Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Description

It was heartening that the FCC supported Net Neutrality a year ago, but since then I have noticed that the service (provided by Comcast in my area) has got worse and I have to wait longer to get things done than previously. As I am a small business owner this is a big problem as it means that it takes a long time to do my transactions. So many people rely on the internet for work and it is galling to know that internet providers are favouring leisure interests above the necessary tasks that we all need to do. These companies risk 'killing the goose that laid the golden eggs' by their destructive behavior and if they are allowed to get away with it then the internet will become just another good idea that failed to reach its potential, and millions of Americans will be shut out from being able to earn a living.

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

I am a new consumer of Comcast this only my second month of service with them. I was never informed there was data cap until I started receiving e-mails from comcast about data usage. When asked for proof where they disclosed this to me and proof of where I acknowledged it they simply kept stating a manager will call you back. Who in their right mind would want to be limited at home for data service, this why everyone tries to use their wi-fi at home because of limited data plans on mobile devices. The rep also said you know there's no usage if you only stream from our app, really so what if I want to use another service or you tube, so now are they allowed to dictate what other internet websites or service I can use. This makes no sense

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 837553 - XXXXXX XXXXXXXXXX's complaint re: Comcast, Verizon, AT&T and T-Mobile behavior

Date: 2/28/2016 6:43:20 AM

City/State/Zip: Wilkes Barre, Pennsylvania 18702

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. Ticket: # 831129 - Comcast Data Cap

Date: 2/24/2016 5:45:06 PM

City/State/Zip: Atlanta, Georgia 30339

Company Complaining About: Comcast

Description

Comcast monopolistic attitude toward the consumer is starting to become a stifling force that can't be avoided. Their abuse of the consumers' need for their services due to their control of large areas (such as Atlanta that is part of their trial data cap area) has now been taken to another level with data capping customers without any notification until they're close to their limit. I recently received the notification that i'm at 110% of my data usage and that continuing usage is accruing more charges. This action is in no doubt a response to the "wirecutting" that's going on with people cancelling their cable TV plans with Comcast due to their horribly inconsistent service along with poor customer service resolutions in which now there is a flow of support toward DirecTV and wireless video app options. This in turn is creating a control on the market that i believe to be dangerous and shows to limit the use of already paid subscriptions such as Netflix, Hulu, Amazon prime, and YouTube. I don't even know if this is a pebble in the bucket of many complaints to express my frustration for this new trend Comcast is starting, but I would like to play whatever part necessary to prevent any further injustices by Comcast to exert their force on the marketplace which essentially drastically effects open internet and net neutrality conditions that everyone person with internet service enjoys.

Date: 2/28/2016 7:08:02 AM

City/State/Zip: Englewood, Colorado 80110

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 831785 - Data Caps for Cox Communication, also no formal notice was given

Date: 2/24/2016 10:41:55 PM

City/State/Zip: Fort Smith, Arkansas 72901

Company Complaining About: Cox

Description

Cox has recently implemented data caps back in December of 2015. I also do not remember getting a formal notification of this idiotic implementation. I am consistently over or on the verge of going over this cap. Currently, they are not charging for this, except in the state of Ohio. This is unacceptable practice. The flow of information and entertainment should NOT be capped (especially the information bit, but who doesn't watch constant Netflix?) I think this is unfair. I do not pay for a certain amount of data, I pay for a service. You are not allocated a certain amount of water, or a certain amount of electricity, and in this day and age, Internet is a utility. With the rise of technology, and improvements in education, an unlimited amount of data should be allowed. I pay for bandwidth, NOT data. This should be considered a crime, and any business implementing these practices should be ashamed of themselves.

[Ticket: # 831877 - Internet Data caps unacceptable.](#)

Date: 2/25/2016 12:42:01 AM

City/State/Zip: Dearborn, Michigan 48126

Company Complaining About: Comcast

Description

No internet provider should have a data cap. ISP should only throttle users who abuse the network and in. The people of The United States of America, prefer to pay 99¢ for a mp3 delivered in high quality to all of my devices , than risk malware and viruses from pirated material.

The people of the United States of America demand unlimited access to content that is legally purchased and delivered to the highest of quality an end user's device is capable of delivering.

When you pay for something in the United States of America, you get your money worth. We understand people work hard for their money and when they decide to spend it they have the right to enjoy it and not be restricted by so called "data cap" for an untangle product. With respect to the Law.

Thank you~

The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

Description

Hello Mr. Durbin,

I address you as a Freshman at New Trier High School, and I ask you to once again support the cause of Net Neutrality.

Last year, under the Obama administration, strong net neutrality rules were finally passed, which enforced and made it law the basic principle that makes the internet what it is: an equal playing field, where all data is treated equally. This fundamental truth had been challenged by the internet service companies, who through their lobbying, had made the laws' ratification arduous. I remember that you had supported the movement for change; you were a cosponsor on the Internet Freedom Preservation Act of 2007, and you voted against the S.J. Resolution 6, which tried to shut down the FCC's net neutrality rules. I, as well as other student internet users, are grateful for your participation in keeping the internet fair.

