition for comcast I believe they are just doing this because they can, and putting all the customers in an unfair position. I believe that comcast should not be allowed to cap their service at all but a minimum for customers who signed up without one. I signed up for a service with a specific upload and download speed not a limited service. It is real sad that these companies can get away with this behavior.

**Ticket: # 735252 - Comcast Data Caps**

**Date:** 1/3/2016 10:37:54 PM

**City/State/Zip:** Hollywood, Florida 33024

**Company Complaining About:** Comcast

---

## **Description**

Comcast has implemented a data cap (comcast refers to it as a data usage policy but the FCC document "Policy Issues in Data Caps and Usage-Based Pricing" released in 2013 defines the practice as a data cap) in several of its markets on a "trial" basis. Comcast claims that the cap is to promote fairer pricing of internet services on their network and likens using more data to using more electricity or water from another utility. If Comcast is allowed to bill for data used on their network, there should be no cost for the connection to the network. Water and power utilities do charge for a pipeline of a certain level to a location as Comcast does. The policy that Comcast is trying is detrimental to the way the internet works. The ability to watch videos uploaded and streamed over the internet has allowed students to learn on scales never before imagined, police officers to be held accountable for their actions on the public, and for entire movies to be watched without leaving the comfort of ones chair. In addition there is no clear definition of what a gigabyte is to consumers nor is there a way to audit Comcast's data meter. Should data that consumers do not want (internet ads, auto-play videos on sites such as facebook, operating system updates, etc...) count against a users cap? Do consumers even know that these items use data? How can a consumer go into their account and ensure that the data used is actually theirs? Comcast has failed to provide detailed usage records like phone companies do when billing for data.

---

**Ticket: # 735255 - Internet data cap usage by COMcast**

**Date:** 1/3/2016 10:43:02 PM

**City/State/Zip:** Kennesaw, Georgia 30152

**Company Complaining About:** Comcast

---

## **Description**

Comcast's Data cap usage is very pathetic. They dont have any usage meter or traffic meter or logs to show that I have consumed the amount of data they have imposed on the bill.

If Service provider like Comcast is gonna follow data cap strategy, they should have developed enough tools to validate that the user has consumed that much amount of data..

My bill shows that I have been consuming lots of data even though we dont use that much streaming or stuff and all my calls CSA ended up in vain.

This should be dropped or should be implemented after comcast upgrading its tools to show logs of data usage.

**Ticket: # 735277 - SuddenLink Not telling about Data Caps****Date:** 1/4/2016 12:02:18 AM**City/State/Zip:** Boonville, Missouri 65202**Company Complaining About:** Sudden Link

---

**Description**

I didn't exactly lose money, but the company screwed us in the long run. We previously had DSL internet without a datacap through ATT. I wanted to switch my father over to a faster internet and talked with SuddenLink a couple of times about their service before switching over. When i spoke with them, they never mentioned a datacap on their services when trying to get me to switch to them. Because everything they mentioned to me, i decided to call them and get the service connected. After a week of good service we cancelled our account with att. 9 days after we had the service connected, we were contacted telling us we were reaching our datacap! Well needless to say we were quite surprised since this was the first we heard about a datacap. After calling the company and telling them that this was never mentioned to us, the people i talked to including the supervisor kept trying to upsell us to higher data caps. Number one, i'm not paying more for something that i thought came with the service, and number two a 250 gb datacap is nothing for a 30mbps data connection.

It's actually a waste to have that fast of internet with that kind of datacap. After talking with multiple people including speaking with a manager, i was basically told tough luck and i could pay for a datacap or cancel my service if i wanted. Cancelling my service does me no good anymore since i cancelled my other service with att and lost out on my grandfathered plan of not having a datacap. So basically i am now up the river without a paddle because SuddenLink falsely advertised their service to me to get me to switch to them.

This kind of Data cap is ridiculous!! Do they know that downloading one Xbox game is 60 gb's? You could eat through that datacap in a matter of hours. How has the FCC allowed internet companies to continue this practice in 2016!!

---

**Ticket: # 735437 - Home Internet Data Caps****Date:** 1/4/2016 10:09:03 AM**City/State/Zip:** Bargersville, Indiana 46106**Company Complaining About:** Comcast

---

**Description**

My family of 3 lives on a tight budget. We decided to cut costs by getting rid of cable since no one is using the TV from about 10:00 p.m.-6:00 p.m. the next night. It didn't make sense to spend \$100/month for cable that wasn't used. We opted to retain our high speed internet package and "cut the cord" by subscribing to streaming services, such as HuluPlus and Netflix. This has allowed us to continue watching TV shows without paying for a cable service that rarely was used. We have been with Comcast for over 5 years as satisfied customers. Recently, I learned about the data cap that was being placed on internet plans. When I talked to customer service about it we looked at our past data usage and we neared or surpassed the 250gb limit for the past 3 months. I immediately researched other internet options because I didn't want to be penalized simply because I didn't have a cable package. Had we paid for cable each month, we could have watched shows "on demand" and not used our internet. Unfortunately, the rural area we live in does not have any other reliable, high speed internet providers, so we will be stuck with Comcast. In my opinion, this is Comcast's way to force customers into cable packages that they don't want. If you don't want to get cable from them, then they don't want you to use their internet to stream shows through other services. We are in the unfortunate circumstance that we don't have other affordable internet options.

## **Description**

Comcast has arbitrarily imposed a 300GB a month data cap. They stated they will charge \$10 for every 50GB block over or offer unlimited for an additional \$35 a month. They only imposed this cap and fees to make up for lost income from a decline in cable subscribers. There is no network reasons for this change. In fact, they charge less for similar or faster speeds in areas that have competition from fiber optic networks. Due to their monopoly, I have no other option for Internet, and will now be hit with either monthly overage fees or have to pay for unlimited as I use more than 300GB a month quite often. With people using more streaming services, and with 4K UHD video, data usage will continue to trend upward. Most computer games are purchased and downloaded online, and with games being upto 60-80GB, that is a large chunk of the month data. Also, Comcast does not break down the data downloaded on your bill, so you have no way to verify the accuracy of Comcast's claims. I have had issues with them in the past where I was billed for a modem rental for months on end, and have never rented a modem from them. They often bill customers incorrectly and count on many of them not noticing the small errors. If they can not even tell who is renting a modem, how are they going to keep track of data usage correctly? To add on to that, I can track my usage through my router, and it differs greatly from Comcast's claimed usage. They also do not allow any roll over of data. If I am paying for 300GB a month, and don't use it all, I should be able to offset future overages. The Internet is a vital utility, much more important to this country's growth in the near future than the telephone ever was, and ISPs should not have carte blanche to do as they wish in limiting data and charging outrageous fees. Our country is lagging behind in terms of Internet speeds and availability. If we continue to let them, the ISPs will over charge, provide poor service, and not upgrade their network until it absolutely has to be done. Thank you.

## **Description**

the new data cap on internet customers has crippled my internet usage. I had to postpone upgrading my devices to safer softwares because I reached my data limit. I have noticed Comcast is not the only provider using such an approach in my area. At least comcast offers unlimited internet for an additional \$35 dollars but AT&T does not at all. I believe this practice is a way to charge customers who uses internet based services such as netflix and Amazon instead of traditional TV. This approach does not increase the value of my service, it cripples it. Moreover, it was added to existing customers as well as new ones.

In my opinion, this is also infringing on net neutrality. I carefully observed my internet usage for the month of December 2015. I refrained from downloading anything. My activities consisted mainly of Netflix, Amazon, and HBO GO streaming. I still went over my data limit. As it stands, AT&T would charge me the equivalent of a monthly Netflix subscription for each 50 GB in order to use the service. While comcast would charge me \$35 more than the amount I signed for. Whereas, there is no additional charge for using the cable or internet service provided by comcast.

I cannot tell comcast how much to charge for services but I hate the idea that I am paying more because there is no real competition in the state I live in. I also hate the idea that I have to use services provided by my internet provider if I want to avoid incurring extra fees. Thank you in advance for looking into this matter.

[Ticket: # 736443 - Comcast data cap](#)

**Date:** 1/4/2016 5:02:25 PM

**City/State/Zip:** Atlanta, Georgia 30363

**Company Complaining About:** Comcast

---

## **Description**

Comcast imposes an internet data cap of 300GB in Atlanta, GA. Removing this data cap will cost an additional \$30 per month. This is extortion, as Comcast already charges premium rates for anything but the most basic internet package. What they are essentially doing is providing us fast internet and then saying we can't use it without paying them more. I currently live alone and still approach this superficial limit. Once my wife and I live together, and also once we have kids, I know for sure a regular family can not stay under this cap. The FCC needs to stop corporations from having the freedom to artificially charge ridiculous prices for internet services due to little competition and insider deals with local governments. This practice is pushing me to cancel my Comcast service. The FCC should reclassify consumer broadband service under Title II of the Telecommunications Act.

---

[Ticket: # 736533 - Comcast Data Caps](#)

**Date:** 1/4/2016 5:33:51 PM

**City/State/Zip:** Davie, Florida 33328

---

## **Description**

The 300GB data cap that Comcast has added in the past months has really limited my family's streaming capabilities (the main way we use our data) and has led to a heavy resentment of Comcast as a company. If we had any other decent ISP options open to us we would drop Comcast in a heartbeat; ISPs should NOT be allowed to get away with this sort of behavior.

---

**Ticket: # 737008 - T-Mobile violating net neutrality with "Binge On"**

**Date:** 1/4/2016 9:07:27 PM

**City/State/Zip:** Menomonee Falls, Wisconsin 53051

**Company Complaining About:** T Mobile

---

## **Description**

T-Mobile is automatically throttling all of their customers video traffic through their "Binge On" program. They advertise this as an optimization of video streams for content providers who are part of the program. These video streams then won't count against your data cap. The fact is that it's purely throttling. There is no optimization. They're throttling video content from providers that aren't part of the Binge On program, they use misleading advertising in regards to what the Binge On program is actually doing, and it's opt-out instead of opt-in. This obviously needs to be looked at. This is besides the fact that these programs that favor certain content providers over others (e.g. don't count against data caps) are a violation of true net neutrality to begin with.

---

**Ticket: # 739352 - Comcast new 300GB Montly Data Cap****Date:** 1/5/2016 11:37:07 PM**City/State/Zip:** Miami, Florida 33175**Company Complaining About:** Comcast

---

**Description**

Where does one begin when talking about Comcast? Do I mention that Comcast has been voted "Most Hated Company" in America? Do I mention that more than 13,000(and still counting) FCC complaints have been made recently over the new Data Cap they are imposing? Or that do I mention that when Comcast VP of Internet Service Jason Livingood was asked about why the Data Cap is being imposed, but had no real answer or reason( <https://twitter.com/jlivingood/status/632177747469725696> ) except that it will make more money for them by forcing customers to the Data Cap. Do I mention that it is only the 5th of January(I have still 26 days to go) and I already used 100gb(or 1/3rd) of my limited data because I decided to watch Netflix show over the holiday New Years weekend? In other words, I am being punished for watching my favorite shows over the weekend and if I continue doing so every weekend, I will be over my data limit before the month is over. Or maybe do I mention that Comcast has failed to accurately monitor data usage(thus overcharging customers) and customers have already filed FCC complaints about this issue already? Let me repeat this last part again. COMCAST HAS FAILED TO ACCURATELY MONITOR DATA USAGE(THUS OVERCHARGING CUSTOMERS) AND CUSTOMERS HAVE ALREADY FILED FCC COMPLAINTS ABOUT THIS ISSUE. Yet Comcast still insist on imposing the Data Cap and charge customers if they go over it.

Comcast is starting to impose an internet Data Cap of 300gb in South Florida. By imposing this data cap, it will cost an additional \$30/m or \$35/m. This is extortion, as Comcast already charges premium rates for anything but the most basic internet package. What Comcast is essentially doing is providing us fast internet and then saying we can't use it without paying them more because of the limited data cap. Heres an example of how the new data cap makes no sense when a customer is on a higher faster connection speed. Whats the point of having a faster speed if the data cap is at 300gb? All this means is that a costumer will hit their data cap sooner than later and end up paying more for going over their data cap. In a given 30-day month, the limited 300GB monthly data means that usage is limited to about 10gb per day. Now consider a family of 4, whom all have devices such as PC, Tablet, Video Game Consoles and other electronics connected to the internet at all time. This family will easily go through 300gb before the end of the month and end up having to pay the surcharge each month. Not only that but as technology increases like 4K TV and streaming, more data will be required and 300gb is just not enough in todays standard. Lastly, ads on the internet(like Comcast website) or commercial via streaming Hulu shows eat up the customers data, which they have little of(300gb). Customers dont necessarily request ads or commercial, so why should it be a strike against the customer and their data for something that was not necessarily asked or wanted? Due to ads and commercial on the internet, the customer truly DOES NOT get 100% of the 300gb data since part of the data usage is being used for things such as ads and commercials and not what the customer wanted or requested for. This practically is stealing precious data away from the customer and punishing them with an surcharge for going over the data cap.

The FCC needs to stop corporations from having the freedom to artificially charge ridiculous prices for internet services due to little competition and insider deals with local governments. I will cancel my Comcast service when the data caps become mandatory. I cannot be paying a surcharge every month. Either I drop Comcast and stay with Phone plan with unlimited data, or Comcast removes the Data Cap and I keep both plans. The FCC should reclassify consumer broadband service under Title II of the Telecommunications Act. Comcast should not be allowed to continue these kind of extortion on their customers who have little or no alternative to picking internet providers. Its these kind of practices that has made Comcast the "Most Hated Company" in America over the years. The FCC needs to step in, and stop Comcast from imposing the Data Cap and extorting their customers. Enough is enough.

---

## **Description**

I am resubmitting this complaint because I never received any communication or response from Comcast.

Comcast's 300GB data cap is making it nearly impossible for me to do everything I need to do for school and work. I am a graduate student studying interactive computing, and with that, I use a lot of data. Much of the software I use is based online, and the offline software needs to be updated frequently. Further, my work involves uploading and downloading videos, photos, files, and more. With Comcast's data cap, I am having to go out of my apartment in order to do most of my work just so I do not go over my monthly usage, which is unacceptable. My ISP should not be limiting my usage to a point where I cannot do my own work. Charging more for the "premium" of using a reasonable amount of data is ridiculous.

## **Description**

I have data caps in the Cleveland area with my Cox services and they do not offer any unlimited plan or allow unlimited for priority services. This is totally against net neutrality and you know it it is very known in the news with Comcast and how is Cox allowed to do this? Please explain or stop them I got a letter from Cox communications saying it's congestion I am tech savvy and any person with a brain knows that bullshit. Someone listen! I shouldn't need to move a city over to have a better cable company like Time Warner.

**Ticket: # 739083 - Shady Business Practices of Comcast**

**Date:** 1/5/2016 8:44:02 PM

**City/State/Zip:** Whiting, New Jersey 08759

**Company Complaining About:** Comcast

---

**Description**

Dear FCC,

As I'm sure you are aware, Comcast has recently announced plans to begin enforcing a 300Gb data cap on a great part of it's customer base. I find this change extremely concerning as I see no reason other companies won't start following suit. There is also the practice of creating artificial fast last lanes for sites that are willing to pay the provider because their service is popular and relies on internet. Comcast has been actively slowing down services such as Netflix because they demand a constant internet flow and access to their network, which the customer already pays for, and forces the site to pay them off or be slowed down and lose revenue and customers. Natural monopolies, limited options, and shady contracts make it difficult or impossible for myself and many others to reasonably switch to another provider.

I'm asking you to do everything in your power to stop this trend before it starts. The internet is not just a luxury anymore - it is a critical part of many people's lives. As we've seen with cell phone data, once caps are in place, it is a race to the bottom to offer ever more limited data at ever increasing prices.

Regards, (b) (6)

[Ticket: # 739558 - Comcast 300gbData Cap](#)

**Date:** 1/6/2016 10:23:47 AM

**City/State/Zip:** Cumming, Georgia 30040

**Company Complaining About:** Comcast

---

## **Description**

In the Atlanta area data caps have been enforced and I am paying over \$100 just for internet capped at 300GB where other states do not have the cap and pay less. The cap is enforced so Comcast can push its streaming and cable tv services that so not count against the cap. There are no other high speed providers in my area so Comcast has the monopoly and can do what they want. For the average family 300gb is way to low. Kids have online school assignments and books online they need to access. Necessary computer, tablet, phone updates count towards the cap. On-line backups such as One Drive backup count as well. This cap limits what I can do with my internet connection that I pay for and most of my data is not streaming services. I would change ISP if I could but I am stuck with Comcasts monopoly.

[Ticket: # 740397 - T-Mobile Binge On and throttling of video content](#)

**Date:** 1/6/2016 3:19:43 PM

**City/State/Zip:** Hollywood, Florida 33024

**Company Complaining About:** T Mobile

---

## **Description**

Recently T-Mobile implemented a zero rating policy for video streaming called Binge On. This policy would allow video streaming from certain providers without counting against a users data cap. While this policy rides the line on net neutrality, T-Mobile has been throttling video content to approx. 1.5 Mbps as a part of the program. This is clearly a violation of the FCCs net neutrality principles. Customers were not informed that non-participating providers would have their content throttled as a result of T-Mobiles Binge On program.

**Company Complaining About:** Comcast, Verizon, At&t And T-mobile

---

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

**Date:** 1/19/2016 5:35:49 PM

**City/State/Zip:** Cabot, Pennsylvania 16023

**Company Complaining About:** Armstrong

---

## **Description**

Armstrong cable imposed a data cap awhile back and it has been a nightmare. Since then our internet which is limited to 250gb a month, always slows, stops or freezes a lot when we reach or especially when we go over our data cap.

We are a household of 3, I work from home so my time is spent online doing investigations which require access to media sites. My son, who is in college spends a lot of time on the internet also he is 19yrs and as you can imagine is active on social media sites. My husband works from home one day a week and each night and weekends at home since he is on-call, he is working a lot.

These data caps, put such limits on us that we cannot even enjoy listening to music or watching a show. I pay for services such as; Netflix, Hulu and Amazon Prime video, so why do i have to also pay more and more when i go over a cap that was imposed? I pay \$60 a month internet with a 250gb cap. I pay \$49 a month for basic cable and the only reason we have it is too get the extra 50gb a month it comes with. I pay \$8 a month for Netflix, \$99 a year for Amazon and other various online services. Armstrong does not have an unlimited option.

You pay \$10 more a month for each 50gb you go over. We go over alot . and each time we get close, we shut it all down to try to save money and avoid the fees. However I still have to work from home. I believe their data calculator is wrong as ours reset on th 15th of this month, so for 4 days it already says we are over 50gb, when we stopped video watching, gaming and surfing. We get our notifications that come up while i am in the middle of work that require you to click and restart your browser when you are close to your limit. That affects my work a lot. The slowing of speeds effect my husbands work because of the file transfer time when they want to stop or freeze or slow our internet.

My son, well it effects everything he does from school to socializing. These data caps are too low. We have 6 computers (My personal computer, my work computer, another laptop used by guests, my husbands work laptop, my sons desktoop, my sons laptop) we have 2 tablets, we have 3 smartphones, we have 1 verizon booster for our cellphones, we have wireless printers, xbox, playstation etc etc. and this quite normal for most families. How can you even use this equipment when you are only allowed 8gb a day. That isnt even enough to watch a HD movie on Netflix. (There HD used 7gb an hour) everything we own is set to the lowest quality it offers. we watch Netflix at the lowest playback setting, same with amazon, same with the game systems, same with anything on i.e. Youtube at 180 definition is really bad, but we do it.

We have no other service provider in our area and no other one will even come out this way because we live way out in a rural setting. How is that fair of Armstrong to limit us so strictly, however we have no other choice? We have even thought about moving because these limits cause so much stress and arguing over prioritizing with work and school. Unfortunately we are not in a position to move right now.

We use to call Armstrong each time our internet stopped working, slowed or froze. But, as you can imagine each time they said, its working great on our end do a restart. We do not call anymore because we know they are limited us, it happens each and everytime we are close or over on the data.

I ask you to investigate this and these data caps. This is the day and age of the internet. It should be unlimited. We should not be penalized for enjoying other programming than Armstrong's, or watching videos, or listening to music or playing a game or just doing my work. We have done everything we can to limit our usage and now when guests come over, we have to ask them to limit their phone use or computer use also due to the fees and restrictions. Trying to tell a teenager that they cannot do something on the internet is like the end of the world, it is for me and my husband when it comes to our work. Its embarrassing, stressful and honestly causes me a lot of anxiety.

Thank you for your time

[Ticket: # 742198 - data usage cap @ Cable One \(Idaho Falls\)](#)

**Date:** 1/7/2016 2:08:41 PM

**City/State/Zip:** Idaho Falls, Idaho 83404

**Company Complaining About:** Cable One

---

## **Description**

Cable One has implemented a data cap of 100GB upon their customers - even those who pay for upgraded high-speed service. This cap is imposed as an unfair business practice, mostly for the purpose of devaluing streaming video services such as Netflix and Amazon prime to boost their cable-TV sales and prevent cord-cutters like myself. Additionally, they require those customers who exceed the bandwidth cap (like myself due to watching streaming video) to pay for the excess use which amounts to a penalty for not using their cable-TV service.

---

**Ticket: # 742285 - T-Mobile BingeOn Deception**

**Date:** 1/7/2016 2:31:33 PM

**City/State/Zip:** Windsor, Colorado 80528

**Company Complaining About:** T Mobile

---

## **Description**

My complaint is two-parted:

1. T-Mobile introduced its BingeOn feature as a benefit to those subscribers with limited (capped) data plans. This feature admittedly does not offer any benefit to those with "unlimited" mobile data plans, such as myself. Despite knowing this, T-Mobile enabled the BingeOn feature on all subscribers, even those like myself who already pay a considerable amount more for "unlimited" mobile data. I was unaware that this feature had been added to my account. I find it unacceptable that this feature, as well as several so-called "privacy" and "advertising" features had been not only added to my account, but were default opt-out instead of opt-in. Despite John Legere's defensive claims in past days, it stands that these "features" and their default configurations benefit T-Mobile exclusively, not consumers.

2. The BingeOn feature has directly resulted in months of poor video playback, buffering, stream disconnects, poor bitrates, and slow download speeds of video content on my mobile device. Services like YouTube were barely usable in this state. I only recently discovered that this was the direct result of the BingeOn feature, as in recent headlines via the Electronic Frontier Foundation I learned that T-Mobile's BingeOn does not "optimize" anything at all; it simply applies a bandwidth throttle to specific types of traffic, namely video traffic, regardless of source, destination, or so-called "participation" in the BingeOn program as outlined on T-Mobile's website. Once disabling BingeOn, I no longer experience any of the above symptoms, and the user experience is once again what I expect from my "unlimited" data service.

This proves services like BingeOn negatively impact how consumers access the Internet and use technology. We already see this paradoxical logic being employed by cable and wireline ISPs who argue there is no consumer demand for gigabit Internet. By T-Mobile's logic, why should consumers spend extra money on a 1080p or 4k capable device when ALL video streaming is being reduced to 480p? In years coming, why should anyone upgrade their networks if "there's no demand" \*(because data caps and throttling schemes)?

