## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would surely hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1057650 - Data Caps are unlawful**

**Date:** 6/27/2016 4:44:11 PM

**City/State/Zip:** Nampa, Idaho 83686

**Company Complaining About:** Cable One

---

## **Description**

The plan that I pay for through Cable One is a 150 megabits per second down speed with a data cap of 400 GB per month. If I receive the advertised speed that I pay for, this means that I would hit my data cap in less than six hours of use. I pay for a subscription to Netflix, which uses 3 GB per hour to stream High Definition content. This means that I can use 133 hours of High Definition streaming. That amounts to 4.5 hours of streaming per day. There are six people in my household, meaning that, split evenly, we each can stream for 45 minutes per day. This is not a fair use of service that I pay for. Cable One also offers cable TV service to their subscribers (a service that I do not have or want). The programming that is offered through their TV service travels across the same lines, using the same bandwidth as the internet traffic, but is not limited or tracked in any way.

I also pay for Xbox Live Gold service from Microsoft. Included in this service are free games, which can be downloaded each month. I am unable to download these games, which I pay for through my subscription, for fear that I will go over my cap for the month.

These are two services that I pay for, that I am unable to fully take advantage of because of the data cap that Cable One imposes on my account.

I am aware that Cable One offers plans with higher data caps. These plans are more expensive, and come with higher speeds. I don't need higher speeds, particularly because I have never once received the speed that I am currently being promised. My issue is that the caps are unlawful, and out of proportion with current needs and speed being offered.

I

## **Description**

Internet data caps by these companies is anticompetitive. There is no competition, only collusion (both companies activated and enforced similar data caps around the same time) I don't value the TV/Cable services they have as they are too expensive for the services they provide as I only watch 2-3 channels. So these providers are stating if you don't bundle a TV service then you MUST have a data cap and pay for overages. Data caps are strictly a money grab (comcast spokesman even admitted it <http://www.theverge.com/smart-home/2015/11/7/9687976/comcast-data-caps-are-not-about-fixing-network-congestion>) and not about network congestion. Here they are offering 4k tv which uses twice the bandwidth of HD streaming over their network. So if they can give you unlimited data ONLY if you have their TV services that also use a ton of data with HD and 4k then data caps SHOULD NOT be an issue or be enforced. Cable companies are trying to protect their TV service by charging internet users EXTRA that stream their favorite TV shows instead of watching them on TV services. That is anti-competitive and illegal.

My bill will double every month to deal with the data caps.

Please do something about this. We have too many monopolies and not enough choice.

### **Description**

I cancelled cable tv from my provider (Comcast) because it was too expensive and I did not have a choice to select fewer selected channels for a lower price. I have since opted for streaming television via internet but now my internet provider has instituted a very low data cap and is charging me more to increase it. However, the same internet/cable provider does not count their own content if I were to use them as a tv provider as part of the data caps. This is wrong!!! Their claim to having data caps as "easing congestion" is flat out a lie! This is purely to increase their profit! Please do not allow this practice by cable/internet providers to continue! Do not allow these corporations to continue abusing the consumer only to fatten their wallets! No more data caps! HELP!

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Hi My name is Robert Clapp and I have concerns about data caps and preferential access being used by ISPs. Access to the internet has become so essential to modern American life that it is akin to other valued indispensable utilities Americans use everyday. It's not fair for companies to create their own rules that disadvantage small businesses and exploit customers. The following statement puts into words my thoughts on the subject better than I could have composed it myself. I hope you will think about our concerns for the future of the internet and take action to keep the ISPs in line for the benefit of all Americans and the ISPs themselves.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

## **Description**

I just received an email that Comcast will be rolling out a "Trial" 1 TeraByte data cap in my area (I live in Blue Island, IL) starting August 1st.

I have several issues with this cap as first when I signed up for Comcast I did so because it didn't have cap. I work in IT and rely on this service to work remotely. I have put up with poor customer service and poor service quality for years just because of this fact. Even going as far as fixing their poor signal issues myself and paying for the correct installation equipment out of my own pocket. As after numerous service calls I could not get Comcast to resolve the issue of my internet speeds dropping considerably below the advertised speeds. Not only did they never resolve the issue but had the balls to try and charge me \$70 for sending a poorly trained "Tech" to "Fix" my issue.

Now I get a data cap and my only other option is ATT which has a measly 50 gb cap. I am/was a 100% cord cutter Netflix, Hulu, Crunchy Roll and Funimation Streaming services are used by everyone in my household (5 adults) on TVs, PC's and Mobile devices. I also have over 500+ GigaBytes of PC games. That means that even if my PC storage fails and I have to retrieve my back up from the cloud I will effectively use more than half my allotment just to restore my PC?? I own 3 PC's which I back up in OneDrive (cloud) and that's not taking into consideration the PC's other users in my house use.

What gets me even more mad is that this supposed "Trial" isn't optional, Comcast will make money out of it (charging me \$50 more for unlimited, trying to make up their cable fee I no longer pay) and worst of all it's basically an indefinite trial. So it's not really a "trial" it's more of a loophole. No where in the email provided is there a date for when the trial will end.

Not to mention that this comes conveniently close to the days where 4k streaming is becoming a thing. Now if I want programing for my relatively cheap 4k TV, I can either fork over \$50 so I can stream content or get Comcast Cable.. whenever it is they start offering 4k channels.

Why is this allowed to happen? This is clearly a case of a company using their Monopoly status to milk people out of their hard earned money and prevent competition. How can we stop this from coming to our town?

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Date:** 7/7/2016 3:09:11 PM

**City/State/Zip:** Lisle, Illinois 60532

**Company Complaining About:** Comcast

---

## **Description**

I have one choice for broadband (25Mbps or higher) at my apartment. I received the attached notification that my monopoly provider will now be metering my usage. It has been widely reported that Comcast exempts its own services from this metering in violation of the spirit of net neutrality that would make scummy lawyers proud (somehow its delivery is "internal" so it's "not using the internet" and thus doesn't count).

The company's executives have openly admitted this has nothing to do with physical capacity and is purely a business decision.

A 2011 study showed sending 1GB of data over the internet costs \$0.03 after accounting for an ISP's real business costs. Comcast wants \$10/50GB--6.67x the actual cost (this likely understates the difference since costs of transmitting data have decreased over the intervening five years). Usage-based billing would be fine if the price were market-based, but a monopolist like Comcast doesn't have to use market pricing. They use "Whatever the heck we want to shore up our sagging cable revenues by screwing over streaming" pricing.

Were there real competition (Google Fiber please!) I would be calling Comcast to cancel right now, but there isn't. Due to this, I am stuck with one choice that seeks to use its monopoly status to extract more profits than a free market would provide and charge higher prices than would be permitted in a competitive environment.

Count this as one more citizen demanding a neutral internet means no data caps, tiered pricing, or monopolistic gouging.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1066820 - Cox Communications Cutting Data Caps in Half**

**Date:** 7/2/2016 6:34:51 PM

**City/State/Zip:** Phoenix, Arizona 85035

**Company Complaining About:** Cox

---

## **Description**

Cox Communications is testing out data overages in some markets, and it appears they are preparing to expand the program. They have "data limits" associated with plans now, but do not enforce them. This month, they cut their data limits in half. I went from having a 2TB data cap to a 1TB cap for the HIGHEST plan available in my area and pay a premium for it. The only reason they would do this is to prepare for overages, and increase their profit margins. Broadband internet is a utility regulated by the FCC, and artificial profit centers, like overages on a landline, are completely unacceptable. It does not cost Cox a penny more if I use 100GB or 500GB, and any money they would charge me would go directly to their bottom line. I do not have a choice in my broadband internet; Cox Communications is the only provider for my neighborhood that has broadband speeds that support my job and my families needs. I'm relying on the FCC to do what is right for the American People, and shut this behavior down now. Thank you.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Date:** 7/5/2016 1:24:54 AM

**City/State/Zip:** Central, South Carolina 29630

**Company Complaining About:** AT&T

---

## **Description**

The at&t Uverse service has imposed a 600GB/month internet data quota on my internet plan. If my usage within a billing cycle exceeds 600GB, I will be charged extra fee for any excessive data. Therefore, I am hereby file a complaint on such unreasonable charge and unjustified business conduct. The consumer's freedom to use internet are greatly restrained as a result of fear of surcharge. With the current trend of heavy and high quality entertainment media stream, it is almost impossible to use only 600GB of data for a household. Every time a consumer wants to watch a Netflix, to download a digital copy of video game (easily 20G a piece), stream lossless audio, one has to think twice before enjoying the benefit of internet. Given the advent of 4K, the situation will only get worse. The data cap has nothing to do with fairness, but everything to do with sheer profit pursuit by the ISP. Is this really what the FCC want for the American consumers? Few countries, even socialist China, do not have such absurd data cap. There area already a substantial presence of opposition on the internet for data cap. I urge FCC to take this complaint seriously and take appropriate measures to stop data cap for internet.

**Date:** 7/5/2016 1:38:09 PM

**City/State/Zip:** Sylvania, Ohio 43560

**Company Complaining About:** Broadband

---

## **Description**

Previously we have been able to use internet with no data cap. Then a few years ago they introduced new caps. If you go over the caps you can get some serious charges. This is unfair to begin with as they never decreased prices or introduced any other value into the existing plans. So users were able to use their connection freely for many years and now a cap is imposed just to take more money from subscribers. Now I have to pay an additional \$50/month just to have the same level of service I used to have. This practice needs to be stopped immediatly and laws need to be made to stop this practice.

And to make matters worse Buckeye Broadband has made a new entry level plan that is not even in the broadband range (10mbps) and it has a low cap of 10GB/month. This is insane as it will go over the cap in just 2 hours of use! This is preying on the poor and terrible business practice. Please FCC, stop this terrible practice now and make it illegal.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Cox Communications is testing out data overages in some markets, and it appears they are preparing to expand the program. They have "data limits" associated with plans now, but do not enforce them. This month, they cut their data limits in half. I went from having a 2TB data cap to a 1TB cap for the HIGHEST plan available in my area and pay a premium for it. The only reason they would do this is to prepare for overages, and increase their profit margins. Broadband internet is a utility regulated by the FCC, and artificial profit centers, like overages on a landline, are completely unacceptable. It does not cost Cox a penny more if I use 100GB or 500GB, and any money they would charge me would go directly to their bottom line. I do not have a choice in my broadband internet; Cox Communications is the only provider for my neighborhood that has broadband speeds that support my job and my family's needs. I cannot disagree any more with the direction that Cox Communications is taking with their internet service.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1072591 - XXXXXXXX XXXXX's complaint re: ISP Zero Rating**

**Date:** 7/7/2016 11:41:29 AM

**City/State/Zip:** Salt Lake City, Utah 84105

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

I want to be able to access whatever Internet content there is at the fastest available speed. I don't want T-mobile to decide which sources are fast and which are slow.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I pay Comcast a handsome sum for their internet and television services, with no viable alternative service provider in my neighborhood. I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead. In fact, I subscribe to many services including Comcast. I should be able to choose which online video I want to watch without interference.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Description**

I stream quite a bit of content for my children and my wife. They use netflix and Hulu quite a bit. A 1080p netflix stream is almost 2GB an hour and We have five people in the house. These Data caps are going to kill us. We have been trying to cut costs by getting rid of our cable TV subscription but now Comcast has found a way to squeeze more money out of me for the service they have been providing cap free for years now. The costs have not gone up, if anything the cost to provide internet have gone down. Please stop this from happening. I already pay a premium for speed. Now I have to pay again because that speed allows me to hit their caps even faster. I have no other options for comparable internet Comcast is a monopoly in my area and much of the country.

**City/State/Zip:** Mount Prospect, Illinois 60056

**Company Complaining About:** Comcast

---

**Description**

Comcast is enforcing data caps in the area. The reasoning is complete garbage as data caps DO NOT affect Comcast nor do they reduce costs in any way. In fact, they will lose customers by enforcing a restriction on a service. Countries in Europe have similar if not BETTER internet options because service providers are not forcing their customers into ridiculous and imaginary costs.

I will be canceling my service because of this. I was content with my service and never thought Comcast would even have the thought to enforce more data caps. I felt sorry for my fellow Americans that had to deal with this nonsense.

Once again, Data caps are an IMAGINARY limit that supposedly reduce costs on the service provider but in fact do the COMPLETE opposite. Comcast will be profiting by FORCING consumers to pay an overage fee or buying unlimited option which will likely be a monthly cost. This is blatant extortion and Comcast should not be allowed to continue this foul practice.

FCC should be taking more actions toward these monopolies like Comcast and At&t. They offer subpar services and only extort more money. Just watch as a startup company offer better services and these data caps will magically disappear. It is disgusting.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

As an IT professional I need the ability to access the Internet and work from home without limited access. Just within the last two months they have reduced my access in half each month while still charging the same rate.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Company Complaining About:** T Mobile

---

## **Description**

Internet should be an open for everyone to use and shouldn't have artificial limits put on it in any way. The whole idea of the internet is to give us all an avenue of freedom of which we can express ourselves and discover information. Limiting this limits our freedom, which is what the USA stands for. Also, the freedom of the internet is what allows small businesses to prosper in a harsh environment. If these Internet companies get what they want, it will only tighten the stranglehold on small companies. Please don't let this happen!

Here's the generic e-mail:

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1073103 - Comcast Terabyte Data Caps**

**Date:** 7/7/2016 2:20:28 PM

**City/State/Zip:** Lockport, Illinois 60441

**Company Complaining About:** Comcast

---

**Description**

Comcast has just changed their internet service in my area to have a 1 Terabyte data cap. I am deeply concerned about the impact this will have on Net Neutrality because Comcast's own TV streaming services are not included in the cap, but other non-Comcast streaming services will be included in the cap (Netflix).

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Hey! Are you listening to your constituents?

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. To put it delicately, THIS IS BULLSHIT.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1073171 - Comcast Caps Internet Usage**

**Date:** 7/7/2016 2:38:16 PM

**City/State/Zip:** Plymouth, Indiana 46563

**Company Complaining About:** Comcast

---

## **Description**

I have received a letter that Comcast will be implementing data caps on customers in the Chicagoland area - complete with overage fees of \$10 per 50GB I use over the initial 1TB. They are also planning to offer an "unlimited" tier for an extra \$50 per month.

Currently I'm receiving "unlimited" data as my usage is not presently capped. So in order to receive the same service I currently receive, they are now wanting me to pay an \$50 extra a month on top of our already outrageous bill - this is not what I signed up for. Not to mention the fact I'm paying for 150 Mbps and if I was to actually continuously make use of that speed I pay for I'd hit the 1TB cap in less than a day. Furthermore, it is not like I can switch providers as thanks to the monopoly they have on my area they are the only providers that meet the FCC's definition of broadband.

It is more important than ever for the Internet to be free and open as more and more devices become connected. As you already know, broadband internet service providers in the US are monopolies, controlling numerous and huge service areas without real competition and without real consequences for their actions. Data is not a consumable resource and therefore shouldn't be charged like one.

Worse still, providers like Comcast have blackballed services such as Netflix into paying them for the ability to reach Comcast customers at usable speeds. They are effectively triple dipping by wanting customers to pay more for both speed and data usage; and then turning around and wanting services to also pay for bandwidth to reach the customers they are already making money off of. Make no mistake, this will stifle innovation and hurt small businesses.

Please don't allow this injustice to continue as it will only hurt American citizens and small businesses. Data caps do not benefit anyone.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**City/State/Zip:** Colton, California 92324

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

---

## **Description**

Today, I received notice that Comcast was extending its data cap to the Chicago area on August 1. I also see that Comcast has made a deal to put Netflix on it's X1 boxes. I do not use X1, so I expect my Netflix usage will count against the cap. And of course there is Amazon Video, etc. This seems does not seem to be "Net Neutrality."

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have. That's not an open Internet.

These programs also create incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use. With incomes in the US stagnating and going down it is unbelievable that companies still prevail against their customers. At the heart of this issue is actually the cause - the very start- of WW II: the censoring and lack of information to the people.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They punish me for using sites that don't pay the toll and raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T at once for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped.

Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Data Caps. I just received notice that they're "trialing" data caps in my area. First of all, I have a heavy-data-usage home. My partner works from home, we are both huge gamers and we have (in essence) cut the cord as best as we can. We have come rather close to the new data cap with only normal usage. Anytime there is a new OS upgrade, new games / console updates to download, a new season of Orange is the New Black on Netflix, etc, we would go over the data cap. The idea that this will "help consumers" is entirely false.

If they're worried about users over-saturating their cable lines, then they shouldn't be offering wireless hot spots using their modems for a rental fee - "Have an XFINITY Wireless Gateway? Then you're likely to have the home hotspot feature. Give guests WiFi access in your home without sharing your password or slowing down your network."

Comcast states that most people don't hit their data cap normally. They don't state whether or not that those customers have high speed (20Mbps+) or are also TV subscribers.

To quote Consumer Reports:

"But here's why Comcast data caps could be a concern for many families. Netflix says that streaming a high-def movie can eat up close to 5GB per hour, so you'd have to burn through 50 hours of movies—25 two-hour movies—or 50 one-hour TV shows, to hit a 250GB monthly cap. Admittedly, few of us watch that much streaming—by ourselves. But those numbers start to look far more modest when you consider a household with a few children and multiple devices—smart TVs, streaming players, game consoles, Blu-ray players, tablets, smartphones—all connected to the Internet via the home's Wi-Fi network. In households where several members like to watch several episodes, or even whole seasons, of a show in binges, data usage grow quickly."

So it can't be a saturation issue. It seems to be a money grab geared towards people who have cut the cord and do not watch broadcast/cable television.

When doing research, I found that they do not have these same caps for their Gigabit Pro (fiber) lines and Business lines. Unfortunately, Comcast does not offer Gigabit Pro lines to my residence. However, I found in my area the cost to be near \$300 a month. Business lines for my current speed are about triple my current cost.

Granted, Comcast gives you two months to figure out your usage before they start charging you - or you can pay \$50 a month ahead of time for unlimited usage. That puts my household back to the same cost as a slightly slower Business line without the guaranteed service or SLAs. They also gave less than a month advanced warning so I cannot rig up or buy a device to verify that my modem is utilizing as much as they state I am.

With the move towards more Internet-of-Things technology, increase in HD and 4K content streaming, and most things needing an internet connection to work, I think it's very disturbing that the only company in the area with high speed internet will test data caps (with monetary penalty) to this large area.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Date:** 7/7/2016 3:18:17 PM

**City/State/Zip:** Hamilton, Ohio 45011

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1073383 - Comcast, new 1TB data limit imposed**

**Date:** 7/7/2016 3:25:12 PM

**City/State/Zip:** Round Lake, Illinois 60073

**Company Complaining About:** Comcast

---

## **Description**

I have been a customer of Comcast for over 10 years. I understand that a few months back (and as far back as the end of 2014) they were looking to impose data caps of 300Gb. I understand that the limit has now been raised to 1Tb (1000Gb) based on the email I received today.

I have our home phone, cable, internet and home security through Comcast. I currently pay in excess of \$250 per month.

Based on their calculator (we have 3 phones, 3 TV's, an xbox, 2 laptops and several appliances connected to our home network - Nest thermostat, washer, dryer, etc) we would exceed the allotment on a monthly basis.

In an environment where EVERY device you own connects to the internet, and considering that Comcast themselves has stated that they have no legitimate reason to impose a cap, I feel that a limit is absurd.

I also use Netflix / Hulu / apple TV and feel that Comcast imposing limits is in an effort to thwart users of these devices as a replacement for their cable. I feel that if I have all of Comcasts services, I should not have ANY cap on our usage. This goes DIRECTLY against an open internet policy and net neutrality.

Please see the email I attached.

**City/State/Zip:** Waco, Texas 76707

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1073579 - Comcast Datacaps**

**Date:** 7/7/2016 4:23:44 PM

**City/State/Zip:** Chicago, Illinois 60625

**Company Complaining About:** Comcast

---

## **Description**

I have received notice from my internet service provider, Comcast, that they will be trialing a data cap to my internet service which will then become permanent at some point in time. The notice claims that if I exceed the data limit, I will be charged a fee as well as additional monies per additional blocks of data. No where in their notice do they offer an opt out option nor do they provide a clear reason for the cap. I have no other option for broadband internet in Chicago, Comcast IS a monopoly. I ask that you enforce the newly enacted net neutrality laws as this is just the first attempt by Comcast at subterfuge against said laws.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1073591 - Comcast data caps in my area**

**Date:** 7/7/2016 4:28:53 PM

**City/State/Zip:** South Bend, Indiana 46616

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently sent me an email informing me that they would be placing a data cap on all usage in my area. In my view, this is a clear violation of the spirit (if not the letter) of open internet / net neutrality: they're forcing users to pay more depending on what it is that they are using the internet for. Obviously, the most concerning violations of net neutrality occur when a provider makes these discriminations based directly on content, but it should still be concerning when they make these discriminations on the basis of use. This is particularly true in the case of Comcast, which has a vested interest in limiting the ability of users to replace traditional tv services with the internet. Given that their data caps are quite clearly intended to punish those who use the internet for streaming--services that the tv-providing branch of Comcast would like to charge for--it is hard to see such caps as anything other than an illegal and monopolistic attempt to punish consumers who use Comcast for their internet services and other providers for tv and/or entertainment. In practice, this is no different than Comcast illegally throttling Netflix and/or Youtube.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1073766 - Data Caps**

**Date:** 7/7/2016 5:17:29 PM

**City/State/Zip:** North Aurora, Illinois 60542

**Company Complaining About:** Comcast

---

### **Description**

I am in an area with I have the choose between ATT and comcast. Both of them do data caps and I am not able to get around it. The only reason for data caps is to make more money for them. The hardware is in place and will not impact them if they have it or not. There is nothing I can do to avoid these data caps and it only serves comcast.

---

**Ticket: # 1073768 - Comcast Data Cap in Chicago**

**Date:** 7/7/2016 5:17:42 PM

**City/State/Zip:** Chicago, Illinois 60625

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently introduced a data cap in my area. If I choose not to spend an extra \$50/month on internet service I risk going over the 1 terabyte cap and being charge an enormous \$200 extra.

I have absolutely no other choice in internet provider at my address that I've made my home. I work remotely, online, and rely on the internet as a utility. I need more options in internet and the ability to use it without limit.

**Date:** 7/7/2016 5:18:49 PM

**City/State/Zip:** Los Angeles, California 90047

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1073819 - Comcast Data Caps in Chicago**

**Date:** 7/7/2016 5:30:01 PM

**City/State/Zip:** Chicago, Illinois 60622

**Company Complaining About:** Comcast

---

## **Description**

Hello,

Comcast is rolling out a 1 TB data cap in the Chicago market (see attached announcement). The company will charge users \$10 for each additional data block of up to 50 GB/month. Alternatively, customers can choose to pay an additional \$50 per month for "unlimited" data.

These data caps violate the FCC's Open Internet rules, specifically the rules on throttling. I urge the FCC to stop Comcast's data caps.

Best,

**Ticket: # 1073824 - XXXXX X's complaint re: ISP Zero Rating**

**Date:** 7/7/2016 5:31:23 PM

**City/State/Zip:** Washington, District Of Columbia 20001

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 1073826 - Pay an additional \\$50 or you will receive a data cap](#)

**Date:** 7/7/2016 5:32:27 PM

**City/State/Zip:** Bartlett, Illinois 60103

**Company Complaining About:** Comcast

---

## **Description**

Hello, today we received a notification from Comcast that they are beginning a "trial" in our service area of Bartlett, IL and that under this trial we will no longer have the unlimited internet data service that we have had for over a decade, but will now be under a data cap. The only way to opt out of this "trial" is to cancel service and switch providers (of which there is only AT&T at slower available speeds in my area), or pay an additional \$50 per month. Now, I use IPTV services for television and movie content such as Netflix, Amazon Prime, and Playstation Vue, rather than subscribe to Comcast's television offerings. The addition of this new data cap, now severely limits my ability to use one of Comcast's competitors for television. I was also informed by one of their agents that Comcast's own IPTV service doesn't count against data usage, which seems to be a clear violation of net neutrality, since they are putting competing services at a distinct disadvantage.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

---

**Description**

Hello, I just received notification from Comcast about data caps in my area. I find this uncompetitive, because they are forcing to limit a seemingly limitless commodity. With 4k streaming right around the corner, any cap is going to be too restrictive. With only one provider in the area capable of streaming multiple devices, I'm effectively locked into being on data caps. In markets that Comcast does not have competition, they know you are stuck with them.

## **Description**

Comcast, which is my only ISP in my area, is implementing one terabyte data caps on my internet service.

This is not acceptable business practice, as technically, additional data doesn't cost them any money. They are creating false scarcity for an unlimited resource. This is also against Net Neutrality rulings. I would switch to a different ISP but they have a monopoly in my area, and they are not lowering the price of my internet with this new limit.

They are also trying to advertise this data cap as a benefit, which is deceitful practice.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1074045 - Data Capping****Date:** 7/7/2016 6:50:45 PM**City/State/Zip:** South Bend, Indiana 46614-1933**Company Complaining About:** Comcast

---

**Description**

We have 4-5 people each day or few days every month using their laptops and etc. online and comcast messaged the owner of the house stating that comcast has been or will be capping the usage of the internet for us. It doesn't feel right and I have been doing personal research and it seems that it has hit or will be hitting our residential areas. We cannot use or do anything like we have even if it's music, video games, or even socializing online. We have to watch what we use and if we go a bit over, we will have to pay \$10 for each 50GB over their personal data plan [or \$50 dollars of their plan for unlimited, we already pay close to \$150 a month]. Comcast says it made the most recent changes because it has "listened to customer feedback about wanting a carefree online experience that doesn't require them to think about their data usage plan." Which with a basement full of 4-5 people that go on their phones and laptops/high end gaming PCs to search and communicate with others. It seems like a scam and where we are located, We don't have any other high speed internet like comcast [or really slow and annoying AT&T]. They have said it's about fairness but It's not if we are all looking at other providers we cannot use after the news that comcast is data capping us. It's a huge interference to us all and everyone who has complained, Also it's really money hungry and does not hurt for internet providers to not cap anyone. It's not an open and free roaming internet if providers are doing this, including it even hurts businesses that use way more data to even function. It's a slight bringer of paranoia and anxiety over even going over the limit they have stated for our area and individual homes.

That is 100% why the data caps exist [they shouldn't exist at all..] . The biggest internet providers in the US are also the biggest tv companies. With netflix, hulu, amazon prime video and torrenting having a good internet service cuts directly into their tv profits. It is cutting us in the process by making us pay more when we go over their limit. I don't know much what the FCC can do but please help the people that have complained about this and since it has in no way before hurt their company or ban capping for good?

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Hi,

I know you've heard that Comcast is implementing a mandatory 1TB data cap in Chicago starting in August. How can this be legal? I don't go over that amount a month but I know that could change in the future. How can I be penalized for accessing what is decidedly a service protected by human rights? I hope you take action. Thank you

**Ticket: # 1074076 - Comcast Data Caps**

**Date:** 7/7/2016 7:10:57 PM

**City/State/Zip:** Northbrook, Illinois 60062

**Company Complaining About:** Comcast

---

## **Description**

Today I received a notification from my internet service provider, Comcast, that they would be "testing" a 1TB data usage cap in my area. If 1 TB is exceeded, \$10 for each additional data block of up to 50 GB/month.

Comcast likes to argue that this is to maintain the quality and performance of their networks, while their internal leaked memos show the truth, that it is just a way to make more money (see: <http://www.theverge.com/smart-home/2015/11/7/9687976/comcast-data-caps-are-not-about-fixing-network-congestion>).

It is interesting timing that I'm notified of this data cap usage trial a month after I cancelled my Comcast cable television service as I had streaming options such as Netflix, Hulu, and HBO Go. This is strictly an anti-competitive move by Comcast to stomp out competition to their cable offerings. Their zero rating of their VoD and online video offerings data usage is extremely anti-competitive as well and should be classified as a violation of net neutrality, even though the FCC doesn't believe it currently is.

I can only hope that the FCC will use their new court validated powers to regulate Comcast (and all ISPs) as a true common carrier under title II and increase regulation of rates and/or open up competition to other providers. If Comcast wants to charge overages for excessive usage then I should be charged less for decreased usage. I personally believe the entire concept of data usage caps is nothing but greed and not necessary, as study after study shows that increased data usage only slightly increases network administration costs, which should be considered as an operational expense and not charged back to users without a choice of providers.

Comcast's implementation of data caps wouldn't be such a deal with if there was actual competition in the market place, but there isn't. There are no other providers in my area that offer 50 Mbps+ high speed internet service (and I'm not sure any even offer the FCC standard of "broadband" at 25/3 Mbps). Comcast's pricing schemes are a matter of "we do what we want because we can," due to a complete dearth of competition in almost every market, mine included.

I can't change my provider, nor can I opt-out of these data caps, so what choice do I have? I either must pay Comcast more money for additional usage, or give up getting my video entertainment from streaming services such as Netflix and Hulu, all of which just happen to be competition to Comcast and their massive media conglomerate.

The FCC has made amazing strides in the last few years to protect consumers, to actually push back on the big guys who have all of the control. I hope the FCC continues this fight and realizes that tactics such as data usage caps and zero rating are no different than paid prioritization of traffic - they are bad for consumers, they are bad for competition, innovation, and they are bad for America.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

We have been notified that Comcast is about to begin implementing Data Caps in the Chicago Market. This morning, I reduced my cable service to switch to a "cord-cutter" model in which I rely on streaming services for my television viewing. I'm sure this timing is coincidental, but it shows perfectly why the Comcast Data caps are an issue. Without question, the only reason for the cap is to attempt to keep people such as myself from exercising my right to watch programming as I choose. Even moreso, Comcast exempts their own streaming service from these data caps in an attempt to keep people from switching to alternate platforms. Conveniently, the notification relies on HD video for it's bandwidth reference, which is quickly falling behind the times. 4K video is now common place which means "700 hours of video" quickly becomes 175 hours (assuming 4k at 4 times "HD" video)

Comcast is offering the possibility to pay even more to get back to unlimited data which itself seems a little odd. However, I would have to pay more than double my current bill in order to receive the same service I receive today. I have investigated my other choices and unfortunately, AT&T is my only other choice which also use caps and have abysmal speeds relative to the cost. It seems somewhat that the companies may be colluding with each other reducing my choice even less that it would appear. I no longer have the opportunity to even select a provider without caps. My only hope at this point is a new provider comes in and attempts to fill the gap, but the odds of that are slim as the costs and permits to even start are exorbitant.