In conclusion, BingeOn is far from the worst thing to happen to Net Neutrality, but it's a slippery slope and the patterns of abuse are quite evident, which should draw the attention of the FCC. The other real issue here is that T-Mobile has done a terrible job of informing its customers in an up front, direct manner just what the BingeOn service does and how it works, and by auto-enrolling all subscribers, has guaranteed that most of its subscribers will never fully know what it is they've been signed up for.

## **Description**

Military family screwed over by COMCAST. We have been with them since late April of 2015. No issues, no overages, nothing out of the ordinary until the Fall. They claim we have gone way over our data cap (300GB) and have used up our 3 courtesies. The worst of all the data problems was in the month of December. We were out of town from December 19-January 2 and SOMEHOW during that time our usage went up to 832GB being used. I checked the MAC addresses of every device in our home against the list of ones on the modems history of usage; they were all our own devices-all of which have been UNPLUGGED and TURNED OFF while we were out of town. Sounds fishy. When we got home from our trip on the 2nd, somehow the data usage meter said we had used 265GB of data IN ONE DAY. We weren't even home. But they said our modem says that there were downloads happening. How can that happen without a trace of any device being used during that time? Comcast is our ONLY internet option in my neighborhood so we are put in a VERY bad spot. Do we "give in" and pay the extra \$30 for unlimited data that we feel we are being bullied into, or can the FCC stop them from screwing their customers over-especially is military who have a harder time with moving as it is.

**Ticket: # 743340 - Data caps tied to speeds - improperly double dipping****Date:** 1/7/2016 8:40:25 PM**City/State/Zip:** Seattle, Washington 98101**Company Complaining About:** Wave Broadband

---

**Description**

I have Internet only service from Wave Broadband in the Seattle area. Wave has placed a 100 GB (combined down+up) limit on their 5 Mbps, \$39.95, tier of service but arbitrarily increases those limits to 300 GB with at the 55 Mbps, \$59.95, service with no tiers of speed in between. They charge \$5/25 Gb over your cap, this brings the 200 additional gigabytes included with the \$20 increase in service speed to \$40; an entirely unfair billing practice that pushes customers into speeds that they may not need to pad Wave's bottom line. Furthermore, Wave pushes Data allotment upgrade plans which don't over-charge but instead "allow" customers to pre-buy increased data caps that they may not even use with no way to recoup that cost. Wave is clearly double dipping in their billing practice by charging subscriptions for both speed and data transfer allotment.

Wave states that they "ask that customers who contribute far more to network congestion also contribute a bit more to the cost of managing and upgrading those networks." This statement is completely disingenuous as we're already paying more (or less) for our billed speeds and capping total transfer a month does nothing to alleviate congestion as congestion is 100% related to Wave overselling their capacity.

This is even more financially advantageous to Wave as wave also sells television service and, in addition to providing discounts on internet service to people who bundle TV, a very low data cap (100 GB) or even a moderately low cap (300 GB as included with the 55 and 100 Mbps service) unfairly penalizes cord-cutters who've made the decision not vote with their wallets and not support the traditional broadcast television industry. Wave's fee structure of charging for both speed and data transfer is clearly an unfair practice that violates the spirit of the net neutrality order and unfairly punishes "cord cutter" customers.

**City/State/Zip:** Johnston, Iowa 50131

**Company Complaining About:** Mediacom

---

## **Description**

I pay a lot for Internet from Mediacom Cable Company (with cable TV I am over 200 dollars a month), and I have to dole it out like gold to my children to avoid overages. I have talked with reps from the company and they say that the caps only affect a small percentage of customers. Well, I have 2 adults and 2 children in my household, what I consider average, and by the end of the month I am telling the kids (8 and 11) that they can't get on the Internet and I am blocking access to their devices with the router so we don't go over. I have already moved up one tier and that gets us 350gb a month (the next tier costs almost \$100 a month for just Internet and is still capped which I find unacceptable and I refuse to pay them that much). This is almost like the battery anxiety they talk about with people who have electric cars. Please help by addressing the data cap issue. Most cable companies have claimed net congestion but it has been leaked that it has nothing to do with that so that just means they are using it as a way to penalize customers financially and keep people from using services like Netflix and Hulu. Thank you.

---

**Ticket: # 743837 - Comcast Data Cap abuse of power and illegal**

**Date:** 1/8/2016 11:13:10 AM

**City/State/Zip:** Franklin, Tennessee 37069

**Company Complaining About:** Comcast

---

**Description**

I am a Comcast customer. As I'm sure you're aware, they are rolling out a new policy, whereby a household is now limited to 300G of data per month--after which the customer is charge \$10 per month additional for each 50G block of data used. I am BEGGING the FCC to take control of this situation and issue a cease-and-desist action against Comcast for this abuse of internet control.

First off, this change is being made without the consent of customers -- who already have a binding agreement with Comcast which is based upon a certain price for internet and television with NO CAP OR OVERAGE CLAUSE INCLUDED.

Secondly, it is widely known that this is a thinly veiled monopolistic move by Comcast to punish subscribers for using Netflix streaming services. It is well known that Netflix is a competitor and that people watching Netflix programs via the Comcast internet connection are making a viewing choice to elect to watch programs via their subscription to Netflix. Comcast is abusing it's internet-provider position, to force people to move away from Netflix use or suffer the consequences. Netflix competes with Comcast's own pay-for-view services. Comcast is trying to force users to buy television programs through them -- which, by the way are so ridiculously and obscenely priced that they are not even logically affordable. Who would pay \$3 to Comcast to watch a 30-minute episode of Modern Family or some other sitcom?

Thirdly, the level they have chosen for their data cap is unjustifiably LOW. 300G for a family of 4 in a house in the year 2015 is absurd. IF -- and I repeat IF -- they and other companies are allowed to charge extra to people or users that are using too much bandwidth to make things fair to all customers, then that cap should deal more with the exception and not the NORM. 5,000 G for example. But we pay Comcast for our internet and data usage -- which until recently had no cap on it. Now that we have a 300 G cap, we have realized exactly how much data various internet uses require (or at least are getting more savvy about it). We as a family literally have to monitor our use, pinch our pennies as it were, and refrain from watching more than ONE Netflix show per day, and watching too many videos on YouTube, etc just to make sure we don't exceed 300 Gigs of data per month. We are paying PREMIUM PRICES for internet service and cable through TV... and are not even able to use the internet to a reasonable degree anymore.

If someone wants to binge watch Netflix all weekend long -- something we'd never dream of doing anyway -- or research and enjoy tons of videos on YouTube and such... that should be their prerogative without having to shell out additional funds to Comcast for the right to do so.

This is a clear use of internet control and abuse of power. Abuse of a monopoly. It infringes upon my rights. I couldn't be any angrier at this. And I am extremely disappointed that the FCC has allowed Comcast to get away with this.

PLEASE STEP IN AND END THIS IMMEDIATELY.

Thank you.

**Company Complaining About:** Comcast

---

**Description**

Comcast has, without my knowledge or permission, imposed a data cap of 300 GB per month on my data usage. This arbitrary limit seems to be a way to punish those who choose to get their TV programming through streaming services (i.e. NetFlix, Hulu, Amazon, etc.), and not get it through Comcast's traditional cable services. This practice is anti-competitive, and thus further solidifies Comcast as a monopoly.

**City/State/Zip:** White House, Tennessee 37188

**Company Complaining About:** Comcast

---

## **Description**

I signed up with Comcast at the end of October 2015. In my first month I used 200gb of data followed by 446 in November. I am now 10 days into January and am showing 200gb. I was originally surprised in November when I went over because I was never made aware of a data cap despite calling a representative and asking multiple questions before signing up. I called to complain and was told this was a large amount of data for a family of 3, one of which is 7, and it doesn't seem appropriate. They believed this was some sort of anomaly and they were sure this would not occur again. I was also told that a supervisor would contact me in 24 to 72 hour to further assist me. When he called 2 weeks later he also agreed that this was an unusual amount and informed me that I was already at 200gb for January. Despite this I was told the only thing I could do was to sign up for the unlimited data plan for an extra 35 dollars a month. I was not happy with this solution and asked that they either fix the problem or add me to the unlimited data plan at no extra cost. I was told that they could not restructure their entire package plans for one customer or they would have to do it for everyone. The phone call was ended with the option to either pay the extra for unlimited data or pay the overages. All this despite the fact that the representative agreed that it would be very difficult for a family of three to consume that much data. Does not seem to be an appropriate response

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 747173 - Data caps from Comcast**

**Date:** 1/10/2016 11:52:50 PM

**City/State/Zip:** Nashville, Tennessee 37211

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently said that their data caps are needed due to their network being unable to handle the traffic. If that is the case, then they have been doing a bait and switch. If their network can't handle extra data, then they shouldn't say it can. If the network can handle the data, then no data caps are needed. This is just an excuse to screw over their customers even further (look for further than the fact that Comcast's media doesn't go against the data cap) and hold back Net Neutrality. Please do something about this abuse of their power. I do not wish to give my account number since Comcast will retaliate against me.

**Ticket: # 747668 - Comcast Data Caps****Date:** 1/11/2016 1:09:46 PM**City/State/Zip:** Tucson, Arizona 85737**Company Complaining About:** Comcast

---

**Description**

Comcast recently implemented data caps in my area. The current cap is 350GB for my home network. They charge \$10 for each 50GB over the 350GB limit. This is a huge problem for our household. We stream Netflix, play online games, and browse the internet frequently. This means that we hit the 350GB limit every month. We are now being charged more for the exact same service as before.

Data and bandwidth are two separate entities. There is no reason why data should be limited for home internet. It is simply a way for Comcast to charge more for the same service. I'm paying for speed, not for data so it is illogical for Comcast to suddenly start charging for data. I also have to trust that their system is monitoring my data usage correctly as they provide almost no feedback about how my data is being used. I want to be clear though, I don't want them to provide this information. They shouldn't be monitoring my data usage to begin with.

The biggest issue here is lack of competition. For the internet speed I require, there are no alternatives to Comcast in my area. As a consumer, I have no power against them. I cannot shop around and find the best deal and Comcast has no reason to innovate or put the customer's interests first. They can effectively charge whatever they want and I have to pay if I want internet access. Restrictions on internet provider coverage areas need to be lifted, and more competition needs to take place. We are on a slippery slope and Comcast will continue to take advantage of the lack of competition if nothing is done about this.

**Ticket: # 747790 - COMCAST DATA CAPS**

**Date:** 1/11/2016 1:49:25 PM

**City/State/Zip:** Miami, Florida 33157

**Company Complaining About:** Comcast

---

## **Description**

When I signed up for my internet plan with Comcast I researched that in Miami there was NOT a data cap. I was told of the market "trials" in some southern markets but definitely not Miami. Two months into my plan they imposed a 300GB/month cap. This is not what I signed up for and since it was implemented so soon after I signed they must have had plans in place for some time previous. I was deceived, flat out lied to! I get internet only...I'm a cable cord cutter. This cap appears to insure Comcast will get more money on overages from my streaming services, Netflix and Amazon. When 4K movies are more common and one movie requires 8-12 GB to download, how fast will customers reach that 300GB cap? I've kept my usage in check so far by using the T-Mobile no data restriction on streaming and casting but this is not what I signed up for, to be deceived and used as a money maker for a company with questionable social values.

**Date:** 1/12/2016 1:35:01 PM

**City/State/Zip:** Mobile, Alabama 36619

**Company Complaining About:** Comcast

---

## **Description**

Comcast's ongoing practice of fighting net neutrality and use of regional monopoly status is unfair to customers. Internet should be regulated as a common carrier service. Their recent 300GB/month data cap is blatantly designed to punish "cable cutters" who stream their media. The sad fact is that no matter how you slice it, you're going to pay them about \$140/month, whether it's as a loyal triple play customer watching the on-demand service, or as a cable cutter who's forced to pay exorbitant fees for 'over using' commonplace services which are clearly in business competition with Comcast.

**Date:** 1/12/2016 8:10:01 PM

**City/State/Zip:** Franklin, Tennessee 37064

**Company Complaining About:** Comcast

---

## **Description**

I am writing to complain about the completely ridiculous Comcast practice of imposing a "data cap" on it's customers and charging them extra for exceeding 300GB per month. The reality of the situation is that this is almost sheer profit for them and they are doing it only because our regulatory agencies and congressmen allow it to happen. I believe this practice also stifles the options of "cord cutters" and the competition alike as Comcast's limits on data usage can severely impact those customers that choose to go the internet only route and stream services such as Netflix, Hulu, Amazon Prime, etc. as their primary source of content as opposed to regular TV.

The digital cable signal that comes into my house is in fact "data" as well, it is simply processed through a different box other than the cable modem and Comcast classifies it as something else when in fact they are fundamentally the same. Why can I leave my television on 24/7 all the while consuming a digital cable signal, aka "data", and not get any additional charges for overconsumption of my "tv data" but they can charge me extra for "internet data"?

This is complete B.S. and this practice needs to come to an end.

**Description**

This is a re-submission of my complaint that I recently filed today (751083). I incorrectly categorized the complaint in Billing when I should have filed it in Net Neutrality. Thank you for your understanding!

I am writing to you to submit a complaint against Comcast and the implementation of a data cap (300GB/month) in the market here in Savannah, GA.

My wife and I don't use the internet all that often. We don't do any online gaming, we don't stream in HD. We watch the occasional TV show from our Apple TV as so many other people do these days. Even with our mild internet usage, the last few months we cannot seem to avoid going over the cap. We initially signed up for 50mgps plan with Comcast and that is all we really needed. We would typically use between 200-250GB/month. But in August 2015, Comcast gave us a "complimentary" upgrade to their 150mgps plan (bills attached to verify plan change) without any notification or even giving us the option to approve the "upgrade". The next month, with no changes in our internet usage whatsoever, we consumed almost 600GB of data. When I spoke with Comcast, the representative assured me the increase in bandwidth allowance would not increase data usage and to a point, they are true. But what they fail to explain is that because of the increase in allowance, less IPs are kicked off because there is more room for them to operate all at once and there is less wait time for downloads/videos...etc which results in a customer being able to watch a couple more videos/hour or load several more pages/hr and maybe stream music simultaneously. There is absolutely a connection between data allowance and data consumption and I feel that Comcast beats around the bush when it comes to this topic. Luckily, getting back to the point, we still had a couple of grace overages that Comcast gives, but since then we have paid overage fees every month without ANY change in our actual internet usage! Comcast's Data-Cap policy doesn't even extend to all of its markets. Savannah and a handful of markets are just in its test markets. With this being a test, I feel that Comcast should not be footing the bill for its learning curve to its customers. Internet usage is at an all-time high and it's not getting any less by the day. Comcast has cornered the market in Savannah for internet usage and I feel that the company is taking advantage of its customers in more ways than one. I feel the Cap should be removed indefinitely and data-caps should be limited to Cellular Data consumption and not be implemented into home internet usage.

[Ticket: # 752176 - Comcast data cap](#)

**Date:** 1/13/2016 1:25:59 PM

**City/State/Zip:** Oro Valley, Arizona 85755

**Company Complaining About:** Comcast

---

## **Description**

Comcast data cap of 300GB per month is restricting how much television my family can watch and quality of streaming television. My family watches TV on demand not only through Netflix, but also Amazon, Hulu, Youtube, etc. I consistently hit the cap every month and have to limit television for the last week of every month. This also restricts how much data I can back up to the cloud, considering I have 2 terabytes of family photos and videos. I would even be okay paying a little bit more if Comcast gave me an option to choose how much data I can use.

Comcast is actively restricting developing internet technologies for cloud backups and streaming media. This must be stopped considering how much market share Comcast has across the country.

**Ticket: # 752525 - Comcast Data Cap**

**Date:** 1/13/2016 3:15:29 PM

**City/State/Zip:** Savannah, Georgia 31411

**Company Complaining About:** Comcast

---

## **Description**

Considering that Comcast's fees for TV and Internet are exorbitant to say the least (when compared to the likes of Google Fiber and EPB), my family has decided to move to streaming only (Amazon Fire TV, Sling TV, Netflix etc). Comcast has decided to put in place their 300GB data cap for no real reason other than to nickel and dime its customers for using the service that they pay for. This is simply unacceptable. With the new powers in place for the FCC to use, I implore you to take steps to rid us of this blight.

---

### **Description**

COX internet has internet data caps. I would like to file an official complain about it. As far as I understand no internet service provider is allowed to impose such caps. Now, they charge \$10 for every 50GB after data cap is reached

---

**Ticket: # 753212 - Comcast Data Cap****Date:** 1/13/2016 6:49:06 PM**City/State/Zip:** Johnson City, Tennessee 37604**Company Complaining About:** Comcast

---

**Description**

Dear Sir or Madam,

I am a Comcast customer in Johnson City, Tennessee. I have no other option for high-speed internet. They recently sent me a letter stating that they would be implementing a 300 GB a month data cap on Dec 1. Overages will be charged at 10\$ per block of 50 GB over the 300 GB limit. This will not be pro-rated or rolled over per month if I don't use the entirety of the 50 GB block; meaning even a 1 byte overage will result in a 10\$ charge. These overage charges are not based on the time the usage occurs, suggesting that they are not tied to network congestion or management problems. In fact, no reason was given in the letter as to why these caps and charges are being implemented. I will now have to pay an extra 35\$ a month to retain the unlimited data service I have been receiving. This is a forced change that I have no way to contest or reconcile. Even more concerning, the letter states that they will be sending an "in-browser" notification when you reach certain thresholds of the data cap. It is my understanding that Comcast would be forcing me to install a browser plugin to receive this message, or use packet injection. The possible use of packet injection raises large privacy and security concerns for me, as any of the data I send or receive may be intercepted and / or modified. All of this goes against the principles of net neutrality and having a free and open internet. The way the data caps and overage charges are being implemented amounts to extortion of the consumer. Thank-you for taking the time to investigate this matter.

Sincerely,

**(b) (6)**

**Ticket: # 753708 - Comcast Data Cap**

**Date:** 1/14/2016 9:32:15 AM

**City/State/Zip:** Charleston, South Carolina 29464

**Company Complaining About:** Comcast

---

**Description**

Comcast has implemented a Data Cap of 300 GB on my account. It was not in place when I signed up and now I'm getting threatened with extra charges on my account unless I pay a 30-35 dollar a month fee for unlimited Data.

The tools don't give any detailed explanation of Data usage. It says I've used 300 GB data in the last 2 weeks which is more than I used last month.

Data Caps should be removed and the removal enforced by the FCC. I generally don't even watch 1 hour of TV nor download much on a daily basis. I have no idea how 300GB's has been used in 2 weeks.

**Ticket: # 753719 - Comcast Data Caps**

**Date:** 1/14/2016 9:52:18 AM

**City/State/Zip:** Knoxville, Tennessee 37909

**Company Complaining About:** Comcast

---

## **Description**

How are the Comcast Data Caps that is currently set in place within the State of Tennessee legal? Under what grounds can they charge you for going over something that virtually cost them nothing? If another ISP or google fiber was available Comcast would surely suffer. With the lack of competition, Comcast is essentially gouging consumers. How will the FCC handle this misconduct? This would also undoubtedly affect net neutrality

---

**Ticket: # 753841 - Low data cap for no reason**

**Date:** 1/14/2016 11:38:05 AM

**City/State/Zip:** Oberlin, Ohio 44074

**Company Complaining About:** Armstrong. [Http://armstrongonewire.com](http://armstrongonewire.com)

---

## **Description**

Hello,

Armstrong has imposed a data cap for their customers. For most this can be seen as monopolistic as they normally service areas with no competition. With the Internet being a vital and required service this should not be the case, caps should not exist.

The fact that I can buy additional services (TV, Phone) from them which will then increase my data cap is not fair and is taking advantage/price gouging.

When you couple limited broadband competition with a strong desire to protect a legacy video distribution business, you have both the means and motivation to engage in anti-competitive behavior.

The traditional method of pay TV watched at home is not at all current with today's technology or thinking. Streaming is the future and forcing customers to pay more for additional data, having a data cap at all, or forcing customers to bundle to get more data is ludicrous.

If they were over-saturated and could not afford additional infrastructure or bandwidth, then I could see them having to institute some sort of temporary cap or temporary throttling until they resolved the issue. But that is not the case. This is a pure greed move with no benefit to the customer. Instead they are nickel and diming people with limited or no other alternative options in their area. All the while sitting on enough bandwidth and infrastructure to survive without having the data cap.

As the FCC you have the responsibility of making sure ISPs are not abusing their customers. Armstrong and Comcast most certainly are abusing their customers with these outdated practices. I should not be punished for using the internet how I choose (which in this case does not line up with how they want me to use it) when their infrastructure clearly can handle the load.

Now for the end aka what I am looking to get out of this complaint.

I would like Armstrong to either waive the data cap for my specific address, or provide a higher data cap without a price/package increase. As I stated earlier there is no possible way a data cap is needed for my address considering the low population and the high percentage of the area being farms.

I feel that is fair considering the other ISP that we had previous to Armstrong DID NOT have a data cap at all.

If nothing can be worked out that does not require a price or package increase, I do not see us staying with Armstrong past the promotional period.

I really hate to file a complaint so early on after signing up for service. And normally do not call in for support, in this case after having an ISP for 4 years that had NO DATA CAP whatsoever this is shocking that this practice is allowed to take place in the United States. But I guess money talks.

Thanks,

(b) (6)

**City/State/Zip:** Arlington, Tennessee 38002

**Company Complaining About:** Comcast

---

## **Description**

First of all, it has taken me almost an hour to even get to this point, where I could type in the complaint. Why? Because I have Comcast. Not only do I have Comcast, but due to fraud and massive bribes paid to criminals they are the ONLY choice for internet I have.

First of all, I can only barely access the internet, with speeds so slow that they make the old AOL on 56k modem seems blazing fast. I pay for far more than that, but rarely, if ever, get even close. The only time my speed approaches what I pay for is at one of the various speed test sites. Those Comcast does not illegally throttle.

Second, it is impossible to expect comcast to do anything to actually fix their worthless, overpriced service. On numerous occasions, I have had to climb the utility pole to fix their service issues.

Third is their fraudulent data cap, which was put in place solely to skirt net neutrality rulings and punish those who ditch their equally horrid TV service.

**Company Complaining About:** Comcast

---

## **Description**

I think that it is very unfair that comcast installed a data cap in my area. Nowadays all the kids do is go on netflix and surf the internet. My average data usage would on average be at least 800gb per month and comcast obviously has knowledge of this. Of course they would try to cash in by giving unlimited data for \$30 more a month. Thats bogus and incredibly shady business ethics. When I called and tried to complain they said that "This is going to be implemented everywhere soon" I hate the service and its completely unfair that it pretty much has a monopoly where I live. I am definitely going to raise awareness about this issue. I will consult with an attorney over the legal possibilities. This greedy monopoly has to stop.

---

**Ticket: # 756607 - Internet Data Caps****Date:** 1/15/2016 4:02:21 PM**City/State/Zip:** Boise, Idaho 83703**Company Complaining About:** Cable One

---

**Description**

A few months ago, I signed up for an internet promotion through Cable One. The promotion offered 100 MBPS download speed for \$35/mo. for the first 3 mo. then the price increases to approx. \$55/mo. I have started getting notifications (one of which I have never received) from them stating that I have been exceeding my 300 MBPS data cap allowed per month. I don't have tv services through them and only use the internet to stream movies from such sources as Netflix, etc. I was never informed of data caps for the internet! Cable One has indicated that if my usage, which isn't extreme being that I am the the only one using the internet doesn't decrease to within the 300 MBPS it will either be canceled or bumped into a higher, more expensive plan. I signed up with a plan I can afford and had I known there was a data cap, I would not have signed up. I feel their promotions are very misleading and lack transparency. I have never received the 100MBPS speed when I have checked. It should be more clearly stated that this is a speed that it CAN go up to but most times, it will not. The internet should not have caps!! It is merely a sneaky way for these companies to be able to charge more to those of us who don't want traditional cable/satellite tv services due to their extreme expense! Additionally, too many of these giant corporations are buying out their competitors so we the consumers have less choices and are forced into their ridiculous rates and plans. There needs to be more oversight over these companies!!