## **Description**

Comcast has just rolled out a 1024 gigabyte cap per month to users in the greater Chicago area.

I have two specific issues with this new policy, and then a more generalized complaint:

The first issue is the "In browser notifications" that they describe as alerting my household when we're about to exceed our usage cap, as described here:

<https://customer.xfinity.com/help-and-support/internet/data-usage-trials-will-i-be-alerted-data-usage>

It's absolutely unacceptable for an Internet Service Provider to make modifications to the data exchanged between my modem and other peers on the internet (be that other computers for online gaming, web servers, or anything else).

I'm led to believe that the FCC is currently handling several legal challenges to the idea of regulating internet service providers as Title 2 Common Carriers. If Comcast is a common carrier, how is it permitted for them to modify the communications transmitted over their network on their customers behalf? Frankly, this is both terrifying from the perspective of free speech, and also outrageous that they would dare to inject data into my web pages. With this capability, they could modify any page to say anything. The implications are staggering.

The second issue is that the mechanism that Comcast uses to measure the amount of data that's being used by a given account is apparently not described anywhere on their customer account portal web site. What assurance do I have, as a customer, that Comcast is measuring things properly? What assurance do I have, as a customer, that issues with Comcast's equipment won't generate bogus data "usage" ? Are they measuring at the modem? Or the local node? How are re-transmits of DOCSIS (or similar lower level and therefore beyond the customers control) frames counted? If Comcast is simply measuring the raw number of bits sent and received by a cable modem, then a damaged coaxial cable can cause a customers "usage" to be measured at many multiples higher than it really is entirely due to protocol noise from low-level parts of the communication stack that the customer has no control over.

When will the department of weights and measures issue a report on the accuracy of Comcast's data usage measurement tools?

A more general complaint is that the very concept of enforcing data caps on a wired internet service is wrong. My understanding is that my internet connection is 100Mb/s. Based on that speed, it would only take approximately 24 hours of download activity to reach my new cap of 1TB. Until now, I already had a cap of my max speed multiplied by the number of seconds in a month. Now Comcast has decided to cut my monthly limit to 1/30th of what I had before and charge me the same amount for it?

How is this acceptable?

Given Comcast's behavior over the last several years, such as (allegedly) deliberately throttling Netflix and Youtube videos, introducing services that use the same internet connectivity as Netflix and Youtube to provide service but that aren't counted against the monthly usage cap, and so on, it's clear that Comcast has no interest in serving their customers, and thus they should be treated as customer hostile whenever possible, and regulated heavily to ensure an even playing field.

**Ticket: # 1074184 - Comcast XFINITY 1TB Cap in Chicago**

**Date:** 7/7/2016 7:54:47 PM

**City/State/Zip:** Chicago, Illinois 60618

**Company Complaining About:** Comcast

---

## **Description**

I received an email from Comcast/XFINITY today that they will be implementing a data cap as a "consumer trial" in my area (60618 ZIP Code). I believe this is immoral, greedy, and possibly illegal. Since they are currently the only broadband provider in my area, I have no choice but to use them, and for them to alter their rates that I had supposedly locked in for a year seems like something they shouldn't be able to do.

Additionally, their email states, "Should you approach a terabyte of usage, we will send you a courtesy 'in-browser' notice." The fact that they could interrupt my browsing experience by altering data between a non-Comcast server and me is a violation of Net Neutrality, and they should not be allowed to do so.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

I believe it is unethical, illogical, and downright greedy for Comcast to implement a 1 terabyte cap on all internet subscribers in Chicago, especially to those who live in areas where Comcast is the only available ISP that offers broadband speeds.

As the owner of a sole proprietorship, I cannot afford their business packages or their data cap overage fees. I do wedding videography and must upload hundreds of gigabytes of video footage to backup online. Now that Comcast is restricting my usage of data, that means I either have to:

-pay overage fees, which I cannot afford. -upgrade my internet service, which I cannot afford. -stop backing up my data online, which will leave me liable for legal action in the event that I lose data that someone has paid me to create. or... -move to a new apartment which has internet service providers available to me that can supply broadband speeds I need in order to successfully run my business.

As you can see, none of these options are ideal and I believe choosing any one of them will cause me to potentially lose my business.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1074231 - Comcast Data Cap****Date:** 7/7/2016 8:17:04 PM**City/State/Zip:** Rockford, Illinois 61107**Company Complaining About:** Comcast

---

**Description**

While it is not against what the FCC defines as "Open Internet," data caps stifle innovation and punish home users. Today Comcast announced that my service territory (Chicago Area) would transition to a 1TB data cap in the coming months. Comcast claims that <1% of people actually exceed their data caps and as such, I shouldn't have to worry. This claim is the perfect exemplification that this is nothing more than a cash-grab to swindle more money out of the supposed minuscule number of users that exceed some arbitrary data threshold. When I signed up for an internet plan, Comcast sold me a pipe to the world wide web with a certain bit-rate and nothing more. If they are seriously doing this because their network can't maintain the necessary throughput, then they have oversold their system and should be penalized for doing so.

In this increasingly connected world, this type greed is a very real threat to this nations' ability to compete in the tech world and I look to the FCC to take appropriate action.

**Ticket: # 1074285 - Implementation of Data Caps in Chicago**

**Date:** 7/7/2016 8:47:20 PM

**City/State/Zip:** Chicago, Illinois 60605

**Company Complaining About:** Comcast

---

**Description**

Comcast has begun implementing data caps in Chicago, limiting the usage to 1TB per month, with unreasonable fees to either go over, or an additional monthly charge for unlimited data. This puts preference on their cable service, which doesn't count towards the caps, and thus undercuts services like Netflix, Amazon Prime and Hulu, which do. This goes hugely against the spirit and letter of the ruling that high speed internet service is a utility.

This is a letter expressing my complaint of this business practice.

**Ticket: # 1074298 - Comcast data caps in Chicago**

**Date:** 7/7/2016 8:50:34 PM

**City/State/Zip:** Chicago, Illinois 60660

**Company Complaining About:** Comcast

---

**Description**

I received an email today informing me that Comcast would begin charging overage fees for using too much data in Chicago. Given that Comcast exempts its own streaming video platform from data metering, I believe this to be a violation of Net Neutrality principles. Comcast uses a dominant position as an ISP to favor its own entertainment products over competing services like Netflix, YouTube and others. I believe it is also designed to stifle competition with its cable tv service by making it more costly and difficult to rely primarily on streaming alternatives such as Playstation Vue and Sling TV.

These overages are an extra charge leveled on an existing service line with very little warning and no recourse. In my building, I have no alternatives to Comcast for broadband Internet.

These data caps stifle innovation. While cable tv providers have not yet been able to produce 4k, 3d and HDR content, streaming services do, and these services consume more data.

I urge the FCC to permanently stop these data caps nationwide. As Comcast has competing entertainment product both through traditional cable TV and through streaming options which do not fall under this cap, the cap is contrary to the principles of net neutrality and anti-competitive.

---

**Description**

I believe it is unethical, illogical, and downright greedy for Comcast to implement a 1 terabyte cap on all internet subscribers in Chicago, especially to those who live in areas where Comcast is the only available ISP that offers broadband speeds. I am currently limited to choosing between Comcast, or AT&T, there are no good options. It is horrible. This day in age we rely on the internet for learning, research, knowledge- to stifle this is counterproductive to society itself.

I am a musician, and I upload literally hundreds of gigabytes of audio and video recordings for the purpose of having a backup. Now that Comcast is restricting my usage of data, that means I either have to:

-pay overage fees, which I cannot afford. -upgrade my internet service, which I cannot afford. -stop backing up my data online, which is irresponsible and not an option for me, in the event that I lose data that someone has paid me to create. or... -move to a new apartment which has internet service providers available to me that can supply broadband speeds I need.

As you can see, none of these options are ideal and I believe choosing any one of them will cause me to suffer and be held back as a citizen. Please do not allow these data caps any longer.

**Ticket: # 1074315 - Comcast data caps**

**Date:** 7/7/2016 8:58:00 PM

**City/State/Zip:** Chicago, Illinois 60618

**Company Complaining About:** Comcast

---

## **Description**

As I'm sure you are aware and have received complaints regarding this exact issue, Comcast is expanding its data caps to more markets. This anti-consumer practice was originally claimed to prevent congestion, but as it has been criticized Comcast has backed down on this claim and instead is now saying this is to provide cheaper service to those who use less data. This is obviously also not the case, as their prices have not gone down in any areas except where Google Fiber has been available.

This is clearly an attack on the open Internet as it goes against Comcast's cable TV business with services like Netflix and Hulu. Comcast has done the same as T-Mobile did with music (also anti-consumer), but went a step farther and provided access to Comcast provided media without counting it towards the 300gb cap in other markets.

Comcast is clearly part of a duopoly which if allowed to continue will halt all progress in the name of profits and has gone so far as to prevent other providers from creating competing networks in other areas and it is ridiculous how far they have been allowed to control pricing and location.

Please do something about these ridiculous caps meant to increase Comcast's profit.

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 1074342 - Comcast Data Caps](#)

**Date:** 7/7/2016 9:10:00 PM

**City/State/Zip:** Chicago, Illinois 60625

**Company Complaining About:** Comcast

---

### **Description**

I am highly opposed to the data caps being added to Comcast accounts in Chicago. This goes against what they advertise and what cable internet is used for. Already I am paying for a service that does not come close to delivering the speeds I pay for consistently.

---

**Ticket: # 1074375 - Against Comcast Chicago 1TB data cap**

**Date:** 7/7/2016 9:23:10 PM

**City/State/Zip:** Chicago, Illinois 60622

**Company Complaining About:** Comcast

---

## **Description**

I recently was opted into a 'trial' for Comcast to test their 1TB data cap program. I believe this practice is unethical and unfair as a standard to set. With more competitive and higher quality content coming from other providers it is in Comcast's best interest to prematurely cap and degrade external services. A 1TB cap may be acceptable for most users right now but as content quality meets and exceeds 4k resolution 1TB will be effectively hobbled inside of five years. They have an inherent monopoly where I live as there is no equivalent speed service in my particular area. Only att DSL is available which is not suitable for any high speed internet experience. A data cap on hard wired infrastructure is a money grab plain and simple. This practice should be made illegal.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As a Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** T Mobile

---

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1074433 - Comcast Internet Data Caps****Date:** 7/7/2016 10:18:18 PM**City/State/Zip:** Aurora, Illinois 60504**Company Complaining About:** Comcast

---

**Description**

I have been receiving 25mbps internet from Comcast for quite a few years now. The cost of the internet was around \$50 a month. Today, I was informed that Comcast will soon add data caps to all of their internet services in my area and will require a fee of \$50 in order to have no cap. This would essentially force my family to pay about double the amount that we have previously for the same exact package. The data caps seem to be a loophole used to bypass net neutrality. By implementing data caps, Comcast can essentially force Netflix and other video streaming services users to pay an extra \$50 each and every month or end up switching to Xfinity TV instead of their current service. Switching to other ISPs is not an option as they either also have data caps or have high ping and low speed. Comcast's anti-competitive behavior creates a lack of consumer options by forcing users to stop using services like Netflix and instead switch to Xfinity TV and prevents power users like me from switching ISPs.

**Ticket: # 1074494 - Comcast Data Caps**

**Date:** 7/7/2016 11:22:42 PM

**City/State/Zip:** Chicago, Illinois 60622

**Company Complaining About:** Comcast

---

### **Description**

I'm opposed to comcast a new terabyte data caps that were just announced for Chicago. There was no period for public comment that I was made aware of and this is a direct attack on so-called "cord cutters" who are legally watching content from non-cable providers.

(Please note: just by filing this complaint with the FCC, I would be going against my data cap. Thus people will be less apt to attach supporting documentation.)

---

**Ticket: # 1074495 - Comcast Internet Data Cap**

**Date:** 7/7/2016 11:23:49 PM

**City/State/Zip:** Orland Hills, Illinois 60487

**Company Complaining About:** Comcast

---

## **Description**

I believe the recent 1TB data cap implemented in the Chicagoland area by Comcast is unethical and unnecessary. I, along with the majority of Chicago residents, have no alternate solution for high-speed internet. In an era where the internet is the main source of media and information, Comcast is using their foothold as the sole available service provider to price-gouge their customers. It is even more absurd that Comcast is charging an additional \$50 for an unlimited data plan, considering there is minimal, if any, additional cost on their part for additional data usage.

In a market where local governments can block competing ISPs from offering service in certain areas, I believe the FCC should implement regulations making data caps illegal.

**City/State/Zip:** Medina, Ohio 44256

**Company Complaining About:** Armstrong Cable

---

## **Description**

This is a follow-up to your previous request #876092 "Armstrong cable data caps"

Is this a joke? You just forward it to my cable company and wash your hands? Is there a different form to fill out that actually causes our complaints to mean something to the organization charged with regulating or communications infrastructure?

It's common for the community to recommend filing these complaints so that the need for this regulation be vocalized to the only org capable of doing something. Can I at least have some assurance that this complaint has been registered as such? Armstrong didn't even bother sending me anything like you said they would. I'd hate to think that the FCC just believes this issue is resolved with me. It's a slap in the face.

**Ticket: # 1074506 - Comcast Xfinity Data Cap**

**Date:** 7/7/2016 11:33:11 PM

**City/State/Zip:** Orland Park, Illinois 60462

**Company Complaining About:** Comcast

---

**Description**

I have just received a notice from Comcast informing me that a data cap of 1 terabyte is being imposed on my account.

The notice includes a deceptive statement that this allotment will allow for 700 hours of HD video streaming video. That would equate to a data rate of 1.46 gigabytes per hour. Most HD streaming services use significantly more data than 1.46 gigabytes per hour. Also, newer 4k streaming services will use up the 1 terabyte allotment within hours.

I have not noticed a decline in quality of my service at peak hours, and I believe that these data caps are not necessary. I also believe that the only purpose of these data caps is to increase the appeal of other Comcast services, such as cable TV.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 1074528 - 1tb data cap in Glenview, il by Comcast](#)

**Date:** 7/8/2016 12:09:58 AM

**City/State/Zip:** Glenview, Illinois 60025

**Company Complaining About:** Comcast

---

## **Description**

Comcast has instituted a 1tb data cap on an existing plan and charges \$50 for "unlimited". There is limited competition in Glenview and this is monopoly behavior. Comcast is acting as a utility and should be regulated as such with caps and bandwidth being deregulated. This is the way electric utilities work and comcast should be treated the same way.

---

**Ticket: # 1074530 - Xfinity (Comcast) Terabyte Data Cap Experience**

**Date:** 7/8/2016 12:24:41 AM

**City/State/Zip:** Rockford, Illinois 61107

**Company Complaining About:** Comcast

---

**Description**

Xfinity (Comcast) plans to further roll out it's 1TB data cap "experience" into the state of Illinois. As a customer who is internet only, all of my households media comes from streaming services (Netflix, SlingTV, HBONow, Hulu, YouTube, Podcasts, Spotify, Apple Music). They are giving consumers two options, pay an extra \$50 for what you used to get for free or cancel your streaming services and subscribe to our TV Service.

Did they just run the numbers and realize they could extort an additional \$50 out of every cordcutter household. With 4K content just hitting the market via Amazon Prime Video and Netflix in what world is \$50 a month for 1TB enough.

I have no recourse because DSL is my only alternative which does not meet the definition of Broadband.

I am already forced to pay an absurd price to a monopoly for subpar service that is not symmetric. Now they get to suck an additional \$50 out of consumers that have no option other than to sell there home and move into one of the few regions of the US that don't have to deal with a monopolistic ISP.

---

**Ticket: # 1074533 - Data caps**

**Date:** 7/8/2016 12:35:37 AM

**City/State/Zip:** Santa Rosa, California 95401

**Company Complaining About:** AT&T

---

## **Description**

AT&T's imposed data cap has caused me a lot of anxiety. We are a family of 4 and are relatively modest in our use, the kids use more depending on what they are doing but even still we can get very close to the cap, I'm tired of being the bad guy monitoring everyone's usage and not getting any enjoyment myself.

I never had an enforced cap before and now they are trying to get more money for the same service I was already receiving. I don't want tv service, I have AT&T cell service, AT&T landline cell service and Uverse service, they consider that a bundle but not the right bundle to get unlimited data. 600 gb is not that much for 4 people, even xfinity gives a Terabyte, while still a cap it would be better.

---

**Ticket: # 1074540 - Data cap net neutrality complaint**

**Date:** 7/8/2016 12:38:48 AM

**City/State/Zip:** River Forest, Illinois 60305

**Company Complaining About:** Comcast

---

## **Description**

Comcast has decided to impose a cap on my internet line. They exempt any programming or data streamed as cable tv programming. As an internet only customer I am disadvantaged vs customers who use Xfinity to stream content or programming. Comcast's industry peers have admitted that there is no legitimate business or technical case for data caps (Time Magazine, June 7, 2016 - <http://time.com/money/4360431/internet-data-caps-bogus-ploys/>).

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1074567 - XXXXXXXX XXXX's complaint re: ISP Zero Rating**

**Date:** 7/8/2016 1:20:40 AM

**City/State/Zip:** Marina, California 93933

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

**Ticket: # 1074596 - Comcast 1TB Data Cap**

**Date:** 7/8/2016 3:13:44 AM

**City/State/Zip:** Arlington Heights, Illinois 60005

**Company Complaining About:** Comcast

---

**Description**

I believe it is unethical, illogical, and downright greedy for Comcast to implement a 1 terabyte cap on all internet subscribers in Chicago, especially to those who live in areas where Comcast is the only available ISP that offers broadband speeds.

As the owner of a sole proprietorship, I cannot afford their business packages or their data cap overage fees. I do wedding videography and must upload hundreds of gigabytes of video footage to backup online. Now that Comcast is restricting my usage of data, that means I either have to:

- pay overage fees, which I cannot afford.
- upgrade my internet service, which I cannot afford.
- stop backing up my data online, which will leave me liable for legal action in the event that I lose data that someone has paid me to create. or...
- move to a new apartment which has internet service providers available to me that can supply broadband speeds I need in order to successfully run my business.

As you can see, none of these options are ideal and I believe choosing any one of them will cause me to potentially lose my business.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Comcast has just implemented data caps in Chicago. In their announcement they have told everyone what their prior 3 month "median" usage is, and have also conveniently stricken any usage history over 3 months old from view. This removes the ability to validate their claim that one will be ok with the new cap. The alternative is a 50% rate increase for "unlimited" data.

Additionally, Comcast will be MODIFYING THE WEB PAGES I VISIT to inject a "bandwidth alert" in case the cap is reached.

Comcast has no competition for REAL high-speed internet in most areas of Chicago.

**City/State/Zip:** Yorkville, Illinois 60560

**Company Complaining About:** Comcast

---

## **Description**

Comcast has placed previously non existent data caps on my internet service. As far as I can tell, I am receiving no benefit from this but rather being actively dissuaded from choosing competing services to Comcast's Cable TV offering like Netflix. I believe this issue is a matter of anti trust because Comcast is essentially choosing winners in what should be a free market place. I do not have many choices for internet providers where I live so I fear that by continuing to pay Comcast for a service that is now hostile towards me as a consumer I am encouraging this behavior. The support I do receive from Comcast for my service is already bad and my bill regularly has mistakes; I fear that this will be worse in the future.

**Ticket: # 1074735 - Comcast Data Caps in Chicago****Date:** 7/8/2016 9:46:18 AM**City/State/Zip:** Chicago, Illinois 60625**Company Complaining About:** Comcast

---

**Description**

Comcast has announced that they'll begin enforcing arbitrary data caps of 1TB/month in Chicago. This comes at a time when more and more of people's every day lives requires them to send and receive data as part of their professions, and recreational activities are increasingly dependent on larger amounts of data being transferred. With video games becoming larger (and distributed through online channels), the rise of 4K video streaming, and the prominence of video/photo sharing services, this is a disturbing trend.

It's especially disturbing because, for a large part of the city, there is no other real option than Comcast, and they continually use their monopoly to gauge their customers. My building only has Comcast as a service provider. I have no options to switch to a competing service. No ability to vote with my wallet. I am stuck. When there is no competition, these user-hostile actions are indicative of a company that has no intention of providing the best possible service, rather manipulate their customers to pad their pockets.

I signed up with Comcast with no data cap enforced. I currently pay \$50/month. With this change, if I want to continue to enjoy the same level of service I originally signed up for, I will be forced to experience a 100% increase in my monthly bill. My current payment doesn't change, but I'm still receiving a lesser service. This is completely arbitrary, and exists only because Comcast's position in the market is such where they have no competition.

**Ticket: # 1074795 - Comcast Data Cap**

**Date:** 7/8/2016 10:14:39 AM

**City/State/Zip:** Chicago, Illinois 60610

**Company Complaining About:** Comcast

---

## **Description**

Comcast has decided to modify all its existing 'Xfinity' internet plans in Chicago and limit the data transferred on them to 1TB a month.

This is nothing more than a money grab and it does nothing but hurt consumers, especially those who depend on their internet connection for a living, like myself.

On top of this the company is unethical about all of this. They have claimed several times that this is not a 'cap' and that you can use beyond the 1TB limit, you just have to pay for it. Comcast also tries to package these data caps as something good for the consumer and that it is needed so that the top 1% of users don't affect the other 99% when it has been proven time and time again that the heaviest users have zero affect on any other users.

**Date:** 7/8/2016 10:17:23 AM

**City/State/Zip:** Asheville, North Carolina 28803

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1074867 - Comcast implementing data caps in my area****Date:** 7/8/2016 10:42:54 AM**City/State/Zip:** Quincy, Illinois 62305**Company Complaining About:** Comcast

---

**Description**

I received email notification from Comcast yesterday, explaining they will be implementing a 1TB data cap in my area. Further research revealed this applies to the "greater Chicago area" in general. Overage fees are rated at \$10 for every extra 50GB of data used over 1TB, with a limit of \$200 maximum in possible overage charges.

Excerpt from the email:

"Your average data usage for the past three months is 210 GB, so based on your historical usage, with this new plan you can stream, surf, game, download or do whatever you want online, worry free. Less than 1% of Comcast XFINITY Internet customers use a terabyte of data or more in a month."

If less than 1% of users ever use 1TB of data per month, I see no point in the implementation of a data cap. This draconian practice flies in the face of Net Neutrality and poses a threat to the free and open exchange of information. It opens the door for even more obstructive and greedy practices that will, without a doubt, bring further harm to the Open Internet.

Data caps are universally despised, and largely serve no practical purpose. The only time they are feasible is when a network is physically incapable of handling the amount of traffic consumers are trying to use. To my knowledge, this is not the case with Comcast's infrastructure. Even if I am incorrect in this presumption, considering Comcast has previously attempted to purchase Time Warner for \$37.4 billion, Comcast can easily afford to upgrade their infrastructure to meet demand.

Data caps need to be permanently put to an end. Given that the Internet is classified as a utility, its usage needs to be regulated the same way water, gas, and electricity are regulated. If other utility companies were allowed to add usage overage charges to their services (i.e. being charged \$10/gallon for each extra gallon used over 100 gallons of water per month), the outrage would be unprecedented. ISP's need to be held to the same standard.

**Ticket: # 1074942 - Comcast Data Caps****Date:** 7/8/2016 11:04:16 AM**City/State/Zip:** Norridge, Illinois 60706**Company Complaining About:** Comcast

---

**Description**

Yesterday Comcast sent me an email explaining there will be a 1TB data cap on my account and if I go over that I will be charged a fee. They explained that I currently use 350GB on average per month, mind you, this is mainly from me streaming 1080p content, but I foresee a future where I will be streaming 4K, which would easily push me over that cap.

Another issue I have is they called me the other day passing off their own streaming service and one of their selling points was the fact it did not count towards any usage caps in place. This seems completely unfair as I currently use Amazon and Netflix.

There is no reason for there to be caps, this seems like a way to extract more money from an already expensive service ( \$89.99 for internet alone ), and that it's unfair practices made to entice you to their own streaming services.

**Ticket: # 1075035 - Comcast Data Caps**

**Date:** 7/8/2016 11:42:40 AM

**City/State/Zip:** Decatur, Illinois 62526

**Company Complaining About:** Comcast

---

## **Description**

Comcast is starting data caps in my area. They have what is effectively a regional monopoly, and are continuously increasing prices to pad their bottom line. They're taking advantage of the fact people don't have other options to access the internet.

Worse yet, they're trying to market it as an upgrade by calling it the "Terabyte Internet Experience" so that people who don't read their emails closely will think they're getting more for the money, not less. This is clearly deceptive advertising.

**Ticket: # 1075176 - XXXXXXXX XXXXXXXXXXXXX's complaint re: ISP Zero Rating**

**Date:** 7/8/2016 12:26:13 PM

**City/State/Zip:** Hollywood, Florida 33021

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

[Ticket: # 1075154 - New bandwidth caps for comcast in Chicago](#)

**Date:** 7/8/2016 12:20:39 PM

**City/State/Zip:** Wheeling, Illinois 60090

**Company Complaining About:** Comcast

---

## **Description**

Comcast recently moved to implement a 1 TB cap in data usage for all residential customers in the Chicago area.

This is a blatantly anti-competitive practice. Data caps do nothing to help with congestion. There are already far better QoS methods that can reduce network traffic congestion without the use of data caps across the board. It's easy to imagine a situation where subscribers will now pay more to simply access streaming video content from Comcast's competitors.

I live in an area which is effectively monopolized by Comcast. I have no other options for a cable Internet subscription to my household. The data cap will undoubtedly affect my usage habits. The overage fees to be charged are inordinately high: up to \$200/mo higher in some cases.

This practice can only exist in a monopoly environment. It is unacceptable to me and many others. Please put an end to it.

[Ticket: # 1075177 - Comcast/Xfinity data cap](#)

**Date:** 7/8/2016 12:27:12 PM

**City/State/Zip:** Oak Park, Illinois 60304

**Company Complaining About:** Comcast

---

## **Description**

I recently received an email that Xfinity was moving to cap data at a terabyte, with overage charges if more data is used. I believe this violates the tenets of net neutrality, as we have a wired, not wireless, connection, and there's no real functional reason for a data cap, and this will disadvantage companies providing services in competition with Comcast's other businesses. The data cap should be removed.

---

**Ticket: # 1075181 - Comcast Chicago area data caps****Date:** 7/8/2016 12:28:33 PM**City/State/Zip:** Hanover Park, Illinois 60133**Company Complaining About:** Comcast

---

**Description**

Comcast has found a way to bypass net neutrality: it applies arbitrary data caps, like those being implemented in the Chicago region, and others, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection. These arbitrary data caps also bring a lot of negatives to my online business.

The real problem here isn't what they're charging, it's why. I am paying for speed, not amount of data. The amount of data I use is meaningless to customer impact. Comcast's claims for needing to charge for high data usage is that "those who use more data slow down the internet for those that don't".

When in reality, the real reason people are impacting each others' internet speeds is that the provider has typically oversold all of their lines. For example, if their line is capable of 5000mbps (random speed), they will sell 50mbps speeds to 100 homes. Comcast does this in hopes that not everyone is on and using bandwidth at the same time. If you are sold as a single household on 50mbps internet, you aren't able to exceed that cap no matter what form of traffic you are using. So you could be streaming high-def video once a year, if that happens to fall during a high usage time on an oversold line....people slow down. So, as you can see, the bandwidth capability of what they are selling is the problem. The data size cap is a completely arbitrary number that Comcast is basically making up to target consistent users. Instead of actually being consumer oriented and expanding to prepare for/usher in future technology growth, they're doing things like lobbying for ending net neutrality and charging more for specific services. In truth, Comcast has a high percentage of profitability because they're charging for lines that are already in existence that they rarely need to maintain. To actually expand and be able to support their sales would be the "customer oriented" move but they are digging their heels in and doing everything in their power to avoid this cost. There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices. Comcast is the only ISP in my area capable of giving me a 70mbps connection, so Comcast has a monopoly on that specific internet speed. Comcast basically behaves like a monopoly, and randomly and without reason increases rates for its customers.

Altogether, these practices prove what we've always known: Comcast disapproves the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as

gatekeepers. Comcast claims they implement "pro-consumer" policies, but in reality they're simply trying to bypass net neutrality.

Please end these caps immediately, and respect the rules put in place by the FCC.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Comcast recently moved to implement a 1 TB cap in data usage for all residential customers in the Chicago area; marketed as "Introducing a Terabyte Internet Experience", which is very misleading to the average consumer to describe it as if it was a new beneficial service, when in-fact, it imposes restrictions.

This is a blatantly anti-competitive practice. Data caps do nothing to help with congestion. There are already far better QoS methods that can reduce network traffic congestion without the use of data caps across the board. It's easy to imagine a situation where subscribers will now pay more to simply access streaming video content from Comcast's competitors.

I live in an area which is effectively monopolized by Comcast. I have no other options for a cable Internet subscription to my household. The data cap will undoubtedly affect my usage habits, which will also give Comcast's data cap except streaming services an unfair advantage over other streaming services. The overage fees to be charged are inordinately high: up to \$200/mo higher in some cases.

**Company Complaining About:** T Mobile

---

## **Description**

Hi T-Mobile, I am an extremely concerned customer.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

I just received my notification from Comcast yesterday that my use will be subject to a monthly 1 terabyte cap (with expensive overage charges) starting August 1st. While a 1 terabyte cap may seem "generous" now, within a few years, normal users streaming 4K video from Netflix/Hulu/etc will easily bump up against this cap.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion.

Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

**Ticket: # 1075835 - Comcast Chicago "Data Plans"**

**Date:** 7/8/2016 3:53:55 PM

**City/State/Zip:** Rolling Meadows, Illinois 60008

**Company Complaining About:** Comcast

---

**Description**

Comcast recently moved to implement a 1 TB cap in data usage for all residential customers in the Chicago area.

This is a blatantly anti-competitive practice. Data caps do nothing to help with congestion. There are already far better QoS methods that can reduce network traffic congestion without the use of data caps across the board. It's easy to imagine a situation where subscribers will now pay more to simply access streaming video content from Comcast's competitors.

I live in an area which is effectively monopolized by Comcast. I have no other options for a cable Internet subscription to my household. The data cap will undoubtedly affect my usage habits. The overage fees to be charged are inordinately high: up to \$200/mo higher in some cases.

This practice can only exist in a monopoly environment. It is unacceptable to me and many others. Please put an end to it.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Comcast is rolling data caps out in this area with short notice. I have been a customer for over 10 years and think this practice is unfair. I never had a data limit before but now there is one. They say it is for fair pricing but they do not lower my bill if I do not go over the cap but will charge me 200.00 more if I do or I have to pay an additional 50 dollars per month for the same thing I am pay for now. They say this is a trial in this area but if you call comcast to speak out against the trial no one really wants to hear your complaints is slow to escalate your complaint to any one who would report the situation up to the level of management that would make a decision affecting the data cap. They want you to think it is ok because they say it is fair. They can not tell you how the measurement data tools work or even what tools they are using to determine how much data you are using. There are countless articles on the internet how their measurement tools are wrong and people are being over charged. They are not showing enough transparency on why the need the caps in place and how the data is being measured.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers. Today, Comcast announced that it is applying a data cap of 1TB on my internet service. The problem I have with this announcement is that Comcast exempts its own video content while counting all competing video services toward the cap. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I use such as Amazon Prime Video and Netflix. Even though Amazon and Netflix compete with Comcast by offering better price, quality and selection, I may be forced to end my business with Amazon and Netflix to avoid the data cap fees.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users like me who'd rather not pay for expensive cable TV packages and watch Netflix as a cheaper and higher quality alternative.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

In the email I received from Comcast, it was mentioned that less than 1% of customers go over the 1TB data cap. While this may be true today, as more 4K online video services become available to consumers, many will reach the cap very quickly. This may force consumers to end business with competitors that offer 4K video online or move to Comcast's inferior video service that is exempt from the data cap.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

The data caps that Comcast plan on implementing will retard the progress of technology in the US. Comcast claims that only 1% of their customers will exceed the caps that they are putting in place, but technology innovations (such as 4k and 8k streaming video) will cause caps to be exceeded by more and more customers in the future. Data caps also prevent the possibility of off-site backups of data, which affects all customers in the event of a catastrophe. Comcast is only implementing these caps because in many cases they are not reinvesting in infrastructure to actually keep up with demand. They want to use these caps to keep demand artificially low, and to prevent the types of technology innovations that would drive higher data usage (e.g., knowing that Comcast is the largest ISP in the US, no technology company will want to push for 4k or 8k video solutions since most consumers wouldn't be able to take advantage of the increased resolutions without going over monthly caps). Comcast is a monopoly in many areas, and their implementation of data caps on cable internet goes against the spirit of a free and open internet.

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Comcast recently moved to implement a 1 TB cap in data usage for all residential customers in the Chicago area.

This is a blatantly anti-competitive practice. Data caps do nothing to help with congestion. There are already far better QoS methods that can reduce network traffic congestion without the use of data caps across the board. It's easy to imagine a situation where subscribers will now pay more to simply access streaming video content from Comcast's competitors.

I live in an area which is effectively monopolized by Comcast. I have no other options for a cable Internet subscription to my household. The data cap will undoubtedly affect my usage habits. The overage fees to be charged are inordinately high: up to \$200/mo higher in some cases.

This practice can only exist in a monopoly environment. It is unacceptable to me and many others. Please put an end to it.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1076794 - Comcast Chicago data cap "trial"**

**Date:** 7/9/2016 12:32:31 PM

**City/State/Zip:** Elk Grove Village, Illinois 60007

**Company Complaining About:** Comcast

---

## **Description**

Adding my voice to the crowd.

This reads like, yet again, an undue exercise of monopoly power. Despite:

- the Charter merger being conditioned on seven years of no data caps
- Comcast "trailing" this in several other areas to overwhelmingly negative reaction
- Comcast essentially admitting data caps have nothing to do with network congestion
- Comcast selectively zero-rating its own media services in these test markets
- Comcast claiming that "the average person doesn't hit the cap" when the very existence of a cap shapes consumer behavior to avoid paying extra fees
- etc

They've brought it to the Chicagoland area, without any prior notice or ability to opt out. As a recent relocater to the area, I'm appalled - I only have two real choices for broadband Internet where I am, and I only selected Comcast because AT&T already has landline data caps.

Having come from the Cincinnati metro area, where Cincinnati Bell introduced (and was continuing to build out) a gigabit option without data restrictions for less than \$100/mo, I'm a bit floored by my relocation here. A larger metro, with less choice, and for approximately the same price I'm getting 1/13 of the theoretical bandwidth (not to mention practically - on Steam, the digital video game service and one of the highest bandwidth services around, I see maybe up to 20mbps, versus 600mbps+ from Cincinnati Bell).

The Internet is no longer a nice extra, but of the same importance and need as any other traditional utility. And unlike physical utilities, bits of data are not a finite resource. I consider this enough of a quality of life issue that, had I known, it would have influenced my decision to take a new job and move in the first place.

As it is, my only options in this "competitive" broadband market are to physically move again to an area with some actual choice, or hope and pray for competition (eg. Google Fiber) to arrive. I suspect I am but one of many who find this unacceptable.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1076753 - Comcast Data Caps**

**Date:** 7/9/2016 11:58:25 AM

**City/State/Zip:** Schaumburg, Illinois 60193

**Company Complaining About:** Comcast

---

### **Description**

I recently received notice from Comcast that they would be putting a data cap on my internet usage, charging a fee if we go over the cap. I see this as stifling my ability to choose to not use one of their cable services in favor of other services that offer more value, as I would be penalized.

---

**Ticket: # 1076847 - Xfinity Data caps**

**Date:** 7/9/2016 1:10:12 PM

**City/State/Zip:** Ruckersville, Virginia 22968

**Company Complaining About:** Comcast

---

## **Description**

Internet penetration rates over the entire globe have significantly increased over the last 10 years. Along with increased Internet access comes reliance on the web for daily activities ranging from bill paying to education and entertainment.

Xfinity imposes a data cap of 300gb in my area and have established themselves as the only ISP, thus creating a market monopoly. Why 300gb? Because they want cable subscriptions purchased through them and are combating cord cutters.

For me to use Internet for my families needs, I am heavily regulated by this market giant. They set the conditions for how people use the Internet, and it's for business profitability reasons and not for infrastructure constraints.

It's becoming increasingly apparent that private companies control Internet in the U.S. in that they set the conditions for how we use it.

For the time being, my family and I have no options but to either disconnect from the Internet or limit our use of it to comply with Xfinity's attempts to force people on cable.

**Ticket: # 1076923 - XXXX XXXXXXXXXXXX's complaint re: ISP Zero Rating**

**Date:** 7/9/2016 2:19:39 PM

**City/State/Zip:** Brooklyn, New York 11231

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1077127 - XXXXX XXXXX's complaint re: ISP Zero Rating**

**Date:** 7/9/2016 6:18:30 PM

**City/State/Zip:** Boulder, Colorado 80301

**Company Complaining About:** Comcast

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**City/State/Zip:** Chicago, Illinois 60647

**Company Complaining About:** Comcast

---

## **Description**

I believe it is unethical, illogical, and downright greedy for Comcast to implement a 1 terabyte cap on all internet subscribers in Chicago, especially to those who live in areas where Comcast is the only available ISP that offers broadband speeds.

As the owner of a sole proprietorship, I cannot afford their business packages or their data cap overage fees. I do wedding videography and must upload hundreds of gigabytes of video footage to backup online. Now that Comcast is restricting my usage of data, that means I either have to:

- pay overage fees, which I cannot afford.
- upgrade my internet service, which I cannot afford.
- stop backing up my data online, which will leave me liable for legal action in the event that I lose data that someone has paid me to create. or...
- move to a new apartment which has internet service providers available to me that can supply broadband speeds I need in order to successfully run my business.

As you can see, none of these options are ideal and I believe choosing any one of them will cause me to potentially lose my business.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1077445 - Comcast Data Cap**

**Date:** 7/10/2016 10:26:54 AM

**City/State/Zip:** Springfield, Illinois 62704

**Company Complaining About:** Comcast

---

### **Description**

Comcast is implementing a data cap policy. As I'm sure you know, people are outraged (including me). Since Comcast lost the Net Neutrality argument (after spending billions to push it through), they are retaliating by capping our data usage so they can still get their way. How is this legal? I didn't sign anything saying I was okay with them doing this! How can I get out of my contract because of changes to my policy that are out of my control without paying penalties to the company forcing me out (Comcast)?

**Date:** 7/10/2016 7:22:19 PM

**City/State/Zip:** Chicago, Illinois 60647

**Company Complaining About:** Comcast

---

**Description**

On July 7th I received an email detailing a 1TB data cap being enforced on my Comcast home internet service.

1. Comcast provides no way for me to audit my usage. They provide no date specific totals.
2. Comcast claims I have used 1300GB on average over the past 3 months. My current usage through 10 days is 160 GB. I found this discrepancy very suspect.
3. The cost for unlimited bandwidth is \$10 more than I pay for my entire service.

I have attached the email below.

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Date:** 7/10/2016 8:39:36 PM

**City/State/Zip:** Holland, Michigan 49423

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**City/State/Zip:** New York, New York 10011

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Description**

I have been a Comcast customer for 9 years. I have used my connection as needed for that duration. Between the use of streaming for my family, performing some remote office work (For a streaming company), and my own uploads of family HD Videos and photos, I admittedly use a fair amount of data. According to a recent email from Comcast, 1313 gb on average per month. I have now been informed, via email, that Comcast has decided to implement ("unsuspend") the data caps they have "had in place", without enforcing. Never mind the fact that they were "suspended" while Comcast was working to acquire Time Warner Cable in a half-hearted effort to appease the FCC, thereby putting on display the tru sketchiness of the policy in the first place. However, I have now been made aware that I can either pay \$10 for every 50GB overage (Approx \$70 ADDITIONAL per month given my average) or pay \$50 for "Unlimited". Now I take issue with several items. First, the additional \$50 for "unlimited" would effectively DOUBLE my current monthly rate, with absolutely no change in service or benefit to me. That right there borders on unfair practices, if not outright extortion. Coupled with the fact that this tactic is geographically discriminatory toward regions outside of Google Fiber installation areas--- Google of course does not have any data limitations---as it should be. Now, I have followed up with Comcast the last few days. I have been offered the chane to upgrade to Business class, which of course MORE than doubles my monthly rate. I have been denied an answer for this implementation from most Reps. One rep has referenced network capacity. However, if I were to use Comcast wi-fi hotspots instead of my own connection---it would be on the same network and somehow of course this would NOT count against my data. The logic doesnt follow. This is a poor excuse to exploit customers whom Comcast has lobbied to NOT have competition. Please let me know if I can provide any further information.

[Ticket: # 1079829 - unauthorized data caps and throttling usage](#)

**Date:** 7/12/2016 1:34:32 AM

**City/State/Zip:** Sacramento, California 95816

**Company Complaining About:** Comcast

---

## **Description**

Comcast has inserted a data cap into my shared account without permission. They have retaliated against me by shutting down my router / Restarting my router for not wanting a data cap and stating that I am not getting the service level I am paying for along with the constant interruption of service that I experience. I have run several speed tests over a period and they all indicate that my upload speeds are greatly affected. Comcast has blatantly shown a bias and when I ran their speed test service through Xfinity, it would consistently show 25% greater upload service. This, on top of the datacap is comcast not treating all things equally but throttling services they do not want.

**Date:** 7/12/2016 7:16:43 AM

**City/State/Zip:** Bartlett, Illinois 60103

**Company Complaining About:** Comcast

---

## **Description**

Comcast has enabled a data cap for the chicago area. We stream a lot of content and am now having to watch how much data we use. If we stream content from the comcast servers, the data is not counted against our new data cap however other services are. I think this is in violation of net neutrality. I think these caps are a monopolistic tactic to squeeze more money out of there customers. No service is being added and rates have gone up. I pay for bandwidth, not quantity.

---

[Ticket: # 1080475 - Data Caps/ Net Neutrality](#)

**Date:** 7/12/2016 12:56:45 PM

**City/State/Zip:** Cumming, Georgia 30040

**Company Complaining About:** AT&T

---

## **Description**

Data Caps are being implemented by cable companies to force us to use their crappy products. They only offer unlimited data if we also use their cable services bundled with internet. They are taking away our freedom to use the streaming service of our own choosing. Of course, we can always pay a whole lot more to get unlimited data, which would double our Internet fees. And there's Comcast, who offers their own streaming service that would not use any data (zero rating). It's clear that cable companies are playing a dirty game to keep our money by penalizing us for choosing other streaming companies. If these companies can give customers unlimited data when they bundle internet and cable, why aren't they able to give us unlimited internet, period? We, the consumers are the ones who lose.

**Company Complaining About:** Verizon

---

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1080920 - Implementation of a data cap**

**Date:** 7/12/2016 3:16:01 PM

**City/State/Zip:** Tinley Park, Illinois 60477

**Company Complaining About:** Comcast

---

## **Description**

Comcast has just informed me that a 1 TB data cap will be enforced on my service starting August 1st. Fully utilizing the 75 Mbps connection that I pay for would exhaust this in less than 2 days.

As an IT professional that works from home, I end up using more data than the average person. In past months, I have transferred over double the amount of data in this cap just by backing up critical data to a cloud service.

This is also a bit anti-competitive where Comcast's streaming services do not count towards the data cap, even though they are being transferred over the same internet connection.

All in all, this is a flat out grab for money. They want users to pay \$50 extra a month for unlimited data that they used to have for no additional cost, or move to a "Business Class" connection that costs even more and has less bandwidth available.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1081561 - At&t data caps**

**Date:** 7/12/2016 6:52:27 PM

**City/State/Zip:** Booneville, Mississippi 38829

**Company Complaining About:** AT&T

---

## **Description**

At&t responded to my last complaint with a completely false explanation. They stated that since March, people have had data caps. This is not true. They started the data caps in May, not March. They went on to say that the reason for the change in policy was so that they could give us better options for internet such as the unlimited data option. Seeing as how ALL internet was unlimited before the change in May, this is a blatant lie. They are not trying to improve options, they are trying to force cable cutters into paying what they would if they did pay for cable and internet instead of just internet. As i said in my last complaint, this is just a money grab. They are trying to increase their bottom line and strongarm people into paying more while refusing to actually improve anything about their already abysmal service.

## **Description**

I feel data caps attack open internet/net neutrality. Think about it I Pay to have access to the internet and to be told how much I can use it is ridiculous. It's like you pay for car insurance witch carriers a higher risk. your not told how much you can drive your car or how often you can use it. dmv doesn't say o you went over your yearly mileage allowance your going to pay more in fee's for driver licence renewal this year. Also look at Comcast you use our web streaming service it doesn't count toward your data allowance. If you use Netflix that web streaming useage then counts. it all comes to passing on more cost to the customer for something we already pay for. Someone has to say enough is enough. You can't sell someone a service then charge them more for using it. Heres another thing to open your eyes I pay 52\$ a month for car insurance I pay 65\$ a months for 10MB internet service..... and I am told how much I can use it.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon, or any other company, to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. This disparity has been made most apparent by leanings by Comcast on content providers like Netflix which has historically seen poorer streaming bandwidth and quality if Netflix did not comply with Comcast's financial demands. This action among others hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

[Ticket: # 1084136 - Throttling causing certain websites fail to load.](#)

**Date:** 7/14/2016 12:15:55 AM

**City/State/Zip:** East Otto, New York 14729

**Company Complaining About:** Exede

---

## **Description**

Exede Satellite Internet throttles you when you go over their data cap, problem is some websites flat out, do not load due to the throttle speed being so low its below dial up speeds (around 30 to 24 Kbps and even once low as 100 BYTES). Steam is the hardest hit, not a single Steam related page will load at all while being throttled, despite many others loading. During their "Late Night Free Zone" Steam is being singled out and throttled showing download speeds of 250 Kbps instead of 1.5 Mbps we're paying for.

This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Given how powerful regional telecommunication monopolies already are, I hope that the FCC will take this liberty-minded appeal seriously.

From last year, the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. Unfortunately, those cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should absolutely put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules. Let's continue with the theme of government transparency.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. However, in the event that you would like to contact me personally, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Description**

Comcast is now implementing data caps in my area (I've submitted a complaint about this before they did this and their response was "We have no plans to do this in your area." which we all knew was a lie.) We will be capped at 1 TB (1024 GB) starting August 1st, 2016.

Comcast charges an absurd amount for access to the Internet, more than 10 TIMES that of most other first-world nations. They charge you for access at a specific speed, and the higher the speed you choose, the more you pay. Currently we are paying for 75mbps down. With this in mind, this is a blatant money grab, and fraud. If I were to USE my 75mbps which is what they are selling me I could download 540 MB per minute, 31.6 GB per hour, 759 GB per day. It would take me less than TWO DAYS of a standard billing cycle to overcome this cap. Since they are selling me a speed I am unable to use because of the cap they are imposing, this is clearly fraud as I am not receiving the service advertised for the price quoted. Comcast needs to be held accountable for their blatant price gouging and shady tactics.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

These plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

Finally, AT&T is undercutting my existing plan without a data cap from Comcast by entering into my market. This pressure forces existing companies, like Comcast, to offer similar products, and could potentially force a data cap into my plan with Comcast.

As a potential AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

It is known publicly that data caps is all marketing bullshit. Cox Communications is not much different from the hated Comcast is that the reputation you guys want? How is data a utility like water or power? I can see a water meter being read from a house but data can be monitored internally meaning it could be in actuate or modified internally and can't be trusted it's not like they monitor the data from a meter from within the house. Time Warner does not do data caps and only the Cox Cleveland market is responsible. What does this say? It's obviously not needed and I am fed up. We almost canceled cause you guys won't even offer a bundle deal anymore. I know people are waking up to it with Netflix now doing 1080p and 4k I don't want Cox to feel like a cell phone service like Verizon. Please don't send me letters unless your gonna overturn data limits.

Thank you,

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Comcast has a monopoly in my area. I have no other choice than to pay \$50 per month for a shitty 10Mb/s download speed and 3Mb/s upload speed, and this usage is capped at a Terabyte before they charge insane overages.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 1086252 - Data Caps on Comcast](#)

**Date:** 7/14/2016 9:23:33 PM

**City/State/Zip:** Bloomington, Illinois 61704

**Company Complaining About:** Comcast

---

## **Description**

Comcast is implementing data caps in my area due to there being no competition. There is zero reason to have data caps, especially ones added to an agreement I already have. This is both very anti-consumer and goes against what the internet stands for; a free and open society for minds and ideas to flow freely.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

**Ticket: # 1086371 - Comcast / XFINITY data cap**

**Date:** 7/15/2016 12:21:50 AM

**City/State/Zip:** Antioch, Illinois 60002

**Company Complaining About:** Comcast

---

## **Description**

Comcast / XFINITY is deploying data caps in my area. In the long and cold Illinois winters, I spend much of my leisure time playing online video games and streaming video from Netflix & Hulu. I use Netflix & Hulu because they have the content I want to watch and because I value my ability to make choices as a consumer. I do not have another choice for high speed internet in my area -- Comcast has a virtual monopoly here. Comcast does also not offer "a la cart" television, so I would have to purchase many expensive packages to get the few shows I am interested in.

Limiting my data means I will be forced to spend money on Comcast's very expensive overage charges (\$10 for 50 GB -- about the size of one new video game or 7 hours of 4K video), cancel my Netflix & Hulu subscriptions, or get roped into Comcast's video services. I do not want to use Comcast's video services because it is very expensive and they don't have the shows I want... but I do not have a choice since they are the only high speed internet service available to me and the bandwidth overage costs are outrageous.

Please help me, FCC, you're my only hope!

**Date:** 7/15/2016 10:50:29 AM

**City/State/Zip:** Chicago, Illinois 60622

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

The FCC passed strong Net Neutrality rules in response to the millions of people who spoke out. The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others.

Now the same telecom companies are creating harmful new schemes that pose a serious threat to the open Internet. For example, Comcast applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps - an unfair, monopolistic practice. This is a textbook case of an ISP abusing its power for its own competitive advantage.

Plain and simple Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

I want freedom of choice for my internet provider, not a single monopoly that controls my content and unfairly caps my data usage. In addition, ISPs should not be allowed to track internet usage and resell their customer's data preferences. Comcast is interfering with these choices. This must stop now.

I ask the FCC to investigate the telecom industry's behaviors and practices, and if found in violation to put an immediate stop to them. It's the FCC's job to protect consumers and regulate the companies from these kinds of abuses. Congress should also make these companies follow the rules and not interfere with the FCC's power to regulate.

Note: for privacy reasons, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1087573 - Comcast Data Caps**

**Date:** 7/15/2016 4:52:54 PM

**City/State/Zip:** Chicago, Illinois 60622

**Company Complaining About:** Comcast

---

## **Description**

Comcast informed me recently that a data cap is about to be imposed on my existing internet plan. As I'm sure you are aware, this is an incredibly anti-consumer move especially since amount of data is not something that affects their operating costs (bandwidth is).

In a market with little or no other option for ISPs, this is incredibly unfair and something needs to be done to protect the rights of consumers until we are allowed to have a choice of ISP in our area.

On a different note, I pay Comcast for access to HBO but am not allowed to use HBO apps so that I'm forced to use Comcast's terrible interface. I'm paying for the service, I should be able to use it freely.

Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

P.S. Innovation isn't the responsibility of the select few ISPs, and the Internet isn't theirs to regulate and decide who gets preferential treatment! The majority of the intelligent online users and websites that provide new services and innovation DON'T work for them. I believe the Net should be a public utility that no one or even any number of ISPs can own or regulate. ISPs cannot tell government regulators how customers should be treated!

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 1089476 - Comcast - Data cap](#)

**Date:** 7/18/2016 12:33:42 AM

**City/State/Zip:** Streamwood, Illinois 60107

**Company Complaining About:** Comcast

---

## **Description**

Comcast has, without our consent or notification, placed a data cap on our account, calling it a "trial" for our area. Decreasing my service, charging me the same, and without my knowledge or consent (it wasn't until I read an article online and looked into it that I even knew this cap was being placed on us), is abhorrent. We have had frequent outages, as well, yet I am still paying an incomprehensible amount of money for less and less service.

---

**Ticket: # 1089506 - AT&T Data Cap**

**Date:** 7/18/2016 2:16:19 AM

**City/State/Zip:** Sunnyvale, California 94087

**Company Complaining About:** AT&T

---

### **Description**

AT&T recently implemented the data cap on it's u-verse users like myself. I find this extremely unpleasant. There should be no limit on the internet usage at home.

---

[Ticket: # 1089553 - T-mobile and Pokemon Go](#)

**Date:** 7/18/2016 8:03:40 AM

**City/State/Zip:** West Bloomfield, Michigan 48324

**Company Complaining About:** T Mobile

---

## **Description**

T-mobile is giving Pokemon Go and other services priority over other traffic on cellular data plans. After a user has gone over their data cap all traffic is throttled back except for traffic that they are giving priority access to such as netflix and Pokemon Go that don't get to count against the data cap. This is essentially allowing businesses to buy fast lanes since all other traffic is throttled.

This affects all users of t-mobile is bad for net neutrality and is effectively creating tiered internet access.

Thanks

**Date:** 7/18/2016 1:33:20 PM

**City/State/Zip:** Buford, Georgia 30519

**Company Complaining About:** Comcast

---

## **Description**

Data Caps are unreasonable and unlawful. Especially when Comcast is the only ISP serving my area.

---

**Ticket: # 1091394 - Cable one and Data Caps**

**Date:** 7/18/2016 9:40:11 PM

**City/State/Zip:** Jerome, Idaho 83338

**Company Complaining About:** Cable One

---

## **Description**

Cable One employs data caps, if you go over their set amount of data three times they bump your service to the next tier. I believe this is blatant price gouging. There is no 'finite' amount of Internet data since the Internet is essentially an interconnected amount of networks, there is no way that could run out. And the argument often used in defense of this is equipment usage, this is a red herring argument and has no bearing on data usage.

I believe that data caps in all forms go against net neutrality as it prohibits the customer from using the Internet freely. Providers should implement a different model, such as charging access fees, rather than charging per amount of data usage.

---

**Ticket: # 1091578 - XXXX XXXXXXXXX's complaint re: ISP Zero Rating**

**Date:** 7/19/2016 6:41:21 AM

**City/State/Zip:** Nederland, Texas 77627

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

**Ticket: # 1092519 - Data Caps**

**Date:** 7/19/2016 2:18:58 PM

**City/State/Zip:** Boise, Idaho 83709

**Company Complaining About:** Cable One

---

## **Description**

I submitted a complaint about the 300gb data cap CableOne placed on us last month. They stated I used 325gb of data. I changed our online behavior to stream less, and changed my netflix quality to the LOWEST possible in order to consume less data, and now they are reporting I have used even more data, to the tune of 425gb per month. This is definitely incorrect, they are now forcing me to upgrade my plan and pay more to continue having service. Centurylink does not provide broadband quality service in my area, therefore this is a monopoly using falsified data to force more money out of me due to not subscribing to cable tv. They did not ever respond to my last complaint, despite saying they would.

## **Description**

Starting August 1, 2016, Comcast is now enforcing a 1 terabyte per month data cap in the Chicago area. This will likely never increase quickly enough over time to allow for the future of 4K video, virtual reality, and other higher bandwidth using technologies to prosper, thus inhibiting economic growth and consumer choice. This should not be allowed as Comcast has an effective monopoly in most areas of its market and thus is allowed to dictate policy that would otherwise not make it in a truly competitive market. This can also be seen as a violation of net neutrality as Comcast-hosted content won't count toward that data cap, thus encouraging the use of their own services over other competitors, further abusing their monopoly powers.

**Ticket: # 1093556 - Comcast Data Caps**

**Date:** 7/19/2016 9:17:59 PM

**City/State/Zip:** Chicago, Illinois 60638

**Company Complaining About:** Comcast

---

**Description**

Comcast has informed me that in my area they will now be imposing data caps in an effort to solicit more money from it's consumers. When I signed up for my service, there were no imposed data caps. Now there will be, meaning I am receiving worse service for the price I was promised.

This seems like a clear abuse of power since the amount of data used does not correlate to cost. As a graduate with a degree in networking, it is clear to me that Comcast is providing a fundamental misconception to its consumers.

Bandwidth works like a doorway. The larger the doorway, the more people can fit through simultaneously. Higher costs for bigger doorways allow in more people (faster traffic). Comcast is now trying to sell a door and charge extra depending on how many people walk through it per month.

This is especially unfair considering the extremely low amount of options in my area. Comcast is attempting to run a monopoly in my area and adding data caps "just because they can" to try and solicit more money. Price gouging like this should not be allowed, especially in areas where there are not enough alternative/competitive options.

**Date:** 7/20/2016 9:29:42 AM

**City/State/Zip:** Hastings, Michigan 49058

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1093588 - Data Caps**

**Date:** 7/19/2016 9:34:05 PM

**City/State/Zip:** Colorado Springs, Colorado 80911

**Company Complaining About:** Centurylink

---

**Description**

Bandwidth is data over a certain amount of time, and that's what I pay for. 40 megabytes/second down and 20 megabytes/second up. With the data cap in place of 250 Gigabytes it does not matter my speed I am limited to 250 Gigabytes.

Since 250 gigabytes/month is technically a measure of bandwidth, being a measure of data over time, lets do a little bit of math. If we convert gigabytes/month to megabits/second it comes to a minuscule .0965 megabits/second! That means if you download at over .0965 megabits/second for the entirety of the month, you will be fined. That speed is not even allowed to be called broadband.

This is an unfair business practice. It is entirely anti competitive measure to limit what you are already paying for, either to squeeze more money from subscribers or control what subscribers do with with the service that they are paying for.

Data caps need to be eliminated. If Century link does not have the ability to deliver on what is sold then they need to remove those packages that can not meet standards. Century link has done a good job so far providing my internet , but this move for data caps is not a good one.

---

[Ticket: # 1093704 - Suddenlink data caps](#)

**Date:** 7/19/2016 11:50:10 PM

**City/State/Zip:** Ward, Arkansas 72176

**Company Complaining About:** Sudden Link

---

## **Description**

Suddenlink sets an arbitrary limit on the amount of data customers can use. I was notified that if I exceed my data cap 3 times they will charge me \$10 per 10 gigabytes that I exceed my cap. The suggested alternative is to pay them \$10 more per month for a speed increase and an additional 100 gigabytes per month. If broadband access is a utility, they shouldn't limit the speed or data used by customers.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1093751 - Comcast Data Caps**

**Date:** 7/20/2016 5:04:55 AM

**City/State/Zip:** San Carlos, California 94070

**Company Complaining About:** Comcast

---

## **Description**

I am extremely unhappy with Comcasts' data cap. When I first signed up they did not enforce a data cap and now have silently begun to enforce the data cap. Now I am in jeopardy of being charged \$10 for every 50 GB I use over my monthly limit of 300 GB.

They have tried to tell me that data caps are to help reduce saturation on the network, but that is not how networks work.

Comcast claims to maintain an open internet but charging on a per GB does not seem like that is so. I feel like I am being extorted.

Please do not let companies like this take advantage of users like us.

Thank you for your help.

**Ticket: # 1095828 - Data Caps for Centurylink**

**Date:** 7/21/2016 5:09:23 AM

**City/State/Zip:** Maricopa, Arizona 85138

**Company Complaining About:** Centurylink

---

## **Description**

Centurylink's data caps are archaic and hurt consumers. Their own site recommended me a 40mbps plan for "4k streaming", yet when the math is done vs their 250gb data cap, i realize that between my daughter, my wife and myself, if we spent only 30 minutes a day watching 4k content, we would almost double the data cap within the month.

This shouldn't be acceptable, how can a company sell a home product with a limitation on it of 30 minutes a day, when we have our 2nd child and they begin using data to watch cartoons, it will reduce our time even further.

Please FCC, help reign in these mega corps that are monopolizing the areas they are in.

Thank you.

**Ticket: # 1097808 - Data Caps (Data Plan) need to be illegal for Comcast as well**

**Date:** 7/21/2016 10:10:20 PM

**City/State/Zip:** Olympia, Washington 98512

**Company Complaining About:** Comcast

---

## **Description**

The FCC has already ruled that Charter and TimeWarner (and subsidiaries) are not allowed to impose DataCaps on their consumers. The delivery and transport of data does not constitute degradation to existing infrastructure, and as such, increased usage of data does not incur additional costs to the provider. To say that it does, is a blatant lie. Furthermore, offering their own streaming services, not counting against the data cap, while making other streaming services count, is a direct violation of Net Neutrality. The FCC needs to make these DataCaps illegal.

---

**Ticket: # 1097861 - Throttling**

**Date:** 7/21/2016 10:54:09 PM

**City/State/Zip:** Draper, Utah 84020

**Company Complaining About:** Centurylink

---

## **Description**

I have a complaint as well under speed, but I don't know if it belongs here or under that section, so I've decided to post it in both to be sure it is seen by the proper parties.

Centurylink is absolutely throttling my internet connection without any kind of notice or notification of any kind. I work in networking and IT, and I can assure any party involved that I've run the necessary tests to prove that there is throttling. Centurylink has overcharged me and underdelivered over and over again, being down for days or weeks at a time to faulty DSL lines and now intentional throttling with no notice. Companies should never be able to get away with this, it's illegal as of 2015 as I'm sure the FCC already knows. They throttle my traffic to YouTube and they throttle my traffic to anything else they deem is heavy bandwidth. I was told when I signed the contract 1 year ago that there was no data cap, and I don't see any in the contract, so what they're doing is 100% illegal and unethical.

There is absolutely no reason for them to be doing this, if their infrastructure doesn't support it then they shouldn't advertise speeds they can't deliver but still charge customers full price on their bill with all their lovely attached fake taxes and fees. I have kept documentation of many of my interactions with them, almost every single one has been negative, and they always try to pretend that you've never called in and talked to them before about a particular issue. This needs to end immediately for me and all other users who experience this, I'm being illegally charged a bill for throttled internet, companies like Centurylink are unlawful and shouldn't be allowed to compete in the marketplace with illegal business practices. They will likely be dishonest and tell you they aren't throttling me, but they 100% are, and there is proof of them doing this all over the internet to 1000s of users, and there's nothing we can do about it without your help.

Thanks for your consideration and time.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

[Ticket: # 1101576 - Complaint about Comcast usage cap](#)

**Date:** 7/25/2016 10:17:24 AM

**City/State/Zip:** Chicago, Illinois 60609

**Company Complaining About:** Comcast

---

## **Description**

I think it is unethical, illogical, and downright greedy for Comcast to implement a 1 terabyte cap on all internet subscribers in Chicago, especially to those who live in areas where Comcast is the only available ISP that offers broadband speeds. This is monopoly, consumers has no options but to pay to get these basic utility.

Internet usage is on the rise across the nation, and it is awful of Comcast put in a data cap limitation that everyone will start hitting a few years down the line as high definition video streaming becomes more and more mainstream.

[Ticket: # 1102566 - DATA CAP](#)

**Date:** 7/25/2016 3:44:21 PM

**City/State/Zip:** Griffith, Indiana 46319

**Company Complaining About:** Comcast

---

## **Description**

When we started the contract with Comcast, we had no data cap and now Comcast is "trialing" a 1TB data cap per month, unless of course we want to pay MORE for "Unlimited". We already pay a ton of money for this internet, which is supposed to be uncapped. This is unacceptable and needs to be taken care of.

---

**Ticket: # 1102852 - "Terabyte internet Experience"**

**Date:** 7/25/2016 5:10:18 PM

**City/State/Zip:** Elmhurst, Illinois 60126

**Company Complaining About:** Comcast

---

## **Description**

Comcast/Xfinity have notified us they are capping our internet usage at 1 TB of data. That means the internet we pay to use, from the company that is already notoriously known for it's horrible customer support, is about to put a stranglehold on us. As a software developer, and a consumer, please understand how ludicrous this is. Comcast is already actively throttling connections, and by making us pay more to use the internet (or face \$200 penalties) they are forcing us to change our lifestyle. Data caps like this will cripple our ability to use cloud and streaming services, which are becoming more commonplace every day. Do NOT let Comcast continue rolling out their so called "trial" of data caps. If we allow them to start capping at 1 TB, it will prevent higher quality videos, like 4K from being used, destroy streaming services like Netflix, iTunes, Apple TV, and so many more. Online gaming will become a thing of the past. Their actions are that of a dictatorship, constantly attempting to acquire more power. STOP COMCAST from hindering the adoption and creation of new technologies, from making consumers pay even more than the hundreds of dollars they're already charging us for a poor service. PLEASE.

## **Description**

Hello,

I am issuing a formal complaint against Comcast Corp for forcefully capping Central Illinois data. As of August 1st 2016, they will be forcing our Comcast users to have a 1TB data cap, and then if go over the data cap, they charge you \$10.00 per 50GB up to \$200, or you can pay \$50.00 to get unlimited data (please see attachment)

I find this to be a way to attempt customers to pay more money to browse the internet, which I personally use for multiple reasons, including work. I have hit the cap multiple times within this last year, by over 500GB+

The internet should be open and free and have no limitation..

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Due to the fact that Comcast is the only viable ISP in my area, I feel like they are abusing this monopoly in my home market of Huntington, WV as well as many others across the country.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 1124826 - Comcast internet service data cap**

**Date:** 8/6/2016 4:14:50 PM

**City/State/Zip:** Grayslake, Illinois 60030

**Company Complaining About:** Comcast

---

## **Description**

Dear sir or madam --

We subscribe to Comcast internet service at home. Last week, we received a letter from Comcast stating that they would be imposing a one-terabyte data cap. This data cap is what I am filing my complaint over, for several reasons:

First, and most basically, this is a (large) back-door price hike, since Comcast will either charge overages, or offers to charge you an extra fee to avoid them.

Second, I believe this is an attempt to skirt the spirit, if not the letter, of network-neutrality and open-internet regulations. Our household watches streaming video from Netflix, which is a direct competitor to Comcast's cable television service, to which we do not subscribe. By imposing a data cap, Comcast is effectively charging consumers who use a competitor to their product. Equivalently, they could use some form of zero-rating to force their competitors to pay them for not counting their data against arbitrary caps. I strongly suspect that imposing a data cap is an attempt to push internet customers into subscribing to Comcast's television service.

Third, I am concerned about the deceptive behavior of Comcast (among other ISPs) with regards to data caps. For a long time they claimed these were necessary to manage network congestion, only to later admit that there was no such congestion issue, and that the caps were intended to raise revenue. (1) This history is a factor in my suspicions about the previous point.

Fourth, I am concerned because I have seen many reports in the press about Comcast tracking data usage inaccurately. (2) As such, I think it quite possible that I will be charged overages in error. Finally, I am complaining because the poor state of competition in the wired broadband industry harms me as a consumer. The only other option for wired broadband in our area is AT&T. AT&T also imposes data caps, and also has a pay-television service to push their subscribers towards. Our household once subscribed to AT&T DSL, and we switched to Comcast when AT&T began imposing data caps. We did this precisely to escape said caps - in addition to all our other internet usage, we are happy with internet streaming and don't want to subscribe to either company's pay-television package. Given that both sides of the local duopoly now impose caps, I can't vote with my feet - there are no other competitors that I can switch to. And many Americans, of course, aren't even that lucky, having one monopoly provider.

Given that the FCC has already acted against the anti-consumer practice of imposing data caps in the merger of Time Warner Cable and Charter Communications earlier this year, for reasons similar to these, I think it entirely inappropriate for a wired broadband provider to be imposing a data cap.

(1) See for instance <https://www.engadget.com/2015/11/08/comcast-caps-not-about-congestion/> and <https://www.washingtonpost.com/news/the-switch/wp/2014/07/29/how-data-caps-could-reshape-the-economics-of-the-internet-again/>

**Ticket: # 1107609 - Data Caps**

**Date:** 7/27/2016 8:53:59 PM

**City/State/Zip:** Cleveland, Ohio 44131

**Company Complaining About:** Cox

---

## **Description**

My cox communications plan was changed on me to include a 700 gigabyte data cap. I was never notified of this change. They conveniently throttle my download speeds and intend to charge me extra. Whenever I run a speed test, I never receive a fraction of what I'm paying for. Conveniently, whenever I run their official speed test, it always does twice as well as other speed tests. Even by their massively inflated speed test's standard, I'm not even receiving 20% of what I'm paying for.

My upload speeds prove that it is not my router that is slow and it is not the websites I'm visiting. My download speeds are slow because they are reducing them. My router can handle higher speeds, but they are throttling what I am receiving.

They have increased my monthly fee, limited my service in both speed and size, they literally have an illegal monopoly in the area. These are bits being sent over wires, it's not water or gas. This isn't a consumable resource, you put up some wires, then you keep the wires up.

This is insane. Monopolies are literally illegal in Ohio, yet, they have a literal monopoly for my city and most of the area. I have actual proof of that my download speeds are being limited and my upload speeds are fine. That my router is capable of handling more than 2 Mbps. Why can't anyone do anything about this. Everything about this is completely illegal.

**Date:** 7/28/2016 8:33:40 AM

**City/State/Zip:** Long Beach, New York 11561

**Company Complaining About:** Verizon

---

## **Description**

I support the open Internet and the strong Net Neutrality rules enacted by the FCC in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 1108859 - Comcast Data Cap](#)

**Date:** 7/28/2016 2:23:11 PM

**City/State/Zip:** Chicago, Illinois 60646

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently implemented a 1TB monthly data cap on their users in the Chicagoland area. I regularly go over 1TB from regular usage -- streaming TV shows and downloading games being the heaviest usage.

They're gouging users for going over an arbitrary limit, and there is no other option I can choose for a cable provider for my home.

---

**Ticket: # 1109009 - Exede Internet**

**Date:** 7/28/2016 3:09:58 PM

**City/State/Zip:** Fort Valley, Georgia 31030

**Company Complaining About:** Exede/viasat/wildblue

---

## **Description**

If you go over Exedes extremely low data caps, they slow you down to unusable speeds. You can't even load web pages. They then offer to let you pay your way back into the fast lane. I don't see how this doesn't violate Net Neutrality rules. I currently pay over \$80 a month for their service and have one day a month when my internet speeds are acceptable. I am not the only consumer that is having this issue with Exede. If you look at the reviews of their service online, you can see that there is a definite problem with this company.

I also have concerns that some of my tax money has gone to this company via federal funding.

---

[Ticket: # 1109385 - Comcast starting data cap trial, no options for other internet providers in my area](#)

**Date:** 7/28/2016 5:11:23 PM

**City/State/Zip:** Stevensville, Michigan 49127

**Company Complaining About:** Comcast

---

## **Description**

I received a letter in the mail from Comcast saying that they were going to start a trial for their new "data usage plan" in my area. I feel that is already frustrating enough because it has been proven before that data caps are not necessary for them to put in place. My monthly average usage has never been over the cap, but if I ever do go over the data limit, it's an extra \$10 for every 50 gigabytes. Which is not a lot of data. I feel it is unfair just from that alone. So I was considering trying to switch to a different company that offers a more fair service to use, but unsurprisingly I have no options around here because as usual, Comcast has a monopoly on the community I live in. It wouldn't be so bothersome if there was any room for competition that makes them stop doing these unfair practices, but I either pay Comcast for their stunts like this for internet that I have to have for my fiancée's schoolwork that she has to send in over the internet and countless other things I need internet for, or have none at all.

The solution, ultimately, I would like to see is that we can have more options for ISPs in the near future in order to provide competition for Comcast and other companies like AT&T and make them not to use a method of business that stems purely from corporate greed and has no scientific or otherwise basis whatsoever. It's bad enough that we have to deal with practices such as these, but also have no other option than to just take it.

---

[Ticket: # 1109877 - Data Caps](#)

**Date:** 7/28/2016 9:33:53 PM

**City/State/Zip:** Schaumburg, Illinois 60173

**Company Complaining About:** Comcast

---

## **Description**

Comcast started a data cap that was not necessary. I have never had my home internet limited and this is straight robbery! I called them and was told for 50 dollars a month I can be protected from it. From what?! Them?! This is like a mafia shake down. There was never a data cap prior to this, now we pay more to avoid this new feature... This can't possibly be legal.

**Date:** 7/28/2016 11:01:45 PM

**City/State/Zip:** Freedom, Wisconsin 54130

**Company Complaining About:** Verizon

---

**Description**

1. Verizon is sending letters in the mail to customers who have the Unlimited Data plan who are using an "extraordinary amount" of data. This means that the Unlimited Data plan is not actually unlimited. This is an absolute and direct violation of 47 CFR 27.16 (b) Use of devices and applications. Licensees offering service on spectrum subject to this section shall not deny, limit, or restrict the ability of their customers to use the devices and applications of their choice on the licensee's C Block network
2. After numerous phone calls and online chats, Verizon will not explain what this data cap is, or exactly how much an "extraordinary amount" of data is. This essentially creates a trap for customers with unlimited data plans that would like to avoid getting a disconnect notice. Customers are not even given a chance to adjust their data consumption. Customers have assumed that Unlimited Data meant unlimited, and therefore have been using their plans as such.
3. Verizon has had literally zero communication on this change and is being deceptive.
4. Customers who live in rural areas that absolutely are not congested or slow by any stretch of the imagination, and have no other access to the internet are receiving these disconnect notice letters

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1114568 - Comcast Data Caps**

**Date:** 8/1/2016 3:53:50 PM

**City/State/Zip:** Crown Point, Indiana 46307

**Company Complaining About:** Comcast

---

## **Description**

I work from home and have ONE other choice for internet, which cannot provide the speeds I need for to run my business. I purchased a modem myself so I could save rental fees from Comcast, but now they want to start charging me extra for bandwidth usage. Had I known this would happen, I would have never signed a multi-year contract with Comcast nor purchased a modem myself.

The letter/emails are deliberately deceptive. This is clearly not a "trial" as Comcast says, since every data cap "trial" for other areas has never ended. And instead of calling it a data cap, it is called a "Terabyte Internet Experience." This crosses the line from marketing into lying.

On top of that, they claim 1TB of data uses ~700 hours of HD video? False. Try 300-400hours and that's not even considering 4k

They're playing a long-con here saying, "You don't need this much data RIGHT NOW," knowing full-well that everybody WILL need that much data in a few years. Especially if they want to get rid of cable TV in favor of better internet-based options.

If Comcast wants to charge per GB, great. Then people who use 1GB should pay for 1GB. But they're not. Comcast wants to have their cake and eat it too. They want to charge excessive rates for basic internet, overcharging low-usage customers while also adding extra charges for high-usage customers.

Unfortunately, I don't have a choice. I either have to move, quit my business, or keep paying Comcast whatever they want to charge me.

I have no choice, so it's up to the FCC to step in. The internet is a utility. I'm already paying an excessive amount for my internet access and there is NO competition in my market. Please stop the data caps

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

My subscriptions to Netflix and Amazon Prime are virtually useless due to broadband limits placed upon access to those paid services that bars, slows or stops shows during viewing. I am forced to use Comcast owned channels and entities as a result. My TiVo lifetime subscription access is also limited in an effort to force me to abandon TiVo Services for a Comcast DVR.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them to improve their chances at securing a monopoly or oligopoly. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 1112461 - Comcast XFINITY Data Caps****Date:** 7/30/2016 4:43:08 PM**City/State/Zip:** South Bend, Indiana 46613**Company Complaining About:** Comcast

---

**Description**

Comcast is instituting data caps in my area, for no sound reason other than to artificially cap something that costs them fractions of a penny to provide in order to squeeze more money out of consumers that utilize their services. Both residential providers in my area now have data caps, so I have no options that are unrestricted due to the duopoly in my area. AT&T and Comcast should be reprimanded for and banned from creating these profit-increasing maneuvers in areas where they have a choke-hold on the market like here in South Bend, Indiana. I use Netflix, Hulu, YouTube, and HBO Go extensively, and Comcast is punishing cord-cutters like me because I give my streaming business to companies that provide much more content per dollar than they offer with cable. With a usage cap, I am now at risk of not being able to fully utilize the services I pay for with Netflix and the like, because those services are provided access and bandwidth through a company that competes with them aggressively, as evidenced by the new data caps. Google Fiber provides much higher bandwidth at lower costs in the areas it serves, without caps. Other companies in my state and neighboring states, such as:

Auburn Essential Services in Auburn, Indiana

Bryan Municipal Utilities in Bryan, Ohio

Holland Board of Public Works in Holland, Michigan (Gigabit!)

iLines Internet in Lebanon, Indiana

Coldwater Board of Public Utilities in Coldwater, Michigan

All of these providers do NOT have data caps on their customers, and most of them charge less and/or provide faster service than what I pay with Comcast. I have included a screenshot of my usage this month so that you can see this doesn't affect just the 1% of users as they claim, but is an outright assault on many lower and middle-income customers like myself who can't afford or don't find desirable the products that are excluded from these data caps, like their own self-branded television and streaming services.

<http://customer.xfinity.com/help-and-support/internet/common-questions-datapolicy>

Please stop these huge corporations that have gobbled up smaller competitors from abusing their monopoly/duopoly status in communities like mine in South Bend by forcing arbitrary, cash-grabbing data usage caps on residential customers who have no other choices for high speed internet.

Thank you.

**Ticket: # 1112811 - New ATT home internet data cap**

**Date:** 7/31/2016 9:30:48 AM

**City/State/Zip:** Janesville, Wisconsin 53548

**Company Complaining About:** AT&T

---

## **Description**

This month is the first I've seen a data cap placed on my High speed home internet that I've had for about 12 years now. They set the cap pretty low in my opinion where they try to force you to drop Netflix (which you can watch anything any time) and purchase their next higher package or add their TV package (which you can only watch during the time the show airs. Most of the time there is nothing I care to watch on regular TV when I do finally have time anyway) back on at a higher price. Home internet should be unlimited data regardless of the speed, and not have to be linked to a TV bundle to qualify for it. They already slow your speed down after 22GB and now they want to shut you down after 300GB or force you to a higher priced package.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Date:** 8/1/2016 1:12:26 PM

**City/State/Zip:** San Jose, California 95128

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Hello there,

I am a comcast customer for the past few months, and without any warning, I just received an email, letting me know that they had changed my plan for this month, and that it now includes a data cap.

This is something that I did not agree to, and something I continue to not agree to.

If anything this is blatant corporate bullying.

Thank you for your time,

## **Description**

just a year back high speed cable was \$50 a month, last year they increased it to \$90 a month. Starting today I also get to enjoy having a data cap imposed on my family, so they can stop watching netflix, hulu, and youtube, or playing games from steam. Or I can pay another \$50 extra a month and be safe, or they will charge up to \$290 a month if I don't take their flat \$140 a month rate hike if I don't personally make sure no one watches more than 1 movie every X-days. There are no other cable providers in the area. Last detail, I did the math, if I put a limit on my router at 300MB a second, it'll be safe for a month, that's 33 times slower than the rated speed.

**Ticket: # 1114912 - Comcast/Xfinity Data Caps****Date:** 8/1/2016 5:41:35 PM**City/State/Zip:** Chicago, Illinois 60615**Company Complaining About:** Comcast

---

**Description**

I'm writing to complain about Comcast/Xfinity's recent implementation of a one terabyte data cap in Chicago. I believe that this is a thinly veiled money grab. While one terabyte of data might be considered generous now, as technology changes and evolves, that likely will cease to be the case. I don't think internet service providers have the best interests of their users at heart, but rather their stockholders and, therefore, can't be trusted to make judgments on how much data should be allocated to their users. The only surefire way around this is for all data plans to offer unlimited data to users. The issue of data caps is further troubling because there is a lack of competition in the area. Comcast/Xfinity is the only provider of broadband in my neighborhood offering service at acceptable prices and speeds. Their virtual monopoly leaves me with no acceptable substitution.

Thanks you for your consideration,

**Ticket: # 1115052 - Comcast Imposing 1TB Bandwidth Cap**

**Date:** 8/1/2016 6:48:23 PM

**City/State/Zip:** Grayslake, Illinois 60030

**Company Complaining About:** Comcast

---

## **Description**

I recently received an email from Comcast that they started imposing a 1TB a month data cap. In my opinion, this move is a gross violation of Net Neutrality.

Comcast currently explains that less than 1% of subscribers use more than 1TB a month, and while I am currently not using that much right now, I currently subscribe to several different streaming video services that compete directly with Comcast's own video distribution services. As the quality of streaming video increases, so does the amount of bandwidth necessary to enjoy the content.

To give you an idea, currently Netflix explains that Ultra HD content has a data rate of 7GB per hour, which when you spread that out over a month, means that if you stream for more than 5 hours a day, you are over that 1TB cap. This doesn't even take into account multiple people streaming multiple videos simultaneously in your average household.

With more and more people starting to get their entertainment through competing streaming service, Comcast is positioning themselves to get you to purchase their video services instead in order to not pay for additional bandwidth.

With generally one or two options for broadband internet service available in any given area, competition is scarce, and until Comcast follows the net neutrality guidelines set in place by the FCC, this situation will only get worse.

**Ticket: # 1115532 - XXXXXX XXXXXXXXXXXX's complaint re: ISP Zero Rating**

**Date:** 8/2/2016 1:13:20 AM

**City/State/Zip:** San Jose, California 95112

**Company Complaining About:** Comcast

---

## **Description**

Restricting access to content is morally equivalent whether it's done with technology slowing you down, or economics steering you away. sponsored data (or zero-rating) combined with data caps are no different than blocking competing content providers. please enforce the SPIRIT of the neutrality rules set last year. you're not going to lawyer a social movement... we'll just keep coming back till all the loop holes are fixed.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Date:** 8/2/2016 11:57:36 AM

**City/State/Zip:** Flagstaff, Arizona 86005

**Company Complaining About:** Sudden Link

---

## **Description**

Hello - our local cable provider is the only vendor to provide high speed internet access in our area. They also provide cable TV and phone service.

Because we choose only to purchase high speed internet from them, we are effectively penalized for choosing alternative IP based TV and phone services because they impose completely arbitrary data caps on their internet service.

It is an uncontroversial fact that broadband providers do not incur any additional costs for unmetered use, except for a tiny minority of customers who use far more data than the vast majority, yet in our regular use we routinely incur overage charges just for watching TV and phone via broadband. This is especially egregious since cell phone service is not available at our address.

The only other internet provider in our area is DSL based and was both slow (not high speed) and very unreliable.

I believe that the FCC has an obligation to stamp out these clear monopoly abuses which exist only to force customers to purchase additional services or be penalized financially simply because they are not subject to competition.

In areas where no meaningful competition exists, high speed internet providers should be regulated far more tightly, monitored closely and be required to have their rate plans approved by the FCC to put an end to these expensive abusive practices.

**Ticket: # 1116091 - Comcast Data Cap in Chicago**

**Date:** 8/2/2016 12:04:15 PM

**City/State/Zip:** Chicago, Illinois 60657

**Company Complaining About:** Comcast

---

## **Description**

I think it is unacceptable for Comcast to add data caps to their consumers in Chicago, IL. Even though these data caps are very high and only less than 1% of users hit it according to Comcast, these caps are in place to get consumers used to them and when more people are consuming 4k content in the next few years everyone will be paying more for the same service and also getting overage fees very often because of the data used for 4k content.

Comcast clearly wants to prepare for the future to charge customers more money. It is a fact that the cost to maintain their existing network drops significantly every year yet they want to charge customers more money for the same service.

### **Description**

Comcast has implemented Data Caps in Chicago as of last month. This infringes on internet freedom and net neutrality.

---

**Ticket: # 1116817 - Chicago Comcast Data Caps****Date:** 8/2/2016 3:25:52 PM**City/State/Zip:** Chicago, Illinois 60615**Company Complaining About:** Comcast

---

**Description**

These data caps are completely contrary to what open Internet should be. It is a cash grab by a corporation who cares nothing more than to find new ways to squeeze revenue from customers who are already over encumbered by fees for their service.

This latest move by Comcast is only enacted due to the near-criminal monopoly they have in the a majority of the area. Without choice, Comcast can enact whatever poor policy it feels will further fleece its customers. At what point does the FCC actually do something in these situations? Or will it idly sit by and watch customers be robbed of their hard earned money, up to \$200 at a time or \$50 extra on top of an already exorbitant pricing scheme? Many politicians including the President himself, feel the Internet should be titled a utility due to the unquestionable move to higher fidelity media. This cap as it stands now is more a punishment for those who no longer wish to be tied to cable packages with only a few channels they're interested in; but this cap not only serves to punish chord cutters, it's also affecting customers who are shackled into these "triple play" plans. Skyrocketing an already \$179 bill well into the near \$300 range.

Unless something is done about this in a timely fashion, the future Internet will be akin to the prison phone system with exorbitant fees for even the smallest data usage.

**Company Complaining About:** Comcast

---

## **Description**

Comcast's data caps in the Chicago area have gone into effect. They are a meaningless tool meant to make money for the provider and have no real purpose other than to penalize heavy internet users. The internet should be open and free. There is no "shortage of data" that we are approaching. These caps only benefit the provider with no benefit for the consumer. They should be outlawed and prevented as soon as possible.

---

## **Description**

I'm writing to complain about the new comcast xfinity internet data caps that have been instituted in Chicago as of 8/1. The cost of internet in america is significantly higher than other nations, and with a literal monopoly over my area, Comcast can charge anything they want, especially with the anti-competitive practices they've put into place with the local governments.

---

**Ticket: # 1117138 - Comcast Chicago Data Cap Implementation****Date:** 8/2/2016 4:46:27 PM**City/State/Zip:** Chicago, Illinois 60659**Company Complaining About:** Comcast

---

**Description**

The recent Data Cap Implementation in Chicago, alongside other cities, is nothing short of exploitation of the fact that Comcast is the only available service in many areas of Chicago. Though Comcast would have its customers believe otherwise, these are most certainly data caps aimed at charging customers more than others for reaching a non-existent limit on data. They argue this is an issue of traffic congestion. This data cap and its coinciding overage fees are not a matter of congestion if Comcast is willing to charge these fees and continue providing service regardless.

This allegedly has already been confirmed from a company email I'm certain you've already come across. We can easily infer that these limits have been set primarily for revenue rather than any kind of fairness in mind. While 1 Terabyte of data seems generous, data usage increases every year, and this precedent Comcast has set for itself may easily be much less flexible in the future.

[Ticket: # 1117247 - Data Caps Introduced by Comcast](#)

**Date:** 8/2/2016 5:11:57 PM

**City/State/Zip:** Downers Grove, Illinois 60515

**Company Complaining About:** Comcast

---

## **Description**

Comcast is introducing data caps in more and more areas. Data caps are unfair to those who use the internet to its full extent and should not be implemented for the benefit of a company and at the possible expense of the customer. As Comcast has a monopoly in many areas of the United States, consumers have no choice but to get access to the Internet through a company that uses unfair data caps. Protest by using another ISP is virtually impossible in many areas of the United States, therefore Comcast and other ISPs should not be allowed to implement data caps that are unfair to consumers.

---

**Ticket: # 1117335 - Data Caps**

**Date:** 8/2/2016 9:42:14 PM

**City/State/Zip:** Waterford, Michigan 48327

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

I reject the response provided by Comcast Customer Security Assurance due to the fact their explanation regarding their usage-based billing approach trials for it is untrue and misleading. The simple outcome of their so called "usage-based billing" is: 1) Fact # 1, current users with unlimited data usage, will start paying additional \$10.00 for each 50 GB block of data over the newly defined data cap of 1 TB. The fact is, these users future bills after the end of July 2016, will not save a single penny, but rather they are open for more charges. Fact # 2, current users who currently have unlimited data usage, but could exceed 1TB monthly usage cap, their bill effective Aug 1st. 2016 can easily increase by \$200.00. The response sent by Comcast does not provide a shred of evidence of not violating the spirit of Net Neutrality. Therefore, I demand the FCC to conduct its due diligent investigations in to Comcast so called "usage-based billing" trials, and determine the financial impact on consumers.

**Ticket: # 1259654 - Comcast Data Caps**

**Date:** 10/12/2016 5:05:08 PM

**City/State/Zip:** San Jose, California 95148

**Company Complaining About:** Comcast

---

## **Description**

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but for many users the local ISP is the only choice they have which grants that business a monopoly in

their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

Thank you for taking the time to read this.

---

**Description**

A week ago Comcast added a 1 Terabyte cap to my internet plan. That was not what I initially signed up for and agreed to. After shopping around this afternoon for an alternative AT&T appears to be the only option. Unfortunately their plans are even worse so I'm stuck with Comcast.

The addition of a data cap is a big issue for me because I enjoy playing videogames and have a Steam library of well over 100 titles. A lot of the newer games are over 40GB each. I think it's absurd that if I now want or need to re-download my game library onto another computer Comcast is going to charge me extra to do so.

I've been a Comcast customer for 4 years and I have had the same internet plan the entire time. They have steadily raised my bill from \$40/month to the \$77/month it is currently at. That's obnoxious enough as it is but adding data caps when the obviously weren't need previously is just a blatant money grab. I'm sick of my bill getting hiked every 6 months and I'm sick of having to choose Comcast. Please do something about their unfair, monopolistic, and anti-consumer business practices.

## **Description**

As an IT professional I am alarmed at the ongoing implement of internet data caps being imposed upon numerous markets. These caps are not only stifling freedom of choice and innovation but are concurrently imposing undue financial repercussions to Americans in fixed incomes.