---

## **Description**

Being someone who uses the computer to communicate a lot, as well as an Avid gamer. I upload gaming videos to sites like youtube or stream to twitch. With the data cap of 300GB it's impossible for me to do anything, a game I buy from the console's store is more than 20-30Gb a game, That's already almost 1/6th of the cap. And then Comcast claims they do not throttle the internet after reaching the cap, but simple things like loading a site, or attempt to play a game online. I experience an utter amount of lag. My videos stutter, attempting to load every few seconds, And everything I tend to do daily lag or stutter free, when I hit the cap everything noticeably slow down.

**Company Complaining About:** Comcast

---

## **Description**

Comcast has enacted a 300GB a month data cap in 8 new cities as of December 2015. I am lucky that I do not live in one of those areas. But, the time will come when data caps are enabled for every Comcast customer. I can easily go over 1.5TB of data a month. The internet service price is already expensive, it's not right to restrict everyone to a data cap. Comcast states an average of it's users use only 40GB a month. Weather that is true or not, those people are getting ripped off for paying \$80 a month and only using that much. I find it hard to believe. Streaming netflix for 1 hour is almost 1.2GB of data. Watch a few movies or TV shows and you've easily hit your 300GB monthly data cap. That is only Netflix alone, Youtube has a ton of HD content uploaded every minute. Everything is done online now, banking, communications, video chat, watching shows, listening to music. Soon 4K content will be as normal as 1080p HD is. Saturday Night Live said they will start filming in 4K and that 1 hour of video footage is over 80GB. We pay for FAST HIGH SPEED internet, why? So we can hit our monthly data caps faster each month? It's stealing from people every MB you download! Please do something before it gets out of hand!! Many people only have 1 choice of internet and TV providers in their area, so they are stuck, no freedom of choice for whom to use as a monthly service.

---

**Ticket: # 757854 - Data Throttling - Comcast Violation Net Neutrality Rules**

**Date:** 1/16/2016 3:05:09 PM

**City/State/Zip:** Richmond, Virginia 23234

**Company Complaining About:** Comcast

---

**Description**

(b) (6)

Richmond, VA 23234

(b) (6)

January 16, 2016

FCC Representative:

I am writing this letter in regard to the ongoing throttling of my video and data streams from Comcast. It is important to understand this complaint is based on solid EMPIRICAL EVIDENCE taken from real-time data stream measurements.

The attached documents to support my claims are as follows:

- 1) Comcast Service Contract – Blast 150 mbps.
- 2) Data Usage Oct. 2015
- 3) Data Usage Nov. 2016
- 4) Data Usage Dec. 2015
- 5) Multiple Download Speed Test (Ookla) Performance
- 6) Speed During Video Streaming
- 7) Netflix Stream Speed
- 8) YouTube Stream Speed
- 9) Download Speed – Film

Current System:

- HP Pavilion 1045 (2011)
- Comcast Modem Arris –TG 1682G
- Netgear Router R 6300 (Dual Band-Hardwired))
- Samsung Galaxy Note 10.1 (2012)
- Chromecast 2 (Hardwired)

History:

I have had four Comcast service reps evaluate my system from incoming signal to the devices. Each has confirmed there are no issues with the incoming signal or my Current System. Note: Every

network suffers from periodic congestion, but these data suggest the data degradation is determined and deliberate.

## Media/Lab Reports – Data Throttling

Stop Throttling by your Internet Provider

<http://www.vpntopten.com/how-to/stop-throttling-by-your-internet-provider>

Major internet providers slowing traffic speeds for thousands across US

<http://www.theguardian.com/technology/2015/jun/22/major-internet-providers-slowing-traffic-speeds>

New Opportunities for Test Deployment and Continued Analysis of Interconnection Performance (Study – M Lab)

[http://www.measurementlab.net/blog/interconnection\\_and\\_measurement\\_update](http://www.measurementlab.net/blog/interconnection_and_measurement_update)

Comcast admits its 300GB data cap serves no technical purpose

<http://bgr.com/2015/08/16/comcast-data-caps-300-gb/>

## Analysis:

- My contracted speed with Comcast is 150 mbps.
- That speed continuously degrades to 50-60 mbps in successive speed tests, so they are not providing the most basic service consistently.
- With respect to video streaming, the stream speeds are from .3-2.5 mbps maximum.
- Netflix speeds are consistently less than 1 mbps.
- YouTube speed are .5 or less with regular stream literally stopping, making You Tube virtually unusable.
- Film Download speeds are 1.1-5.0 (spike) requiring a 2 hour download time for a movie.

## FCC Net Neutrality:

FCC Net Neutrality Rules stipulate that all data traffic on a network **MUST** be treated equally. Therefore, Comcast based on the real-time data is in direct **VIOLATION** of Net Neutrality Regulations and in **VIOLATION** of my service contract vis-a-vie Internet Speed Performance.

It must be noted that the issue which must be clarified is the difference between Internet Speeds ads determined by speed tests, and the Functional Internet Speed – defined as the speed measured during usage on a website!!!!!!

I am requesting the FCC open a case on my behalf to investigate Comcast for deliberate violation of FCC Net Neutrality Rules and **CONSUMER FRAUD**, by not providing service as contracted.

Respectfully,

(b) (6) [Redacted]

**Ticket: # 758070 - Comcast Data Cap**

**Date:** 1/16/2016 6:12:54 PM

**City/State/Zip:** North Charleston, South Carolina 29406

**Company Complaining About:** Comcast

---

**Description**

Comcast recently (i found out it happened in Oct, but i just found out the information today 16Jan16) that there is now a 300gp data cap on the internet service they provide. That is completely unacceptable to place a cap on something that will only increase the price (30 extra dollars to an already high bill, or \$10 for every 50gb you go over) of an already high bill! Now, the problem is, as my wife is a stay at home wife, she used the internet quite a bit, plus i play games, stream videos, and do work on the internet, this simply increases my bill to an unfair amount.

I called comcast to get an explanation and was told that they can change this at any time without my consent! I have their paperwork and we choice them due to the fact they didn't have a data cap! This is completely pro-consumer price gouging. It's not secret that comcast wishes to shut down open internet which in turn shuts down open ideas and learning.

If they state I was informed, that is a lie. I was not. No paper work was sent to my house, my email to my comcast email nor personal email. Nothing.

Also, when receiving "Alerts (if they can be called that)" about going over the data cap, I was given a screen that stated my data limit was 90% to max, and extra charges would apply. The thing is, it has a 24hr delay! Even if i agree with this cap, which I don't, that's too little amount of time!

For comparison on how this isn't fair, a simply ps4/pc game when downloaded is ~50gb! Download a few games, watch some hulu/netflix, do some business, surf the web and BAM extra charges, a complete bill-shock!

**Ticket: # 758354 - Comcast Data Usage****Date:** 1/17/2016 8:15:23 AM**City/State/Zip:** Hermitage, Tennessee 37076**Company Complaining About:** Comcast

---

**Description**

Yesterday while out of town I signed in to my Comcast account to check status of data usage. Having been very close to data cap last month I am curious and closely monitoring day by day this month to try to determine actual usage. My month to date usage was 51 GB. We got home around 8 pm last night. Watched the ball game on cable tv and played around on iPad for about an hour. This morning I checked data usage again and it shows 53 GB used. I honestly cannot see how we used 2GB in 2 hours without any streaming video. Our average daily total for the first half of the month has been 3GB a day. I do not feel that Comcast fairly and accurately measures data usage. Unfortunately Comcast is the only cable internet provider in my area or I would not have selected a company that implements a data usage limit.

**City/State/Zip:** Alpharetta, Georgia 30005

**Company Complaining About:** Comcast

---

## **Description**

Comcast now put data caps forcing you to buy data in bundles of 50gbs and then keeping the rest of data when month ends. If I exceed my 300 gbs on 30th day and need one more GB I pay for 50 to loose all in a few hours? Also if I don't use my data of 300 gbs last 6 months, should you not roll it over for few month? Price gouge. This should be banned specially in areas where Comcast has a monopoly.

---

**Ticket: # 758448 - Internet Data Caps & Open Internet**

**Date:** 1/17/2016 1:36:03 PM

**City/State/Zip:** Boise, Idaho 83709

**Company Complaining About:** Cable One

---

## **Description**

"Recently, Cableone in Idaho, and across the nation based on the complaints i read about, has enacted "data caps" and is coercing customers into DOUBLING their internet fees due to."over usage."

The internet has completely become unaffordable to millions of citizens due to this price gouging. I am having to cancel my broadband service in order to avoid paying \$100+ per month.

Cableone is violating the spirit of the Net Neutrality decision by increasing internet fees on the average household for "excessive internet use" which, in their interpretation, is around 4 hours of use per day in a household of 5 people with multiple connected devices.

The People don't have the power to correct this. We must rely on the Federal Government to enforce broadband as a public utility.

---

**Ticket: # 758549 - Comcast data caps**

**Date:** 1/17/2016 3:54:29 PM

**City/State/Zip:** Coconut Creek, Florida 33073

**Company Complaining About:** Comcast

---

## **Description**

I'm in one of the "trial markets" for Comcast's latest cash grab, data caps. All this practice does is discourage me from using any internet service that Comcast doesn't provide in my home. I have three people in my household with smart phones and we use some streaming services for my toddler. I've always considered our usage normal. I have exceeded this 300gb cap by 100gb each month. I have no way of actually knowing if Comcast is measuring my usage correctly. I just have to take the word of the crooks that changed my terms of service because they wanted to.

This is certainly not promoting competition, innovation and investment in broadband services and facilities

---

**Ticket: # 758700 - Suddenlink and unfair data caps**

**Date:** 1/17/2016 7:33:56 PM

**City/State/Zip:** Buckhannon, West Virginia 26201

**Company Complaining About:** Sudden Link

---

## **Description**

Several months ago suddenlink implemented data caps, essentially forcing me to upgrade to a higher bandwidth plan to accommodate my data usage. Even after upgrading to the highest plan available (100 mpbs and 450 GB of data) I've consistently went over in data usage incurring a further \$10 charge. This brings my total bill to \$88. I had previously been paying \$60 per month. I do not subscribe to cable TV service and choose only to use streaming media services. It seems as though I am being punished for my method of media consumption.

I am not alone in what suddenlink believes is an over consumption of data. More than half of all the people I work with in the IT department at West Virginia Wesleyan college have the same issues with exceeding their monthly data caps. It's important to note that one colleague, who drives 30 minutes from Clarksburg, WV to work is able to have choice of cable / internet providers and does not have data caps imposed. He was able to choose another provider, something we do not have the freedom to do in Buckhannon.

Though not confirmed, I understand that 2 hours away from where I live in the Charleston, WV region, Suddenlink does not impose data caps. If this is indeed true, I find it troubling that the same company punishes an entire region of the state for using what is essentially an unlimited commodity.

450 Gb of data is about 2% of the potential data usage per month I have with the 100mbps connection I pay for. It should also be mentioned that data usage is calculated with a non itemized or categorized vague progress bar style chart (see attachment). I have no way of knowing if suddenlink's calculation is accurate. It is also unmentioned that my upload data also counts into this calculation.

I don't believe it is necessary for Suddenlink to have data caps. If there is no way around it, though, they should at least be fair to ALL customers. Not just a select few who do not use the potential of their connection or subscribe to suddenlink cable tv service.

**Ticket: # 758928 - Comcast data caps**

**Date:** 1/18/2016 1:28:58 AM

**City/State/Zip:** Coconut Creek, Florida 33063

**Company Complaining About:** Comcast

---

## **Description**

As you are, i'm sure, aware of the data caps being implemented by comcast as a part of a "trial" program...please take the time to investigate how this practice can possibly be ethical and "neutral" for every comcast internet consumer. Comcast is implementing this in order to make financial gains (<https://bgr.com/2015/08/16/comcast-data-caps-300-gb/>). Many consumers use HD streaming services (myself included) such as netflix and hulu as a way to practice our own freedom to be in control of what we would like to watch (and already pay for those services) at the cost of eating up bandwidth. It's clear that comcast is trying to find a way to financially benefit from this being that their TV based subscribers are dropping (<http://time.com/3845271/comcast-internet-tv-subscribers/>).

Please help us consumers:

<https://www.yahoo.com/tech/s/leaked-comcast-docs-prove-300gb-data-cap-nothing-003027574.html?nf=1>

**Ticket: # 758995 - Data caps and lack of access**

**Date:** 1/18/2016 7:37:23 AM

**City/State/Zip:** New Springfield, Ohio 44443

**Company Complaining About:** Armstrong Cable

---

## **Description**

I am stuck at the mercy of Armstrong Cable. They are my only option for Internet service where I live, yet their constant changes in service and increasing costs are unbearable. When I signed up for service, I was given unlimited access for \$40/month. Within two months, they added data caps, which are much lower with internet only, as opposed to internet with tv. Essentially, I am being punished by Armstrong for refusing their other extraordinarily expensive service that is bloated with "filler" stations that I have no interest in, yet am forced to pay for in order to get a handful of channels I do watch. Although I am unhappy with this, I am trapped into it, since cable companies don't compete with each other and there are no other options at my address. This lack of competition had caused my bill to increase by 50% over a 12 month period, and has led to a number of overage charges because of Armstrong's arbitrary limits. More recently, they have stopped informing me when limits are being reached as well. I don't understand how this company can continue to charge excessively for a service that is subpar when compared others in the country, and even more so abroad. My only options are to pay whatever insane price they charge or move. There needs to be a better solution.

---

**Ticket: # 759030 - Data Cap Limit**

**Date:** 1/18/2016 10:00:33 AM

**City/State/Zip:** Hazlet, New Jersey 07730

**Company Complaining About:** Comcast

---

### **Description**

I was not informed by the company that I would be receiving a data cap. This is a bad practice and I believe violates open internet and net neutrality as they are basically the only option in my area.

---

**Ticket: # 759036 - Comcast Data Cap aka "data usage plan" complaint**

**Date:** 1/18/2016 10:10:17 AM

**City/State/Zip:** Atlanta, Georgia 30349

**Company Complaining About:** Comcast

---

## **Description**

I am a customer of Comcast Xfinity and we currently are in a "test market" for their data cap plan and I have some serious issues with the only major provider of reliable internet service charging additional fees for those who use what is already supposed to be "unlimited" data. Additionally, I'm not sure that they are correctly calculating their data usage because already it says that I have used 430G of data, which can't be possible considering that I was home more in December and November and used almost 200G less data (how in the first month of actual charges suddenly we shoot up almost 200G in additional data usage than usual is a bit strange- and we're only halfway through the month). At this rate I'm looking at \$150-200 in additional fees.

---

**Ticket: # 759139 - Comcast data cap and privacy invasion**

**Date:** 1/18/2016 11:50:42 AM

**City/State/Zip:** Florence, Alabama 35633

**Company Complaining About:** Comcast

---

## **Description**

This complain is 2 part.

1. The data cap introduced by Comcast is arbitrarily small for modern Internet usage. In a world of near infinite streamable content, a 300 GB cap simply does not cut it. For example, Netflix states that high resolution usage consumes between 3 and 7 GB per hour (<https://help.netflix.com/en/node/87>). Based on that, a conservative 4 GB per hour estimate yields 75 hours per month. That's 2.5 hours per day of only streaming video. This doesn't account for many other typical home Internet usages. This arbitrary data cap must be raised or entirely removed.

2. Comcast has made it clear that they are able to monitor your Internet usage by injecting arbitrary code into websites that they do not own or control. This has been used to spam users with warnings about their data cap, but there is nothing preventing them from gathering any information they want. This is an activity often employed by blackhat hackers and is considered a threat against the security of computing ([https://en.wikipedia.org/wiki/Arbitrary\\_code\\_execution](https://en.wikipedia.org/wiki/Arbitrary_code_execution)).

**Ticket: # 760063 - Comcast Imposing Data Cap****Date:** 1/18/2016 6:05:33 PM**City/State/Zip:** Margate, Florida 33063**Company Complaining About:** Comcast

---

**Description**

Comcast is imposing an Internet data cap on my service, which is goes against the open internet / net neutrality rules. I am thinking of cutting cable tv service, as I mostly use netflix and play computer games, and I just received notification that they're going to charge me extra if i continue to go over this arbitrary 300gb monthly "allotment." It would be impossible for me to switch to netflix without going over this cap, and unsurprisingly, if i want to switch to an "unlimited" plan, I would have to pay them an extra \$30 per month. This is highway robbery. It wasn't long ago where there was no limit, but now they're imposing this simply because they can.

**Company Complaining About:** Comcast

---

## **Description**

Comcast has placed data caps on our internet usage in South Florida. Not only are they charging us for having access to the internet just as before, but now they are also charging us for using the internet speed that we bought!

The data cap level is extremely low, at 300 GB. With just Windows updates, android updates, Security patches, iOS updates, etc, for 4-5 people in a house with a few devices each, it is almost impossible not to go over these caps. In this day in age, we require the internet for our jobs, for school/education, civic duties, etc., essentially the internet is almost as vital as water, sewage, electricity, etc., yet Comcast is creating substantial barriers between us and the internet.

The home internet ecosystem has simply has not been designed with data caps in mind, as an example (there are many) Microsoft Windows Security Updates are concerned with security, not the size of their patches as data caps never before existed in the home environment. By suddenly and unilaterally changing the nature of broadband internet, Comcast is making us less secure and is severely and negatively disrupting the internet for millions of it's users. It is taking advantage of it's position like no utility has ever tried. This is quite upsetting.

Thank you for your time.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 760906 - Home Internet Data Caps?!**

**Date:** 1/19/2016 11:26:53 AM

**City/State/Zip:** Atlanta, Georgia 30324

**Company Complaining About:** Comcast

---

## **Description**

Comcast's recent select implementation of Data caps on a users home internet service is a clear attempt to find an alternate means of forcing home users to pay more for services which have always been available. This was the core complaint in the net neutrality laws which were discussed last year, that users would have to pay more to receive the services that have always been available, and that ISP's could throttle the connectivity of competitors (such as Comcast's competitors, Netflix and Hulu - as it relates to a drop in cable subscriptions). Forcing users to either monitor the amount of browsing they do or pay a data overage fee is just as egregious as expecting people to pay for "fast lane" internet speeds, and the fact that the FCC has allowed this to occur as if they were unaware of the clear attempt to circumvent Net Neutrality laws is equally egregious. Please fix this corporate corruption! ISP's deserve to be paid, but they do not deserve to receive additional funds (\$35 for unlimited internet on top of monthly subscription of about \$40?! Really? An %87 price increase to get what you've always received?! REALLY!?!?) for no additional services rendered! Fix this FCC!

---

**Ticket: # 763071 - Comcast Data Cap**

**Date:** 1/20/2016 11:59:14 AM

**City/State/Zip:** Hollywood, Florida 33024

**Company Complaining About:** Comcast

---

## **Description**

I have been a Comcast customer for years, and they suddenly capped my home internet data, and now want to charge me more for the same service I've had. They gave no warning to me as a customer, nor did I agree to the new terms. I find it ridiculous that the FCC would allow Comcast to enforce caps on data which would not allow for a customer to look for alternate competing streaming services like Netflix, or Hulu etc.. There needs to be some kind of consumer protection here.. I never agreed to a data cap.

---

**Ticket: # 763326 - Internet Throttling/Extortion**

**Date:** 1/20/2016 1:12:27 PM

**City/State/Zip:** Shreveport, Louisiana 71118

**Company Complaining About:** Comcast

---

## **Description**

Comcast is extorting with their data cap. We did not agree to it. We don't want a data cap. We already pay over 90 dollars a month for internet. Not only are they extorting us, they are throttling our internet because we went over 90% of our data cap. My ping used to stay at a constant 50ms now it's at a constant 65ms. Same thing happened in December: ping was 50ms until we hit 90%, then it went up to 65ms until the calendar month reset. Last month when I called Comcast, they openly said that they throttle our internet when we use 90% of it. I'm pretty sure you can get a hold of that phone call. I want to have the internet that I'm paying for. I don't want a data cap. I don't want to be throttled. We're in a world where we're moving into the "streaming" era. How are we supposed to download digital copies of games (which are about 30GB a piece) and stream movies/television when we have a data cap, AND A SMALL ONE. 13,000 complaints have been made about this happening, and I think it's time that something is done about it. The people are not happy.

**Ticket: # 763899 - Home Internet Cap and gouging with Suddenlink**

**Date:** 1/20/2016 3:50:20 PM

**City/State/Zip:** Georgetown, Texas 78626

**Company Complaining About:** Sudden Link

---

## **Description**

I have Suddenlink for my internet (I am in Georgetown, TX and this is the only cable - non-dsl - provider here...so they are the monopoly). i recently started receiving (last 3 months) notices that I was going over their data cap. there was no data cap when i began using them in April of 2013. Come to find out, they added caps to the data and i began going over it. they started charging me \$10 per 50 GB of data per month. I ended up having a \$50 overage charge on this bill and had to increase my monthly bill by \$40 to increase the data to 600 GB per month. I feel this is gouging especially since they are the monopoly and possibly in violation of net neutrality.

---

**Ticket: # 763990 - Comcast Data Caps**

**Date:** 1/20/2016 4:16:48 PM

**City/State/Zip:** Nashville, Tennessee 37211

**Company Complaining About:** Comcast

---

## **Description**

Comcast is the only provider in my area that actually offers the speeds I need for both my job and entertainment purposes. While I am not opposed for paying more for more speed, it is absolutely outrageous that I have to pay more for more data. It costs Comcast nothing to provide me more data than an average customer. Yet, they are charging not just me, but anyone who goes over their ridiculous 300GB an additional \$10 per 50GB. This is blatant abuse from a company that is essentially a monopoly.

The proof of this is when they actually get any real competition in their area (Google Fiber as an example). All of a sudden, data caps go away, speeds increase, prices go down all because "they are committed to customer service". In truth, most customers would have dropped them in a heartbeat if they had a choice.

---

**Ticket: # 764011 - Sponsored Data Programs are a backdoor to breaking Net Neutrality rules**

**Date:** 1/20/2016 4:23:24 PM

**City/State/Zip:** Little Elm, Texas 75068

**Company Complaining About:** Verizon Wireless

---

**Description**

After reading today about so-called "Sponsored Data Programs" in place with carriers like T-Mobile, AT&T and (soon, my carrier) Verizon. I just HAVE to make my voice heard on this issue. Please, please please put a stop to these sponsored data programs they are a dangerous backdoor into ISPs garnering control over which data gets higher priority on these networks.