This approach bears no improvement to a system that already cannot deliver what it's selling (i.e. peak speed sales). As a 30 year veteran in the IT industry I can assuredly state that internet usage data caps are input imposed to create financial opportunities for the business and its shareholders and has remains a net negative impact to the people subscribed to that service.

Please investigate and revoke the usage of internet data caps before they become a standard business practice.

**Description**

To whom it concerns,

The announcement from Comcast that it is expanding its 1 TB data cap is a source of concern for me (<https://www.engadget.com/2016/10/06/comcasts-1tb-data-caps-start-to-roll-out-nationwide/>), and it is a source of concern not just for my personal use but for business use as well. Data should be free flowing, and access should not be stymied in any way. Leaving caps to Comcast and their faulty measuring software is a deterrent to innovation in online streaming and consuming of media and services. Allowing Comcast this power will cripple future innovation and I do not want a data cap of any shape, or form to stop me from using my services in any way that I desire.

If you guys at the FCC could stop the data cap, that'd be great. If you guys can break up Comcast, that'd be even better. Comcast currently owns over 56% of the marketshare in the USA. Without competition innovation slows and prices go up. We are currently playing exuberant prices for much slower data speeds compared to the rest of the world. This should not be.

## **Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, game downloading, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for. Internet, unlike utilities such as water or electricity, do not have a higher cost associated with higher usage once an infrastructure is in place. We are faced with a product which breaks the traditional supply-and-demand model because supply becomes truly infinite. Comcast is akin to a company that charges you to install an air vent in your home. They have a right to charge you for the labor and materials to install the vent, but they do not have the right to charge for the amount of air that flows through the vent. Down the road, they may charge you more for a larger vent as your needs expand, but again, it would be absurd to try and then limit the amount of air you are allowed to draw from an effectively infinite source. These practices must not be allowed to continue, as it only hurts the consumer and enriches a monopolistic entity. Consumers deserve better, and we will not stand for it.

---

## **Description**

Data caps should not be legal. they have no reason other then to put a financial strain on American tax payers. unlike 20 years ago where internet was not as important and part of our everyday lives, today it very much part of living as was the phone then. for a majority of company's you need internet to apply for a job, find information about a company, learn new skills, look up laws (for both employee rights and normal rights), find information not available before, entertainment and much much more. internet is part of our daily lives and is crucial for improvement and information. Large company's like Comcast are taking advantage that in order to be competitive in today's work force you need to have unlimited access to the worlds knowledge that is the internet.

## **Description**

Comcast is adding a 1TB Data Cap to my region and it is targeted to harm their online competitors so comcast can sell me cable TV instead of actually competing against netflix, amazon and google. Data is not a finite resource, the amount is not relevant only the speed at a given time. How much is use does not actually affect anyone, only when I use it and how much throughput I consume when I do.

---

**Ticket: # 1259759 - Comcast Internet Data Cap****Date:** 10/12/2016 5:17:21 PM**City/State/Zip:** West Jordan, Utah 84081**Company Complaining About:** Comcast

---

**Description**

Hello,

As of Nov 1st 2016 Comcast is imposing 1TB data caps on everybody. There was not data caps until now and we never had to pay extra for using what we pay for anyway. Now after Nov 1st Comcast will charge us \$50 if we want to have uncapped internet experience(until now that was free) or if we exceed the cap of 1 TB we will have to pay \$10 per 50GB of data. This is outrageous! With 4K tv and internet games being about 50-60GB on average (each) I don't think that this is fair. If we are under contract and they change the terms like that we should be allowed to break our contract, or the changes shouldn't affect us until the contract is valid. This is another example of unfair business practice created only for the benefit of Comcast, to line their pockets with even more money.

## **Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, game downloading, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for. Internet, unlike utilities such as water or electricity, do not have a higher cost associated with higher usage once an infrastructure is in place. We are faced with a product which breaks the traditional supply-and-demand model because supply becomes truly infinite. Comcast is akin to a company that charges you to install an air vent in your home. They have a right to charge you for the labor and materials to install the vent, but they do not have the right to charge for the amount of air that flows through the vent. Down the road, they may charge you more for a larger vent as your needs expand, but again, it would be absurd to try and then limit the amount of air you are allowed to draw from an effectively infinite source. These practices must not be allowed to continue, as it only hurts the consumer and enriches a monopolistic entity. Consumers deserve better, and we will not stand for it.

**Ticket: # 1259802 - Comcast Data Caps**

**Date:** 10/12/2016 5:21:49 PM

**City/State/Zip:** Olympia, Washington 98506

**Company Complaining About:** Comcast

---

## **Description**

Hello,

I think that the FCC should take action to ABSOLUTELY prevent the Comcast from instituting a 1TB data cap on all customers, as is a clear violation of consumer protections and a "scheme" to subject consumers to unnecessary fees and highlights their ability to capitalize on the regional monopolies which they, and others, have been to allowed to create.

Imposing a "data cap" is an obvious penalty to it's customers who are "cord-cutting" and favoring streaming Internet services, over paying for cable, a service which they solely provide.

Comcast should not be allowed to punish it's customers for adopting newer technology by imposing draconian, retaliatory restrictions, fees and penalties.

Please do the right thing and support a free and neutral Internet, with equal access for all.

Thank you

---

## **Description**

Comcast is about to place data caps on its users in many states, affecting millions of users. I am not one of them, however I likely soon will be. This is an anti-consumer act that will serve no one but Comcast. These data caps would be terrible for a myriad of reasons, including but not limited to:

1.Lack of customer choice. If I'm not happy with my food, I will eat somewhere else. If I don't like a company's business practices, I can choose not to buy their products. However, there is no competition in the industry. I could not, if I wished, switch Internet providers. Time Warner, Google Fiber, and other competitors are effectively forbidden from opening up shop in my town. If I tried to change providers, the only option I would have is waiting for Google Fiber to reach relatively small towns. THIS IS A FORM OF MONOPOLY. IT IS NOT ACCEPTABLE.

2.Internet is no longer an optional utility. Almost all jobs, businesses, education, and commerce depends on the Internet to some degree. For much of America's infrastructure, removing it would be on par with removing the power grid. The majority of all livelihoods in America, directly or not, depend on the Internet. Treating it like this is unacceptable.

I truly hope a caring, like-minded individual reads this complaint, and that I haven't typed this all in vain. I look forward to any response, automated or otherwise.

## **Description**

Dear FCC,

Comcast recently rolled out a 300GB, then a 1TB cap on data usage for all of its existing plans in markets throughout the United States, including my own. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access, again, such as my own community which can only receive Comcast.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Provide access. Charge for speed. Restrict access to content only WHERE REQUIRED BY LAW.

That is fair.

Sincerely,

(b) (6)

## **Description**

Recently Comcast has announced that they will be imposing a 1TB data cap on customers in my area. This is extremely detrimental to my house as I work from home and need unhindered access to the internet. We, unfortunately, live in a location that does not offer a wide variety of ISP so we are pigeon-holed into going with Comcast. When I signed up for our current plan Data Caps were not mentioned once and had they been I would not have chosen Comcast. Now a month into my year-long contract they impose new Data Caps on my plan after I had agreed to set contract. This feels extremely anti-customer and very exploitative.

Further, I cannot find any notification settings in my Comcast account that will let me know when I am approaching my data limit. I have no way to accurately gauge my data usage as I do not know if I can trust Comcast's metrics when it comes to metering my data.

Overall, I feel like I am being exploited by drastic changes to my access to an open and available internet. I would not have signed a year-long contract knowing that soon-thereafter Comcast would pull the rug out from under me with these Data Caps.

Thank you,

---

**Company Complaining About:** Comcast

---

## **Description**

I have a family of five, and our internet usage is predicated on a lot of Netflix usage amongst other services, such as Amazon Video. There is simply NO reason for Comcast to set a data cap other than to create another source of revenue at the expense of its customer base. I recently moved and had to get Comcast after years of having Verizon FiOS. I had ZERO complaints in 6 years. I have had Comcast for all of 2 months, and I'm disgusted already with their service and suspect business practices. Not to mention the fact that it costs more each month and I dropped from 50mbps to 25mbps. Apparently, Comcast has a deal with the municipality and a monopoly in the area, unless you want DirecTV, which is worse. Please consider supporting the reclassification of Internet and TV services as a utility.

**City/State/Zip:** Sacramento, California 95816

**Company Complaining About:** Comcast

---

## **Description**

The fact that Comcast has gotten away with so much is absurd. But the newest item is data caps, this is just a massive cash grab. Data is not a consumable product. There is no data reserve that needs to be carefully handed out to individuals. Data usage will continue to grow, and users will continue to want more and more. Putting a cap on what we can use is anti-consumerism and targets those who have decided to "cut the cord". People have shown, with their wallets, that they want another way to consume entertainment. Consumers don't want to watch ads and pay for content. As content becomes higher quality the need for faster speeds is needed. Comcast is trying to put the bar high enough where it doesn't affect many people now, but in the future will just be a profit churning machine. The Internet needs to be regulated and laws put into affect to protect consumers not the billionaire corporations. Only the FCC can do this, who will the FCC side with? The people or the corporations.

**Ticket: # 1259903 - Comcast Data Caps**

**Date:** 10/12/2016 5:33:37 PM

**City/State/Zip:** Corvallis, Oregon 97333

**Company Complaining About:** Comcast

---

## **Description**

Comcast has recently notified us about implementation of data caps for there service in Corvallis OR. This is an active deterrent to my access to the internet access which in today's modern economy is a utility needed to operate in the same way clean water and electricity are. Without any other major competitor in my area I do not have a choice as a consumer to find someone else to provide broadband internet. In addition to this the change was made without changing to pricing so as of November 1st I will be paying for less service then I originally purchased with my contract. This not only poor business practices but inhibits and open, fair and free internet. Data caps on wired internet access cannot be allowed to become standard business practice.

---

## **Description**

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but

for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

## **Description**

I have become aware of Comcast's recent decision to implement a 1 terabyte data cap on their customers. I think this practice is highly inappropriate, and given our nation's dependence on information, potentially dangerous. It also punishes people that use the internet for additional services, such as Netflix or Steam, which can be data intensive. Netflix in particular, since it competes with ISP's television offerings. I do not think it is in our best interests to stifle competition and restrict a vital part of our society.

---

**Description**

Hello, I'm submitting this complaint about the data caps going into effect on my Comcast account on November 1st. Data caps are so outrageously against net neutrality that it pains me, being in a tech field and to see how behind the US is in terms of internet connectivity to the rest of the world. How is it ok that Comcast in my area can limit people's accounts out of nowhere, charge the same (which the low income area of Bloomington can barely afford as is), and still not actively work on improving their network? Why is it that there is no way to contact anyone at Comcast that has any involvement in this unless the FCC is forced to do so in place of me?

There's no transparency or government intervention in measuring how much data is being used. Comcast claims that I'm only using 500gb per month, but just like how my Comcast bill spiked randomly for no visible reason in the past and I had to file an FCC complaint just so they'd pick up the phone about it, I fear that I will wrongfully be told that I went over the cap and just be at the will of Comcast and have to pay up for something I did not do. I imagine that there's many, many similar complaints being filed now after they announced how many more people will be subject to such caps. If a company is so untrustworthy, can't something real be done? When is the time to step in? I'm not looking to get some small reduction in my monthly bill from sending this, I'm hoping that our country can start catching up to the rest of the world, instead of being at the will of greedy companies like Comcast who have had no reason at all to improve themselves because they haven't faced any consequences that they deserve.

Thank you for taking the time to read this.

## **Description**

In our modern day, the internet no longer exists as a product of simple personal benefit. It is not an item purchased out of a desire for grandeur or luxury. The internet has evolved into an essential utility in order to function on a basic level in current society, as are water and electricity. The issuance of data caps on internet data restricts innovation and advancement while perpetuating monopolistic tendencies of large corporations. Furthermore, a current lack of transparency in reporting and metering practices creates an unfair market and hurts consumers unaware of the resulting inaccurate charges.

## **Description**

I was recently informed that my contracted comcast plan, which used to have an unlimited data useage plan, has now been capped at 1TB without my consent or prior knowledge. This is unfair as I did not sign up for comcast service to be given a data cap, I signed up for the service I agreed to at the time of purchase. This also puts a clamp on my internet usage, I can no longer use it the way I used to, and for the same ridiculous price I already pay

**Ticket: # 1259992 - Comcast Data Caps**

**Date:** 10/12/2016 5:46:48 PM

**City/State/Zip:** Farmington, Utah 84025

**Company Complaining About:** Comcast

---

**Description**

I am concerned about Comcast's anti-consumer data caps that are being implemented in my area. When I signed up for my service I was sold one that was touted as unlimited. Comcast has also constantly increased my bill, without an increase in services rendered. Now they are capping the amount of data I can use in a month, again without reducing my price. Comcast has clearly shown they cannot be trusted not to abuse regional monopolies.

Another issue I have is with the measurement device. When I pay my electrical or gas utility bills I can check my own meter onsite at my home to make sure it is correct. With Comcast's system, I am unable to do so. How do I know what they claim I am using is correct? They were recently fined for charging customers for services they did not actually order. Why should anyone trust them on measuring data usage in a black box?

The practice of capping internet usage is warranted in an environment where there is not enough bandwidth to go around. Comcast clearly has the availability, because they offer an unlimited plan for \$50 more. Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use.

**Date:** 10/12/2016 5:47:37 PM

**City/State/Zip:** Brooklyn Park, Minnesota 55429

**Company Complaining About:** Comcast

---

## **Description**

Comcast is imposing a data cap of 1TB to all home internet plans. This stifles competition and is flat out wrong. I don't get the opportunity to change internet providers because comcast has a monopoly around my area, which should be illegal. I would love to have multiple internet providers, where google fiber is around, prices are cheaper and consumers win. Comcast can get away with this because they know we have no other options. This entire restriction is unconstitutional.

## **Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, game downloading, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for. Internet, unlike utilities such as water or electricity, do not have a higher cost associated with higher usage once an infrastructure is in place. We are faced with a product which breaks the traditional supply-and-demand model because supply becomes truly infinite. Comcast is akin to a company that charges you to install an air vent in your home. They have a right to charge you for the labor and materials to install the vent, but they do not have the right to charge for the amount of air that flows through the vent. Down the road, they may charge you more for a larger vent as your needs expand, but again, it would be absurd to try and then limit the amount of air you are allowed to draw from an effectively infinite source. These practices must not be allowed to continue, as it only hurts the consumer and enriches a monopolistic entity. Consumers deserve better, and we will not stand for it.

## **Description**

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

---

## **Description**

Comcast is continuing to roll out 1TB data caps across their users, and although they haven't yet expanded this "program" to Pennsylvania, I can't imagine that they won't spread this policy across their entire network. I refuse to stand by and allow them to take advantage of me as a customer.

First of all, their implementation is flawed. This year alone, 13,000 people have already complained to Comcast about the cap measurements being flawed. The issues have ranged from being billed for \*someone else's data usage\* to \*systematically miscounting data usage\*. They may deny these claims, but the stories of those 13,000 people can't all be wrong. Furthermore, their metering system is closed-source and the implementation is hidden from their customers, so we have no idea how we're being billed for our data use. Does it count bytes in IP packets? Does it count bytes in Ethernet frames? Does it only count payloads? We don't know! Even if this practice weren't completely abhorrent to begin with, this shoddy implementation alone should disqualify them from being able to use it.

Secondly, there is no network-management based reason for the caps. In Comcast's leaked training documents, representatives are \*explicitly forbidden\* from saying that the caps are intended to manage congestion [1]. Literally the only purpose of these data caps is to extract more money from us as customers. If Comcast wants to charge me more for the service, raise the base rate. Sure, I'll be upset about that too, but at least that's a reasonable request. This is just nickel-and-diming me for going over an arbitrary limit with a nebulously-defined fee on my bill.

Finally, this practice violates Net Neutrality. The core principle of Net Neutrality is that all traffic is treated equally. Although the caps don't directly treat traffic differently, they \*do\* force customers to make choices about which applications and services they use. Sure, I can do a lot with a terabyte of data, as Comcast points out in this incredibly patronizing video [2], but consumer data use doesn't naturally follow some sort of logistic curve that has an asymptote at 1TB. Thanks to wide availability of broadband internet access, file sizes across the internet have begun to creep up. Sure, 1TB is plenty to watch Netflix now, but what happens in a year when I want to watch SUHD streams on my fancy new television? A standard-length movie at that resolution is 7GB. Computer game downloads aren't getting any smaller either — downloading the latest Call of Duty is 138GB, which, along with some idle Netflix and Chilling and operating system updates, could handily put me right over the cap.

But this isn't just about taxing the heaviest users of their network. Comcast also happens to own Hulu, a streaming service that competes with Netflix. When Netflix users are beginning to bump up against the cap, Comcast could very easily announce that Hulu streaming doesn't count against your cap, by claiming that for Comcast customers, it's delivered as an IP Cable service, or some similarly meaningless distinction. Suddenly, they are actively reducing consumer choice by forcing customers to use their own video streaming service. This is a direct violation of Net Neutrality, and I will not stand for it.

I implore you, as the regulatory body in charge of this, to tell Comcast and the other cable companies that this kind of manipulative trickery will not stand. Show them that you really mean that you're going to protect Net Neutrality and swiftly nip these shifty sidesteps in the bud.

## **Description**

Comcast is currently rolling out a 1TB data cap to many if not all of their customers, this is only due to the fact they are often the only provider available, or the only viable one due to limitations in DSL distances. There is almost zero cost for additional bandwidth, this is not due to an honest business need. The following link also summarizes many of my feelings on this.

[https://www.reddit.com/r/technology/comments/5749a8/we\\_need\\_to\\_make\\_it\\_clear\\_to\\_the\\_fcc\\_that\\_we\\_want/](https://www.reddit.com/r/technology/comments/5749a8/we_need_to_make_it_clear_to_the_fcc_that_we_want/)

Also see this article for evidence that cost of bandwidth in bulk has gone down dramatically, yet almost every major provider who has any form of local monopoly has consistently been increasing prices and adding caps, when there is zero technical reason.

<https://techcrunch.com/2011/07/29/your-isp-is-screwing-you-as-your-service-costs-go-up-their-backbone-costs-go-down/>

**Date:** 10/12/2016 6:05:18 PM

**City/State/Zip:** Fresno, California 93711

**Company Complaining About:** Comcast

---

## **Description**

The proposed data cap policies are essentially creating a monopoly making it much harder for streaming programs such as Netflix or Hulu to remain viable when HD quality video require 3gigs per hour and ultra HD is 7 gigs limiting the entire household to 142 hours of steaming video alone. This is if people use the internet ONLY to stream, and nothing else. This essentially forces you to have to buy cable from the cable company instead of simply using the internet for streaming services. The internet has become one of the most important forms of communication and sharing of knowledge and to allow a company to control that is inappropriate.

---

## **Description**

Data caps are an unnecessary restriction that transfers more power into the hands of cable companies, who already have too much power due to regional monopolies and collusion with other companies, and local governments. 1TB may sound reasonable to most people, but in just a few years that type of data transfer is going to be common place as more and more people stream high-quality videos off the internet. This effectively allows Comcast a lever to punish people for cutting cable, and choosing to stream instead. Once the 1TB cap is in place, what's stopping them from reducing it to a much lower level, and charging egregious fees for any overages? What option do people have if they live in an area where Comcast is their only option? If there was actual competition, like the government is supposed to be policing, I wouldn't have a problem...but if Comcast goes unchecked with their data capping, there's no question this will be abused at the expense of just about everyone who uses the internet.

**Description**

Recently Comcast in my area has implemented a data usage cap which is anti-competitive and is a huge (>50%) cost increase to maintain my current level of service. I primarily stream digital content from Netflix or Amazon--which Comcast views as a competitive market to their cable offerings--and this will significantly impact my ability to support those companies and others like them. It also imposes on my ability to support companies like Amazon, Google, Microsoft, and Code42 who provide cloud storage and backup services for my photography and video production hobbies. These are all American companies whose business may be harmed by this data cap in addition to me as an individual.

As technology progresses and data usage increases, as it always does, the cap they've set will become more and more limiting and the penalties they distribute ever more common. Having few options for internet service means I'm not able to get competitive service from another company. We can look at Canada's low data caps and controlled market as an example of what we must prevent in the United States to remain productive and innovative as data creators and consumers.

Please consider action to prevent these anti-competitive and anti-individual behaviors.

Thank you,

(b) (6)

## **Description**

I have recently received notice from Comcast regarding their new data cap policy that they are implementing. Though it is likely that I will rarely ever hit their currently set limit, as a small business owner who works via the internet and will be increasing traffic as the business continues to develop I am concerned that this sort of policy will effectively cripple the continued expansion of small businesses like mine throughout Comcast's coverage area. I also feel as if this sort of policy is effectively undermining the pre-existing contract I had with Comcast regarding my internet service. I signed up for access to the internet with a certain speed, there was never any agreement that they could cap my usage when I signed up for 12 months of service. Though not an immediate issue, this is very much a concern for the future of the internet and a matter of principle.

[Ticket: # 1260160 - Comcast imposing data caps](#)

**Date:** 10/12/2016 6:12:15 PM

**City/State/Zip:** Portland, Oregon 97232

**Company Complaining About:** Comcast

---

## **Description**

Data caps on high speed bandwidth are a threat to net neutrality. Internet access is a de-facto utility, and in many cases a virtual, if not outright monopoly.

Comcast's move to impose data caps in Oregon and elsewhere will stifle innovation, and punish users for taking advantage of the services that Comcast had promoted in their advertising materials as justification for the need for broadband.

Because these ISPs offer competing services aside from internet connectivity, in particular cable tv as compared to netflix and other streaming video services, this is a clear push to drive users with little choice to purchase their other services.

**Ticket: # 1260170 - Comcast 1 TB Data Cap**

**Date:** 10/12/2016 6:13:33 PM

**City/State/Zip:** Portland, Oregon 97211

**Company Complaining About:** Comcast

---

**Description**

I have recently learned that Comcast is implementing a data cap for home consumers of 1 TB per month and I wish to express concerns about the impact of this on my family, my career, and my home.

As someone who relies on the internet and technology and works in that world, this is frightening. It stifles innovation as many of my peers are working on products and applications that require an open internet to function. Data caps punish customers who in turn ignore new businesses that may send them over their limits. The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

Comcast would also argue that this cap is far above the average usage. However, as the internet matures, so does data usage. Beyond this, there is nothing to stop them from inching the caps down lower and lower until customers pay far more for the same exact product.

Instead of improving their infrastructure to keep pace with new internet innovations, these caps stifle competition by needlessly enforcing a ceiling that has no reason to be there. Please put a stop to this practice.

**City/State/Zip:** Fort Collins, Colorado 80525

**Company Complaining About:** Comcast

---

**Description**

Comcast recently announced the rollout of their 1 TB data cap. This is a disturbing trend for a few reasons.

- 1) It sets a precedent for higher and higher billing. While it's unlikely that most people will hit a data cap of 1 TB today, it will probably be likely in a couple of years as data needs grow and grow. Additionally, there is nothing to say that Comcast won't shrink that cap to 500 GB or 250 GB and begin charging overages. Soon we'll be buying our cable Internet much in the same way we buy our wireless data plans today.
- 2) Cable companies are not utilities. There are governmental regulatory bodies that utility companies are accountable to; not so with cable companies. If Comcast claims that I used 2 TB of data, I have no recourse, even if I am independently monitoring my own data usage.
- 3) Choices. In most areas, your choices boil down to cable or DSL. There are few choices for Internet access. This monopolistic practice means the consumer loses because their Internet is effectively held for ransom. If we're not happy with an Internet Service Provider, we can't switch.

## **Description**

In less than a month Comcast will be rolling out 1TB data caps to all their customers.

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly. Essentially they are trying to bypass the net neutrality issue to achieve the same result for their business, and this is not acceptable. By exploiting a loophole in the letter of the law they are avoiding its spirit.

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use.

In our society, internet use has become mandatory. From dealing with school, work, or personal relations, all essential aspects of our daily life have been integrated with the internet in a way that makes them impossible to separate. In a perfect world, there would be several different ISPs to choose from, creating a healthy and competitive market. In reality, the best case scenario is you have two options to choose from but the most common case is that you only have one ISP who offers service in your region. I am writing to you because the tyranny of a monopoly must be prohibited. It is the FCC's duty to protect the common people. I hope that many others just like me are sending you messages and complaints so you can understand just how important this issues truly is.

One further point I would like to make is that Comcast measures the data usage through a third party who doesn't make their methods of measuring available to the public. How do we know that they are truly providing us with accurate information when there is no transparency? I urge the FCC to put a stop to Comcast's shady business practices.

## **Description**

Under no circumstances should any company be allowed to set a data cap on internet. Internet is not a finite resource that can run out. How can a company lawfully be allowed to charge you a fee for going over a set amount, but not refund you for not reaching that amount? Its completely unethical.

If they are allowed to set a data cap on internet, then they should also be forced to set a cap on both Television and Telephone use as all 3 run through the same infrastructure. The US is considered the greatest country in the world by many, yet we completely fall flat on our face when it comes to any kind of media productivity, especially the internet. Our speed are terribly slow, and allowing things like a data cap just make us look even worse.

There should never be a data cap on any service that does not need to be mined where you literally cannot run out of said resource. Internet is a part of every day human life now just like electricity and water, however unlike those two, it cannot run out.

In light of this, comcast has also been doing everything in their power make sure that the general public is not made aware of this as an issue and is trying to play it off as if it wont affect anyone, when in fact, it does, and will, especially in the future. I will also be attaching an image showing how a popular post on the website reddit somehow managed to start receiving numerous downvotes to the post, clearly by comcast in order to downplay the issue.

Please help us as American citizens to stop this travesty from taking place and to slowly push towards allowing other businesses to rise up so we can start having a competitive market that has built itself off of capitalism and not loop-holed monopolies.

## **Description**

The Internet is not something that should be tiered, closed off, capped, or restricted from anyone anywhere on the planet. Comcast is implementing new nation-wide data caps on November 1st, and they are a violation of freedom of speech and personal liberty. The internet is a basic human right in the modern era, and no entity has the right to restrict it.

---

**Ticket: # 1260250 - Data-capped policies violate are unfair and monopolistic**

**Date:** 10/12/2016 6:26:30 PM

**City/State/Zip:** San Francisco, California 94103

**Company Complaining About:** Comcast

---

## **Description**

Data caps on internet providers are unfair to consumers and benefit the monopoly positions of certain providers. In particular, these policies:

- are not regulated for accuracy or fairness;
- unfairly benefit the cable TV industry at the expense of internet-based industry;
- further restrict consumers who generally only have a single choice for internet service; and
- restrict growth of future internet services while disincentivizing internet providers to invest in additional capacity.

For these reasons, data-capping practices are deeply unfair and should be thoroughly opposed by the FCC. I urge the FCC to set rules opposing data-capping policies.

## **Description**

I'm emailing the FCC to urge them to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Please note that other Internet Service Providers are rolling out or have rolled out similar policies.

Sincerely,

(b) (6)

### Description

Comcast recently informed me that a 1TB (terabyte) data cap will be imposed on my internet consumption. Their email claims that 1TB (1000 gigabytes) is a totally huge number and virtually nobody would ever exceed that. This is objectively false. I will list some reasons why:

1) Streaming HD video (1920x1080, referred to as "1080p") from Netflix requires 3GB/hour.

Therefore, it would take 333 hours to fill up a 1TB, or 11 hours of HD video per 30 day month. While watching 11 hours of TV a day is not exactly healthy, it is also NOT ILLEGAL and cannot be made illegal by Comcast.

2) According to Netflix, streaming 4k video (4000x2000p) requires 7GB per hour. Therefore, it would only take 142 hours of 4k video to reach a 1TB cap, or just 4.76 hours of 4k video per day. 4.76 hours of tv per day is very achievable for the average American.

3) The above calculations assume that only 1 person in your household watches Netflix AND assumes that YOU ARE NOT DOWNLOADING ANYTHING ELSE EVER (which is literally stupid to suggest, as we're all downloading things all the time. My phone downloads stuff without telling me). This doesn't even mention other possible sources of large downloads. I have purchased 3 games in the last 2 months, requiring downloads totalling approximately 350GB.

I am NOT a heavy gamer by any means, yet I would easily start to brush up against my data cap just by watching a couple hours of Netflix in 4k and downloading a couple games, not to mention the bandwidth required to actually play the games, since they require an active internet connection to play.

I have 120GB of music files on my laptop, which I regularly backup to the cloud. If I backup these files once a month, that's 12% of my data cap. If I back them up twice a month, that's now 24% of my data cap.

Comcast is intentionally hiding behind language of "One terabyte is a massive amount of data – less than 1% of our customers use that amount in a month." Yet by even the most conservative projections, 1TB will begin to be the MINIMUM amount of monthly data an adult American with multiple connected devices can reasonably expect to consume.

Additionally, this quote from their email is a literal lie: "With a terabyte of data you can stream between 600 and 700 hours of HD video, play more than 12,000 hours of online games, or download 60,000 high-res photos in a month."

As we just went over, according to Netflix's published requirements of 3GB/hour for HD video, you should only be able to watch 333 hours.

Lastly, anyone with any sort of technical competency can understand exactly why data caps are completely arbitrary profit grabs.

<http://arstechnica.com/staff/2014/10/analysis-wireless-data-caps-more-about-profit-than-congestion/>

This article details it quite well, however, the basic technical infrastructure behind the internet doesn't care how much data you use per month. In fact, the only thing that can affect the overall quality of the internet speed is the number of users currently accessing the network (that's why the internet is fast at night when most people sleep and slow at 7pm when most people are home and browsing). It's not exactly like water or electricity; there's no limit to the amount of internet available, we're not pulling the internet from the limited supply of fresh glacial Internet, there's no reservoir of internet that's drying up. If you use 10GB/s of bandwidth, all that matters is that if other people near you also try to use the internet, they'll find that you're hogging it. However, this is easy to deal with, as the ISP can simply divert some of your bandwidth to other users and slow you down to 5GB/s temporarily.