<http://goo.gl/nve3cm>

As a consumer who often streams video content from popular streaming sites like Netflix, Hulu, Amazon and YouTube I DO NOT want to see any data packet treated differently than any other, and this is exactly what these sponsored data programs are doing by causing SOME internet traffic to count against a consumer's data cap, while other content does not. We NEED packet equality. I don't really care if these programs might benefit me in the short-term, they're dangerous in the long-term, and this practice needs to be nipped in the bud! A packet of data should be like a watt of electricity. I every bit of juice is treated the same regardless of if it's powering my TV or my coffee maker. The Internet HAS GOT TO BE the same way.

## **Description**

Dear Sir or Madam,

I am a Comcast customer in Nashville, Tennessee. I recently received an error message stating that they would be implementing a 300 GB a month data cap. Overages will be charged at 10\$ per block of 50 GB over the 300 GB limit. This will not be pro-rated or rolled over per month if I don't use the entirety of the 50 GB block; meaning even a 1 byte overage will result in a 10\$ charge. These overage charges are not based on the time the usage occurs, suggesting that they are not tied to network congestion or management problems. In fact, no reason was given in the letter as to why these caps and charges are being implemented. I will now have to pay an extra 35\$ a month to retain the unlimited data service I have been receiving. This is a forced change that I have no way to contest or reconcile. Even more concerning, the my conversation with comcast revealed they will be sending an "in-browser" notification when you reach certain thresholds of the data cap. It is my understanding that Comcast would be forcing me to install a browser plugin to receive this message, or use packet injection. The possible use of packet injection raises large privacy and security concerns for me, as any of the data I send or receive may be intercepted and / or modified. All of this goes against the principles of net neutrality and having a free and open internet. The way the data caps and overage charges are being implemented amounts to extortion of the consumer. Thank-you for taking the time to investigate this matter. I would like my data cap removed, overages refunded, and pricing to reflect what I was originally promised from Comcast. My usage meter does not work, hasn't worked, and yet I am still being charged.

Sincerely,

(b) (6)

**Ticket: # 764766 - Comcast is Violating Net Neutrality with its Stream TV Service****Date:** 1/20/2016 8:50:21 PM**City/State/Zip:** Nashville, Tennessee 37211**Company Complaining About:** Comcast

---

**Description**

Comcast is violating the FCC's open internet regulations by exempting their own "Stream" streaming television service from data caps. In doing so, Comcast provides an "over the top" internet television service in which they have a financial interest an unfair advantage over competing providers which is a form of paid prioritization as prohibited by rule 3.

Comcast defends this practice by attempting to describe "Stream" as a cable television offering rather than an "over the top" streaming video service, but this assertion is easily dismissed with two simple observations. First, Stream is only offered by Comcast to existing customers with "xfinity internet" service. Second, Stream is entirely reliant on the equipment and provisioning of that "xfinity Internet" service for operation. In other words, unlike traditional cable television, Comcast is unable to deliver the "Stream" product without relying on the same infrastructure used to deliver every other internet service, including Stream's competitors. If "Stream" truly were an independent cable television service and not an "over the top" service, Comcast could offer it to every customer in their footprint and not merely as an add-on for internet customers.

**Company Complaining About:** Verizon Wireless

---

## **Description**

The FreeBee service is a sponsored data program that violates the spirit of net neutrality. Carriers should not have the power to charge content providers in order to not have their data count against a data cap. This gives carriers too much power and discourages competition from start ups which cannot afford to pay those fees.

---

[Ticket: # 815522 - Data caps](#)

**Date:** 2/17/2016 4:56:58 AM

**City/State/Zip:** Flagstaff, Arizona 86001

**Company Complaining About:** Sudden Link

---

## **Description**

The data caps imposed by ISP monopolies like Suddenlink's parent company Altice based in Luxembourg are meant to implement "legal" overcharging schemes. These data caps are also meant to force American customers to use their internet a certain way so that the company no longer needs to invest in their infrastructure. Suddenlink is an aggressive monopolistic company bent on taking away my freedom of using the internet how I want. Why is this legal? This will eventually hurt commerce in a very serious way.

**Ticket: # 765119 - Comcast Data Cap**

**Date:** 1/21/2016 4:28:21 AM

**City/State/Zip:** Miami, Florida 33186

**Company Complaining About:** Comcast

---

## **Description**

Comcast is invading my browser and spamming with countless pop-ups about me reaching my "data cap". A data cap that I never agreed to, I have been a customer with them for many years and have put up with all their shenanigans but I am finally tired of it. They are invading my browser without my consent, who knows what else they're doing to my computer without my consent. They are trying to charge me overage fees for a service I never agreed to (Data Cap) and they are throttling my speeds whenever I get near the Data Cap. My rights are being infringed by comcast as they continue to try and monopolize the internet.

---

**Ticket: # 765104 - suddenlink communications is trying to force people to not be able to use high definition tv and movie sites like netflix using low data caps**

**Date:** 1/21/2016 2:29:13 AM

**City/State/Zip:** San Angelo, Texas 76901

**Company Complaining About:** Sudden Link

---

## **Description**

Hello and thank you for hearing my complaint. I believe suddenlink is violating net neutrality. Suddenlink communications is trying to force people to not be able to use high definition tv and movie sites like netflix as their primary source of tv and movies by using low data caps so that people are forced to use suddenlinks own high definition tv and movie services. The average american per nielsen ratings watches on average 5 hours of television per day, and according to netflix their high definition video can take as much as 3.3 gigabytes per hour watched that is 495 gbs per month and that is just for one person. So suddenlink offering caps below 500 gbs per month for an entire family makes it impossible for the average american family to use internet high definition streaming sites such as netflix hulu and amazon instant video.

**Ticket: # 765181 - Comcast/Xfinity Data Cap Warning****Date:** 1/21/2016 9:29:20 AM**City/State/Zip:** Decatur, Georgia 30033**Company Complaining About:** Comcast

---

**Description**

On January 6th, I switched internet services from AT&T to Comcast due to varying internet performance, meaning data speeds would become incredibly slow until I called customer service and then it would magically work properly. I began to have the same issue with Comcast internet last evening, even though they swore up and down that their service would eliminate this problem. This morning, I receive a message from them saying "You are approaching your data cap of 300GB per month. You have 30GB left for the calendar month." I called Comcast to find out what was going on, as NO ONE I spoke to when signing up for service made any claims to a monthly data cap. I wanted to know how I could have possibly used that much data in two weeks as the most I had EVER used was about 90GB using the same devices and services. The person I spoke with, Kevin, said that he could not see my data usage, and I should go online to check the usage meter and call back. He said he did not understand how I got a message. I went online to check my "data usage meter", and of course it says it could not verify data usage. After reviewing some consumer reports, I see that Comcast has gotten a few other people with this tactic, and charge for data over the data cap. I also understand that they are not doing this everywhere. Another discovery I have made is that their "data meter" is grossly inaccurate. I am livid that I was not told about any data caps, and when I call to complain, no one can give me a straight answer. This seems to me to be a predatory practice.

---

## **Description**

Dear FCC,

As I'm sure you are aware, Comcast has recently started enforcing a 300Gb data cap on a great part of it's customer base--including myself in Savannah, GA. I find this change extremely concerning as I see no reason other companies won't start following suit. Natural monopolies, limited options, and shady contracts make it difficult or impossible for myself and many others to reasonably switch to another provider. There are no other options here, and as someone who works from home, their rise in cost with no competitors in the market, is frightening for my livelihood and the livelihood of others. Also, I was not given any notice, as a customer, to the implementation of this data usage cap.

I'm asking you to do everything in your power to stop this trend before it starts. The internet is not just a luxury anymore - it is a critical part of many people's lives--email is the new phone and fax line, the internet is where we find jobs, and is a huge part of education of the masses. As we've seen with cell phone data, once caps are in place, it is a race to the bottom to offer ever more limited data at ever increasing prices.

Also, they claim that using their xfinity.com streaming services does not affect your data usage, giving them an unfair advantage over other streaming services like hulu and netflix. This is another market that their data caps are affecting.

Sincerely,

**(b) (6)**

## **Description**

This complaint concerns comcasts absurd 300 gb data cap. This is not so much a specific transgression or violation of any law or social norms but rather a violation of the entire american capitalist economy and the american people. As your research will show, such a measure constitutes nothing less than a carefully calculated attempt to extort american consumers in the name of profit-- there is NO reason whatsoever that comcast or any ISP need install a datacap (i.e. to safeguard a limited resource or ensure the companys fiscal success thru careful distribution of said resource) -- data is infinite-- its consumption and creation require no resource other than a connection to the internet and for some forms (streaming video for instancs) a suitable speed-- customers pay for a connection with a certain speed (broadband internet speeds evolved as direct result of market forces-- broadband became available widely, prices get competitive and stayed there) The bandwidth (speed) of connection is what customers are paying for, the ability to send and recieve data at a certain speed. Comcast is essentially trying to achieve a stranglehold on data. They realize that internet connection is essential to the conduction of modern commerce, innovation in almost all fields, as well as the social life of modern man-- not satisfied with merely running a profitable company and uninterested in working harder to devise a worthwhile product or service to increase profits, they schemed up a way to extort the american public- by making them pay for (what are in this day and age, basic everyday actions) -- by installing data caps comcast can force every single customer to pay for each and every bit of information they send and recieve (something they were already doing by providing and billing customers for internet service). There is no reason for comcast to do this other than shameless profiteering- there is no increased workload on their servers or fiber optic cables; there is no additional resource expenditure that increases in proportion with increasing data uses- in short NO reason to install data caps except to try and fuck the average american out of more of his or her hard earned money. Such data caps serve NO ONE but comcast. Literally every other party loses-- they cost consumers more (more money for comcast), force the government to waste already taxed resources, they crush new or incubating businesses (less competition for comcast), they bar new and innovative tech businesses from ever developing past conception (which again, is great for comcast, not good for anyone else), they ruin established consumer entertainment businesses (streaming tv/film) netflix amazon prime hulu etc (which is great for whoever owns cable tv... oh wait thats comcast too). Comcast is an abomination - a disgusting, vaguely communist, and shamelessly profiteering economic disease; it is the archetypical fat-greedy-&-ruthless racketeer, always scheming to line his pockets a little more at everyone elses expensive. These measures are very obviously designed to force comcasts products- everyone of them- down the unwilling throats of american consumers. When new products came along that started outperforming their worthless offering they didnt innovate. They didnt make a new and better product like american do, they started scheming and scamming on how to crush the opposition and screw the conaumer harder, how to force their unwanted garbage product on everyone else. Do we really want to allow companies like this to exist?

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Date:** 1/22/2016 10:16:03 PM

**City/State/Zip:** Weston, Florida 33332

**Company Complaining About:** Comcast

---

## **Description**

Comcast started sending warning messages to my account (after my house hold crossed 300gb in 1 month). The Comcast is about to charge extra money on account. This account did not have any data cap when we signed up. The account is a bulk account and I confirmed with bulk account representative, they were unaware of this cap as well. When I called Comcast to resolve this issue, Comcast representative notified me the data cap is recent but could not state when it was implemented or do anything about it. This non sense has to stop - additional charges on originally no data limit account without any communication, or any options to stop the charges. I guess I'll have to pay a lot extra for same service which was sold or look at slower alternatives. Hopefully, you don't decide this is an acceptable norm and allow Comcast or other companies to make this a practice for every region. Please, stop them.

**Ticket: # 769512 - Comcast double dipping into the consumers**

**Date:** 1/23/2016 4:16:59 AM

**City/State/Zip:** Hialeah, Florida 33015

**Company Complaining About:** Comcast

---

## **Description**

So not only do I have to pay a hefty amount for my internet bill but, I have to now pay \$30 to get unlimited data usage or stay with the 300GB data cap. This is extortion from the Comcast trying to take more money from the consumers that are already paying way more than enough.

The internet is a widely used today by everyone around the world for a lot of things (Jobs, news, entertainment, etc.). Now cable companies like Comcast are trying to charge more for something just because more people are using it around the world.

Did you ever notice that they never charged extra for TV service (only when it came to getting more channels). They never complained about congestion in their cable lines when everyone around the world was watching TV.

Please look at this from a consumers point of view and see how this is affecting people in day to day activities using the internet.

Thank you, (b) (6)

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Date:** 1/24/2016 12:51:23 PM

**City/State/Zip:** Abingdon, Virginia 24210

**Company Complaining About:** Comcast

---

## **Description**

This month, Comcast has implemented a 300 GB data cap on my account. My wife is a full time college student and my daughter is in grade school. I am the only member of the household that is able to work at this time, and as my wife and daughter are both students, internet is a must have for us. Unfortunately, Comcast is our only option since we live in a rural area, so we cannot simply switch providers to avoid the overage fees. I feel like this type of business practice is price gouging, and my family is helpless to do anything about it.

---

[Ticket: # 770664 - Internet Data Caps](#)

**Date:** 1/24/2016 2:12:46 PM

**City/State/Zip:** Miramar, Florida 33025

**Company Complaining About:** Comcast

---

## **Description**

The Comcast 300 GB cap is not sufficient for consumers who get their TV through services like Netflix and SlingTV. I am not totally against metered usage per say. After all if we (consumers) want internet service to be treated like a utility, then that is one of the trade offs we should expect. Every other utility charges per metered usage. My basic concern is that the Comcast limit is arbitrary and unreasonable. It may be more reasonable to do some research on average consumer data usage and base the limit on that research. I am sure that if this is done the monthly data cap would be much high than 300 GB.

**Date:** 1/24/2016 9:31:32 PM

**City/State/Zip:** Atlanta, Georgia 30307

**Company Complaining About:** Comcast

---

## **Description**

Just received a notification on my mobile device, while using it at home, that I had reached 90% of my xfinity data cap. I had no idea what the message was about. Started googling and found out my city is part of comcast's "data cap trial." Lucky us! I had received no prior notification from Comcast.

Please, please, please scrutinize these data caps. Clearly they have net neutrality implications. Internet service should be regulated like a utility. Sick of the lack of competition in the broadband market and the clear conflict of interest between the provision of Internet service and provision of cable tv packages. I do not want comcast's cable tv packages, they should not be able to limit my internet because I don't want their television. There is no operational reason for these caps, it is clearly just a cash grab.

**Ticket: # 771069 - Internet Data Cap Throttling****Date:** 1/24/2016 11:40:07 PM**City/State/Zip:** Susanville, California 96130**Company Complaining About:** Zito Media

---

**Description**

The only major non DSL ISP in the Susanville, CA 96130 area is not making it harder to customers to consume the Internet. Zito Media has been imposing a data cap on customers even the older ones who knew nothing of this data cap. The caps are 250 GB for the basic tier 10 mbps service, which most of the towns residents are on. The next tier which is the 30 Mbps service has a data cap of 400 GB. Lastly the highest tier which is the 65 mbps service has a cap of 700 GB. This is highly unfair to customers as they have failed to disclose these caps to their older customers and even the new ones. When called to ask or when you visit the offices they say the Data Cap is a new law. I searched on the Internet and see no such law. It is unfortunate that this cap exist despite it not being in existence last year. I believe that this is unfair to all citizens that expects their Internet to be fast and speedy, but unfortunately for these customers Zito Media hasn't told them about the cap, which is shameful. I do hope that Zito Media changes their practices as Internet is highly important to the people of this town. Most people subscribe to the lowest tier Internet as they are unable to afford the higher tiers. Please consider looking into this issue and resolving it so the residents of this town can finally get the Internet they deserve. Thank you for your time. I have here attached the throttled speed We are experiencing. We pay for 30 Mbps down, 4 Mbps up.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

**Company Complaining About:** Shentel

---

## **Description**

My family and I have been Shentel customer for about 4 years now. We've been with them since before the maximum profit "Data Caps", and we have had to change everything about our usage to accommodate for the changes. We've put so many rules against the internet usage that it doesn't even serve the same purpose, haven't internet is useless if you can use it how you want! I stand against the revolting "Data Caps", due to the fact that it's taking our freedom from our internet usage and that we can't even use the internet for what we got it for in the first place! These "Data Caps" are losing more business than big businesses think! Although they don't care, because they're getting nothing but profit!

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 772904 - Data Cap with Shentel****Date:** 1/25/2016 8:42:20 PM**City/State/Zip:** Forest, Virginia 24551**Company Complaining About:** Shentel

---

**Description**

Shentel forces a data cap on all of their plans:  
Residential Shentel data allowances

In order to protect your Internet experience, Shentel has established data allowances for each Internet package. The vast majority of all Internet customers will not be affected by these allowances. Customers should consider modifying usage or upgrading to a higher level of Shentel Internet service if Internet usage exceeds these allowances. Exceeding these data allowances will result in additional charges of \$10 per 50GB block of usage over the allowance.

Internet package	Data allowance
3Mbps	200GB
5Mbps	250GB
10Mbps	300GB
15Mbps	400GB
25Mbps	500GB
50Mbps	750GB
101Mbps	1TB

**Ticket: # 773060 - Data caps, ISP ad injecting**

**Date:** 1/25/2016 10:21:47 PM

**City/State/Zip:** Buckhannon, West Virginia 26201

**Company Complaining About:** Sudden Link

---

## **Description**

Suddenlink informed me via a webpage-injected advert that I'm coming close to hitting my "data cap." I believe these "data caps" go against net neutrality and an equal internet. I also feel that since they were able to inject an ad into my browser it seems like they're doing deep-packet inspection or something else nefarious that shouldn't be happening.

Suddenlink says, "Customer accounts will not be billed for exceeding a monthly data plan until the third overage. On the third and subsequent overages, the monthly plan will be increased in installments of 50 GB at a cost of \$10 per installment."

I find this ridiculous. I already pay more than enough for them to provide this utility to me and shouldn't be charged more just because I use it. I'd almost bet that this ISP has received tax money from the government to get their infrastructure up to par anyway. I mean, I don't get charged extra for driving a vehicle too much that I own.

Attached is also a screenshot from my phone of the injected "advert" warning me of my impending doom coming in the form of an expensive and BS "data cap." My ISP should not be able to read my traffic well enough that they can inject text and images directly into the webpage.

Please, do something about my ISP, and all the other ISPs, about these data caps. These caps are solely in place to deep the pockets of CEOs of the companies, not because of "infrastructure limits" or "congested networks" or any other line of crap they feed the American people. These extra fees they try and tack on constantly hurt the people and do not improve the service at all.

In this day and age internet is pretty much a needed and vital utility. Please, make the ISPs behave like other utilities.

**City/State/Zip:** Miami, Florida 33177

**Company Complaining About:** Comcast

---

## **Description**

Plain and Simple. So far service has been great, but Data Caps are a ridiculous idea. The fact that my entire area suffers this issue while other areas don't is absurd. This is the first time i have reached a cap in 3 months, but if this is regular usage, and shouldn't be allowed.

---

[Ticket: # 774292 - Data Cap](#)

**Date:** 1/26/2016 3:22:52 PM

**City/State/Zip:** Big Stone Gap, Virginia 24219

**Company Complaining About:** Comcast

---

## **Description**

The 300GB data cap recently imposed on our area is easily surpassed. I stream 1080p HD video almost daily on Netflix and use Skype daily as well as play online games. Some of the games I download via Steam can be as high as 40GB a piece! That's not to mention the usage on my smartphone connected to my Wi-Fi. As HD and UHD (4K) video become more common it will be even easier to exceed this limit. Yet if you use Comcasts streaming services, this doesn't count against your data cap!

---

### **Description**

I pay 65 dollars per month for high speed internet (75Mbit) but it comes with a 350 GB Data Cap. Just streaming Netflix in the HD mode for two TV's for 3 hours a day would consume over 500 GB a month. This is not acceptable.

[Ticket: # 775110 - Xfinity data cap scam](#)

**Date:** 1/26/2016 8:11:06 PM

**City/State/Zip:** Atlanta, Georgia 30318

**Company Complaining About:** Comcast

---

## **Description**

Was notified without warning that I'd be charged extra for data usage overages because I'd gone over some data cap that was never outlined in my contract. This must be stopped. There is no reason we should be charged more for any amount of usage.

Furthermore, I received a patronizing explanation that someone must be "stealing" my wifi for my data to be so high. This is an outrage. Comcast is knowingly using my router as a hotspot or their meter is purposefully being tampered with.

We need swift and immediate legislation to stop them from manhandling customers. This is a legalized monopoly.

**Ticket: # 775171 - Comcast Xfinity Data Cap**

**Date:** 1/26/2016 8:32:20 PM

**City/State/Zip:** Little Rock, Arkansas 72205

**Company Complaining About:** Comcast

---

## **Description**

Comcast has enforced a monthly data cap of 300GB. The American people, the FCC and the US government alike were in favor of net neutrality, which disallowed internet providers to throttle internet speeds when certain websites were visited. This data cap enforcement is way for internet providers to get around the "net neutrality" issue. Instead of throttling internet speeds, they will impose data caps and, ultimately, gain monetarily from internet users. Most likely these internet users are maxing out their monthly data caps from using online streaming services such as Hulu, Netflix, HBOGO and the like. I've got kids to feed, so to speak, and I don't have the time nor the money to waste on these gouging internet service providers. And another thought, bring on Google Fiber.

---

**Ticket: # 775278 - Comcast Data Cap Transparency**

**Date:** 1/26/2016 9:13:48 PM

**City/State/Zip:** Marietta, Georgia 30066

**Company Complaining About:** Comcast

---

**Description**

1. The monthly tiered data limiting was never clearly and transparently disclosed to us when signing up for the service. Data caps for home internet service is not widely known about and shouldn't be buried in the fine print, especially when this is a regional 'trial.'
2. There is no way real to track the usage of one's data use -- the 'Usage Meter App' on Xfinity's site is broken and doesn't execute once downloaded. The information on the Xfinity site is also not up to date within 24 hours -- which means there's no real way to know how much data is being used.
3. No accountability on how Xfinity is measuring the amount of data used. After going over the limit we made substantial efforts to curb our usage but the data continued to increase exponentially. The 'detailed data usage' is just showing that my internet modem is using all of the data. There's no way for the consumer to verify what we actually used vs. Comcast's meter.

**Company Complaining About:** Comcast

---

## **Description**

I am taking my time And writing this complaint because Comcast has, unbeknownst to us, added a Data Cap to our Home Internet. Apparently according to them, we went over our data cap of 300 GB in December. For once, we were not told about this data cap, no notification was given regarding the changes in our account, and every 5 minutes anyone in our house browses the web we get a notification about data usage. On top of that, we were away for a week in December, and we all work M-F jobs, and unless they're watching Netflix, my parents don't surf the web in an extravagant manner.

I do not think it is fair to us that they made changes to our account without our knowledge and then threaten us with extra charges with a cap that we were not aware of in the first place.

When I called her, I asked to be informed about the data cap, but she could not tell me when it started. She only told me that to get away from it I would have to pay an additional fee every month. So I have to fork more money each month to pay for something that Comcast considers to be overage. But I have no way of trusting how they measure their service, and especially when they say that other Comcast customers can use my xfinity wifi without my consent.

Also, if this is a trial, why were we not given advanced notification or options to opt in or out? I asked her if there is a way to opt out of the trial and she said no. So now, a family of four with spotty cell coverage in the area, we have to be hit with charges and restrictions because Comcast decided to? And the agent said it herself when she told me we have never been over the 300GB according to them, but according to me there is no way We could be over 300GB the month of December because no one is at home Monday to Friday, and a week in December we were out of town.

So now, on top for paying for services like Netflix, Hulu, or even my little brother playing his PlayStation games, now we have to restrict the services we use day to day. That is, unless we use Comcast Streaming services, which according to the representative, does not count towards data. The representative also informed that the data cap is not there to improve speeds. So I asked her, are you trying to make me stop using Netflix and use Comcast instead? Just because it does not count towards data? Now I have to tell my parents to watch stuff on Comcast, because Netflix uses their data and Comcast does not? Or ask them not to FaceTime our out-of-state family too long, because we'll have to pay more? It sounds to me like they are twisting our arm and forcing us to think about using their services, instead of being fair to every streaming service out there or just giving us options. I have been trying to see about other options that Comcast may offer, but all they are saying is that I would have to pay an additional fee to go over the 300GB.

Please, FCC, step in and fix this mess. I don't know what else to do and was pointed by several online articles to file this complaint. We didn't know about this change to our account until now, when they are threatening us with charging extra for a month that we were not even home, which I don't have a way so measuring their data usage. They hid these changes, and don't even provide us advance notice of extra fees, and then harass our browser with messages nonstop about overage. They are not providing us options and pretty much are saying, "We own your Internet, and unless you use our services or pay an extra \$40, you will have to think about using Netflix or Hulu on our

Network." After knowing this, now my family and I are super paranoid about what we are going to use day, and in no way is that fair to us to feel that way in the comfort of our home.

Thanks for reading this and I hope this has shed some light on how my family feels after being treated like we don't have a voice, being being lied to for over 6 months about the services we had, being restricted and harassed regarding one month of usage, which is inaccurate given our circumstances that month. If they are going to make changes, they have to be transparent with them and give options to us, and make sure they are realizable. Just because you tell me I went over 300GB does not convince me after you have hidden from me a change in my account for half a year. This is not fair to consumers, and other competing services such as Netflix, Hulu and other internet services. It's only fair to Comcast, because their services don't incur in charges when I use them. My poor parents also, if it wasn't for me, a Comcast representative could sway them to use only Comcast Stream TV had they talked to the representative I talked to. Luckily I was the one that talked to them and was able to gather information, because my parents were shocked; they did not know anything about the data caps Comcast had and we have been a customer with them for years.

I am probably being redundant, but I appreciate your reading this and am begging for this situation to be fixed for us, and I hope that the information I have provided for you helps.

---

**Ticket: # 775542 - Unfair Data Caps imposed without any real purpose**

**Date:** 1/27/2016 2:04:28 AM

**City/State/Zip:** Miami, Florida 33018

**Company Complaining About:** Comcast

---

## **Description**

To whom it may concern,

Comcast has imposed data allowances in residences with internet services provided by them in the Miami area which I am a resident of. This has caused quite a bit of issues as our family is not able to use the internet openly and freely as much as we want considering what we pay for. The 300GB "allowance" which in reality is a data cap infringes every definition of Net Neutrality which was passed by the FCC months ago: Comcast customers like myself are not able to watch streaming services at home as much as they want as this will heavily cut into the data cap (such as Netflix, Hulu, Amazon Prime, etc) and instead are motivated by Comcast to instead pay for their own streaming service which also has an extra monthly charge associated with it, and this Comcast home grown service does not cut into your monthly data cap. Customers that wish to lift this 300GB data cap must also pay an additional 30-35\$ charge. These are all signs of a monopoly that has taken advantage of not only it's customers but have laughed in the face of the US government and people who by also openly infringing on Net Neutrality laws without consequence (the only other viable competitor in the area is AT&T which doesn't nearly offer the speeds Comcast does). I speak for myself and residents in my city when I say, no scream, "Please punish Comcast and it's data caps and it's unfair treatment of loyal customers".

Best Regards,

(b) (6)

**Company Complaining About:** Comcast

---

## **Description**

Please do something about the greedy practices of data capping at home networks through WiFi. This practice is unethical to the consumer and is a price-gouging method for companies to make a profit easily. The Internet is supposed to be an open-sourced and important necessity in this day and age. These companies are trying to limit that, and they can because they have no competition. Please do something about this unfair and greedy corporate practice.

---

**Ticket: # 776313 - Comcast Data Caps**

**Date:** 1/27/2016 2:01:54 PM

**City/State/Zip:** Atlanta, Georgia 30306

**Company Complaining About:** Comcast

---

**Description**

- 1.) This service was sold as unlimited, but then changed to limited plus automatic increased charges without consent.
  
- 2.) Consumers have no choice but to accept unsolicited incoming video and web advertising that consumes data usage and is bundled with their intended paid programs on streaming services -- essentially charging customers to view advertising or other unsolicited "auto-play" videos.
  
- 3.) This is deliberately anti-competitive, designed to target and create a hardship for customers who have reduced Comcast services in favor of other providers.
  
- 4.) No guidance has been issued about the treatment of non-video-streaming sources of data usage, such as backing up one's own files, photos and videos over one's own wi-fi network; storing or monitoring home security data, smart home appliances or other home-based uses of internet-enabled devices. Since Comcast can pick and choose what does and does not count against the cap (giving preferential treatment to their own products) -- do these count?
  
- 5.) Comcast has not provided a robust enough tool to document and/or verify usage and the sources of that usage.
  
- 6.) I see no documentation of an ability to appeal or submit alternatively verified usage reports.
  
- 7.) Due to Comcast's monopoly-seeking/protective business practices, customers do not have an alternative.
  
- 8.) In addition to opposing principles of net neutrality, this move sets back policies and years of development put into use of the internet for constructive, creative, civic and educational purposes. For example, public schools have come to rely on students home internet access for students to complete assignments (not to mention as a vital communication and administrative tool with parents). Parents will now have to question which homework assignments might put the family over their usage cap.
  
- 9.) Anticipate adverse effects on commerce, productivity and innovation when consumers no longer download software updates or reconsider purchases of software, applications, SaaS products or internet-enabled devices due to restrictive data caps.
  
- 10.) Monitoring and notification is inaccurate, a-synchronous and insufficient. I received notices of using 110%, then 125% usage overage in two consecutive days, with no actual change in usage. Mysteriously, my usage is only now over the cap once Comcast implemented surcharges.

11.) Comcast has admitted there is no operational business need for this policy. It is only to extract additional fees from certain targeted groups of customers. This is essentially a work-around to set a non-competitive, monopoly price for its services.

12.) There are no notifications in place for any given usage transaction. For example: "this movie will use approximately xGB of data to stream to your television would you like to accept?" appears nowhere. We cannot make informed choices. Further, data usage also depends on device type and viewing platform and is therefore not neutral.

13.) Comcast is offering inducements for additional fees to minors living in or visiting customers' homes.

**Company Complaining About:** Armstrong Cable, At&t Remove The Data Caps And Lower Cost

---

## **Description**

I had att dsl about 6 mb speed and no data cap, to continue providing me internet service I was forced to switch to Uverse, same slow 6mb no data cap. After months of service calls. I filed a complaint with the FCC. What finally happened, I was told I had 15 drops in 3 weeks and just poor service. I called Armstrong cable the offered almost too good to be true off of 50 mb a month. so I switched. THEN I was informed I had a data cap of a lousy 200mb per billing cycle. Thats like having a race car and 1 gallon of gas..it's useless. I had to cancel my Netflix, about all I can do is read my email for way too much money. We found DSL Extreme who offered 6mb speed no data cap for about 43.00 a month. All we are offered is slow internet because att owns the lines, copper lines on my street. I signed up with DSL Extreme and still do not have an appointment to install it, the installer is ATT!. We really need competition, and the end to community exclusive contracts that prevents other ISP's from competing and running fiber. AT&T pushes Directv instead of investing in fiber, So let someone else invest, bring the cost down and stop the monopolies these Isp's have Open it up to allow all isp's to compete and end the data caps. My complaint is with ISP's with data caps. and monthly cost that exceed the budget of the poor.

---

**Ticket: # 777945 - Data Caps**

**Date:** 1/28/2016 10:24:36 AM

**City/State/Zip:** Cumming, Georgia 30040

**Company Complaining About:** Comcast

---

## **Description**

Comcast Data Cap is unfair to the consumer and in no way is beneficial. The cap actually limits the consumers ability to not have paid TV service. If you have no paid TV service and rely only on internet and streaming for live TV (news, sports, shows, movies, etc) then you will exceed the data cap in short order. Comcast is doing this only to force customers to by their TV service which at many times is the only one allowed in the area due to contracts Comcast has signed with local governments to give them a monopoly of the area. Additionally they offer speeds on internet service and then give no guarantee of service. So if you purchase 25 mbps and only get 3, they will not do anything for you because you have service. This is why I believe Comcast and other cable companies have monopolies over areas and the data cap they impose to limit competition for their paid TV service is bad for the consumer.

---

**Ticket: # 777962 - Violation of Open Internet Policy****Date:** 1/28/2016 10:36:39 AM**City/State/Zip:** Berwick, Maine 03901**Company Complaining About:** Comcast

---

**Description**

Comcast has caused many residents throughout the United States to be limited to their internet use. In areas where Comcast is the monopoly and no other internet service is available they have been doing a "trial" to limit the amount of internet that customers may use. Customers such as myself who live in Maine are limited to 300gb per month and must pay extra fees if they go over the allowable 300gb per month. Not only are those residents being overcharged for internet, but Comcast's unlimited data plan which would save money refuses to be allowed in Maine. Under the trial areas that Comcast has limited their internet, customers are allowed an option to purchase the unlimited data package, but those residents in Maine are not allowed. This is unfair treatment by a huge corporation that violates the rights of Open Internet/Net Neutrality. Comcast knows that areas in which they own the monopoly they can do what they please to their poor customers as no other option for internet is available. I ask the FCC to immediately call Comcast to get rid of their data caps, or treat all customers the same and make unlimited data caps available to all.

---

**Ticket: # 777981 - Suddenlink Data Cap**

**Date:** 1/28/2016 10:53:33 AM

**City/State/Zip:** Tyler, Texas 76182

**Company Complaining About:** Sudden Link

---

**Description**

People think the 300GB data cap that Comcast implemented is unfair, but Sudden link's is even worse at only 250 GB. This is not conducive to an open internet. If they want to meter our usage they should meter it the same way a water or electricity utility is and charge us for the amount used. It's eerie as well that the data caps seem to always be set around the average usage of a cord-cutter (someone who uses the internet for their entertainment needs, foregoing a cable subscription).

This is a conflict of interest, as these companies are trying to use internet data caps to discourage cord-cutting and maintain cable subscription business.

**Ticket: # 779055 - Karma internet failing to follow unlimited rate plan agreement**

**Date:** 1/28/2016 3:46:22 PM

**City/State/Zip:** Lawton, Oklahoma 73505

**Company Complaining About:** Karma Go Neverstop

---

## **Description**

I signed up for Karma Go Neverstop internet service on December 9th, 2015, with no data caps, and guaranteed service up to 5mbps. I received and activated the service on December 21st, 2015 and experienced service until December 26th, when service was stopped by the service provider. The service wasn't restored until January 4th. The service was extremely throttled at that point, and then I received an email from Karma Go on January 7th, telling me that they were then going to start throttling my speeds to 1.25mbps. This was done until January 18th, of which I received another email from them stating that they would now raise my speeds up to the agreed service of up to 5mbps, but would now limit me to 15gb per month usage. This was not what I signed up for. I have had very limited service availability as stated above, but yet they then charged me \$35 on January 21st for another month's service, even though they had not completed anywhere near a month's worth of service prior to that. My name is Keith Cathey, and my contact phone number is 580-919-5656. This seems to be a very large customer wide issue, and this is breach of contract.

---

**Ticket: # 779674 - Comcast Data Caps****Date:** 1/28/2016 7:03:17 PM**City/State/Zip:** Homestead, Florida 33033**Company Complaining About:** Comcast

---

**Description**

I am disturbed by the recent trend Comcast has introduced with home use internet data caps currently 300 gigs with \$10 extra for every \$50 there after. Realize that a current consumers and those with teenagers use a lot of programming like Netflix, and other services for games like PlayStation or XBOX or PC. Computers update regularly and can be several gigs in data each update, Digital games range from 20-50 gigs per game, and within the next couple of years 4K will become a standard for streaming which will increase data usage considerably. Instead of having a fair and open playing field Comcast is skirting net neutrality and basically forcing consumers into using only their (non data capped services) because the regular consumer who is already paying \$70+ just for Internet can't afford to use other services because Comcast is forcing you to pay more if you do.

When you put a Cap on data or create a Data usage plan it is going to hurt not only the consumer but the innovation from other companies who are trying to get your service. Consider that we are moving into an environment where all things are being connected digitally (smart appliances, lights, ac, etc..) every one of those is using data - guess what - if it's not a Comcast service - your going to be paying to turn on your light or any other smart device.

In closing - please don't allow this to happen. I have seen so many people affected adversely from this wanton money grab from Comcast. Please protect innovation and all the companies who rely on digital commerce.

[Ticket: # 779792 - T-Mobile fraudulent advertising, misrepresentation of service, overbilling of data](#)

**Date:** 1/28/2016 7:54:45 PM

**City/State/Zip:** Stevenson Ranch, California 91381

**Company Complaining About:** T Mobile

---

## Description

I have recently provided my mother with a T-Mobile hotspot for her internet as AT&T refuses to install any more DSLAM parts in her home area. T-Mobile advertises broadband as unlimited, and also advertises their binge-on program as unlimited as well, assuming customers accept data caps on video streams. Unfortunately, T-Mobile doesn't honor this unlimited binge on service. After having exceeded her standard high-speed usage on her 'unlimited' data plan, T-Mobile discontinued her Binge-On program and throttled her data usage to speeds of 20kbps down and 140kbps up. T-Mobile buries this information in a way that makes it very easy for elderly people to be misled. Binge on is called 'unlimited,' however only video streams from services like Netflix and Hulu are unlimited. You still use data just to go on to these sites and services, therefore it is completely impossible to use Binge on in an unlimited capacity, even if you were to restrict all other data usage.

Further, if a customer, after having exceeded their data allowance, continues to use data via 2G methods (hence, the unlimited data label), and later adds additional high speed data to their plan, T-Mobile will retroactively consider all previously used 2G data as high speed data, effectively fining the user for high speed data - even if high speed data wasn't actually high speed data being used. On top of this, T-Mobile has made it impossible for me to manage or view my billing plan via their website.

I applaud t-mobile for their efforts to bring more, faster, and better internet options to users with their new band 12, however their advertising is at best misleading and at worst fraudulent and worthy of further investigation.

**Description**

\$63 dollars a month for a measly 20 Mbps connection is to much. By comparison, places like Chattanooga TN where you can get a gigabit (1000 Mbps) connection for relatively the same price, just leads me to believe that the consumers that have no way of choosing a competing service, including myself, are being swindled.

We have foreign countries that have leagues better internet infrastructure than the vast majority of the US does. We are only shooting ourselves in the foot by letting cable companies bottleneck our internet connectivity with there old and bloated business practices. The internet is the future, all business needs the communicative connectivity in order to flourish. Please, do something about the internet situation in our country, and please for the love of god, know that data caps are the worst thing to ever happen to internet by wire communications. Please unlock this countries potential by giving us the tools to do so. Namely, a free and open internet at reasonable cost. Thanks for your consideration.

---

**Ticket: # 780925 - Xfinity Data Caps**

**Date:** 1/29/2016 1:50:29 PM

**City/State/Zip:** Memphis, Tennessee 38117

**Company Complaining About:** Comcast

---

**Description**

I live in TN, where Xfinity has been testing data caps. I find this practice to go against an open internet. They are most likely implementing this as a selfish act to protect their aging TV service business model and to fight streaming services like Netflix and Hulu. Please take steps to prevent data caps.

The US is already lagging behind world peers in internet speed and practices. We do not need our ISP's to drag their heels making the situation worse. Where I live the only options for residential HS internet is ATT and Xfinity. Both of these companies have data caps in my area, so I do not have an alternative.

To make things worth, Xfinity is said to be rolling out "Stream TV" which is supposed to be their Netflix alternative. I have heard that their streaming service will not count against their data cap, giving them preferential treatment.

Please keep the internet open and neutral for the citizens. Please stop practices like data caps and preferential streaming practices.

**Ticket: # 781894 - Comcast and data caps**

**Date:** 1/29/2016 6:37:05 PM

**City/State/Zip:** Gainesville, Georgia 30506

**Company Complaining About:** Comcast

---

## **Description**

To whom it may concern,

I am a current customer of Comcast. I only purchase internet access, and I live in a market where they impose data caps and are they only provider of broadband internet. I will keep this short.

-Data caps limit my entertainment choices. Comcast imposes these caps to force either paying an overage for usage, or buy tv service from them.

-Due to data caps, I can not leverage cloud backup utilities, since comcast counts both up and down stream against the monthly data cap.

-Comcast has a monopoly in many areas, which gives them an unfair and undue power to control the internet, which has become a utility.

Please fix this. Comcast needs stop this unfair policy.

I have spoken with multiple internals at the company regarding this. Their official line is that "we do this to force congress to start taxing the internet more fairly." The real reason seems to be that their cable TV business is quickly eroding.

---

**Ticket: # 782272 - Comcast data caps in Miami****Date:** 1/29/2016 11:10:58 PM**City/State/Zip:** Miami, Florida 33161**Company Complaining About:** Comcast

---

**Description**

Comcast recently introduced data caps in the South Florida area back in October 2015. We were the "lucky" candidates chosen to be guinea pigs for their new "unlimited" data plan at an additional rate of \$30 a month. How is it legal for them to even do this considering the net neutrality laws passed by the FCC not too long ago? This seems like a blatant push against open internet. We are now being expected to pay for something that has been free for the past 10 years that I have had high speed cable internet with Comcast. The worst part is I don't even have any alternative options. Comcast holds my area hostage when it comes to high speed internet with their monopolistic stranglehold. Do they not milk enough money out of their consumers as it is with rental fees for cable boxes that cannot be purchased anywhere? Why are they allowed to operate uncontested in any market? With most media and entertainment companies pushing towards a digital future, how is it in anyone's best interest to allow Comcast to begin nickel-and-diming for what is becoming an essential part of our lives? We live in an always connected, always online world. Where software updates and on demand information is becoming more and more common. Why is Comcast being allowed to infringe on our right to information and progress as individuals? Is that what liberty has become in America? Not the right of the people, but of the corporations and their bottom line? Our founding fathers would be so proud.

[Ticket: # 782353 - Data cap](#)

**Date:** 1/30/2016 2:30:03 AM

**City/State/Zip:** Paducah, Kentucky 42003

**Company Complaining About:** Comcast

---

## **Description**

I believe that the 300gb data cap that comcast has in place is unfair and needs to be stopped. I recently read an article from a top comcast employee that the cap is used for business reasons (more revenue) and not a technical issue. I live in a city where comcast is the only viable choice for high speed internet. If there was any other option I would switch to another isp that does not use a cap. In a household with 2 adults and 2 children, 300gb of data is not adequate. Gaming, streaming video and music are a part of our lives and we are having to turn the modem off and do without for a portion of the month because of this business decision that comcast has put into place. I can pay \$10 for 50gb more data. Why do I have to pay more for data that should not be capped in the first place.

---

[Ticket: # 782539 - Data Caps are Bad for Consumers](#)

**Date:** 1/30/2016 11:33:55 AM

**City/State/Zip:** Big Spring, Texas 79720

**Company Complaining About:** Sudden Link

---

## **Description**

Suddenlink has a data cap that prevents usage of Internet services like Netflix and Amazon Prime. They overcharge for data and then have a lifetime 2 strike with no reset so if you go over twice you are screwed the rest of your life. They also fail to warn you of approaching the limit in a timely manner and imposed the data cap with no warning to customers.

---

**Ticket: # 782519 - Comcast Data Cap for Home****Date:** 1/30/2016 11:25:06 AM**City/State/Zip:** Marietta, Georgia 30064**Company Complaining About:** Comcast

---

**Description**

I received an e-mail from my ISP (Comcast) today notifying me that I had used 90% of my data cap for the month. This is an absurdly atrocious business practice given both the necessity of internet in 2016, and the lack of choice consumers have when selecting an ISP. When I purchased this house in August 2014 I had exactly two options for high speed internet service providers (AT&T and Comcast). Between the two, only Comcast offered download speeds that would be considered "broadband" by today's standards, less than 18 months later. Comcast both is and acts like a monopoly, and there should be regulations which protect consumers from such actions. Internet usage is not an 'elastic' service, and without competition there must be oversight to disallow any instance of a belligerent business practice.

---

[Ticket: # 782565 - Comcast using data caps to prioritize internet traffic.](#)

**Date:** 1/30/2016 11:55:23 AM

**City/State/Zip:** Vine Grove, Kentucky 40175

**Company Complaining About:** Comcast

---

## **Description**

I am in an area where Comcast has implemented a data cap. When talking to Comcast representatives about this policy I was informed that if I signed up for the Comcast OnDemand services that the Comcast streaming video would not count against this cap. This seems like a blatant attempt to get around Net Neutrality rules about prioritizing data. The limits also seem to be just low enough to "punish" Netflix streamers as I have consistently gone over the cap with just modest streaming of Netflix. One other practice I do not like related to the data cap is the fact that when approaching the cap pop-ups are injected into my browser. It could be coincidence but so far I have only received these page injection warnings when going to the Netflix website.

---

**Ticket: # 782717 - Comcast's unrealistic data cap**

**Date:** 1/30/2016 1:44:04 PM

**City/State/Zip:** Antioch, Tennessee 37013

**Company Complaining About:** Comcast

---

**Description**

Comcast XFINITY's 300 GB data cap is absolutely unreasonable in 2016. Perhaps that limit was acceptable in 2008 when data caps first started being implemented but the cap hasn't increased along with the average person's internet usage. My fiance and I both rely on internet access in our homes for our jobs. This isn't us streaming movies all day and going over our limit - although if that's how we chose to use our time, that shouldn't matter. But this is now affecting our livelihood.

So why don't we simply switch to another provider? Because there are no other options. Comcast has a monopoly on the market. There's simply no one to switch to. They know that and that's why they can price gouge customers with such a low data cap. The data cap is not in place to reduce congestion or for any other technical or reasonable reason. It is a money grab that Comcast has been allowed to get away without any checks.

If there must be a data limit, it needs to be consistent with the times and be updated annually to remain consistent. The 300 GB cap should be at least doubled to support one household in 2016. This is the basic need of parents working from home or children accessing the tools they need to do their homework. A cap of 300 GB is dated and unrealistic in 2016.

[Ticket: # 783529 - Unwanted Usage Cap](#)

**Date:** 1/31/2016 1:03:40 PM

**City/State/Zip:** Loganville, Georgia 30052

**Company Complaining About:** Comcast

---

## **Description**

My family of five uses the internet heavily, as so much is moving online instead of through television. The internet has become more and more important, but because of Comcast's "test area" that we reside in, we have to pay extra to use our internet. We did not ask to be part of your market test, Comcast. Data caps are horrid, and it's not like we are charged less if we use under 300GB. Our speeds vary wildly, and we shelled out thousands of dollars to have Comcast put in our own box with a trunk line due to the land we live on. We've already given Comcast tons of money, but our service sucks. Unfortunately, there is no other option because this greedy company has a local monopoly.