The only reasonable argument I have ever heard is that during PEAK USAGE, it makes sense to limit high bandwidth users so that no one person can slow down multiple others. However, limiting bandwidth outside of peak usage literally has no effect on anything. Again, there is no internet reservoir that we are draining, the internet is limited solely by the number of access points provided by the ISP.

Keeping track of how much bandwidth a person uses over an entire month has literally nothing to do with the performance of said internet or the cost to the ISP. Cost to ISPs depends on the physical infrastructure they laid down, not how many youtube videos end users watch.

Lastly, I have to make a plea for net neutrality and the classification of internet as a protected utility. The USA has fallen far behind China, Korea, Japan, and now even Europe in regards to internet speeds for both physical and mobile devices.

<http://www.pbs.org/newshour/updates/internet-u-s-compare-globally-hint-slower-expensive/>

This article notes that there is a lack of competition, leading to companies simply charging more for the exact same service. These companies, without competition, have no incentive to increase speed in anyway, and must be obligated by law to increase internet speeds.

When you have a company that intentionally acts against it's consumers interests, you must require it by law to provide better service to it's customers. In 2015, Comcast reported \$16 Billion in Operating Income, with \$8.16 Billion in Net Income. This company profits handsomely off Americans every year, yet refuses to make significant upgrades to its internet speeds.

## **Description**

Comcast is beginning to roll out data caps, charging customers who use more than a Comcast-determined amount of acceptable Internet bandwidth extra money.

The Internet is probably the fastest-growing technological area, with new and innovative ways of leveraging its connectivity being invented with increasing frequency. All of these innovations require some amount of bandwidth. If cable companies are permitted to place absolute (and arbitrary) upper bounds on the bandwidth resource, they effectively place upper bounds on the innovation that is available to their customers. This places them in a position to control, throttle, or stifle that innovation as they see fit.

The Internet sectors (and, consequently, knowledge, commerce, and technology) of countries that are unhindered by these restrictions will grow faster than those with. This is, in many ways, hamstringing America.

The Internet is a gateway to knowledge, learning, entertainment, news, information, commerce, and many other critical aspects of our everyday lives. ISPs imposing arbitrary and artificial restrictions on its usage impacts everyone.

**Description**

I am extremely disappointed that Comcast will soon be bringing its 1 Terabyte data cap to Washington state. It is my opinion that uncapped access to digital content at reasonable speeds is essential. As a software developer I use the internet not just for entertainment and communication, but also as a primary tool of my trade.

In my current residential area there are only two options for wired internet, Comcast Xfinity and Century Link. Comcast offers high speeds but (soon to be) capped data. Century Link offers subpar speeds (25mbps max at a higher price than Xfinity 105mbps) but uncapped data. If it were possible I would switch to a better provider in a heartbeat.

One thing that irks me about this issue specifically, is that I entered into an agreement with Comcast shortly upon purchasing my home 1 year ago for unrestricted internet access at a relatively consistent speed. I do not understand how I am fully expected to honor a service contract with them while they in fact may decide to cap the data arbitrarily at any time. This seems like an injustice at best.

I would like the FCC to take action to ensure that internet providers may not impose arbitrary data caps, or at least ensure that consumers are not price gauged with large fees to eliminate said caps (\$50 per month in Comcast's case).

## **Description**

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

<https://www.dslreports.com/shownews/The-FCC-Has-Received-13000-Complaints-About-Comcast-Data-Caps-135895>

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

<https://help.netflix.com/en/node/87>

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

## **Description**

My ISP is implementing monthly data caps on internet users with no good reason other than to seek higher revenues and profits with lower cost of operation overall (see attachment). It's even more bizarre is that if Comcast has competition, it removes these data caps to compete with much better ISPs that give out faster speeds and lower price.

Without better laws put in place for current ISPs, we can see more tactics like this to come that would leave customers with lack of choice or say of what ISP they can pick.

## **Description**

I am a resident currently affected and very unhappy about Comcast's new data cap plan they forced upon my home and my community. The new data plan is not about fairness, and it is not about congestion. Frankly, it is a way for Comcast to pad their profits.

Let's talk about fairness; Comcast claims they are charging for data like how any other utility charges for water, electricity, and gas. However, once the infrastructures are put in place, sending and receiving data costs almost nothing to them. They are already charging enough to have posted record profits last year.

Now, let's talk about congestion. Data caps have nothing to do with network congestion, as was evident when Comcast accidentally leaked in an internal memo confirming so.

This leads us to the only remaining reason that Comcast would implement data caps, and that's to increase profits without making any changes or upgrades to their services. While a business has every right to make as much money as they can, Comcast, being a monopoly in many areas, should be held to a different standard. There is no competition, nowhere to turn. With the increase in high data-utilization applications such as 4K streaming and more Internet connected devices in our homes, this data cap is just an unfair way to get in on the money without actually innovating. This behavior is also anti-competitive, as it specifically designed to curb the usage of streaming services such as HBO Go, Hulu, Netflix, and YouTube. As these streaming media services begin to roll out Ultra HD streaming, it becomes easier and easier to hit a 1 Terabyte cap. In terms of a 4K movie, 1 TB is equal to roughly 10 movies. I live in a house with 4 other working professionals, and it's easy to see that Comcast is purely trying to sabotage our desires to consume the media that we choose that just so happen to compete with their own Cable TV service.

---

**Description**

To whom it may concern:

Comcast, operating as what is essentially a monopoly, is taking advantage of its position of power over the consumer by regulating and limiting a heavily depended on, necessary utility to the detriment of their own customers. They, however, have the potential to benefit immensely.

This data cap will be a massive hinderance to small business owners, creative workers, cord cutters, and families alike. No one will benefit from this, and yet the vast majority of Americans can't simply just "get another ISP" if they're unhappy with it. My family is in that position, where we consistently recieve horrific customer service, irregular and unfair charges, and other examples of poor business etiquette; however, we have no other option available to us.

That is why it falls to you, the FCC, to protect the consumer from this blatant extortion.

Beyond the immediate ramifications, this data cap also sets an ugly precedent for what Comcast can and will continue to do at the expense of the people who rely on their service.

I thank you for all of your efforts in the fight for net neutrality, and I anticipate that you will make the right decision at this juncture, as well.

Sincerely yours,

(b) (6)

Kent, WA

---

## **Description**

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

## **Description**

Dear FCC,

Over the past few years, many ISP companies, much like Comcast and AT&T, have slowly started introducing hard data caps on their users. The trend is growing at an alarming rate and is being adopted by many other ISP's because of one factor; greed. We live in a world where the internet is an essential tool for millions of people, on a day to day basis. Many people rely heavily on internet usage for work, while others deploy it in their households for media consumption and staying up to date on current events.

The data usage caps being promoted and deployed by these ISP's are forcing users to choose what they can and cannot do on the internet because of the forced caps. This act is creating a struggle for end users to continue enjoying the freedom of the internet and all that it stands for, all while the "too big to fail" companies like Comcast, AT&T, Verizon, CableOne, and many others sit back and laugh because there is no regulation placed on data caps. They can stick it to their users time after time and not be punished. It's immoral, and just plain wrong. These acts also put a damper on competition in the most direct way, especially when it comes to the media consumption portion that millions of people rely on in their households, day in and day out. Some examples include: Steam, Netflix, Hulu, Playstation Vue, SlingTV, GoG, etc.

Take one look at South Korea and Japan. These countries are currently pushing the limits of technology with publicly available two gigabit (yes, 2 gigabits/second) internet, at low cost to their users with absolutely ZERO data caps all over the country. While you're at it, take a look at a large majority of European countries and their gigabit infrastructures that have been in place for decades. These countries pay so little, yet get so much versus the United States when it comes to Internet factor. They also do not have to worry about the nonsense that is a data cap.

We live in one of the most technologically advanced countries in the world, and yet we are so far off the path of continuing to develop and promote a free and open internet that it's not even funny. You cannot tell me that something can't be done to stop this crazy nonsense and get things headed in the proper direction. It's almost mind boggling how data caps are even a thing, especially in 2016. Bandwidth is not a finite resource that is mined from the Earth like oil. It's not magically "out" when you hit your data limit for the month and it does not disappear into thin air.

The people who are directly affected will be standing up for the same thing as I am now, because they know that it is unjust and unfair. Just because a large corporation is finding it difficult to keep up with other competing entities with their products, does not give them the right to hammer their users over and over by enforcing a strict policy that doesn't even make sense. All of this, just so that they can continue lining their pockets by preying on the defenseless users.

Please stop this nonsense, and help promote a more free and open internet.

---

## **Description**

Data caps stifle competition by increasing the costs to use internet services for everyday Americans. Netflix and other internet entertainment services are a threat to Comcast's traditional cable revenue. Comcast is creating restrictive data caps to deter it's customers from using services like Netflix. Other services like online gaming are being negatively affected by these caps.

Comcast bandwidth metering is inaccurate. The metered amount does not reflect my real world use. On occasions when I am out of the area and the modem is unplugged it will still show use. In other situations it will show very little use while the line is actively being used. There is no transparency regarding how overages are decided, or how the bandwidth is metered.

## **Description**

### 1. Comcast

The cable and media giant that dominates the fixed broadband market is coming up with inventive ways to favor its own content over competing streaming video apps by imposing data caps in select markets and exempting its own video app Stream TV from those caps. This is a textbook example of an ISP tilting the playing field in its own interest.

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

### 2. Verizon and AT&T

Both companies have sponsored data programs, creating a new toll for websites and applications who want to reach customers without impacting their data caps. This is a radical shift in Internet architecture and business models, letting ISPs seek payments for the first time from websites, app makers, and content providers that are not their customers. This creates huge barriers for start-ups and small players that can't afford a toll. They no longer have a fair shot at reaching people online. Thus, Verizon's and AT&T's program create the same harms as "fast lanes" would have if they weren't already banned. It also means ISPs could keep data caps low just to give sites a greater incentive to pay for an exemption.

### 3. T-Mobile

The Binge On program lets you watch all the streaming video you want, but there's a catch. That unlimited streaming comes only from selected partners like Netflix, Hulu, Amazon and others. While any video provider can enroll in the program, the technical requirements are substantial. What's worse, to pull off the plan, T-Mobile is downgrading the quality of all videos. HTML5 HD videos hosted on independent websites suffer the most. On these sites, T-Mobile users will see the dreaded "buffering" icon, not the video they're looking for.

## **Description**

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but

for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

## **Description**

Data caps are an unfair limit on a piece of technology that is a big part of our lives. Having data caps limits our entertainment, ability to both socialize and work, along with restricting our personal daily habits. Also, adding data caps and then offering an unlimited option is price gouging. You are already giving us this privilege, all you are going to be doing is raising the price for no reason on this privilege.

## **Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. Like many my age, I do not subscribe to cable television and watch most of my television through broadcast or streaming. But besides entertainment, I use the internet to do a great amount of business as a web designer. I understand how the internet works and how it was developed. With that understanding, it is completely unreasonable that a company that had been deeded a local.monopoly charge me for both speed (bandwidth)and consumption of a limitless supply (data) with no restriction or consumer protection. This barrier is nothing more than a price gouging tactic from a company which already makes an unreasonably large profit. And it's placed squarely on the backs of the citizenry. Our citizenry deserves better. This behavior from the largest cable provider should not be allowed to continue. We paid for the infrastructure to put cable in the ground and we pay Comcast directly for the last mile connection. The internet was paid for by all of us, and to limit it's use is effectively a toll on our productivity. We can go on and on about the potential hazards of a data cap, but make no mistake, this is a Pandora's box and it should never be opened.

**City/State/Zip:** West Linn, Oregon 97068

**Company Complaining About:** Comcast

---

## **Description**

After years of cap-free internet service, Comcast / Xfinity is rolling out an all-new data cap in Oregon. They will charge me \$10 extra per month for every 50GB over a 1TB limit.

The information is at this URL (attached below): <https://dataplan.xfinity.com/faq/>

There is no technical reason for the cap - Comcast has plenty of capacity. They are exempting their own video service, so the cap is designed to prevent users from subscribing to competing video services.

Comcast has a poor record of accurately recording customers' usage. If they erroneously say that you are over the limit, there is no way to prove exactly how much data you actually used.

I have no other choice for high speed internet in my area. CenturyLink is too slow for my work, and we have no other options (such as fiber) in my town.

Chairman Wheeler, please help customers avoid these unnecessary data caps. All it does is dramatically increase profits for this monopoly provider, when they already make money on the cap-free internet service, and have plenty of capacity available in their network.

Thank you in advance for your help. -cheers, (b) (6)

West Linn, Oregon

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

## **Description**

Beginning in November, Comcast (the only real option for ISP provider in the Portland OR area) will be rolling out a 1TB Data Cap to all it's customers.

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly. This is an unfair practice that brings back to the Net Neutrality fight all over again as data caps are just a proxy issue that allows Comcast to achieve the same thing it wanted with its draconian net neutrality rules.

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use.

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity. Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

I'm writing this email in hopes this will raise public awareness of this issue and flood you, the FCC, with our community's complaints and input so we don't have to deal with a stifled internet.

---

**Description**

Comcast, which the FCC recently fined for its terrible business practices, is once again attempting to stifle internet freedom and availability in its pursuit of profits. Our world has reached a point where even the U.N. recognizes internet access as a basic human right, and Comcast's implementation of data caps is a looming threat to this right.

In many locations, Comcast has already implemented a 1TB data cap on its customers. The company claims this is a reasonable limit that few users will exceed, but the data caps will inevitably be implemented to Comcast customers in all regions. And before long the 1TB limit will be reduced to 750 or even 500GB under the same pretense that "most customers don't use that much data". Eventually those internet data caps will be cripplingly low, and customers will be charged exorbitant amounts to upgrade their internet plans. Moreover, because many areas - such as the city where I live - only have one major internet service provider. That means customers have no reasonable alternative, and Comcast has an effective monopoly to charge whatever rates they desire. Of course this is a symptom of a larger problem, but emphasizes the point that Comcast can abuse these data caps with little regulation and doesn't have to worry about losing any customers.

In addition to these concerns about customer abuse, the data caps are another way for Comcast to slowly infringe upon net neutrality. What happens when users can't stream Netflix or Hulu because of their data limit, but Comcast's own X1 streaming service conveniently doesn't count towards their own data limit. Is that not the same as providing preferential speeds to certain websites and services while limiting others to the internet slow lane?

Finally, consider this point. Does it sound reasonable for a cable company to limit how many hours of TV you can watch every month? If that sounds absurd, then the idea of internet data caps should as well. Please consider these facts carefully when considering the current state of internet service, and prevent internet data caps from becoming a harsh reality.

## **Description**

Comcast is one of 2 ISPs in my area. They are Implementing data caps in order to convince consumers that they should pay per unit for data. This sets a dangerous precedent, since increased data usage is inevitable in the future and unlike other resources, data costs nothing to transport once the infrastructure is in place. If Comcast is allowed to implement these caps, other companies will follow (because they can and because there is almost no competition among ISPs). This will be bad for consumers, bad for businesses that rely on an internet connection to operate, and bad for the future of the internet.

**Description**

I wish to convey my dissatisfaction with Comcast's recent announcement to limit my, and many others' monthly data usage to 1 gigabyte per month with severe penalties for going over the limit. Although I have never come close to hitting this data limit, Comcast instituting this apparently unnecessary restriction signals to me nothing more than greed, anti-consumer policies, and the creation of an artificial limit on data for the sole reason of charging consumers more. The internet is not a finite resource like oil or food which is subjugated to supply and demand. In fact, the internet has become a basic utility and arguably a human right that should not be allowed to be limited to any person or have restrictions imposed upon it.

As for the limit itself, 1 gigabyte may seem like a substantial amount, but size of files being transferred over the internet have been growing rapidly and in a few short years this 1 gigabyte limit will not be sufficient for simple internet use, especially if a household has multiple people. Comcast knows this and is simply trying to get us used to the idea of having a limit now so that when the limit actually becomes an issue we would not fault Comcast for it, just like how we see cell phone data caps as a normal part of the service now. And in many other developed countries, data caps are unheard of. And not only do they not have data caps, internet is orders of magnitude faster for a fraction of what companies like Comcast charge per month.

Comcast is an unarguably extremely profitable company and should be investing in improving infrastructure to match that of other modernized countries. Instead, they continue to increase our rates for seemingly no reason, limit our internet speeds so that we trail far behind even some less developed countries, and now impose unnecessary and absurd data caps that are not justifiable in any way, no matter what Comcast might try and have us believe.

And my last point is concerning choice. Comcast is a virtual monopoly in many areas of the country so that consumers literally have no choice in who their ISP will be. This goes against the concept of a market free of monopolies and leaves Comcast free to charge whatever they want and impose absurd limitations on consumers leaving us no recourse. And this also gives them the power to limit access to services that Comcast and its' parent companies are in direct competition with, such as on demand streaming services. Internet is a necessary utility and a person can't simply switch to an ISP that offers better services when there is literally no other ISP to switch to. This is an issue that must be dealt with now for the sake of the consumer, the American people, and the future of the internet.

---

## **Description**

Comcast is soon going to implement data caps on home broadband usage. Comcast has admitted that these caps are not about the technical limitations of their network, but instead they say that they are in the interest of "fairness". In reality, these caps are the opposite of fairness. As online streaming sites become ever more popular, cable companies are seeing declining subscriptions to their cable services. To combat these online streaming sites, Comcast is implementing data caps to punish those who decide to get their entertainment from the internet. Many consumers have little choice as to which broadband internet provider to choose. These data caps are anti-consumer and only serve to preserve the monopoly of Comcast. I want strong, decisive legislation with no loopholes to stop this practice.

## **Description**

Comcast (and other major ISPs that are planning on following suit) have unveiled plans to begin arbitrarily capping the amount of data their customers can use over their broadband service. This practice is nothing but cold-hearted exploitation of an essential utility service that will have a chilling effect on virtually every aspect of internet use.

This practice will discourage cord-cutting customers who do not and have not used expensive cable television packages for years. Major services like Netflix, Hulu, HBO Now, Youtube, Twitch and a host of others all moving toward 4k streaming and other quality innovations that won't be available to the average customer if they afraid to turn on their computer or watch a movie with their family because their internet bill may skyrocket.

Virtually all videogames have some kind of online component and popular genres like MMO and MOBA games are entirely online and require a constant stream of data. Well-known and immensely popular games that require a constant internet connection like World of Warcraft, League of Legends, and hundreds of others will suddenly become far more costly for people to play.

We have a very modern household with my wife and three kids. Virtually all of us have multiple devices that are connected to the internet at all times. There would be no transparent or accurate way for us to measure how much data we are consuming at any given time and how much our ISP would be deciding to charge us for the privilege of access to our information and entertainment.

ISPs operate with massive profit margins and have broad monopolies and very little reason to innovate or lay down new fiber lines AS IS. Allowing them to impose artificial barriers to internet access so they can charge even more for a utility that all modern households are more and more reliant on for their connection to the outside world, work, entertainment, news, and every other facet of life is a tremendous step backward.

Please do not allow this to happen. Ban ISPs from imposing data caps on customers using land lines. These ISPs can always expand bandwidth by investing in infrastructure in heavily trafficked areas and they certainly have the money and revenue stream to do it. The greed has to stop.

## **Description**

The Internet is not something that should be tiered, closed off, capped, or restricted from anyone anywhere on the planet. Comcast is implementing new nation-wide data caps on November 1st. The internet is a basic human right in the modern era, and no entity has the right to restrict it.

As a college student at the University of Michigan, internet extremely important to me since most of my work is done online. Assignments are posted and turned in online and readings and lecture powerpoint slides are online.

Comcast went from giving me unlimited internet for \$60 a month to limiting it to 1TB for the same amount of money. There aren't any competitors in the area I could switch to if I wanted to. They have a monopoly on internet in most of the country and can get away with charging whatever they want because of it.

It is the FCC's job to fix this. Data caps should be banned.

## **Description**

Hello,

I am writing in regards to the data capping trend we are seeing by major ISP companies for their internet packages. I will soon be moving to an area with no competition, and with comcast rolling out caps across the country I have little choice but to either go without internet, or pay hefty fines for my internet usage.

With no viable alternatives, I feel these caps are taking advantage of myself as the consumer. I love the stances the FCC has taken recently in protecting the rights of consumers against these ISPs and hope you can put an end to this nonsense as well.

Thank you, keep doing what you're doing!

## **Description**

Comcast has recently implemented a data cap to their internet service offering. Being the only provider in the area, I don't have an alternative choice.

The data cap is problematic due to a few reasons:

1. It stifles competition. I do not have cable TV, but instead, I choose Netflix as my primary source of TV content. Netflix is a competitor of Comcast. By limiting how much I can consume, Comcast is limiting their competitor's business.
2. I'm a technology innovator. Without high speed internet, none of my customer will upload videos or watch videos. Without high speed internet, Youtube cannot exist, Netflix cannot exist and certainly House of cards won't exist.
3. While the 1TB datacap sounds reasonable. But with a family of 4, you have essentially 250GB/person. This is a tiny amount of data when you consider 4k stream from Netflix, you can use up the 250GB in about 7-8 days.

This is unfair and given Comcast is a monopoly, it must be regulated and cannot provide internet access with cap.

## **Description**

I've recently come to experience how primal it feels to be living with data caps and reduced Internet speeds after hitting a set data limit. The Internet is a utility that I cannot live without due to my job and paying additional fees just to have my job makes me feel like I'm paying the Comcast tax. This is absurd. Comcast shouldn't be slapped on the wrist for punishing cord cutters. They should be crippled. \$2 million is nothing to them when they siphon \$12 billion from helpless people.

## **Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, game downloading, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for. Internet, unlike utilities such as water or electricity, do not have a higher cost associated with higher usage once an infrastructure is in place. We are faced with a product which breaks the traditional supply-and-demand model because supply becomes truly infinite. Comcast is akin to a company that charges you to install an air vent in your home. They have a right to charge you for the labor and materials to install the vent, but they do not have the right to charge for the amount of air that flows through the vent. Down the road, they may charge you more for a larger vent as your needs expand, but again, it would be absurd to try and then limit the amount of air you are allowed to draw from an effectively infinite source. These practices must not be allowed to continue, as it only hurts the consumer and enriches a monopolistic entity. Consumers deserve better, and we will not stand for it.

**Description**

The cable and media giant that dominates the fixed broadband market is coming up with inventive ways to favor its own content over competing streaming video apps by imposing data caps in select markets and exempting its own video app Stream TV from those caps. This is a textbook example of an ISP tilting the playing field in its own interest.

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

## **Description**

I'm having an issue with Comcast, and really any other internet provider that is trying to implement these data caps. Comcast is trying to implement a 1TB data cap which initially doesn't seem like a big deal, but it is overall quite shortsighted. Today, we are able to stream 4k videos, play artistically beautiful video games, and amazingly have completely immersive experiences in VR. The common link with these amazing technologies is that they use, and will continue to use more and more data. 1 TB now if one were to choose to do all of these things would shortly put them over that limit, and if you even look back not that long ago 1mb was seen as a lot of data. Overall, I think data caps are a terrible, terrible idea that is only being pondered because we have no real competition in most areas in the US. The internet should be viewed as a necessary utility because it is nowadays for work, social life, etc. Please do not let us stagnate technologically for the short term profit of Comcast and other monopolistic companies stateside.

**Description**

Imagine Ford sells you a car and in fine print they say "If you drive more than 300 miles in a month, engine will shut off, but you can pay us \$35 a month for unlimited driving" That is exactly what Comcast is doing. I worked as ISP Admin and actually upgraded most of the Americas big cities to go from 3mbps to 25mbps, cost was 1.7mil dollars for OC blades and few switches/fiber devices that were configured for redundancy. That same ISP charged people even now almost decade later \$30 more for internet. The intend of this complain is that 300GB of data cap was quite large back in 2005 because of video quality, websites, pictures, emails and everything else was not as good as nowadays. So please do something to remove this data cap.

**City/State/Zip:** New Lenox, Illinois 60451-1116

**Company Complaining About:** Comcast

---

## **Description**

I live in New Lenox, Illinois. The only fast internet available is through Comcast. AT&T only offers DSL at a very low speed. I'm a heavy data user with Netflix, Hulu, Amazon Prime Video, YouTube, gaming, Skype Video calls, etc. Comcast put on the cap on my existing plan and offered unlimited for 50\$ more per month. How ridiculous!! That's practically doubling the internet part of my bill! So I'm paying for a speed tier and a data cap removal. Yikes.

I feel this is being forced on me like a tax. I consume competing video services through my Comcast internet, so I'll be forced to pay more once the cap is surpassed. A 1TB data cap could be a lot for other customers, but I imagine when their internet appetites rise or they begin to use more internet-based services, they will eventually hit that maximum and be way too late to complain.

## Description

Comcast has decided to arbitrarily roll out data caps of 1TB to all its consumers on Nov 1st 2016. This makes me very angry for a number of reasons.

First of all, there is no limitation of resources. Just because someone uses over 1TB of data, they aren't taking away any data from other consumers. Data is not a precious resource like food, or petroleum, or anything else that can be quantified as a physical object. So I can't be using "more than my fair share". I'm paying for the access, so I should be able to access that data during my time I have paid. But now, I'm scared since I am a tech saavy person, that if I don't watch my data amount used like a hawk, I'm going to get slapped with ridiculous overage fees which do not go back into improving the network, simply into the pockets of Comcast so they can line them even further.

Second, who is tracking this data, how is it tracked, and how is it quantifiable? There is no transparency here. We don't know the algorithms. We don't know who is tracking it (is it comcast directly, or through a third party they hire? Who is that third party?). And if I am say, out of town for 2 weeks, and come back to my network infrastructure being compromised or hacked, and my usage has skyrocketed, who do I talk with about that? How can I contest my usage? The media has to use at least 2 sources to prove something, and I'm supposed to take the less than trustworthy Comcast's word that their third party (again, whomever that may be, we don't know) is not inflating numbers or has "misread the meter"?

Thirdly, this stifles competition. Comcast won't come out and say it, but YOU KNOW the reason why they are instituting these data caps: Netflix. Hulu. CBS On Demand. Crackle. ANY movie or tv show streaming service that isn't owned by Comcast. They feel like those other business are drawing consumers away from the TV and On Demand packages that they can charge for, so instead of being competitive with pricing or offering better services, they simply cut people off from the competition. If that wasn't doing an end run around the Net Neutrality rules, I don't know what is.

Lastly, because Comcast has the monopoly on the internet at fast speeds in my area (and in MANY other areas), we don't have a way to voice our complaints by leaving. We're told, "Sure go to someone else", only to find that Comcast has pushed out any other business that want to compete, so you have to use them. Oh, and Comcast owns all the copper lines. The internet needs to become a utility. It is no longer a luxury for people that can afford it: it has become ingrained into our everyday lives.

These, and also other factors which I'm sure I'm neglecting to mention, are the reason why these enforced data caps are bordering on criminal. Isn't it the evil megalomaniac in Hollywood films that buys up all the resources, then inflates the price to astronomical levels, simply because they can? Heck, we all know that there are people like that in real life: just look at Martin Shkreli.

Comcast is the Martin Shkreli of Internet Service Providers.

Tom Wheeler has already smacked down a bunch of Comcast's more draconian attempts at sticking it to the consumer. Please continue to do the same and **MAKE THEM STOP**.

Thank You.

## **Description**

I'm on affected by Comcast data caps, I live in the Portland area and my household uses more than the proposed 1TB/mo. This is pure money gouging and a step for Comcast to secure their profits in the future. 1TB may seem like a lot now, but really isn't. But what about in 10 years? More and more households will easily reach that cap. Their marketing for this is outright disingenuous too, stating hundreds of hours for video playback but not mentioning that would be incredibly low video quality, so low that its not worth it. If they have the monopoly on our area, they should provide good service. Data caps should never be a thing.

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

## **Description**

I am a current subscriber to Comcast and am locked into a contract with them. They are going to roll out a data cap with a 1tb limit in my area and thus are breaking the terms of my contract. I signed up with no data cap and I demand the FCC take action as this is nothing but a consumer control issue. If I choose to cut the cord on cable tv and use Netflix it is my option and as such I cannot be penalized for this with an unfair and contract breaking data cap. Simply it is nothing but an anti competitive move on Comcast's part and in serious question of antitrust laws. By enforcing a data cap they are unjustly making it difficult for any competitors to have my business. Just as a local telephone provider has to give a consumer a choice in long distance carriers Comcast must give me a choice in television providers, by enforcing a data cap they are hindering me in my choices.

## **Description**

I have been a Comcast user for about 4 years now. Their "Terabyte Data Plan" is being advertised as a "feature", as if the consumer could not use a terabyte of internet before; but in reality it is limiting the freedom of using the internet by charging extra if somebody uses more than a terabyte of data. There is no reason for this cap to exist. It is becoming more and more inexpensive for ISPs, including Comcast, to serve an internet connection to the home. Comcast believes the internet should be like food, if you want more, you pay more. However, with 4K video and game file sizes becoming larger and larger, they are taking advantage of their monopoly and the fact that consumers do not have a choice for a different internet provider. Bytes of data is not a finite resource, and the first gigabyte of data that I download does not cost any more than the other gigabytes I download.

I feel it is very unfair for the customer to be limited in what he or she downloads, as we are paying for download/upload speeds of data, not for a monthly allowance. In the attachment I have sent, under the "Do's and Dont's" section, Comcast themselves admit that it is not a matter of server congestion. I request the FCC to require Comcast to abolish their data caps and serve unlimited data, so the customer can use the internet as he or she chooses, free of limitations.

## **Description**

Comcast, which is the only broadband (as per FCC rules) provider in my neighborhood, is implementing data caps in November. While a terabyte a month may seem high, it's really not. With multiple users streaming content instead of using THEIR cable service, they are trying to punish users for seeking out a cheaper, higher quality alternative while they monopolize areas.

It isn't as if these data caps are there to improve infrastructure (which is only two percent of their annual budget) or because they're charging too little for their service (most developed countries have faster service and lower prices), they're doing it because they know that in almost all their markets, they don't have any significant competition.

I urge you to please put a stop to this practice for fair access to what is essentially a utility that doesn't cost very much at all to provide, past hookup fees.

---

**Ticket: # 1260950 - Comcast data caps**

**Date:** 10/12/2016 9:12:36 PM

**City/State/Zip:** Fort Collins, Colorado 80521

**Company Complaining About:** Comcast

---

## **Description**

On Oct. 8th I received an email from Comcast stating that they will be implementing a 1TB cap on data usage and will price usage beyond this tier.

I have no other choice for high-speed internet as a DSL provider was not deemed acceptable by my Employer for telecommuting. They are too slow to use my employers preferred web meeting tools.

The data caps are a clear violation of net neutrality because streaming Comcast video does not count against the cap, while streaming Netflix or Hulu or Amazon Prime you do. They treat their own packets differently than they treat packets from other companies and this violates Net Neutrality precepts. This move also leverages their monopoly in internet data delivery to unfairly push their TV cable product - which is a violation of antitrust "tying" restrictions.

Lastly, this will likely lead to more tiers of service in the long-term. They are imposing meters like a utility without being subject to the laws that govern utility companies and using a metering method that they developed and that doesn't match other data measuring methods.

**Ticket: # 1260955 - Comcast Internet Caps**

**Date:** 10/12/2016 9:13:32 PM

**City/State/Zip:** Ann Arbor, Michigan 48103

**Company Complaining About:** Comcast

---

### **Description**

Data caps aren't being put in place to help "consumer fairness." Costs continue to decrease, and prices continue to go up - the only thing data caps contribute to are the company's bottom line. If Comcast gives its own app an exception to those data caps, it's directly against the principal of net neutrality.

**Ticket: # 1260964 - Opposing Comcast's Internet Bandwidth Cap**

**Date:** 10/12/2016 9:16:35 PM

**City/State/Zip:** Auburn, Washington 98092

**Company Complaining About:** Comcast

---

**Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

**Ticket: # 1260989 - ISP Data Caps**

**Date:** 10/12/2016 9:23:19 PM

**City/State/Zip:** Boulder, Colorado 80303

**Company Complaining About:** Comcast

---

## **Description**

This complaint is to encourage FCC Chairman Wheeler to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

Data caps are a violation of the principles of net-neutrality and have no place in American internet services.

**Ticket: # 1260992 - Comcast's Data Cap Policy**

**Date:** 10/12/2016 9:24:58 PM

**City/State/Zip:** Sterling Heights, Michigan 48313

**Company Complaining About:** Comcast

---

**Description**

I am filing this complaint in response to Comcast and other ISPs putting in data cap policies around the U.S. The internet can no longer be considered a luxury when it is the single biggest backbone to modern life. Everything from bill payments, to actual work being done the internet is the single biggest economic boom since electricity.

And data cap policies being put into place unfairly restrict people's access to an essential backbone of American life.

Internet should be a utility that cannot be unfairly restricted, monopolized, or unregulated.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

I wish to convey my dissatisfaction with Comcast's recent announcement to limit my, and many others' monthly data usage to 1 terabyte per month with severe penalties for going over the limit. Although I have never come close to hitting this data limit, Comcast instituting this apparently unnecessary restriction signals to me nothing more than greed, anti-consumer policies, and the creation of an artificial limit on data for the sole reason of charging consumers more. The internet is not a finite resource like oil or food which is subjugated to supply and demand. In fact, the internet has become a basic utility and arguably a human right that should not be allowed to be limited to any person or have restrictions imposed upon it.

As for the limit itself, 1 terabyte may seem like a substantial amount, but size of files being transferred over the internet have been growing rapidly and in a few short years this 1 terabyte limit will not be sufficient for simple internet use, especially if a household has multiple people. Comcast knows this and is simply trying to get us used to the idea of having a limit now so that when the limit actually becomes an issue we would not fault Comcast for it, just like how we see cell phone data caps as a normal part of the service now. And in many other developed countries, data caps are unheard of. And not only do they not have data caps, internet is orders of magnitude faster for a fraction of what companies like Comcast charge per month.

Comcast is an unarguably extremely profitable company and should be investing in improving infrastructure to match that of other modernized countries. Instead, they continue to increase our rates for seemingly no reason, limit our internet speeds so that we trail far behind even some less developed countries, and now impose unnecessary and absurd data caps that are not justifiable in any way, no matter what Comcast might try and have us believe.

And my last point is concerning choice. Comcast is a virtual monopoly in many areas of the country so that consumers literally have no choice in who their ISP will be. This goes against the concept of a market free of monopolies and leaves Comcast free to charge whatever they want and impose absurd limitations on consumers leaving us no recourse. And this also gives them the power to limit access to services that Comcast and its' parent companies are in direct competition with, such as on demand streaming services. Internet is a necessary utility and a person can't simply switch to an ISP that offers better services when there is literally no other ISP to switch to. This is an issue that must be dealt with now for the sake of the consumer, the American people, and the future of the internet.

## **Description**

Comcast's latest announcement that they are bringing data caps to a large number of markets is disheartening. They have a virtual monopoly on many neighborhoods, mine included, and this move to make it "fair" by charging people who use more bandwidth is nothing more than greed. If there were an incremental cost associated with each byte of data that was transmitted, then perhaps it would be fair, but more data does not cost more to transmit. It is a blatant move to discourage streaming services and digital goods marketplaces. Consumers want their ISPs to either be more free market with a choice in providers or to be treated like a utility, which it is increasingly becoming.

## **Description**

On 10/6 I received a notification from Comcast that my internet would be capped with a 1TB data plan. I signed a contract w/ Comcast recently that included unlimited data and no caps. I feel that it is unfair and disingenuous for Comcast to suddenly place this cap on my internet. Recently my wife and I have upgraded our television and media streaming boxes to 4K UHD. Our data usage will oscillates between 400 and 700GB's a month as we stream regularly.

However, with this new data cap we will hit the cap easily. A standard 4k movie can easily be 100 gigabytes. That's 10 movies and then we've hit our cap.

Also, I believe this is Comcast's way of trying to stifle streaming companies like Netflix, who currently offer 4K content. It is my belief Comcast intends to push their 4K content on me via their cable TV subscriptions because I cannot use 4K on streaming services due to the cap. I do not use Comcast for television; in fact, I do not watch traditional television. We use only streaming services like Netflix, Apple, HBO and Hulu.

Comcast is stifling competition and attempting to drive streaming media companies like Netflix out of business by squeezing their own customers with capped data plans and then pushing their 4K television services on us - which we do not care for. I believe Comcast is trying to circumvent net neutrality rules by screwing their own customers with data caps. 1TB of data is a lot today, but when 4K content shows up in earnest, 1TB will not be enough.

I respectfully request the FCC put an end to Comcast's capped data plans. They have shown absolutely no proof that they reduce network congestion on its network, which has never been a problem to begin with. Comcast is simply trying to find new revenue because their cable TV services have been bleeding subscribers for years and has begun to affect their bottom line. Comcast should compete, not use its monopolistic power to squeeze more money of its customers.

Thank you,

~(b) (6)

## **Description**

Hi,

I have a one year contract with Comcast. They recently e-mailed me and informed me that they are putting a 1 TB data cap on my account. There is no mention of a potential for a data cap in my contract and they provided no recourse for breaking the contract without a ETF despite their unilateral change of terms. I believe there should be some recourse to leave the contract since they changed the terms. Second, applying a data cap against hardline (non-wireless) broadband is nothing more that profiteering. Demand on the part of consumers isn't using anywhere near Comcast's bandwidth capacity.

## **Description**

Along with many others I was recently informed of data caps being enforced on accounts in my area. And while Comcast is technically correct in saying that myself and most others never pass that cap, it does still add another layer of worry to my internet use.

Just this week I reformatted a computer, which ate up several hundred gigabytes in windows updates, re-downloading a game library, getting current versions of past software, etc. Data caps mean there will always be an hourglass in the back of users minds. "How close am I to my cap now? Do I need to make sure I don't watch tv for the rest of the week to ensure I don't go over? Someone sent me an email with a large attachment... can I afford to open it?" On top of that, all the while I have ad's that stream video, redirect me, and generally un-optimized websites eating up that now limited data, totally against my will. The internet is no place to meter usage.

On top of that. I think we all see the writing on the wall. Caps start high at 1TB where no one will be bothered. Eventually they either get lowered to trap current users, or the growing popularity of 4k video turns 1TB into an easy to surpass threshold. This is clearly a trap being set for users and something needs to be done about it.

**Ticket: # 1261106 - Proposed Data Caps for Comcast customers**

**Date:** 10/12/2016 10:00:02 PM

**City/State/Zip:** Washington, District Of Columbia 20007

**Company Complaining About:** Comcast

---

**Description**

I would like to express my opposition to Comcast's proposed plan to institute system-wide data caps. Data caps bring a chilling effect on Internet innovation and are a simple money grab by an effective monopoly.

The underlying problem may very well be that Comcast does have an effective monopoly in my neighborhood: Verizon offers DSL at wholly insufficient throughputs and does not offer FiOS at all.

Comcast has not substantially improved my Internet access in nearly a decade: my monthly cost for Internet access has not changed and neither has my throughput.

Adding data caps seems like it will bring neither improvements to the service, increase costs and restrict what I can do with the Internet.

**Ticket: # 1261150 - Comcast data caps in Portland, OR**

**Date:** 10/12/2016 10:19:12 PM

**City/State/Zip:** Portland, Oregon 97209

**Company Complaining About:** Comcast

---

## **Description**

I live in Portland, Oregon and starting this coming November, Comcast - the only realistically usable ISP in the area - will be rolling out a one terabyte data cap per month to all it's customers. No doubt this is related to Google's recent announcement that it will not be actively pursuing a Google Fiber roll-out in the area any longer.

Comcast's data cap policy is a flawed consumer control measure, enacted under blatantly false justifications, and a direct action against innovative companies that don't have the benefit of a deeply rooted monopoly. This is an unfair practice that harkens back to the Net Neutrality fight all over again. Data caps are just a proxy issue that allows Comcast to achieve the same thing it wanted with its anti-Net-Neutrality rules.

Unfettered Internet access can no longer be considered a luxury and is very clearly a vital utility alongside electricity or water. However, most of the country has access to only one usable ISP due to the organized regional monopolization that I know you are familiar with. In a better world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers.

This message is sent in hopes it will join with the large ranks of like-minded individuals yearning for fair Internet access. I wish to raise public awareness of this issue and if flooding you, the FCC, with our community's complaints and input is the only way to have justice enacted, then so be it.

---

## **Description**

The cable and media giant that dominates the fixed broadband market is coming up with inventive ways to favor its own content over competing streaming video apps by imposing data caps in select markets and exempting its own video app Stream TV from those caps. This is a textbook example of an ISP tilting the playing field in its own interest.

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

## Description

FCC,

I was recently emailed by Comcast regarding the 1TB/month data cap in my area starting November 1. While I agree that 1TB is more data than the average consumer including myself uses currently in a month, I am certain that with it carries a dangerous precedent to net neutrality.

As internet has recently become a staple in the American household it has become clear that large corporations such as ATT, Time Warner, and Comcast has used this to their advantage in monopolistic ways. These companies own most of the infrastructure and allow no alternatives to other internet service providers. By charging a premium for speed and data Comcast is essentially double charging their customers as customers already pay through their monthly premiums and there is no real world "limit" to "data" as long as a connection is secure. Data caps do however, stifle competition, as video streaming has become a popular contemporary alternative to cable television (also provided by the ISP's). Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, game downloading, and more.

Nothing in this complaint provides anything new or unknown, but the fact remains that consumers deserve better, and practices such as this does infringe on net neutrality.

**Company Complaining About:** Comcast

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Description**

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

I urge the FCC to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

## **Description**

Starting in November Comcast plans to roll out a 1TB data cap on all of it's customers.

This policy relies on generally flawed data measurements that Comcast has had problems with in the past. Basically I look forward to overages being billed even when I do not go over their cap.

The main reason this is a problem is because Comcast seems to have a virtual monopoly in the Portland area. The apartment complex I live in, for instance, has a policy in place that ONLY Comcast can be used for Internet, TV, and land-line Phone. Because of this monopoly Comcast is able to charge whatever it would like for internet and to mis-bill customers with impunity. I have in fact had this problem several times in the past, and only a previous complaint to the FCC did anything about the problem.

We are at a time where the Internet is a basic utility, used for primary communication and information. The monopoly that Comcast has allows them to treat their customers badly because there is no competition.

I am writing this complaint in the hopes of raising some awareness of a growing problem with the monopolies that ISPs enjoy in many areas. The FCC should step in and prevent Comcast from continuing to abuse the customers that it holds hostage because of the lack of competition in ISPs.

Because of the present monopoly I feel I pay significantly more for my internet access than I would if there were any competition. Because Comcast also provides entertainment (TV) they limit how fast my internet is allowed to be unless I also sign up for their TV (or at least they did last time I tried to look into changing my services). The data cap feels like just another way to bill me even more for the services.

---

**Description**

Added information on my last complaint of this cap. I use Netflix, YouTube, and Twitch TV as my sources of entertainment on my TV. I pay for high speed Internet without data caps so I can stream HD and UHD. Which when the sources are available take 4 to 7GBs a hour right now. This cap will limit companies from providing UHD programs. 4K technology will be stifled because a company wishes to try and destroy competition to their product. This cap destroys fair competition by limiting a direct competitor to their horrible cable TV service. To be able to use another service effectively I have to now pay almost double what was my plan to continue getting the same service. And Comcast has no other high speed competition in my area I can not switch to show this behavior is unacceptable. I use my Internet for more than just TV. I also game extensively online. I listen to music on Pandora through the Internet. I will be starting school... Through the Internet. I communicate to my family via Skype around the world. The Internet is an important part of my daily life. To allow this company to freely hinder fair use of this important utility is absurd. More oversight and competition is needed in this sector.

**Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

This is a copy paste I got off of Tomshardware and it stated the majority of my complaints. However, I do have more to say.

How on earth has the FCC failed to see this coming a mile away? A company as big as Comcast is NOT doing anything to benefit their customers, but everything to benefit their shareholders. That, on top of illegally selling people, myself included, equipment and services we didn't pay for, is a whole new level of scum. Their monopolistic mindset and knowing they're the only option for fast internet in most areas sets them up to produce sham policies that harm the consumer.

Should the FCC want to be taken seriously as an enforcer of consumer internet rights, they need to take action. This is a serious offense and Comcast needs to pay more than a meager 2.3 million for their illegal business practices. That is a meager drop in the oceans of profit they're swimming in. The fact they only have to abide by your regulatory rules for five years is also disgusting, because they will just turn right back around and do it again once that time is up.

This association needs to take a stand as a group where us as individuals cannot. That is the entire point of having a group like this, and if you guys are not going to do your jobs or are being paid off, then why the hell do you exist still? Seriously, get it together and help save the internet!

Sincerely,

(b)

---

**Description**

Data caps needlessly punish customers who depend on an internet connection for their jobs. As a freelance video editor who often works at home, data caps will severely hinder my ability to do my job, as the large files I transfer to and from my clients over the internet will quickly put me over the 1TB data cap proposed in some areas of the US by Comcast. There is absolutely no reason why these need to be implemented - if there was, we would have had these data caps implemented from the very beginning.

Data caps are also inherently anticompetitive to online streaming video services. I'm afraid that Comcast will begin selectively allowing data-free streaming from some services and not others (similar to how T-Mobile treats Spotify/YouTube/et al), which I believe blatantly violates the principles of net neutrality. Even in the unlikely case that other US-based ISPs such as Charter or AT&T do not follow Comcast's lead in implementing data caps, I fear that the negative impact this will have on the legal online media distribution industry will be large and, again, completely unnecessary.

Finally, given Comcast's record of lack of infrastructure investment, improvement, or expansion, I do not trust that the money Comcast will be taking in from their new data cap program will benefit their customers in any real way.

Thanks (b) (6) [REDACTED]

## **Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, game downloading, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for. Internet, unlike utilities such as water or electricity, do not have a higher cost associated with higher usage once an infrastructure is in place. We are faced with a product which breaks the traditional supply-and-demand model because supply becomes truly infinite. Comcast is akin to a company that charges you to install an air vent in your home. They have a right to charge you for the labor and materials to install the vent, but they do not have the right to charge for the amount of air that flows through the vent. Down the road, they may charge you more for a larger vent as your needs expand, but again, it would be absurd to try and then limit the amount of air you are allowed to draw from an effectively infinite source. These practices must not be allowed to continue, as it only hurts the consumer and enriches a monopolistic entity. Consumers deserve better, and we will not stand for it.

## **Description**

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them. The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

Due to the monopoly the cable industry has in my state I am unable to shop around for a better ISP provider. Since there is no competition the FCC is out only resort and hope in handling this urgent matter

## **Description**

I'm writing the FCC to urge you to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Recently in my area Comcast has rolled out a data cap of 1 TB. At the time my internet usage is not very much but will change shortly. Like many people I am slowly buying 4K televisions and smart home equipment. Streaming 4K content, phone backups, tablet backups, NAS backups, a security system, and smart home products will use up 1 TB very quickly. I pay for access to the internet, not a limited access to it.

Comcast continues to see higher revenues and profits with lower costs. Unfortunately in my town there are no other internet providers and so we must put up with the tyrant that is Comcast. Comcast has no reason to enforce these data caps other than protect the monopoly they have over cable tv. They are using their monopoly to make it more expensive for cord cutters to use other video options. And by exempting their own video application from the cap, they are giving Stream Tv an advantage over competition in the online video market.

## **Description**

I currently average 1.3 TB in data usage per month. The only reason I think my usage is "above average" is because I decided to stop paying for Comcast's over priced TV service and now stream all my TV through Netflix , HBO, and Hulu.

Comcast will force me to either pay \$50 extra per month so I am not force to use their TV service, or get their TV service and stop using the competitor's service.

This would be totally fine with me if I had a 2nd choice for high speed internet where I live. However, this is not the case for me. I can choose Comcast or AT&T, whose internet service is stuck in 1999 and topping at 6 Mbps.

Comcast claims that the cap is for "fairness" so people using more data pay more. However, they didn't mention how people using less data will pay less. This Data cap is just a ploy on their part to utilize their monopoly as an ISP to keep people from switching to different entertainment content providers.

## **Description**

Beginning in November, Comcast (one of the few ISP providers in Portland, OR) will be rolling out a 1TB Data Cap to all its customers.

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly. This is an unfair practice that brings back to the Net Neutrality fight all over again as data caps are just a proxy issue that allows Comcast to achieve the same thing it wanted with its draconian net neutrality rules. Comcast has even stated their data caps have nothing to do with server congestion.

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use.

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity. Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

I'm writing this email in hopes this will raise public awareness of this issue and flood you, the FCC, with our community's complaints and input so we don't have to deal with a stifled internet. If REAL competition existed among telecom companies, consumers would haven't to combat their incessant attempts at gouging every cent possible for their poorly provided service.

The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

The data caps have no real reason to exist except to squeeze more money out of consumers already paying extremely high internet fees. The news is full of stories about how inexpensive internet costs are in many other countries compared to ours. The decision to add a data cap is not a 'gift' to the consumer no matter how large it is. In fact, it's the opposite: a restriction on the consumer's ability to use the internet to its full potential.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

**Company Complaining About:** Comcast

---

**Description**

On Oct. 6th I received an email from Comcast stating that they will be implementing a 1TB cap on data usage and will price usage beyond this tier.

In our area, Comcast is a virtual monopoly for high-speed internet as well as television service. There are other options, but they are substantially slower or offer fewer channels or internet speeds or higher latency.

I believe these data caps are a violation of net neutrality because if you stream video from Comcast, it doesn't count against your 1TB cap but if you stream from Netflix or Hulu or Amazon Prime you do.

They treat their own packets differently than they treat packets from other companies and this violates Net Neutrality precepts. This move also leverages their monopoly in internet data delivery to unfairly push their TV cable product - which is a violation of antitrust "tying" restrictions.

Lastly, this will likely lead to more tiers of service in the long-term. Eventually, it will probably be 500 GB and then 250GB and so on. Soon you'll be buying data bundles much like you do with a cell phone. They want to meter you like a utility without being subject to the laws that govern utility companies and using a metering method that they developed and that doesn't match other data measuring methods.

**Company Complaining About:** Comcast

---

**Description**

Comcast has recently announced data usage caps on their internet service. Although Comcast claims these caps are reasonable for a huge majority of their subscribers, they are technologically baseless and serve only to punish consumers and internet based innovators.

To make this situation worse, there is no open market competition in my area (or in most of the country) allowing consumers to vote with their dollars.

The internet is an essential and vital modern utility which should be reasonably and fairly regulated by the government to the benefit of consumers and businesses alike.

As an example, consumer protection laws passed in Norway to clarify the legal language concerning bandwidth caps drastically changed the ISP market. Almost overnight, ISPs practicing data caps lost huge swaths of their subscribers to ISPs who offered unlimited or unrestricted access.

**Description**

Internet Service Providers should not be able to implement data caps. With an ever growing society based on data, consumers and businesses cannot be held back simply because of a poor business model of an ISP. Streaming Ultra High Quality video on services such as Netflix, upwards of 7 Gigabytes per hour is used per video. If a family of four were to watch one hour a day each, that's 840 GB used just for video (7 GB per hour x 4 people x 30 days in a month = 840 GB). There is no reason not to allow this to occur, except for an ISP to control their customers and stifle competition. There is more to say on this topic, but I will stop here. Thank you for your time.

---

**Ticket: # 1261520 - Comcast Data Cap**

**Date:** 10/13/2016 2:27:45 AM

**City/State/Zip:** Spokane, Washington 99203

**Company Complaining About:** Comcast

---

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

**Ticket: # 1261525 - Comcast's New 1TB Data Cap Policy**

**Date:** 10/13/2016 2:36:43 AM

**City/State/Zip:** Sunnyvale, California 94085

**Company Complaining About:** Comcast

---

**Description**

I am concerned that Comcast's new 1TB data cap policy is primarily for anti-competitive reasons, specifically to make it more difficult and expensive for consumers to use services like streaming video that consume large amounts of data and that threaten Comcast's TV services business. In addition to the new fees imposed on users who exceed the cap, Comcast will likely seek to use the data caps to establish a new revenue stream via partnerships with other companies to "zero rate" their services. Zero rating is dangerous to a free and neutral internet because it allows ISPs to favor their own services or specific partners over competitors.

Comcast's rationale that the caps are for "fairness" is nonsensical; other customers are not deprived of anything because of uncapped internet service.

The FCC should enhance the existing Net Neutrality rules to prohibit zero rating and data caps on broadband Internet service.

## **Description**

I'm writing to the FCC Chairman Wheeler to urge him to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

**Date:** 10/13/2016 5:32:34 AM

**City/State/Zip:** Missouri City, Texas 77489

**Company Complaining About:** Comcast

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Comcast is enabling a data cap on my service, after many years without a cap. Numerous articles have debunked the data caps as anything but a money grab, which works because there is no competitor to whom I can switch. So I either stay under the cap, or pay a monthly surcharge to regain uncapped service.

There is no accountability for how metering is done, nor any recourse if I suspect comcast's measurement of my usage to be incorrect.

To stay within the cap, I will suddenly need to scale back the streaming video services that I pay for, and install as much ad blocking software as possible to minimize usage. This will remove ad revenue from the very services that I use, since I can't justify an additional \$600/year for unlimited bandwidth.

Nor will I upgrade my television service to 4K, since this would only increase my danger of violating this unilateral cap.

If data caps are actually necessary, how can they provide it to anyone who can pay? Wouldn't it need to be rationed, or partitioned such that paying users aren't choked out by the unlimited users?

I also perform nightly low-data-rate backups of my photography library to a third-party site. I may need to cancel this service as well due to the cap.

I suspect that Comcast's own services will somehow be exempt from the data cap, pressuring me to switch from my satellite provider to Comcast. Although to be fair, they've not yet announced this to be the case.

So without competition, I'm either hostage to whatever comcast wants me to pay, or else I hurt every business I interact with after years without a problem.

## **Description**

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

## **Description**

To whom it may concern,

I'm writing to express my concern over internet "data capping", a practice engaged in by many internet service providers. Internet data usage by individual users and the enforcement of data caps is done by third-party agencies that aren't subject to any oversight or regulation from regulatory bodies. A growing number of consumers have expressed concerns that the way their data usage is monitored and measured is inaccurate. This problem forces consumers to wrongfully pay penalty fees for exceeding their data caps.

Additionally, the practice of "data capping" is an anti-competitive behavior that should not be allowed to continue. The practice is used solely to stifle competition, and the charges for exceeding arbitrary data cap limits have no cost basis that justifies charging consumers more for a service that they already pay a base price for. The use of data caps is a detriment to the progress of business, at the expense of consumers. I urge all parties to fully investigate the use of data caps by companies like Comcast in order to identify it as the unethical, predatory practice that it is. Loop-hole free regulations that do away with this damaging practice need to be implemented and enforced.

Thank you for your time.

## **Description**

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Why this is flawed:

There is no guarantee of accuracy or transparency:

Regardless of your stance on the matter there should be no argument that internet usage amounts should be accurate and transparent to users affected by it. However that is not the case at all, there is no third party government agency in charge of regulating broadband metering. Comcast contracts out its metering to a third party vendor and its methods of measurement are internal and not open to the public at all. Just this year alone Comcast has received thirteen thousand complaints about their data caps and their terrible accuracy in measurement. Almost everyone who has to deal with this caps seems to have a story of their ISP charging them for data usage that would be impossible given their current bandwidth.

Discourages cord cutting and stifles competition:

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

Users have little choice in what ISP they must subscribe to:

The Internet is no longer a luxury that most can live without. For many it has become an essential utility much like electricity.

In any thread regarding complaints against Comcast or any ISP for that matter the main complaint of users is that they have no choice in their ISP ("Save us Google Fiber!"). Those lucky enough to live in major metropolitan areas may be fortunate enough to have the choice of maybe two or more ISPs but for many users the local ISP is the only choice they have which grants that business a monopoly in their area. In a happier world there would be dozens of ISPs each competing with each other and vying for market share so the poor behavior of one company only provides an opportunity for another to gain more customers. Sadly most Americans don't live in that kind of free economic environment.

## **Description**

On the matter of data caps being implemented on users in my area; these appear to be arbitrary caps for the sole purpose of increasing profits just because they are not in a competitive environment.

In markets where there is intense competition with the likes of Google Fiber or other competitive broadband alternatives; these caps are not being implemented on the customers. This would be because the competition in most are pursuing such a cap.

With the economy being what it is; return-on-investment (ROI) has to be factored in; and cable television is no longer viable as legal Internet alternatives (HBOGo, Hulu, Netflix, iTunes, et.al) are able to target the audience and poach from cable television subscribers. For most of us; paying for these Internet alternatives to television is the same as buying upgraded cable packages. HBO is ~\$12/month on cable; and their HBOGo service is much the same for broadband. Why punish broadband users for obtaining their service using a different mechanism? To many of us, cable television is being delivered over the same pipe as broadband; so why cap one side when they don't cap the other?

Lastly, how do customers know that their usage is monitored accurately? None of these cap implementations indicate that the customers can monitor their usage in a transparent fashion; to see if the Comcasts' of the world is providing us the service that we are paying for; and file complaints when our service is not being measured accurately.

## **Description**

"I'm calling FCC Chairman Wheeler to urge him to stand with Internet users and pass strong, loophole-free rules against so called Data Caps. There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications. "

## **Description**

Comcast and Century Link will soon be adding data caps to Colorado. They state that this is being done in the principle of fairness. If you use more, you pay more. And if you use less, you pay less. Unfortunately this is a false statement.

With services like water and electricity- you pay for what you use. No more and no less (present issues posted on nextdoor excluded). Our ISP's want us to pay a set rate and then pay more. There is no true pay for what you use option. Both ISP's also provide TV service. Data caps are an easy solution to stem the increasing losses of people cutting their TV service (cord cutters) and using services such as Netflix or Hulu. Conveniently, both ISP's say that their TV services do not count towards a customer's data cap, even though TV data travels to the home over the same wires that internet data does. This violates the spirit of Net Neutrality.

Unfortunately in our area we have no 3rd option for broadband internet service.

**Ticket: # 1261917 - Data caps for home internet access in the US**

**Date:** 10/13/2016 10:53:02 AM

**City/State/Zip:** Oakland, California 94610

**Company Complaining About:** Comcast

---

## **Description**

I am against having data caps on home internet in the US. I have never experienced access issues or had my throughput affected due to congestion on the network. In fact, my access has only gotten faster over the last few years. There is not a legitimate business reason for data caps to be in place. They are simply a method to force people out of streaming services and back into traditional viewing methods.

Not only are data caps not needed to effectively continue the business, there is not a reliable system in place to effectively evaluate the amount of data used. The current system proposed by Comcast is not able to be examined by the public. Furthermore, while it is a single anecdote, I am unable to obtain my personal history of data usage online or through the phone with Comcast. The reason given is that they do not have the MAC address on my modem recorded, so their system has not been recording my usage. They are unable to tell me if this will affect their ability to measure me against a data cap starting November 1st.

This system needs to be stopped. If it can't be stopped, we must have proper consumer protections in place before rolling it out. The perfect example here is the way electricity is measured. It is verifiable and the data has been proven to be reliable. In the instances the data is not reliable, there is an open and clear course for recourse.

Thank you.

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

**Description**

Comcast is enacting monthly data caps in detriment to me and many customers like myself. Enacting policies such as these allows comcast to begin a cash grab from customers wallets while providing no additional products or services. Additionally, the product delivered by comcast is rarely the quality of the product which they advertise. For example, I pay for an Internet service at speeds over 50mb/s but netflix constantly struggles to function, a connection which takes less than 2mb/s to run.

Comcast has also stifled competition in the area, limiting my options from whom I may receive my Internet service, while also refusing to reinvest into their own infrastructure to provide an improved product, or even provide the product that is advertised.

In summation, Comcast is attempting to extort additional money from every customer through no additional service, has stifled competition and consumer choices of Internet service providers, has intentionally stalled development of their network, and advertises a product which they rarely deliver.