**Ticket: # 783604 - Comcast Data Caps & Billing Scams****Date:** 1/31/2016 2:35:47 PM**City/State/Zip:** Knoxville, Tennessee 37919**Company Complaining About:** Comcast

---

**Description**

Well, Comcast finally bit me today. They charged me \$130 in overage fees and then are claiming that I'm renting a modem from them (I provided my own hardware). Another \$10 in a "speed increase" that I did not authorize and they charged me \$15 for a self service setup kit that I didn't buy (I provided my own hardware). All of that on top of my \$50.92 internet service. This is garbage. I try to contact customer service who tell me to basically get lost. I can't use their chat service either as it 404's when I try to use it. They have a monopoly on Knoxville TN. I cannot get any other service provider that is worth anything in my area. They give me 300 gigabyte data cap for an otherwise unlimited service, they then charge me \$10 for any 50 gigabytes I go over after that. The internet cannot run out from usage, that is not how any of this works. As I previously stated I cannot get any other service that is better in my area. I believe AT&T's U-verse is around 30 gigs slower for the "same" download rates and they also have data caps. This is ridiculous, and you the FCC, designed to protect the consumer won't do anything about it. Now after I file this I will be contacted by Comcast in about a week to basically tell me that I need to get bent.

Now, with all of this said I have had blatant data throttling on my account because I am a Netflix customer and use their services to stream television shows. I am perfectly happy with my Netflix services and do not blame them for any of this. Comcast is throttling me because I am not paying for their television services which are priced exorbitantly higher for much less content.

Please, for the love of god stop this.

**Ticket: # 783684 - Complaint against Comcast Data Caps and Usage-Based Billing****Date:** 1/31/2016 4:25:35 PM**City/State/Zip:** Cordova, Tennessee 38016**Company Complaining About:** Comcast

---

**Description**

My name is Adam Chan, and I have Comcast XFINITY Internet. I would like to file a complaint to the FCC regarding the internet data caps imposed by the company, Comcast. From signing, I was unaware that the internet usage was usage-based, and no Comcast representatives told us this information until after the fact (or requested). Moreover, my particular location and account is linked to a "market trial" in which customers are required to be on a data cap. This seems a bit unfair as the Net Neutrality rule seems to be violated. Service and ISP providers should treat all internet traffic equally. The institution of data caps and usage-based billing by Comcast violates this access to free internet. While Comcast does not regulate what I see or do on the internet, it does limit the amount of things that I can do with a data cap. I ask that the FCC look into Comcast's policies and hear my complaint about these data caps and usage-based billing. Thank you for your help.

---

**Ticket: # 783705 - Comcast Data Caps****Date:** 1/31/2016 5:31:52 PM**City/State/Zip:** Goose Creek, South Carolina 29445**Company Complaining About:** Comcast

---

**Description**

I recently filed a complaint with the BBB in regards to Comcast's data caps in my area. After receiving little satisfaction from the route, I am urging the FCC to put an end to this madness. Comcast claims to me that they are trying to alleviate lower-end users of data of paying the same as those who use more. In no way, shape or form, do I accept any validity to that claim as Comcast has yet to offer any incentives for those using less data, only offering to charge others in the Florida "trial" region for the "unlimited data option." My market did not even get this option.

Secondly, the methods used by the third-party that Comcast has contracted to account for the data utilization, NetForecast, Inc., do not account for TCP resynchronization when there is congestion on the network. When this occurs, and it inevitably does as NetForecast recognizes, Comcast "double dips" on the data usage meter resulting in a higher tabulation presented to the consumer. The technology certainly exists to understand when congestion-induced packet loss requires packet retransmission, yet there is no mention for it being employed. If broadband wishes to be seen as other utilities, then it certainly needs a mechanism to account for this as well as a regulatory body to ensure that there is a standard enforced. Please point me to the regulatory body that guarantees the measurement of data usage when my calculations, which occur at the packet level of my router running DD-WRT, are not in agreement with Comcast.

Lastly, Comcast encourages increased data usage by placing shows online for its consumers to view. Like the "company stores" of mining towns of old, Comcast charges for access then charges again when that access occurs. This is really an attempt to corner the market in video on demand and/or to force customers into buying more expensive packages and leasing additional equipment. Since there are no other options in my area for broadband service, Comcast is certainly enjoying it's monopolistic position.

---

**Ticket: # 783710 - Eliminate the monopoly on broadband**

**Date:** 1/31/2016 5:49:53 PM

**City/State/Zip:** Nashville, Tennessee 37203

**Company Complaining About:** Comcast

---

## **Description**

Comcast and other major broadband ISPs are implementing data caps, which is bad for everyone. Many sounds arguments have been made regarding this and I will not repeat them. Two things can help.

First, eliminate the restriction that only one business can provide broadband coverage in area, at least as far as Internet is concerned.

Second, regulate Internet consumption like electricity: People should be charged for what they use, not for "plans" and "overages" and the such. Data connectivity has become a basic utility like any other utility, and should be provided, managed, and overseen as such.

---

[Ticket: # 783801 - data caps](#)

[Ticket: # 783975 - Comcast trying to skirt net neutrality](#)

**Date:** 2/1/2016 12:12:37 AM

**City/State/Zip:** Shreveport, Louisiana 71104

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently begun instituting data caps. They are spreading false information that people rarely use 300 gigabytes of data a month, but that's patently false. I've actively tried to reduce my monthly data usage, and comcast is still reporting that I'm using more and more every month.

I feel that Comcast is intentionally trying to skirt net neutrality. Since they cannot throttle competitors like Hulu, Netflix, and other streaming sites, They've started instituting data caps as a way of throttling through a backdoor. The primary customers and parties affected by this data cap are people that stream a lot, through their competitors, and so they are now charging for them doing so. Their competitors are also affected because when customers are charged more, they reduce their streaming habits. My mother-in-law, sister-in-law, and many of my friends have all canceled netflix and dropped youtube usage to avoid data overages, so it's clearly working.

---

[Ticket: # 784826 - Monopolization of bandwidth and data overage charges with no sound reasoning](#)

**Date:** 2/1/2016 2:49:13 PM

**City/State/Zip:** Canton, Georgia 30114

**Company Complaining About:** Windstream Communications

---

## **Description**

The issue is that the internet service providers in most areas have been forcing customers to move to a "Data management plan" in which the customer is charged exorbitant fees for small parcels of data. It has been widely theorized that this is direct defiance of the recent Net Neutrality loss suffered by internet service providers. In other words, they lost, they're upset, and since they can't gouge the customer the way they wanted to, they've found another way. There are petitions to attempt to get them to repeal these policies, but those petitions will be left to the corporations themselves. The only other option for consumers is to elect to purchase a severely degraded service provider to avoid the data cap, and following the recent trend, those service plans will be a thing of the past in a matter of a few years if not, months.

**Ticket: # 785207 - Comcast Monopoly allows for insane charges****Date:** 2/1/2016 4:26:29 PM**City/State/Zip:** Tuscaloosa, Alabama 35405**Company Complaining About:** Comcast

---

**Description**

Comcast has a monopoly in my area, and AT&T can't /wont give them competition to lower prices. This is a problem all over Tuscaloosa, Al with various companies exploiting different pockets of monopolization. It sucks that not only am I over paying for internet, but for a basic cable package it would run \$120 plus \$10 a box in my house, plus a data cap, oh plus HD isn't stadard, you have to pay for that too. Before you know it, \$120 turns into \$215. That's crazy. Companies should either be forced to give affordable pricing that is reasonable quality OR not be allowed to impose an internet data cap. At the end of the day Comcast is trying to hinder the expansion of Netflix, Hulu, etc. It's been ruled that companies cannot throttle data just because they don't like the site because it hinders these internet streaming companies from being able to compete with cable companies. Why then, is it not illegal to charge me \$35 a month on top of my \$60 internet package to have free access to the internet? At the end of the day it is the aim to disallow residents with Comcast from being able to enjoy streaming services. This is a breech of the Net Neutrality Ruling because it is forcing customers of Comcast to discriminate against such services to prevent the cable services from being up charged. Seriously, we watch our data usage and ration it like it's food because we can't afford to risk an up charge. We are 3 college students who require streaming abilities to access much of our class material anyway, and by imposing the data cap, Comcast is eliminating it's biggest competition: Netflix. It's illegal. It should be stopped.

**Ticket: # 785498 - Data Cap Put in Place - No Prior Notice Recieved, Very low cap**

**Date:** 2/1/2016 5:59:58 PM

**City/State/Zip:** Kingman, Arizona 86401

**Company Complaining About:** Sudden Link

---

## **Description**

I live in Kingman, AZ, and I use Suddenlink as my ISP at home. I use my Internet primarily for school, transferring large datasets between my university in Dallas and my home computer. Before signing up with Suddenlink, I explained my situation that I would use alot of data, and that a data cap would inhibit my school work. They assured me that a data cap was not in place in our area, and that there were no plans to institute one at any point in time. This was April 2015. I checked with them again in November, as I heard that they were doing this in other places. They once again assured me that no plans were in place for a data cap.

In January, I noticed on my account that my data usage was being tracked. I saw that I had a cap of 250GB, and that I was 50% toward that cap. No letter or notification was given in previous bills or notices. I called them up and they told me that this was their new policy, and that "the vast majority of people would not exceed that cap". They offer no plans for unlimited access, and their overage allowances are insufficient.

I have, and will, exceed that again due to the datasets I'm downloading. I am not abusing my Internet access.

I'd like to file a complaint against Suddenlink for misleading its customers. I'd also like to file a complaint under the General Misconduct policy. Suddenlink operates as a functional monopoly in our town: they are the only broadband provider, as DSL and others here do not go above 25 Mbps. I cannot switch ISPs for school as they cannot handle my school applications, and I'm looking at high chargers in the future due to this policy they implemented.

---

**Ticket: # 785586 - CableOne Data Cap**

**Date:** 2/1/2016 6:31:18 PM

**City/State/Zip:** Boise, Idaho 83704

**Company Complaining About:** Cable One

---

**Description**

CableOne's extremely low data caps (300GB) make doing anything on the internet a constant game of "is it worth it". Should I let my kids watch that movie? Do I have enough data? I have to spend every day rationing how much data I consume.

They recently doubled my speed yet did nothing to the data cap. Now, I can run out of data even faster.

Every single technical news outlet has proof that data caps are simply a money grab. I feel it is completely unfair when I have no real choice in ISPs.

Promised no data cap. Data cap imposed on 1/14/2016

---

[Ticket: # 785951 - Open Internet/Net Neutrality](#)

**Date:** 2/1/2016 9:40:57 PM

**City/State/Zip:** Hattiesburg, Mississippi 39402

**Company Complaining About:** Comcast

---

## **Description**

I just finished grad school and am looking for employment. Out of necessity to save money, I stay home and stream movies while I am looking for /applying for jobs. Thanks to the data caps imposed by Comcast, I am getting charged an extra \$30/month for a total of \$96/month for internet access. I don't understand how Comcast can only impose a data cap on a limited number of markets. I assume that it is "because they can" due to a complete lack of competition in the Hattiesburg market. I live in Hattiesburg and I can't even get access to DSL and even though it is slower, I would jump ship in a minute if it was available.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 787862 - Comcast Data Caps**

**Date:** 2/2/2016 6:16:55 PM

**City/State/Zip:** Elizabethtown, Kentucky 42701

**Company Complaining About:** Comcast

---

## **Description**

I am concerned that the Comcast data cap is only applied in certain areas, with overages subject to additional fees. Streaming services like Netflix do result in increased data usage; however, Comcast's own Stream TV streaming service apparently does not count against your data usage. Stream TV is indeed a data stream, as it is also available through other devices like phones and tablets. This appears to me to be an equal access issue.

**Ticket: # 788315 - Comcast Internet Data Cap**

**Date:** 2/2/2016 10:16:13 PM

**City/State/Zip:** Gallatin, Tennessee 37066

**Company Complaining About:** Comcast

---

## **Description**

I do not feel it is right for Comcast to impose a data cap on my internet service from them in the Nashville area. For months the data on my internet was between 30-60gb then all of a sudden for the month on January they claim I used over the 300gb and I would be charged for additional Internet unless I choose to pay a additional fee every month for unlimited internet. This is a SCAM to take advantage of hard working Americans that need internet service and Comcast can find ways to drive prices up. This is bait and switch at its best. In no Comcast communication or advertising that I received when I signed up did they state my internet data would be capped and additional fees would be involved.

**Company Complaining About:** Comcast

---

## **Description**

I am being charged for overages although my data usage meter is broken. I have complained 3x and the overages continue. The data usage is not representative of my actual usage. Comcast has done nothing to help yet offered to waive the data cap for others in my area at no charge.

---

**Ticket: # 788493 - on coming changes to cable/netflix options and data caps**

**Date:** 2/3/2016 2:48:45 AM

**City/State/Zip:** Troy, New York 12180

**Company Complaining About:** Time Warner

---

## **Description**

I've been reading all over the internet that places such as comcast (whom i do not have) have been in a war with netflix and streaming services regarding placing data caps upon a customers internet usage in order to curb the amount of data that is used ( really the issue is mainly to crush the competition). They can word it any way they want to. But by allowing any internet provider to place data caps upon internet service they pay for in order to deter people from streaming services which crushes competition and cord cutters they are in a sense performing unfair business practices. Since cable tv companies cannot decrease their constant rising prices customers downgrade services, disconnect, seek other options. in order to fight back they are beginning to place data caps on internet usage as a penalty for people that are seeking other options.

This should be an unfair and unlawful practice. In essence they are creating a monopoly and creating practices that destroy other businesses such as netflix. Such as Time Warner working towards renegotiating contracts with hulu to end next day airings of current episodes of shows.

There needs to be more laws in place for fairness. Time Warner is creating their own streaming content and do not want the competition from others so they are putting things in place to destroy a consumers options to find other alternatives.

**Ticket: # 788523 - Comcast Data Cap**

**Date:** 2/3/2016 8:31:53 AM

**City/State/Zip:** Hallandale Beach, Florida 33009

**Company Complaining About:** Comcast

---

## **Description**

As a way of discouraging customers to seek alternate forms of media, information and entertainment, Comcast is imposing a 300 GB / month data cap on my service, and charging \$10/50 GB overages per month. That's outrageous, and deliberate, because cord cutters like me get most of their content via the internet. Two weeks usage of Netflix alone will consume that much bandwidth. This kind of data gouging should be illegal.

---

**Description**

Hi, I have been a loyal customer of Comcast for 10 or more years. We were told that we would have a data cap on our account of 300gb with 3 "complimentary" overage forgives. We in November of 2015 were told that our DOC 2 Modem that we bought personally was out of date and we needed to have a DOC3. We bought one and installed it in late December 2015. Since then we have been told that we went 140 gbs over our limit in January, and now after 2 days of usage in February that we have used 44gb. There is no way we have used this much. We use our xbox one for everything other than phones which use a data plan. Our xbox says we have used 4 gbs. I am needing someone to hold this company accountable. Came close to going over once about a year ago when my kids were off school and using their tablets to stream Netflix. We only reached 260gbs. Now with people in school and gone for work we come home and there will be 6 to 20 gbs used. This is unacceptable when I pay for the service to start with.

## **Description**

I was really glad when Net Neutrality won last year, but I'm not sure that anyone's following the rules. When looking at the possibility of upgrading to a smart phone I kept running into "data caps" so small that it was clear I'd always be getting slow service outside of favored websites. I said, screw it, and didn't bother to upgrade. Now, thanks to FFTF, I understand what I was up against.

Let me make it clear. I don't care whose content is being carried over the net, there should be NO preferential treatment given. Ever. Not even if it's Verizon or Comcast's own stuff. Net neutrality is for every packet. And data caps are a scam intended to screw more money out of people for less service. If they can provide one app without a cap, they can provide any app without a cap.

So I'll end with FFTF's words. Go after these buggers and make them play right. The rules have already started forcing them into actually investing in infrastructure, and they need to start catching up to the rest of the planet or get out of the game.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**City/State/Zip:** Freeport, Texas 77541

**Company Complaining About:** Yourkarma

---

## **Description**

YourKarma initially had a plan that was billed as "...\$50 per month for all the internet you want." the speeds were 5Mbps up and down. Sometime in January. everybody across the board got throttled down to about 1Mbps. Either I never recieved an e-mail or they never announced the throttling. On January 18th an email was sent out stating the changes made to the plan. that took effect 1 hour after they sent the email stating that there was a data cap now for 15GB at full speed and after that they would throttle the internet down to speeds good enough for e-mail and chat (the speed was never mentioned in the e-mail). On the blog post they wrote the throttled speeds would be "around 64-128Kbps."

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 790835 - Suddenlink Data Allowance**

**Date:** 2/3/2016 10:07:34 PM

**City/State/Zip:** Kingman, Arizona 86409

**Company Complaining About:** Sudden Link

---

**Description**

One of the largest Internet Service Providers for the County I live in, Mohave County, Suddenlink, and also my Internet Service Provider, recently implemented a "Data Allowance" on all of its customers. Once customers go over a set allotment of data at their house, their Internet is capped until they pay a \$10 per 50GB fee. I was not notified of this data cap change in service in any form. I learned of it via social media. It is my understanding that I will only be notified by Suddenlink of the implementation of their new "Data Allowance" on my account if I go over the cap in any given month. Prior to this new cap, data consumption was unlimited.

---

**Ticket: # 790846 - Data caps from Xfinity**

**Date:** 2/3/2016 10:21:33 PM

**City/State/Zip:** Frederick, Maryland 21702

**Company Complaining About:** Comcast

---

## **Description**

I recently was surprised out of the blue by the implementation of Xfinity's Data Cap. I understand controlling abuse; but this data cap affect net neutrality and inhibits alternatives of services by user. Software updates (critical for up keeping security) may easily count against data charges.

Xfinity does not refund low data usage customer, yet charges users who unwarily pass their Cap without any notice. If Comcast want to charge for data then it should become a utility company like electricity.

Most importantly, who monitors this data usage? Who controls the cap limit? If its the Xfinity without an outside comptroller then there is a high potential of fraud, inaccurate charges or abuses against customer.

Enough is enough, internet is a critical part for this country's development. Censoring or limiting it is just another burden against the already steep price US customers pay for something that turned into a necessity instead of a luxury.

[Ticket: # 791900 - Internet access charges \(increase\)](#)

**Date:** 2/4/2016 1:37:54 PM

**City/State/Zip:** Coconut Creek, Florida 33073

**Company Complaining About:** Comcast

---

## **Description**

Comcast's new 300 GB/mo. data cap and usage fees for internet access (in Broward County), as it relates to fair usage and net neutrality laws. After this 3-month "transitional period" they will begin charging an extra \$10 for every 50 GB of overage, per month.

Suddenly, I am 'using' more data than I have ever used before. I don't know how this happens. Previously, my max use was 192 g in month. Suddenly it is + 300. I am not aware of any increased use.

Also, can they slap this 'cap' on me out of the clear blue sky? We never had a 'cap' before. is this 'Bait & Switch'? I really feel as if 'I have been taken to the cleaners'. (IMHO) Comcast is exercising power leveraging a monopoly position over the Internet Services that I need.

1. I did not use over 300GB

2. Comcast should follow the Net Neutrality principles, Data caps are illegal.

---

**Ticket: # 793172 - Comcast Data Caps discourage free enterprise and competition**

**Date:** 2/4/2016 7:28:22 PM

**City/State/Zip:** Sunrise, Florida 33351

**Company Complaining About:** Comcast

---

## **Description**

Data cap fees imposed by internet service provider's are meant to discourage usage of online services like Hulu, Netflix, HBOGo, etc. Though the 300GB cap may be high for now, in 1 year it will be too low for the majority of consumers since data usage increases dramatically year over year.

The other issue at hand is the concern that these companies, specifically, Comcast will be metering the data usage for their customers. Where will the average consumer find the technical know how or capabilities to see if they really are using as much data as they stand accused by their cable provider? There has already been several incidents where the data metering was incorrectly measured by Comcast.

People are not subscribing to pay TV services like they used to, so in retaliation, Comcast and providers alike who have been losing subscribers on a daily basis, have resorted to charging their customers for what is viewed as excess data usage.

Think of data as water. We consume water and our water utility will send us a bill for the amount of water we used. Comcast in essence is acting like a public utility and therefore should be treated as such. They are now at the point where they are charging like you would charge for traffic on a toll highway. On the toll free highway, you can only fit 3 lanes of cars, but on the toll road, you might have 6 lanes of cars.

Does this make sense. They are ripping people off.

---

**Ticket: # 793318 - Bandwidth Cap by Broadband ISP****Date:** 2/4/2016 8:42:34 PM**City/State/Zip:** Eagle, Idaho 83616**Company Complaining About:** Cable One

---

**Description**

My broadband provider (Cable One) sets data caps on my internet usage. I used to subscribe internet service at 100Mbps, which is a sufficient speed for my family. However, it came with a monthly cap on data usage of 300GB. With 5 people in my household, multiple mobile devices per family member, and the prevalence of streaming nowadays, the data cap is easily exceeded. Cable One's policy is that if I exceed the data limit 3 times in a year, I'm forced to upgrade my service to a higher speed level, which comes with a larger data cap. As a result I was forced to upgrade my service last December to 150Mbps with 400GB/month data cap, which bumped my monthly bill from \$55 to \$80. My question is that are there any regulations how and should ISPs be imposing data cap on consumers?

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Description**

Please review Comcast business model. Your agency needs to provide customers some relief from policies that Comcast has enforced on its customers. Let's start with the plan of service I am on with Comcast. The past 1.5 months ago, the agreement provided my household with voice, data, Internet broadband service for a price that would be not I increased for two years. Six or seven months into that agreement they instituted a data cap which was never discussed. The broadband service was planned out at a level that Comcast has never provided that I am paying for. I have had more than 12 service calls to get better thru put for my broadband service level which has never been successfully provided. The wifi service is created has interfered with my wireless service in my home. I am a technophobe or expert on networking, but test I have run indicates that Comcast wifi service has had a negative effect on my router. This service also effected Comcast router to the extent that Comcast own technical staff recommended I change router's. Comcast is charging me \$12 per month for a DVR and \$3 per month for a digital cable converter. Yet 1.7 months at start of service I asked which cable boxes I could purchase, advised that with X1 service only their box would work. My compliant could extend 4 or 5 levels deep which poor customer value, lack of ethics, over charges and lack of any options for me to correct this issue. Don't discuss of business options because I have twice switched service and had issues with cost, service and lack of a corrective measures to force favorable resolution with cable/satellite service companies which are a monopoly. One example Comcast is the sole cable provider in my county (Henry county, GA). Your agency is or should provide customer some relief from these type of robber barons. Either you provide us some relief or everyone ends up getting TV from over the air signals from antennas. I am paying \$184 per month with Comcast and their are 15 countries with better cost and larger broadband service thru put. Help us and more over to allow the market to fix this.

---

**Description**

Hi,

Data caps have become a money making scam. My current provider does not give me the choice to pick a plan that is less expensive. I am forced to upgrade my internet every time I exceed cableone data caps. I can only pick a 100Mbs speed with 300 GB a month. If I exceed that more than 3 times I then have to upgrade to a 150 Mbs speed with 400GB a month. Then if you exceed that then 200 Mbs and 500 GB download cap. Why can't I get a 50 Mbs speed with more data. Why do we need caps? With the current technology we have we don't over load cableones network. I pay for 100Mbs but rarely receive over 50Mbs. How is it that a company can tell you a lie and get away with it? This is becoming one of the growing issues in the internet provider world today. I asked that the FCC does something to intervene and help those who cannot afford these expensive services. I'm currently a full time student going to a technical college in IT which requires me to download lots of data to get my homework and things done. These internet providers do not need to be making more and more money. They need to give consumers what they want. We do not have enough provider's in America today we have company like Comcast, At&t and cable one who tell us what we need because there is not any competition for them to say other wise. That is one reason T-Mobile is currently giving the American people better cellular rates. The FCC needs to regulate this more, or stop the merging of smaller ISP companies with bigger ones.

Thanks for your time,

**Ticket: # 793777 - Comcast Data Cap**

**Date:** 2/5/2016 10:16:03 AM

**City/State/Zip:** Gainesville, Georgia 30507

**Company Complaining About:** Comcast

---

## **Description**

Comcast has began capping data in my area. I called to inquire about cancellation of services or have them reverse my data caps. They informed my that to cancel I would have to pay my disconnect fee. They also informed me that there is no choice, everyone is now subject to caps whether there was an existing service agreement or not.

Furthermore, I am also not eligible for unlimited service as the plan is not available in my area. For my profession (IT), I have to download large files or attend streaming training sessions regularly.

Comcast has set me up to pay them heavy fees in addition to the regular premiums for use on their service. I implore you to take a stand against these data caps. Comcast continually ranks low in customer satisfaction and this is indeed another reason why.

**Ticket: # 794813 - Price and Speed increase without Data Cap increase**

**Date:** 2/5/2016 4:04:12 PM

**City/State/Zip:** Medina, Ohio 44256

**Company Complaining About:** Armstrong

---

## **Description**

Armstrong has once again increased the price and speed of all levels of their internet offerings while continuing to maintain an artificially low data cap for no reason than to make more money by selling additional data. Their basic package has doubled in speed and gone up \$5 dollars per month which seems like a good deal. The problem is the data cap has not increased so you are still limited to how much you can use their service before getting charged exorbitant data fees for going over their cap. With my new increased speed of 50 Mbps they will be offering for the basic package and my data cap of 200 GB, I will be able to use my connection at the maximum speed for less than 12 hours before I meet my data cap.

**Ticket: # 795238 - Comcast - Data Cap Overage Charges**

**Date:** 2/5/2016 6:40:06 PM

**City/State/Zip:** Kennesaw, Georgia 30144

**Company Complaining About:** Comcast

---

**Description**

I have continued to receive data cap related charges due to Comcast's unethical business practices.

As a customer, I want a choice in my data consumer - currently, we do not have enough competition in the market and this allows Comcast to impose their will on individuals.

This is unfair and unethical - As a tax payer, it is the right of our government's regulatory commissions to ensure that the will of the people is upheld. It is clear that the policies imposed by Comcast are not in the will of the people and should be reviewed.

I already face extended data charges for using features such as Hulu and Netflix, while Comcast does not charge data usage for their own proprietary service.

If the electric company charged me more for using their own lightbuild than a Phillips lightbuild, this would be considered illegal.

Why is it that we allow Comcast to do the same thing, when they are a utility provider?

---

[Ticket: # 795460 - Verizon violating net neutrality](#)

**Date:** 2/5/2016 8:38:12 PM

**City/State/Zip:** Seattle, Washington 98102

**Company Complaining About:** Verizon Wireless

---

## **Description**

Verizon allows consumers the ability to access their the Verizon video app (Go90) without counting against the user's data cap. This is a direct violation of Net Neutrality which stands for all internet traffic is equal. Now the internet traffic to their own site is free and therefore not equal. There are similar occurrences of this with T-Mobile which allows certain video websites to not count against user's data plans and others.

**Ticket: # 795510 - Suddenlink internet cap**

**Date:** 2/5/2016 9:36:11 PM

**City/State/Zip:** San Angelo, Texas 76901

**Company Complaining About:** Sudden Link

---

## **Description**

I was informed by a recorded message that Suddenlink has implemented a 250gb Internet cap and if you go over you are charged. This is wrong because suddenlink offers the only high speed Internet in San Angelo Tx so you either switch to DSL or deal with it. This is happening because cable is losing customers because of Netflix and Hulu. They will make sure they get paid by implementing data caps. I also don't know if I trust their data usage monitor. I am a single mother that works 80 to 120 hours a week in September. My 16 year old daughter is at school from 7:30 to 3:45 yet it shows the two of us used over a terabyte of data. We don't even download. I have talked to several computer programmers and with one smart tv, 2 desktops barely used, 1 laptop used often and two cell phones that is practically impossible. I have raised my data usage to 500gbs but am now paying more. If I go over 500gbs a month I will be charged 10 dollars for every 50gbs over. This is unethical practice when you monopolize the city.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 795697 - Comcast data Caps](#)

**Date:** 2/6/2016 7:10:48 AM

**City/State/Zip:** Rockville, Maryland 20852

**Company Complaining About:** Comcast

---

## **Description**

Comcast has instituted Data Caps for monthly Internet use. This is designed to discourage people from cutting the cable and using only Internet. For those that have cut the cable cord Comcast offers a streaming service that you would have to pay a monthly fee for and this would not count against your Data Cap. This also discourages people from using Netflix or Hulu etc. since using them counts against your Data Cap. This is a violation of Neutrality by favoring it's own streaming service.

[Ticket: # 836451 - XXXX XXXXXXX's complaint re: Comcast, Verizon, AT&T and T-Mobile behavior](#)

**Date:** 2/27/2016 3:21:29 AM

**City/State/Zip:** Cocoa, Florida 32926

**Company Complaining About:** Comcast, Verizon, At&t And T-mobile

---

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

**Ticket: # 796098 - Comcast Data Cap Needs to Be Removed****Date:** 2/6/2016 3:15:58 PM**City/State/Zip:** Bartlett, Florida 38135**Company Complaining About:** Comcast

---

**Description**

Comcast recently sent me a letter saying that I have gone over the ridiculously low 300 GB data cap for the month. With the advent of streaming services and many users cutting the cord for cable, this policy seems to be a means to recoup money to line the pockets of the CEOs. Just because Comcast cannot provide a competitive rate in terms of entertainment media does not mean that they can begin to charge extra to those that have found other means to receive entertainment media. Any reasonable network engineer with any real background will know that the statement that Comcast made about user's not reaching the data cap is an absolute lie. To acquire any sort of media after cutting the cord, one clearly has to go to the option of streaming media. With that in mind an average person working 8-5 will be home consuming media for at least 2-5 hours a day. According to Netflix "Each estimate below is per stream:

Low (0.3 GB per hour)

Medium (SD: 0.7 GB per hour)

High (Best video quality, up to 3 GB per hour for HD and 7 GB per hour for Ultra HD)

Auto (Adjusts automatically to deliver the highest possible quality, based on your current Internet connection speed)"

Using the assumption that a user uses the Auto setting and they have a reasonable connection, it is pretty easy to assume they will be pulling at least an average of the "High" quality stream. This leads to in an average watching day of two movies or 4 episodes of a show at least 30 GB of data consumed in one day. A month on average has 30 days. This leads to 30 days/month X 30GB/day = 900GB/month. The folks at Comcast clearly need a lesson in math if they couldn't figure that out.

**Ticket: # 796177 - Unfair Data Caps****Date:** 2/6/2016 4:11:13 PM**City/State/Zip:** New Springfield, Ohio 44443**Company Complaining About:** Armstrong Cable

---

**Description**

Armstrong Cable / Zoom Internet is at it again. I have just received a letter stating that my rates will be increased, and also that my speeds will soon increase, yet the unrealistic data caps imposed by this monopoly service will remain the same. Therefore, I now get the privilege of hitting my data caps even faster, so Armstrong can gouge me for even more money. Yet again, I am being punished for choosing to stream video from online services rather than pay Armstrong's outrageous prices for cable service. Cable subscribers not only get higher data caps, they can enjoy HD programming without impacting their data caps. Streaming HD video uses roughly 3GB per hour. With a 200GB per month data cap, this restricts me to about 2 hours per day of video if I were to use my connection for nothing else. I am being unfairly restricted in my usage simply because I choose to get my content from a competitor. It is time for something to be done about these anti-competitive, arbitrary caps being placed on consumers. Unfortunately, I am still stuck with no other options for internet service other than to completely uproot my family and move into a different provider's market. I need a real solution, not just a passing of the buck.

[Ticket: # 796790 - Go90 App by Verizon Wireless is violating FCC's open internet rules.](#)

**Date:** 2/7/2016 1:24:02 PM

**City/State/Zip:** Stony Brook, New York 11790

**Company Complaining About:** Verizon Wireless

---

## **Description**

Verizon Wireless has an app called "Go90" which can be found through a simple search on Apple's App Store. Once downloaded, the app (when launched) shows in their terms that streaming of all videos within the app would not count towards the data cap ONLY if the user is on a Verizon Wireless LTE connection (effective February 4, 2016 if I remember correctly). This clearly violates the rules of Open Internet and should not be a service available for free only to certain people. Videos in the app include sports videos, live music performances, videos by companies like BuzzFeed, etc.

[Ticket: # 796864 - Data Caps](#)

**Date:** 2/7/2016 3:42:19 PM

**City/State/Zip:** Woodstock, Georgia 30189

**Company Complaining About:** Comcast

---

## **Description**

Comcast is, in my opinion, breaking the Law on net neutrality. How can they implement data caps that affect other streaming services but not their own? It stinks and the consumer is getting skewered yet again with Data caps AND because of the Laws that keep competition out of my neighborhood. We have ONE CHOICE for high speed internet (thanks to Congress) and that is Comcast so all we can do is complain and expect the Government to force Comcast to be fair. Force them to stop Data caps that are not applied to their own products but do apply to everyone else (Netflix, etc.)

[Ticket: # 796898 - Comcast Data Usage](#)

**Date:** 2/7/2016 4:42:17 PM

**City/State/Zip:** Murfreesboro, Tennessee 37128

**Company Complaining About:** Comcast

---

## **Description**

Comcast is apart of an oligarchy in Murfreesboro, TN with AT&T U-verse leaving consumers very little options to choose from. Because of this, comcast is permitted the opportunity to impose unnecessary fee's and rates on the residence of Rutherford County in the form Data Caps. These caps are completely unnecessary due to the fixed cost of a high bandwidth user compared to a "light" user. This is imposing high costs for a service that is no longer seen as a luxury but more of a utility for every day life in the information era.

---

## **Description**

AT&T charge me a premium for "Unlimited Data", but when I reach a certain amount, they act like it's something of tangible allotment, and THROTTLE my internet speed down.

As if that's not bad enough, now COMCAST is implementing data caps throughout the country and it's only a matter of time before they reach me in Seattle. How does that NOT break the rules and spirit of Net Neutrality? Please explain to me how this is ok.

ESPECIALLY when they are planning to implement a streaming service that doesn't count towards your data cap!!! It's like a work around for "high speed" lanes and it must be stopped and nipped in the bud! It's obvious they are bitter about things like Netflix and are using methods that strong arm consumers into giving them their business. It's an outrage, and though many people wont file a complaint like I am because they are very busy people and have straight lost hope for the future of our internet, everyone is talking about it and looking at the FCC and shaking their heads because you aren't doing anything about it.

Comcast has even said that data caps have nothing to do with bandwidth or overloading their network.

Please regulate on these companies for practicing shady tactics that are paid for on the hands of the consumer for clearly no other means than corporate gain.

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring

some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous “spinning wheel of death” as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there’s no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially “cord-cutting” by users who’d rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we’ve always known: these companies hate the FCC’s Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It’s the FCC’s job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I’m providing the number of an advocacy group. If you’d like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

**Ticket: # 797073 - T-Mobile Binge On**

**Date:** 2/7/2016 11:06:34 PM

**City/State/Zip:** Northport, Alabama 35473

**Company Complaining About:** T Mobile

---

## **Description**

Please address T-Mobile's Binge On service as it causes severe technical issues for some streaming services.

Recently, I've had constant stuttering / buffering issues while trying to view videos on YouTube to the point that the YouTube service was not usable. After discovering that YouTube plays fine when I use the VPN on my phone, I was able to determine that T-Mobile's network was to blame.

After a lengthy troubleshooting process, I discovered that the issues were stemming from Binge On being enabled on my account. Once disabling Binge On, YouTube plays without issue.

Also, technical issues aside, I feel that Binge On is an abuse of power that has the possibility of killing off services that aren't partnered with T-Mobile. Folks that do not have an unlimited data plan such as myself may not use services that will count against their data cap for fear of going over their limit, which stifles competition among competing services.

## **Description**

As an internet user the concept of a Data Cap is tantamount to actively restricting internet access. I am a paying customer of Comcast, by need not by choice, to provide me with both recreational internet and internet to conduct the necessary functions of my home and life. Using a Data Cap is adding an extra barrier to my access of the internet. When I hit the cap for the month I am then forced to make a decision whether or not to use the internet in my home for which I already pay a set amount a month for access. A Data Cap restricts my access to the internet and prevents it's fair use on a daily basis. Over charges for extra data are an inhibitor for my using of the internet. If I were to incur a penalty each month for usage, I would be priced out of Internet access completely.

Meanwhile, this same compay uses my wireless router as an access point to FREE Wi-Fi for other customers who happen to be close to my house.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

**Description**

The service from Comcast has gotten to a point where I feel the need to file this complaint. We experience very high latency on a daily basis, difficulty connecting to common websites, and are being charged additional amounts for overages because we are in a "test" market for data caps. I have been told by a representative of Comcast that our data cap is affect by the use of "on-demand" services as well. Whether or not that is true I don't know but the more important question is why is the "test" going for 2 years and why not everyone. Comcast has basically made an additional charge for using Netflix, Amazon, YouTube, etc, etc... When I already pay for their TV service as well! To make matters worse we were gone for two weeks on vacation and we checked our usage and there was 120 GB's worth of data used while we were out of town on a very secure network. To make my additional \$80 a month usage fees worse due to the unreliability of the network files have to be downloaded more than once. If I had an option that came close to the speed of the Comcast network here I would have already switched to them.

Customer service has always been respectful and nice during our interactions my issue is higher up chain.

**Date:** 2/8/2016 5:39:31 PM

**City/State/Zip:** Toledo, Ohio 43611

**Company Complaining About:** Buckeye Cable

---

## **Description**

My roomates and I are running out of our data cap so I went looking to find another broadband ISP. The only one that delivers is Buckeye Cable. They have a monopoly and are using it to ploy schemes using data caps. If one of us decides to download a game it could cost another \$10 making it so that you have to basically pay to use parts of the internet. Buckeye should not be allowed to have a data cap.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Net neutrality must remain free, fair and open to all, not just a few large companies who want to regulate what customers can and cannot do on the internet.

## **Description**

Implementing data caps goes against the openness of the internet and shouldn't neither be acceptable or legal. I can see warning users in the top fraction of a percentage, but to immediately impose overages on the entire user base when most have no other alternative for high-speed internet access is atrocious.

Also the term Data Cap is completely false. It doesn't stop, or cap, anyone at an amount, but instead allows them to go over so the ISP can charge more.

I'm tired of telling my wife and kids that they can't consume media online or access online videos for educational purposes because we're going to get charged more for using a service that for years was a flat monthly rate.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

## Description

In 2015, last year, the FCC passed the Open Internet Order, which bans internet service providers from giving preferential treatment to some internet traffic over other traffic, meaning that Comcast can't deliberately slow down, say, Netflix streaming video while giving its own services a boost.

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use

overall, and especially “cord-cutting” by users who’d rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we’ve always known: these companies hate the FCC’s Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It’s the FCC’s job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I’m providing the number of an advocacy group. If you’d like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** Comcast

---

## **Description**

I've lost count of how many complaints I've made at this point. My city is part of a "test" program that's gone on for YEARS at this point. We have a 300gb home data cap. Any additional data is charged at an insane rate. After years of complaining both to Comcast and to the FCC they finally have a solution, albeit a pretty shady one. I can have my unlimited data again (a service other cities and customers enjoy to this day) but I will have my bill go from 67\$ to 120\$.

After years of not being able to use the internet the way I want to use it, this is simply infuriating. I use it to create, stream, upload etc. And never once did I think I'd have a home data cap. The way my city has been treated isn't fair and Comcast isn't going to stop it without FCC intervention. They have a virtual monopoly in this area. I guess what I'm trying to say is ██████ Comcast and please do something about this.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. ---

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

## **Description**

Comcast is rolling out data caps on home internet. I am firmly against this policy and believe it will cause the USA to lag behind other countries' technology. It is pretty clear they are trying to combat online streaming services. I believe that Comcast holds many local monopolies and should be dissolved and should become a common carrier.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. ## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 805912 - Comcast Data Caps**

**Date:** 2/11/2016 6:02:20 PM

**City/State/Zip:** Buford, Georgia 30519

**Company Complaining About:** Comcast

---

**Description**

My family is subscribed to Comcast's highspeed internet and every month we have to stop using the internet around 3-4 days before the end of the month as we only have 2-3GB of data left.

Almost all of our data goes to streaming educational shows for our son who is in preschool. Right now we are being forced to either stop using the internet which we pay for every month, or pay overage fees.

Comcast has also came up with a new plan to pay an additional 30\$ more for unlimited data. This just goes to show that they are only using the data caps for more money in their pocket as if they can offer it for unlimited internet if you pay, obviously there isn't a data usage problem.

This needs to be stopped. It is out of the hands of the individual and up to you. I live in an area where I cannot change to any other internet service that doesn't have a cap or enforce it. Comcast has the absolute monopoly on my area and they know it and refuse to remove the data cap. This is a very common issue I hear among my neighbors with kids as well.

**Ticket: # 806734 - Comcast Data Cap**

**Date:** 2/12/2016 10:36:03 AM

**City/State/Zip:** Dunwoody, Georgia 30338

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently rolled out a data cap in my market, and I believe one other, as a test, because they know they can't do it nationally. It's a lightly-veiled attempt to prevent cable cord cutting, as they continually raise monopolistic prices to ridiculous levels and customers look for other options. I consistently have issues with my service, and I pay almost \$300/month for Comcast internet, TV, and phone, and then they add this garbage cap on top of it to prevent me from cutting cable due to their ridiculous prices, as they are the only cable internet provider serving my area. This is a clear violation of Net Neutrality, and the FCC MUST ACT.

---

**Ticket: # 1022506 - XXXXXX XXXXXXXX's complaint re: ISP Zero Rating**

**Date:** 6/7/2016 12:10:35 PM

**City/State/Zip:** Springfield, Missouri 65807

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

**Ticket: # 807511 - Comcast Data Cap on Home Users**

**Date:** 2/12/2016 1:59:45 PM

**City/State/Zip:** Houma, Louisiana 70364

**Company Complaining About:** Comcast

---

### **Description**

Comcast has added a data cap of 300gb per month to our home broadband service. This was not in the original contract. It is clearly targeted at stoping people from using online video streaming services. Eg. Netflix, Hulu, HBO Now... This is denying open internet by circumnavigating throttling.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 808112 - Data Capping and Net Neutrality****Date:** 2/12/2016 3:57:58 PM**City/State/Zip:** Miami, Florida 33174**Company Complaining About:** Comcast

---

**Description**

Comcast and AT&T have begun data capping their home internet services. Data capping has been proven time and time again that it does not costs money to provide internet, but rather providing connection speeds and broadband. Data capping should be illegal considering it takes away open access to the internet for millions of people. For instance, I take classes online and with data capping, it does not allow me to use the data to complete my classwork for each month because school takes up a lot of data. My boyfriend also works in the app development industry, and he needs to use the internet all day in order to create his applications and promote his business. Data capping is a way of providing slow lanes to those who can't pay up. The CEO of Comcast compares Data-Capping to a utility bill, and that the more you use it, the more it costs, with "fairness in mind". However, if I use no water, I have no water bill, yet if I use no internet, they still charge me their prices, even if I use none of my data. It also cannot be compared to a utility bill because data is not a finite source that is burned out such as natural resources and oil. Data is constantly available, and does not cost money to provide data.

Keeping these things in mind, please call an end and prohibit data-capping to home internet users and phone service providers.

With regards,

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

The big telecom companies appear to be doing an end run around your net neutrality ruling. This has got to stop so that the fairness of the internet can continue. Telecom companies cannot be allowed to place caps on certain individuals or groups and not on others. This goes against everything the ruling was intended to protect.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users. PLEASE,

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**City/State/Zip:** Tucson, Arizona 85705

**Company Complaining About:** Comcast

---

## **Description**

Comcast and their new data caps are just another excuse for a large company to extort money. The oil and coal monopolies of old have been replaced with the John Rockefeller of the internet age where a person is forced to bite the bullet and hand over the wallet because there are no other alternatives. One would think the U.S government which had such a strong opposition towards monopolies in the 19th century would have some word on the matter but all the FCC has managed to do is have "constructive conversations" with the fat cat that is Comcast.

**Ticket: # 809555 - Comcast Monthly Data Cap**

**Date:** 2/13/2016 1:02:27 PM

**City/State/Zip:** Murfreesboro, Tennessee 37128

**Company Complaining About:** Comcast

---

## **Description**

The Data Cap that Comcast/Xfinity has imposed on it's customers has really hurt my internet habits. I am a gamer - which means that all of the games I get through Steam I must download (some of which I then play online which uses more data). Also, most of my television and movie viewing is online as well, on sites like Netflix and Amazon Prime Video. With this cap, I use up most of my data limit for each month and am afraid to go over. With as many products in this digital age using data, I find it wrong for a company to instill such Data Caps when in reality the only reason they do it is to make a profit off of an already overpriced service. I want to ask that you look into getting this data cap removed.

### **Description**

I do not feel Comcast should be able to put in place a data cap on internet data usage, especially when it is not a company wide practice, and only picks on a few states.

---

**Ticket: # 809739 - 300 GB cap**

**Date:** 2/13/2016 3:00:52 PM

**City/State/Zip:** Conyers, Georgia 30012

**Company Complaining About:** Comcast

---

## **Description**

300 GB is RIDICULOUS in this day and age. I download all my LEGAL Steam games and Netflix and consistently go over costing me anywhere from 50-100\$ extra a month. That is outrageous. If they HAVE to do caps then at least put it at a 2014 level of 600GB for mid tier. I have the most expensive home internet plan and am still limited to 300GB a month. My only option is to get comcast business and pay for installation, can't use my modem that I bought, lose my promotions and it will end up costing more even after the penalties. So basically they screw you.

In paragraph 27 of your document 14-113, pertaining to GN Docket 14-126, you ask, "The Commission has indicated that it might consider data usage allowance as a core characteristic that affects what consumers can do with their broadband service. Should we include usage in our section 706 assessment?"

I live in an area where Comcast has instituted a monthly 300 GB usage allowance on consumer ISP subscriptions, with \$10 added to my bill for every 50 GB thereafter. The only other wired consumer broadband ISP in the area, AT&T U-verse, has a similar 250 GB usage allowance. I have not yet hit the 300 GB limit, but I noticed last month that I was getting close. I have a family of 6 in my household. Previously, we could watch Netflix, watch YouTube, use online backup services such as SpiderOak, and play online games at home without being concerned. In addition, I do software development from home, and my tasks sometimes involve large downloads of software libraries, OS images, etc.

We have a limited budget, so now I have to be the "bandwidth policeman", and tell everyone "no more Internet today", just to be safe and avoid incurring extra charges. Where it was previously a joy, our home Internet service has become an extra source of stress in the house.