**Ticket: # 1262175 - Comcast Data Caps are a preventative message against the Future**

**Date:** 10/13/2016 12:19:47 PM

**City/State/Zip:** Denver, Colorado 80203

**Company Complaining About:** Comcast

---

**Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, game downloading, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for. Internet, unlike utilities such as water or electricity, do not have a higher cost associated with higher usage once an infrastructure is in place. We are faced with a product which breaks the traditional supply-and-demand model because supply becomes truly infinite. 1TB might seem reasonable today, but in the future where everyone is trying to stream 4K videos, it is protectionism so that people have to subscribe to Comcast's cable.

## **Description**

I am concerned about the data cap that Comcast is implementing for its customers. I understand that they are rolling out 1TB data caps for the internet and in this day and age I should not be worried about data caps except for my phone data. I should not have to worry when I'm sitting in my own house that I will be charged \$10 if I go over my "data cap" in my own home. We are in an inherently data -connected age now, and this should not be something that I would get gouged over. Comcast claims they're not inconveniencing anyone except the top 1% of users, but again, I don't want have to worry about paying them extra if I go over the amount they've deemed is appropriate for me. It's wrong.

---

**Ticket: # 1262490 - Comcast Data Cap****Date:** 10/13/2016 2:02:21 PM**City/State/Zip:** Robbinsdale, Minnesota 55422**Company Complaining About:** Comcast

**Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, game downloading, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for. Internet, unlike utilities such as water or electricity, do not have a higher cost associated with higher usage once an infrastructure is in place. We are faced with a product which breaks the traditional supply-and-demand model because supply becomes truly infinite. Comcast is akin to a company that charges you to install an air vent in your home. They have a right to charge you for the labor and materials to install the vent, but they do not have the right to charge for the amount of air that flows through the vent. Down the road, they may charge you more for a larger vent as your needs expand, but again, it would be absurd to try and then limit the amount of air you are allowed to draw from an effectively infinite source. These practices must not be allowed to continue, as it only hurts the consumer and enriches a monopolistic entity. In addition, Comcast is exempting its own streaming service from the data cap, claiming that it is a cable service which it clearly is not. Consumers deserve better, and we will not stand for it.

---

**Ticket: # 1262635 - Comcast data caps****Date:** 10/13/2016 2:46:06 PM**City/State/Zip:** Seattle, Washington 98199**Company Complaining About:** Comcast

---

**Description**

Comcast, which the FCC recently fined for its terrible business practices, is once again attempting to stifle internet freedom and availability in its pursuit of profits. Our world has reached a point where even the U.N. recognizes internet access as a basic human right, and Comcast's implementation of data caps is a looming threat to this right.

In many locations, Comcast has already implemented a 1TB data cap on its customers. The company claims this is a reasonable limit that few users will exceed, but the data caps will inevitably be implemented to Comcast customers in all regions. And before long the 1TB limit will be reduced to 750 or even 500GB under the same pretense that "most customers don't use that much data". Eventually those internet data caps will be cripplingly low, and customers will be charged exorbitant amounts to upgrade their internet plans. Moreover, because many areas - such as the city where I live - only have one major internet service provider. That means customers have no reasonable alternative, and Comcast has an effective monopoly to charge whatever rates they desire. Of course this is a symptom of a larger problem, but emphasizes the point that Comcast can abuse these data caps with little regulation and doesn't have to worry about losing any customers.

In addition to these concerns about customer abuse, the data caps are another way for Comcast to slowly infringe upon net neutrality. What happens when users can't stream Netflix or Hulu because of their data limit, but Comcast's own X1 streaming service conveniently doesn't count towards their own data limit. Is that not the same as providing preferential speeds to certain websites and services while limiting others to the internet slow lane?

Finally, consider this point. Does it sound reasonable for a cable company to limit how many hours of TV you can watch every month? If that sounds absurd, then the idea of internet data caps should as well. Please consider these facts carefully when considering the current state of internet service, and prevent internet data caps from becoming a harsh reality.

---

**Ticket: # 1262573 - Data caps on comcast**

**Date:** 10/13/2016 2:26:11 PM

**City/State/Zip:** Fort Collins, Colorado 80525

**Company Complaining About:** Comcast

---

## **Description**

Comcast is creating a data cap on a supposedly unlimited service. I have been a comcast customer for over 8 years and use between 500Gb and 1TB per month on their service. Just to download my gaming library from steam, it takes over 2TB and with games becoming larger and larger and offering no physical media- caps are unreasonable. In addition to this concern, they underestimate the amount of download bandwidth common things like web surfing incur on their network. They estimate 185Mb for an hour of web surfing while their own website is 25Mb per refresh. Using their own math on their own website would only allow you to view that page 6 times before the estimate would exceed theirs. Also, they appear to be targeting streaming services using high quality content by putting these caps in place. As 4k content becomes available it will require 7Gb per hour to stream, allowing on 146 hours to be used per month before incurring additional bandwidth charges. Compounded by up to 6 users- as I have in my home- allows only 24 hours of high quality streaming per user. That is less than an hour per person, per day.

## **Description**

With the pace of technology, the data caps that Comcast is rolling out to more and more geographic areas, will only serve to line their pockets. I understand that they are a business but these actions will only stifle innovation that the telecoms should have done when they received government funding years ago.

I've personally reaped massive benefits from all of the information available, from legal sites at that, that I can't imagine that as far as we've come to only be at the mercy of those companies that want to slow our country down.

Not to mention where the US measures against other countries in regards to connectivity. Why do we consider ourselves an innovative country but handicap our ability to use those innovations? In the sense of full disclosure, I have no issue with Comcast's service. When it works, it works great, but their business practices and associated lobbyists shouldn't set precedence for our country.

**Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

(b) (6)

---

**Description**

The addition of an arbitrary data cap (when there was none present before) has several disadvantages.

Allow Comcast to police itself over measuring the usage of users is in direct conflict of interest as charging more for the very next megabyte after 100GB does not require any additional difference in supplying the first 100GB.

My family receives 100% of its entertainment from online sources which allow us to tailor our needs selectively and on an at need basis. I have no other choice in my area for reliable fast/high speed internet making Comcast effectively a monopoly.

Regulation is the only solution. The Internet is a utility and needs to be maintained as such.

## **Description**

I'd like to urge Chairman Wheeler to stand with Internet users and pass strong, loophole-free rules against "Data Caps".

There is no legitimate, technical reason for these data caps. Comcast, for one, even admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes.

The real reason behind these caps is to protect Comcast's (and other ISP companies' ) monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications.

The internet is no longer a luxury but a utility that every American needs un-capped access to. Please do everything in your power to ensure this.

Thank you.

## **Description**

I have recently learned that Comcast will be enacting data caps of 1TB/month in my area. I find it unreasonable that a company try and "ration" something such as bits of data that flow freely through an infrastructure that customers already pay for through their monthly premium. Data caps hurt the consumer's ability to choose additional services that require high bandwidth, such as media streaming, game downloading, and more. It hurts our economy as a whole as people give up services that they would otherwise pay for. Internet, unlike utilities such as water or electricity, do not have a higher cost associated with higher usage once an infrastructure is in place. We are faced with a product which breaks the traditional supply-and-demand model because supply becomes truly infinite. Comcast is akin to a company that charges you to install an air vent in your home. They have a right to charge you for the labor and materials to install the vent, but they do not have the right to charge for the amount of air that flows through the vent. Down the road, they may charge you more for a larger vent as your needs expand, but again, it would be absurd to try and then limit the amount of air you are allowed to draw from an effectively infinite source. These practices must not be allowed to continue, as it only hurts the consumer and enriches a monopolistic entity. Consumers deserve better, and we will not stand for it. The Internet is not something that should be tiered, closed off, capped, or restricted from anyone anywhere on the planet. Comcast is implementing new nation-wide data caps on November 1st, and they are a violation of freedom of speech and personal liberty. The internet is a basic human right in the modern era, and no entity has the right to restrict it.

## **Description**

I do not believe that data caps by comcast are fair, nor justified. Data is not a resource, like oil, that is scarce or non renewable. To place an artificial cap or scarcity on it is poor business practices, and we as consumers have no other reliable or comparable high speed data providers to purchase our high speed data lines from.

This is clearly a money grab by comcast to try to stem the financial losses from their television sector.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

In my case, my data backup provider (Amazon) already charges for higher data rates up and down. If I were to have to restore a backup , I would incur fees on both ends.

The cap is not on data rates or limited to congested hours, nor is the cap any higher for users who pay extra for higher speeds. This is an abuse of their regulated monopoly. Please regulate them appropriately.

Sincerely,

(b) (6)

## **Description**

I recently signed a contract with Comcast for my high speed internet needs under the impression that I was able to use unlimited internet with a set amount of bandwidth. Two months later, I read an article that comcast is now implementing a 1 TB data cap with possibility for overage charges for those that go beyond. In my house, we have 1 TV, 2 computers, and our usage has reached 700 GBs of data in a month. This means that if I were to replace my TV for a 4K or even just buy a second TV, I would be exposed to these additional charges that I never meant to be subject to. As technology in general moves forward, so do our data needs. Help!

**City/State/Zip:** Bellingham, Washington 98226

**Company Complaining About:** Comcast

---

## **Description**

Data caps imposed by Comcast Inc. are anti-net neutrality by discriminating against websites that inherently use large amounts of data. Using websites such as Netflix, or YouTube can use large amounts of data. This is amplified in situations where the quality of the videos streamed from these websites are set to the highest, as well as when there are multiple people in a household, using the aforementioned websites, at the same time. Situations like this are constant throughout the day, and large amounts of data can be consumed in situations like this.

When the data cap is reached due the aforementioned situation, Comcast's data caps force the user to deal with throttled internet speeds until the next billing cycle, or if they pay up for even more data. This punishes the user for using a service they paid for, just because they hit the limit of an arbitrary number set by the internet provider. An arbitrary number set by the provider because they are the only internet provider in the area, or the only provider in the area able to provide internet fast enough for an evolving world where internet access -and speed- is becoming more and more vital to the everyday lives of the population.

Therefore, I find Comcast's data caps, and monopolistic practices unsatisfactory, and is leading to the filing of this complaint of mine.

---

## **Description**

Hello,

With the recent Comcast rollout of nationwide 1TB data caps I feel it is crucial that I submit my complaint. Data caps are a problem and without swift action will be a much larger issue in the near future limiting not only innovative uses of the Internet but the entire global flow of information. Data caps are not only an inconvenience to those customers but are simply against net-neutrality at its core. This is nothing more than a money grab and attempt to get people to stick with the dying cable TV model. It even excludes Comcast related data from that cap!!

It unnecessarily impedes emerging video technologies such as 4k streaming while simultaneously punishing those that dare to download large games or files. It's not even rooted in network congestion: <https://www.techdirt.com/articles/20130118/17425221736/cable-industry-finally-admits-that-data-caps-have-nothing-to-do-with-congestion.shtml>

For example: streaming 4k content according to Netflix uses roughly 4.7GB per hour. Doing that math that's ~7 hours PER DAY before hitting said 1TB cap. Multiply that by 2 or 3 other members of a household and you can watch at most a few hours per day. This is assuming you do absolutely NOTHING else with that Internet connection.

The further encroachment of data caps sets a dangerous precedent that unchecked will stifle innovation and let ISPs control the flow of information into households. This is something that needs to be curbed quickly to prevent ISPs restricting the flow of information simply to benefit themselves. I urge you to please consider restrictions or outright banning of data caps on hardline Internet connections such as cable and DSL. I further ask that you investigate data caps on cell data to determine if there is actually any legit reason they exist. T-Mobile is a great example. They allow very specific traffic to NOT count towards a data cap. This is also against net-neutrality.

While on the surface it may seem that 1TB is enough for anyone, it is anti-competitive, anti-consumer, anti-innovation, and I don't think it should be permitted.

### **Anti-competitive**

Comcast offers various internet service such as video streaming while not counting their own services against this imposed data cap. This dangerous precedent will allow Comcast to edge out its online competitors or force online consumers to pay overage charges in the future as entertainment requires more and more data throughput.

Competitors in the same space as comcast (such as Netflix, Hulu, Amazon Instant Video, Showtime, HBO Now, YouTube, and many others, and this is only in the video streaming industry) have their content counted towards the user's data cap. These companies already pay large sums of money to support their upload bandwidths, and in many cases pay Comcast additional fees to allow them to colocate. Since user's uploads and downloads are counted towards their data cap, Comcast is essentially charging twice for the same data.

We are already starting to see anticompetitive behavior in the marketplace with companies ignoring net neutrality. An example is Tmobile, where certain content, from companies they have picked, do not count towards your mobile data usage. Controlling the pricing for internet traffic based on where the traffic is from allows ISPs to control which companies succeed and which fail. With more

competition and more ISPs available to the general public this may not happen. Unfortunately though, for the immediate future, we must live with the reality that the vast majority of the US have little or no choice when it comes to their ISP. New ISPs that attempt to enter the marketplace, such as Google Fiber, often face many uphill battles as companies such as Comcast and AT&T attempt to roadblock their progress with legal suits.

#### Anti-innovative

As we enter a more connected world people should be motivated to design and build a future that takes advantage of our infrastructure. Artificially limiting the available infrastructure limits that available space in which to innovate. Despite the snail's pace of advancement in networking infrastructure in the US, services such as streaming videos, remote desktop, and video calling would not be possible for the wider public on the infrastructure we had 20 years ago. Imagine what advancements may be possible in the next 20 years if we support improved and open networks instead of allowing companies with borderline monopolies to artificially limit the flow of traffic. Additionally, techniques for limiting network congestion are deprioritized in order to work around these data caps as lower network congestion does not affect the user's end price. Solutions such as peer-to-peer networks and caching do not affect the user's price as users are still paying for the amount of data input and output from their homes, regardless of how far the data had to travel.

#### Anti-Consumer

Data caps needlessly punish customers who depend on an internet connection for their jobs. As the world becomes more connected, more people are attempting to make a living using online services. Large companies today such as Amazon, Google, and Apple all started in small personal garages. Artificial data caps such as these limit the possibilities of what is available for adventures entrepreneurs.

In addition to entrepreneurs, the quality of life for many is being improved as more business and opportunities allow for the benefit of working from home, either part-time or permanently as part of their job. A freelance video editor or security consultant who works from home will be severely hindered in their ability to do their job

There is absolutely no reason why these need to be implemented, and sets a very poor precedent for other ISPs. Given the profit margins Comcast has for their internet services, as well as their record of lack of infrastructure investment, improvement, or expansion, I do not trust that the money Comcast will be taking in from their new data cap program will meaningfully benefit their customers.

The US should be a leader and innovator when it comes to technology. Looking at our current state, and comparing to other countries around the world that have taken the time and energy to properly invest in their networks, the US should be embarrassed that we are taking a step backwards instead of forwards.

**Ticket: # 1263796 - Comcast data caps**

**Date:** 10/13/2016 10:02:13 PM

**City/State/Zip:** Chico, California 95973

**Company Complaining About:** Comcast

---

## **Description**

I have following complaints with Comcast:

- Comcast is using it's monopoly position to give it's own TV service an unfair advantage, by enacting a data cap as of November 1st. It will have the effect of making Netflix, Hulu etc. more expensive. The \$10 per 50GB are in no relation to the price it costs comcast. It's simply an abuse of comcasts monopoly position as there is no other broadband provider available in my area.
- The way the change in contract got communicated is unacceptable. That should have to be done in writing.

---

**Ticket: # 1263806 - Data Caps**

**Date:** 10/13/2016 10:07:05 PM

**City/State/Zip:** Littleton, Colorado 80120

**Company Complaining About:** Comcast

---

## **Description**

To Whom It May Concern,

I received communication from my internet service provider, Comcast, that I will now have to abide by their newly enforced data caps, beginning on November 1st. Less than a month's notice was given. I was not offered a discount for receiving this completely limiting change but rather an option to more than double my bill to continue receiving the same service I have had as a customer for 9 years.

This new change in no way benefits myself or the people in general and I am appalled the conduct is being permitted by you, the regulatory committee. Yes the data cap is extremely high, however the reasons Comcast is giving for this change are blatantly false and they could reduce the caps at any time.

This is the same company that two separate times has sneakily billed me rental charges for my own router that I bought. That the FCC would turn a blind eye to this not only threatens net neutrality but the affordability of information access. What next, telling people they can only read five books a year, any additional material will cost a fee. To limit information is to limit knowledge which can only hurt the people you should be protecting.

It's not too late to make changes and I hope with sincerity that you take this, and all of the other complaints, with the serious consideration they deserve and make the necessary changes that people are calling out for.

## **Description**

Data caps are a way of limiting our freedom on the internet. It hurts the general public in that it limits us the users from obtaining and doing things we want in our lives. If internet has become a utility it needs to start being treated like one. One that we as consumers have access to without limit.

Comcast set a data cap in my area recently where as before I did not have one. Once I hit the cap I will be charged more. So my only option is to go to a slower speed internet so I can try to slow myself down from actually hitting the cap. This is moving backwards, not forwards.

Just because I use alternatives to watch TV or movies like Netflix or other sites online and do not pay for cable tv. I have not paid for cable tv since around 2003 - 2005 by the way. My only outlet is the internet. So if I stream movies and music and I upload video's to youtube and stream my video games to twitch.tv I will plow through the 1TB limit without even trying. Having a data cap it would be better off for me to move to Russia where there are no data caps. I mean seriously... Why are we so far behind in infrastructure and competition in the ISP/Data internet scheme of things?

Now, because there are data caps, what you doing to stop any and all traffic going over the IP address to my home except the data traffic I approve of? Microsoft windows 10 now forces people to update. You can only set a 12hr period where it will not forcibly update and reboot your computer.

The spam emails that get downloaded into my mail client? How come you haven't stopped the spam if the data is going to count against me? I didn't approve it, nor do I approve any webcrawlers, port sniffers, or even Comcast itself from pinging my modem and using "my" so called limited data. Why should I pay for all that if I am limited?

Get on the horse FCC, stop these criminals from destroying what we have in America.

## **Description**

The fact that we have to even write to you regarding this matter is absurd.

How does one (most hated) company monopolize something that was made by people for people and have the government watch without recourse? Why are you allowing the United States of America to become a laughing stock in tech due to pure greed? How do you expect innovation to flourish when at its core its being stifled by greedy CEO's only caring about the bottom line? Data caps are purely and fundamentally designed to increase profits and rob its customers. Every part of the online experience is heading towards larger data transfers due to higher quality content yet you are allowing a company to move backwards in order to profit? There is no logical explanation that anyone at comcast can give which would explain the need for them and the fact that due to lobbying our great government allowed ancient laws to be used to monopolize every humans right is disgusting.

Countries with significantly lower GDP's around the world understand the importance of internet let alone competition and provide faster and cheaper access to it. While this "great" country allows one soulless company to blatantly steal and overcharge its customers knowing that the FCC will do nothing or laughably fine them what essentially equates to 0.01% of their net profit. No wonder they continue these horrible practices since the cost of business is less than pennies on the dollar and thanks to the FCC and absurd laws most people are stuck with only one internet provider, comcast.

**Company Complaining About:** Comcast

---

## **Description**

On 10/6 I received an email from Comcast that my internet would be capped with a 1TB data plan. My contract with Comcast included unlimited data and no caps. It is unfair and disingenuous for Comcast to suddenly place this cap on my internet. I live in Albuquerque, New Mexico, and currently, Comcast is the only high-speed internet provider in my area, and holds an extreme monopoly over broadband for thousands of Albuquerque residents.

Comcast is stifling competition and attempting to drive streaming media companies like Netflix out of business by squeezing their own customers with capped data plans and then pushing their 4K television services on us - which is highly inferior compared to streaming providers such as Netflix and Amazon. I believe Comcast is trying to circumvent net neutrality rules by punishing their own customers with data caps. 1TB of data is a lot today, but when 4K content shows up in earnest, 1TB will not be enough.

I respectfully request the FCC put an end to Comcast's capped data plans. They have shown absolutely no proof that they reduce network congestion on its network, which has never been a problem to begin with. Comcast is attempting to utilize its monopoly to suppress streaming content providers in favor of their own streaming services. Comcast should compete, not use its monopolistic power to squeeze more money of its customers.

**City/State/Zip:** Humble, Texas 77396

**Company Complaining About:** Comcast

---

## **Description**

Comcast has started placing data caps on our service. Comcast has claimed that this is to help ease network congestion, but Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. The caps are only put in place to increase profits for a company that already has sought to corner the market. Personally, I feel this is Comcast's effort to thwart Internet only users from "cord cutting" television services and using alternative methods. They've exempted their own streaming service from the data cap to provide more evidence into the greed of this decision. They already charge a good bit more than other services and blanket entire neighborhoods in my area so you aren't even given a choice for an ISP.

**Ticket: # 1263964 - Against Comcast data caps**

**Date:** 10/14/2016 1:40:42 AM

**City/State/Zip:** Sunnyvale, California 94086

**Company Complaining About:** Comcast

---

**Description**

I urge FCC Chairman Wheeler to ban Internet data caps like the ones imposed by Comcast.

There is no technical reason for data caps: Comcast itself admitted that these caps aren't about network congestion (<https://i.imgur.com/quf68FC.jpg>). Instead, these caps make it more expensive for customers to "cut the cord": since Netflix's Ultra HD uses 7GB per hour, I will be less likely to use Netflix which protects Comcast's monopoly in cable TV. As the size of videos and other media like games increases, data-intensive services that would have otherwise been developed will languish as data caps force consumers to avoid them.

Comcast also has a monopoly as the only high-speed ISP in my area, so like most Americans I cannot leave Comcast--the Internet has become an essential utility much like electricity. And it deserves the same consumer protections as other utilities.

Finally, because Comcast exempts its own video application Stream TV from its data cap, Comcast violates net neutrality by giving itself an advantage over all competing video applications.

## **Description**

Dear FCC,

Comcast recently rolled out a 1TB cap on data usage for all of its existing plans in markets throughout the United States. This change constitutes a major alteration to the service they sold myself and other consumers, which previously did not include any such cap on data. The new imposition of this data cap signals that Comcast is 1) not interested in upgrading existing infrastructure, 2) wishes to take advantage of tiered usage through bait-and-switch, and 3) is confident enough in the lack of availability of alternatives in areas where they hold a monopoly on internet service access.

I ask that the FCC please enact and enforce new rules limiting the ability of internet service providers to impose data caps on this critical public utility.

Sincerely,

---

**Description**

Comcast's data cap policy is a flawed consumer control measure against those who would go without cable and a direct action against companies that have actually innovated over the past decade rather than sit pretty on a monopoly.

Data caps exist solely as a consumer control measure to stifle competition and cause users to be biased against applications based on the data amount they use. For example Netflix which lists high quality HD as using 3 GB per hour and Ultra HD as using 7gb per hour is immediately affected by this. As Ultra HD becomes more common and using 7gb of data for an hour of video streaming becomes common place users affected by data caps will hit their limits more easily causing them to be charged overages. This will cause users to drop Netflix in favor of less data intensive services which Comcast will only be too happy to provide through cable. Families of five living in a home with heavy Netflix usage will already be pushing this current limit.

This isn't just for videos of course, people who use services like Steam will be hit just as hard especially as the size of games increases, data intensive services that would have otherwise been developed will languish on the vine as data caps cause consumers to be biased against them.

---

## **Description**

There is no legitimate, technical reason for these data caps. Comcast itself admitted in internal customer service guidelines that these caps aren't about network congestion. Instead, it claims these data caps are about "fairness," but the broadband industry continues to see higher revenues and profits with lower costs overall and there's no argument that these caps are based on any "fair" costs that Internet usage causes. The real reason behind these caps is to protect Comcast's monopoly over cable TV, making it more expensive for customers to "cut the cord" even if they want to choose other video options. And by exempting only its own online video application from the cap, Comcast gives Stream TV an advantage over all competing online video applications. "

**Ticket: # 1264147 - Data Caps Unreasonable limitation on use; no competition**

**Date:** 10/14/2016 9:40:29 AM

**City/State/Zip:** McCall, Idaho 83638

**Company Complaining About:** Cable One

---

## **Description**

Dear FCC:

I am writing with regard to Cable One. I live in McCall, Idaho where there are only two internet providers, and Cable One is the only provider that has true "high speed" internet. The other provider, Frontier Internet, uses DSL that is limited to < 10 Mbps, i.e. 1/10th the speed.

My family and I rely on the internet for work, communication, and leisure. We had the lower-tier plan with a 300GB/month cap, and after exceeding that cap for three months, were "forced" to upgrade from 100Mbps to 150Mbps to obtain a higher cap.

The new plan is 45% more expensive (\$80 vs \$55) and brings us NO useful benefit apart from the 33% increase in data cap. We do not need more speed on our connection - 100Mbps is plenty for our needs. So essentially, Cable One are "force-feeding" us a higher rate and higher speed plan, simply to increase the arbitrary cap.

This cap is much like providing a 125 gallons-per-minute firehose to bring water to a house, with only 250 gallons in the tank. When the water is gone, it doesn't matter how big the hose is.

In fact, at the download speed of 150Mbps (18.75 MBs), this cap will be used up in 21,333 seconds, or 355 minutes (5.9 hours). That is WELL under one day's worth of usage.

So we are being charged for a "fat pipe" that we cannot use even a tiny fraction of. In fact, we can only use 0.8% of the 150Mbps bandwidth available to us each month, due to the cap. (i.e. there are 790 hours in a 30 day month, divided by 5.9 hours to burn through the cap = 0.0081).

This is a clear case of "false advertising" - i.e. claiming that we can achieve 150Mbps on the family plan, when in fact we can only do so for less than 1% of the time in any month.

We have opted to remedy this situation by signing up with a second provider (Frontier), who though speeds are much slower, has no caps. In fact, this plan, at \$35/month, has a theoretical capacity of 1.7TB/month throughput (download at 5Mbps, assuming no outages), with no caps! The only problem is that it prevents members of my family (with three daughters) from using internet simultaneously. That's why we now have TWO providers.

Unfortunately, there are three problems with this scenario:

- 1) We are fortunate to have an income that allows us to pay for two different internet services. However, the average household could not afford this "workaround" to the unreasonable caps. (And we do so begrudgingly).
- 2) I have a computer science background, so I can configure the routing to work with two internet connections. This is beyond the typical user's abilities.

3) I have "done the math" to understand that Cable One is actually charging more than twice the amount for less than 1/3 of the total data per month than Frontier. The typical consumer does not realize the extent to which they are being deceived by Cable One's advertising. (I did not realize this for several years).

Worse, Cable One is actively punitive when it comes to their caps. I recently called them to inquire about an uncapped "Business Plan" (all other plans of theirs have caps, the highest being 500GB/mo). These plans are nearly twice the cost, they are slower, but they have no caps.

The representative told me that if we had exceeded the cap on our residential plan for 3 months in a row, we could not upgrade until we had FOUR MONTHS of not exceeding the cap before we could upgrade to the "Business" plan. It was after this phone call that I immediately called Frontier and ordered a second plan from another provider. If there were any reasonable way to not support Cable One, while maintaining internet access at >50Mbps, I would do so.

The only conclusion that a logical person can draw from this is that Cable One are trying to FORCE us into subscribing to their cable TV plans, which we will not do. I am very picky about the content I will let my family interact with, and we have much more control over that with the online services like Netflix, than with cable.

Another issue that's not apparent here is that of "cloud backups." (i.e. backups to a location that is offsite, in the cloud). We would like to use "cloud backups" to protect our family's precious memories (like photos) from disasters, but we have no hope of doing so under the caps. Our photo and video library exceeds 2TB. To back this up would consume 5 months of Cable One's measly caps - with no other usage whatsoever. That is simply not realistic.

Further, now that MacOS Sierra has a "cloud sync" feature, where one's desktop and documents are synced to the cloud, we cannot take advantage of that under the caps. (My documents folder > 400 GB, so it would burn through the cap).

This restriction prevents us from using modern, well-accepted computing practices, such as syncing and backing up our devices using the cloud.

Cable One is like a car dealer who sells a Ferrari that can go 250 mph, but it requires a very special kind of gas, and you can only buy 2 gallons per month. If you exceed your allotment of two gallons, they become punitive towards you, not even allowing you to upgrade to the 4 gallons plan because you dared to exceed the 2 gallons plan.

In no other area of legitimate business would such a dealer survive. However, because companies like Cable One have no realistic competition, they get away with forcing these kinds of unreasonable limitations down consumers' throats.

I sincerely hope that the FCC will step in and start regulating these unreasonable caps, that represent both deceptive business practices along with an attempt to force consumers to use services they do not want.

Cable companies are much more like a utility than a regular business, and these unreasonable data caps show that they do not take their responsibility to consumers seriously. If the companies cannot reasonably self-regulate, then the only other alternative is governmental regulation.

Sincerely yours,

(b) (6)

ps - Cable One operates in many low-income, low-education areas of the USA, making its deceptive practices even more egregious. However, it seems to "get away" with those practices exactly because it knows that its consumers aren't as well equipped to understand how they are being fooled into a sub-par service at premium cost.

**Ticket: # 1264287 - Comcast data caps**

**Date:** 10/14/2016 10:49:48 AM

**City/State/Zip:** Wilmington, Delaware 19806

**Company Complaining About:** Comcast

---

## **Description**

Comcast will be implementing data caps in my area. I believe this is anti-consumer and anti-innovation. With streaming services and ever increasing internet dependence, implementing caps will stifle new services.

Internet data is increasing in size. 4k quality video will become the next standard in a few years. (As did 1080p before). At 7gb an hour it would take an average of 4 hours a day to go over your data cap.

That's only counting streaming. Purchasing and downloading video games can easily take up several hundred more GBs. And then a typical user needs internet for a lot more.

With data caps, not only would I need to limit my use of other services, but I would be less likely to buy other services as well, because my Cap could not handle it.

Caps would essentially hurt other businesses dependent on the internet as well as consumer habits. Even with a TB cap, increasing quality and size of data will easily overtake that limit, especially as we move to the future.

Also to note is a lot of downloads are outside of the users control. (Windows updates) these happen automatically and can take a lot of data. With caps, Comcast would limit a users security by not allowing them to download updates. Security is of increasing importance in today's dat and age.