I am cynical enough to believe that Comcast (and likely U-Verse as well) has consciously chosen the 300 GB limit, in order to discourage so-called cord cutters, i.e., people that get Internet-only subscriptions, and consume 100% of their video entertainment as streaming from the Internet. 300 GB of high-definition content over the course of a month maps to only roughly 4 hours of video a day. While this might seem like a lot, it doesn't factor in households like ours with 2 adults, 2 teenagers, and 2 children, all with very different viewing habits. Also, it looks suspiciously like another mechanism to push consumers back to their relatively profitable television services. (Let me note here that in my household, we subscribe to their "Triple Play" where we get ISP, television, and VoIP telephone service.)

In paragraph 29, you ask “How would the Commission implement a broadband usage threshold?”. First off, I would suggest you should make major consumer ISPs such as Comcast raise their monthly data limit to something more like 1 TB. Even my family of 6 could live comfortably within that limit. If their present day network truly cannot handle that in my region, then they should be required to make the investments to make it happen within a reasonable time period.

Secondly, I am currently paying for “105 Mbps down/20 Mbps up” service from Comcast. I am open-minded enough to consider that Comcast may also just be trying to manage traffic on their network. I suggest that the reasonable thing to do, rather than charge me more money when I hit the 300 GB monthly limit, is to have progressive throttling. E.g, once I hit 100% of my data cap, throttle my attainable speeds to 50% of what I am paying for, “52 Mbps down/10 Mbps up” in my case. At 120% of my data cap throttle it to 20%. At 140%, throttle it to 10%, down to a minimum speed around, say 512 kbps. Users that regularly get throttled down that far are obviously doing something like running a server, where they should reconsider their service provisioning, and go to something like an ISP for businesses, or avail themselves of hosted services if they are running servers.

---

**Ticket: # 816422 - Comcast 300gb data cap**

**Date:** 2/17/2016 2:13:57 PM

**City/State/Zip:** Marietta, Georgia 30062

**Company Complaining About:** Comcast

---

## **Description**

I signed up for Comcast (Atlanta area) internet service on January 19 of this year. The sales rep was more than willing to upsell me to the higher download speeds due to the number of users and devices in my home however, they never once mentioned that a 300gb data cap would apply. When I called to ask about this omission they claimed that the FCC had approved this data cap/additional charge practice without notification of the customers.

Comcast wants to charge internet access like utilities (electricity, gas, water) however, they are not regulated like those utilities. They also can not explain how the data usage is monitored other than stating that there is a display on the user account. How do I know this is accurate? I find it hard to believe a family of 4 can use up 300 GB in 2 weeks when the highest bandwidth usage is Netflix. We would need to watch 10 movies a day for 15 days to consume 300 gb. The result of this data cap is limiting our ability to freely use the internet. The data cap essentially bypassed the net neutrality rules by penalizing the user instead of the content provider such as Youtube, Hulu, Amazon Prime, and Netflix.

Their solution is to charge and additional \$10 per 50 gb in excess of the 300 gb. With little or no competition in the area we are out of choices. Comcast business practices do not seem fair let alone legal.

Something needs to be done about this and soon!

## **Description**

Why is it that our government will threaten to break up a company like Microsoft because of Internet Explorer being integrated into their own Windows operating system, at a time when other browser companies didn't bother to advertise and because at the time most consumers were too computer illiterate to look for different browsers options? Yet, our government does absolutely nothing when there are true monopolistic practices that the telecom companies enforce to limit consumers internet usage. First off, there is very little competition in each market across the country for consumer to choose from when looking to subscribing to internet plans. Second, why are the telecoms companies allowed to offer services that compete against themselves? Since telecoms companies are allowed to provide telephone, cable tv, and internet, this gives them the power to enforce data caps and limit consumers internet usage, and to force consumers into buying cable tv services. The current business model that telecoms use allow for zero choices in the consumer market. It is simply a ploy to control what consumers can and can not use the internet for. It's 2016, technology is changing, cable tv is fading out, and the internet is becoming the new medium for how consumers consume media and access information. The telecoms and media companies are afraid of this, and instead of offering new competitive services to consumers, they instead cut them off from the internet. A cable tv company should not be allowed to sell internet service. An internet company should not be allowed to sell cable tv service. The telecom companies should be broken up, and data caps should be illegal.

**Company Complaining About:** Comcast

---

## **Description**

These data caps are ridiculous. The internet is already bad enough in my apartment building where the wiring is ancient, but this is just the icing on the cake. I am now being charged extra just because I'm watching Youtube videos and playing video games in a certain part of the country. This must have some legality issues.

## **Description**

Cox Cleveland and surrounding area now has data caps (no other service area does) I like to make a complaint after going not just 1 but 6 50GB blocks over each block is \$10 I called try to get it credited they did not help me at all all they said they could do is give me a \$20 late credit. How is this is fair or ethical when the account holder isn't able to control her account. It could be anything the cable infrastructure isn't exactly secure and the data usage I did research and it is not accurate the only way they are getting away it is saying it is for "testing". I wouldn't want to be the one to have their WiFi hacked and have overage fees that can't be credited or helped. Please help push them to stop data caps I don't want to let this go and I am not.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

I'm upset that Comcast is notifying me of my incoming data cap (300GB). There should be no cap and I'm going to be forced to pay extra to keep using my service. Comcast claims that the cap is in search of 'fairness', but I do not see how they can think that. I did not get money for going under the cap previously and there is no rollover. This is extremely unfair and proof of what a company can do when set free. I don't want to pay more than what I already am for Internet service.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Dear Honorable Legislators

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage, no, insist the FCC to do its job.

And while I'm at it get big money out of politics and government. Reverse Citizens United - it is the worst threat ever to our democracy.

Honders@HVC.rr.com And I approved this message and will support anyone that will help with these ideas.

## **Description**

Why is this still legal? i pay for a high end service that would fit all my needs and some, but i'm being forced to upgrade my data package or have my service cut off?

This is silly. The net neutrality act should have this covered already. If fast lanes are wrong, surely so is this. I shouldn't have to pay for faster and more expensive internet just so the cable company can break my bank. I rarely download anything, and i basically only use my service for playing games and watching movies on my other services.

Also, in the net neutrality act, i was sure that it was addressed that internet was considered a modern day need, not much different than water and food. a basic human right. This isn't like i'm just running the tap all day. So seriously. address the data caps issue. I know that I'm not the first nor last of the long line of complaints about this concern.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 814722 - Cable One forcing users to pay excessive high Internet subscription fees.**

**Date:** 2/16/2016 6:25:21 PM

**City/State/Zip:** Meridian, Idaho 83646

**Company Complaining About:** Cable One

---

## **Description**

Because of their "fair usage" policy I and many other users are forced to upgrade to a higher plan which will cost me \$135 per month for Internet. Cable one is abusing their position in this market since they are the only company offering Internet with speeds over 7Mbps. I work as a full time remote employee and maybe use more than the average user but to provide data caps low enough that you could effectively max out within a day of use is just unacceptable.

They should not be allowed to abuse their position in the Idaho market and provide below par Internet use.

Besides all of this, Cable one is not providing a good means for me to privately analyze the data usage and I just have to rely on them providing me with accurate figures without any control from a 3rd party.

It seems very sketchy and I am amazed that there is not more control from the FCC to keep providers like Cable One in line.

I know Net neutrality does not cover the data caps but open internet should have some guidelines to protect consumers in certain areas from being take advantage of.

**Company Complaining About:** Comcast, Verizon, At&t And T-mobile

---

## **Description**

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

**Date:** 2/18/2016 1:21:10 AM

**City/State/Zip:** Parma, Ohio 44134

**Company Complaining About:** Cox

---

## **Description**

Good day. My family and i have moved into a city were choices are limited to one Cable provider witch is Cox. My work is dependent on vpn and streaming. Even paying the max for max speeds witch cost 110 bucks they have data caps like phones. I keep going over and continue to get charged. I would pay more for unlimited but they don't offer it. This is every single company now. I understand why phone service companies do it but its unreal that now ISP are capping us. Something should be done about this , we are already charged a crazy amount for internet and in a world that now turns to streaming for content a data cap seems unconstitutional

**Ticket: # 820369 - Comcast Data Cap and stifling of high bandwidth industrys**

**Date:** 2/18/2016 9:35:06 PM

**City/State/Zip:** Memphis, Tennessee 38111

**Company Complaining About:** Comcast

---

## **Description**

In my city of Memphis TN Comcast enforces data limits if I go over 300 gigabytes of data I get billed \$10 for every 50gb after that. Under normal usage I go over or reach the limit every month. Now say one month a new game comes out that I want to play on my computer. Since the data cap has been implemented I have to account for the actual size of the game files before I make a purchase. If the game is too large I may be charged by Comcast to download it. Most modern games are well over 50gb in size, therefore I usually wont purchase new games for this reason in fear of additional charges. If the new trend of capping data usage for home internet continues it may hurt the gaming industry as well other high bandwidth industries. I think it will be better for consumers as well as many other online industries if the data caps imposed by Comcast and other ISPs were removed.

[Ticket: # 820828 - Comcast Data Cap](#)

**Date:** 2/19/2016 10:46:37 AM

**City/State/Zip:** Mt Pleasant, South Carolina 29464

**Company Complaining About:** Comcast

---

## **Description**

Comcast has imposed a data cap that is directly against the spirit of an open internet. They are purposely limiting the streaming of video and audio services (Ex: Netflix, Amazon, etc) while providing similar services that does not affect the customer's data usage. This is the very reason why the internet should be labeled as an utility so businesses like Comcast can't implement anti-business practices to control the market when they own the only infrastructure in the area to support said services.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

P.S. I actually am a Comcast customer, and have noted the large increase in my buffering times despite having the fastest internet speed package Comcast offers. When I try to play some videos online, they literally get stuck until I move the cursor over a stuck spot, only for them to become stuck, again, a few seconds later. This did not happen until recently; when I read about Comcast's new policy, I finally understood why.

What is the point of passing laws if corporations are allowed to simply flout their provisions with nominal work-arounds? How is this not illegal?

**Ticket: # 822406 - Comcast Data cap**

**Date:** 2/19/2016 7:36:21 PM

**City/State/Zip:** Hiram, Georgia 30141

**Company Complaining About:** Comcast

---

## **Description**

The very concept of a "data cap" on a cable network such as Comcast's is absurd, and can be viewed only as an attempt to squeeze more money out of their customers in the absence of any competition. In addition, their monitoring of data usage is inaccurate at best, intentionally high at worst (for example, in the 19 days of this month, they have me at 270/300 GB of data used, whereas my routers usage report shows only 243 GB over the last 30 days). If there were another competitive option other than Comcast, I would certainly allow the free market to run its course, and support an ISP with more scrupulous practices. However, my options are slim and for that reason am I asking the FCC to step in not only on my behalf, but the behalf of all the other persons I know have made complaints to you on this particular matter. Thank you.

**Date:** 2/19/2016 9:55:21 PM

**City/State/Zip:** Shreveport, Louisiana 71118

**Company Complaining About:** Comcast

---

## **Description**

We have not agreed to be a part of Comcast's 'trial' for data usage cap. It started in my area in December 2015. Every time we hit 90% usage or higher, our internet gets slowed down. To the point where I can't stream ANYTHING AT ALL. Youtube videos buffer constantly, Twitch broadcasts won't play. I called Comcast in January about this. The lady that I spoke with told me that when we get to 90% usage our internet gets throttled down. Today is 2/19/16 : We hit 90% usage late last night. We started having internet problems. This morning, I noticed the internet being really slow (this is the 3rd month in a row that it's happened now). I called Comcast, and the lady swore up and down that the data cap has nothing to do with my internet speeds and tried to schedule a technician to come look at my router.

Something needs to be done about this. Comcast is performing 2 illegal actions: Extortion, and Throttling.

Also, I filed a complaint previously. Someone from Comcast called me and I wasn't able to answer. I called back and nobody answered or returned my call. I also didn't receive an email from them.

## Description

To the FCC:

Please find below a template letter that I wholeheartedly agree with. Please investigate and STOP these ridiculous data cap programs.

Sincerely,

(b) (6)

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Data caps on Internet service then charging 30\$ more for unlimited on top of selling 2Gbps for a premium price (because it's "faster") when most consumer grade networking gear is 10/100/1000 and can only attain 1Gbps. Your network is only as fast as the slowest link. What average end user who makes less than 30-40 k can afford enterprise class networking gear at 10Gbps? Seilriously stop the data caps with both in home and cell networks.

**Date:** 2/20/2016 12:59:10 PM

**City/State/Zip:** Mobile, Alabama 36609

**Company Complaining About:** Comcast

---

## **Description**

I was not informed of any data cap when I signed up for service. I spoke with a CSR by phone, and it was never revealed to me. I did not get any notification until the first time the limit was exceeded. We are a household of 2 adults in their 50's, we do not do many activities that should be consuming so much bandwidth. No one games. I subscribe to a tv package, and 2 premium channels, so I am not a "cord cutter". I would like to be able to stream original content from Amazon Prime, or perhaps Netflix, but instead I curtail my usage. I am absolutely seething every time I think about it, and will cancel their service as soon as my contract is up.

**Ticket: # 823485 - Data Caps**

**Date:** 2/20/2016 6:03:35 PM

**City/State/Zip:** Guyton, Georgia 31312

**Company Complaining About:** Comcast

---

## **Description**

Comcast began implementing data caps in several of its coverage areas. These data caps appear to be a flagrant violation of net neutrality laws. There are multiple streaming services, some of which are provided by Comcast themselves, that require the use of data. As cable companies are generally granted monopolies of the network in the areas they cover, my data options are extremely limited. Both of these facts limit the competition in the marketplace. The purpose for which net neutrality laws, which were vehemently protested by communication companies such as Comcast, were to prevent those companies from implementing vehicles that would impede the use of internet. Obviously, the policy of a pay/GB used would create a hardship to anyone trying to use a higher bandwidth service such as streaming. As data usage itself neither causes Comcast to incur any cost nor requires anything of Comcast to provide, it appears this measure is unnecessarily and unfairly being implemented. Additionally, this measure would insure that Comcast would profit unnecessarily from the very hardship they are creating on the customer and/or the streaming service. Comcast might be seeking an additional revenue stream as they continue to encounter a more competitive marketplace. However, one might suggest that they concentrate on attempting to keep customers by making them happy with the service they are getting rather than instituting policies that alienate their customers in an attempt to make up for revenue lost by providing abhorrent customer service and concern in their customer's overall welfare. One only need to look at areas where competitors like Google Fiber exist, where the company has decided to not implement data caps, to realize that Comcast is capitalizing on smaller markets simply because they can bully those customers. Additionally, the so called "data monitor" that Comcast uses is completely incorrect. My installation connects my modem directly to a router that has been firmware flashed to include an open source software that provides a data monitor. To this point in the month, Comcast has my data usage pegged at 231 Gb. According to my router, I am currently just breaking 200 Gb. My overall hope is that Comcast changes policies to work with the spirit of Net Neutrality laws, stands behind their customers instead of in bullying them, and changes their business model to reflect the needs of the current market.

**Ticket: # 823704 - Data Caps**

**Date:** 2/21/2016 12:02:51 AM

**City/State/Zip:** Lake Havasu City, Arizona 86403

**Company Complaining About:** Sudden Link

---

## **Description**

Suddenlink implemented data caps beginning January 2016 in Lake Havasu City (residential customers). I was given no notice, only to find out by a message coming across my screen when I reached 80%. I called Suddenlink and they adjusted my plan, but I find their sneaky implementation of caps an unethical business decision. Further, one is allowed to monitor data, but has no way to determine that Suddenlink is accurately tracking usage. I find there estimates of data uses suspect. Suddenlink is taking advantage of the fact that there is little competition in this rural part of Arizona and taking advantage of its customers. Customers who signed up for internet service before the caps were implemented were sold this service due to speed and the lack of limits.

---

**Ticket: # 823846 - Comcast Internet Cap**

**Date:** 2/21/2016 12:39:53 PM

**City/State/Zip:** Johns Island, South Carolina 29455

**Company Complaining About:** Comcast

---

## **Description**

The cap they have instituted is too low, and is anti-consumer. More frustratingly, we cannot access their meter to see how close we are to going over, (we have tried on numerous attempts) and we do not have any alternate service provider (AT&T serves DSL near us, but they do not provide service to us yet).

300 GB is our cap, and there is no indication it will scale as data usage needs rise. This is not enough for a typical household in 2016. (I feel most households are probably similar to ours, however do not have data to make that claim as fact).

Our typical usage includes:

Game Console (downloads 1-2 new games a month, plus updates. Games can be upward of 40 GB each, and updates anywhere from 1 to 10 GB). Online gaming further increases data usage.

Smart Devices (iPhone, iPad, Android Phone, Laptops). These also auto-update themselves on a fairly regular basis (each week new app updates). I'm not sure how big all of these files are, but over the course of a month its probably at least 1-2 GB and only getting larger as apps become more robust.

Music: We regularly stream music. This is easily several GB over the course of the month.

TV/Video: We use Netflix and Twitch and YouTube. A majority of our data usage is from video streaming. We probably watch less video than the average household, though (we tend to be pretty active) but still enough to average a few hours a day.

Other data: Internet browsing (Facebook, etc.) and work related functions (upload/download files from Dropbox or other cloud services). These functions can take variable tolls on data, and having to worry about 'should I back up files because of my data cap' is burdensome. It also diminishes the value of online storage (as now I am not only paying for the storage, but to download the contents of the storage if it causes me to exceed my data cap).

Data over wire is not a finite resource like water or electricity. It doesn't suffer from the same limits wireless data does, either (limited frequencies for multiple devices to share). Data caps are purely a money grab. If network management were the issue caps wouldn't be the primary lever, speed (bandwidth) would be. The data cap is arbitrarily sized, and isn't attached to any kind of scaling mechanism (as obviously as technology pushes forward, data usage is only going to increase). Data caps should be eliminated, or scrutinized and implemented in a consumer friendly approach. Otherwise, they are anti-competitive to any company that relies on delivering data to the consumer.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 824067 - Internet Data Caps**

**Date:** 2/21/2016 5:17:11 PM

**City/State/Zip:** Slippery Rock, Pennsylvania 16057

**Company Complaining About:** Armstrong Cable

---

## **Description**

Armstrong Cable recently implemented a data cap for internet usage under the guise of an "Open Internet Policy". Previously, internet service was unlimited. The data cap is set at 200GB for users that do not subscribe to television service through the company, 250 GB for those that do subscribe to TV, and 300 GB for those who subscribe to TV, Telephone, and Internet service. The fact alone that the company is raising caps for the customers who pay for more services unrelated to internet should be considered unfair. Armstrong claims that the average household usage is only 83 GB per month, but in this time of increased streaming of videos and music, game downloads, and connected devices, that number seems absurdly low. As an example, around Christmas this year with new devices and games being set up, our allotment of data was used within the first week of the billing period. I believe that this practice has nothing to do with network management, and is more about a money grab aimed at individuals who have dropped cable service for other means of entertainment.

**City/State/Zip:** Memphis, Tennessee 38107

**Company Complaining About:** Comcast

---

## **Description**

Comcast data caps for selected customers is unfair and unethical! I am single work 8-5 Monday-Friday, but am somehow able to go through my internet cap! I can't imagine having a family! The cap is u fair and unrealistic!

---

**Ticket: # 824295 - Suspected throttling and web traffic disruptions**

**Date:** 2/21/2016 10:12:44 PM

**City/State/Zip:** Pleasantville, Pennsylvania 16341

**Company Complaining About:** Armstrong

---

## **Description**

I strongly believe my internet service provider Armstrong Cable is throttling my connection speed to data-heavy websites and services that I use often, such as Netflix, Twitch TV, and Xbox Live. Even when internet speed tests show we are getting the speed which was sold to us and other sites load perfectly, these services in particular often lag to the point of being unusable.

This is on top of their general inability to reliably deliver consistent internet performance and their strongly anti-consumer policy of maintaining data caps on their internet services. Armstrong as a company preys on a consumer base that is somewhat ignorant to larger internet issues such as net neutrality, and have few options in internet service providers. Therefore, they are unlikely to face the kind of criticism and backlash that larger ISPs receive but they are nonetheless deserving of it.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

**Ticket: # 826706 - Comcast Data Cap Suddenly Enforced****Date:** 2/23/2016 12:51:10 AM**City/State/Zip:** Huntsville, Alabama 35806**Company Complaining About:** Comcast

---

**Description**

I live in a place where the only option is comcast. As of this month apparently comcast has decided to actually enforce the data cap at my residence. For the past few months it has been "enforced" but not actually enforced and suddenly I got an email yesterday notifying me that I was at 90% of my data cap. This is not fair to people like myself and my roommate who use the internet for gaming and streaming. Comcast is unfairly trying to make as much money off of people just because they can gouge them. We will surely reach or exceed this limit each month just by using the internet as we usually do and the only solution to this is to add \$30-\$35 to our bill each month. That is outrageous. Google fiber offers internet places with not data cap and way faster speeds for less than the amount that I will be paying if I do that. There should not be a data cap.

**Ticket: # 826964 - Comcast Data Caps "Trials" in Selected Areas****Date:** 2/23/2016 10:31:31 AM**City/State/Zip:** Miami Lakes, Florida 33016**Company Complaining About:** Comcast

---

**Description**

I work from home as a software engineer and have recently moved into my first house. The only option I have for an internet provider is either Comcast or Dish Network. I need a fast and reliable internet connection so my only option is Comcast in this case. I became aware of a 300GB data cap or as Comcast likes to refer to it "Data plan." I routinely log into my companies VPN network to upload and transfer large amounts of data. In order to remove that data cap I'm required to pay an additional fee. Some have called this data cap the "Cord Cutters Tax" and I don't feel like I need to subsidize those who decided not to pay for cable tv. This is something Comcast needs to resolve on their own but since there is virtually no competition there's no reason for them to do so. There are only a few markets in this "trial" period, please stop Comcast from expanding this nationwide.

## Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 827305 - Comcast Data Caps**

**Date:** 2/23/2016 12:35:37 PM

**City/State/Zip:** Little Rock, Arkansas 72204

**Company Complaining About:** Comcast

---

## **Description**

Comcast has begun enforcing a 300GB data cap when previously it was advertised my Internet would be unlimited. They have done this in areas where there is no competition which may meet the legal definitions of racketeering.

As defined by Wiki: A racket is a service that is fraudulently offered to solve a problem, such as for a problem that does not actually exist, that will not be put into effect, or that would not otherwise exist if the racket did not exist. Conducting a racket is racketeering. Particularly, the potential problem may be caused by the same party that offers to solve it, although that fact may be concealed, with the specific intent to engender continual patronage for this party.

Comcast has offered to upgrade me to "unlimited" again for the low low fee of \$35 a month. This would move my internet-only package to nearly \$100 for a service that, two years ago, was \$55. Comcast goes into areas without competition and hog ties the customers. Customers in cities where Google Fiber, ATT UVerse and Verizon FIOS have much lower prices for Comcast because competition exists.

I am very unhappy because the only way to express displeasure with Comcast is to cancel my service and have no Internet at all.

## **Description**

We set up our internet service with a phone call. An installer came out. He left us no paperwork. After our internet slowed down, we called tech support who told us we had hit our data cap. We had to upgrade to a more expensive plan or wait until the end of the month. They charge for speed but then also charge per gigabyte.