Now, however, the same internet service providers who had littered the way to net neutrality with stones and spikes are trying to circumvent the principles again. They are imposing unreasonable data caps, and if you pass them, they are throttling. They are making certain services unavailable to users, and keeping others safe. This is a blatant attack on net neutrality. It's worse than the "hyperspeed-lane" idea. It's the threat of a "Kennedy Expressway during Chicago at the rush hour, with heavy snow and fog. Also construction."

Even I, young as I am, know that this is wrong. I know that you do too, since you were voted for by the people, as someone who can make the right decisions. I trust that you will stop this atrocity from continuing.

Thank you,

- (b) (6)

City/State/Zip: Seattle, Washington 98103

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 833028 - Network Neutrality Violation

Date: 2/25/2016 3:29:17 PM

City/State/Zip: Bullhead City, Arizona 86442

Company Complaining About: Sudden Link

Description

The telecom provider Suddenlink is now enforcing arbitrary data caps on residential service, in violation of Network Neutrality. The data caps are as follows: 250gb on the 50mb/5mb plan; 350gb on the 75/7.5; 450 on the 100/7.5; 550 on the 150/7.5.

Please consider classifying Internet as a Title II utility.

Ticket: # 838331 - Cap block is preventing my studies

Date: 2/29/2016 12:01:06 AM

City/State/Zip: Dania Beach, Florida 33004

Company Complaining About: Comcast

Description

Once again, I can not finish studying because of Comcast data blockage. I have a very small business and I am a full time college student. 100% of my studying is done on-line. I have to do research for a program. I have to raise money for my tuition. I am trying to sell products on line so I can raise the money for my research projects. In addition to all of this, I have to study for my boards.

Over the past 3 days, I have been interrupted by pop-up threatening me with more fee's. \$30.00 dollars in addition because I have hit a magical cap? I have not even been home most of this month. We are in a short month and I am, once again, being haggled for additional fee's because Comcast is.... is.... is.... What exactly is Comcast? Are their feelings hurt because so many people are unplugging them? Are they not making enough money with their national monopoly?

What excuse does Comcast off for a data cap when my cell phone has unlimited access to the internet?

Should I forward my \$250,000.00 dollar student loan to them? It takes alot of work to become a doctor. Should I forward transportation fee's since I have to go to the library like it is 1998? Should we remind Comcast what happened to AOL in the 90's with their petty and foolish demands to extract every penny out of the average family.

What exactly should I do? My studies are continually interrupted.

I would also like to point out that I recieved my first warning on the 27th, but the data was from the 25th. I would also like to state that Comcast has failed to contact me about this subject.... oh... wait... they did try to call me with a number that I could not actually contact anyone with. Since I am a full time college student and a business owner, I do not have the luxury of laying round my house all day waiting for them to grace me with their phone call. It was clear that the person never listens to my voicemail because I provided solutions to be able to talk on the phone.

Comcast is the most hated company in this nation. Why are they provided advantages and protection from our government?

The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

Ticket: # 833963 - Horrible Data Capping by Comcast**Date:** 2/25/2016 8:52:48 PM**City/State/Zip:** Hollywood, Florida 33024**Company Complaining About:** Comcast

Description

Dear Sir or Madam,

I have internet only service from Comcast in the South Florida area. Comcast has instituted a 300GB per month data cap where each additional 50GB is charged at a rate of \$10. It is my understanding that cable TV customers do not have video programming traveling over the same wires counted against their data cap, my viewing of any audio or video programming is logged against my data cap. This seems to privilege the video programming sold by Comcast over competing video services. Why can a cable TV customer watch 24 hour HD programming Without this usage counting against their data cap, while my viewing of HBO Now, Hulu, or Netflix accrues against the 300GB limit? Approximately 3.5 hours of HD programming a day in a month with 30 days by one individual within a household would be impacted by Comcast's data cap. We have four members in our household and do not wish to select low quality video feeds or agree to all watch the same programs at the same time to manage our internet usage. I view the limit as arbitrarily low and the implementation of only metering signals not originating from Comcast as a preferred programming provider as opposed to the fair playing field intended by the FCC.

This is not to mention that Comcast does not provide any unbiased way to monitor your data usage or a detailed analyses of it and could easily commit fraud by reporting larger data use.

Thank you for understanding

(b) (6)

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Ticket: # 834179 - Comcast Data Cap mis-use or Not accurate.

Date: 2/25/2016 11:36:28 PM

City/State/Zip: Hollywood, Florida 33021

Company Complaining About: Comcast

Description

Comcast has recently imposed a data cap of 300GB per month for my account, they are not providing any type of information of how data is measure, such as daily use, hourly. As of 2/25/2016 they are stating I have used 263GB of data but my router states i only used 106GB. I would like to request an investigation into this matter as i'm not the only household that this is happening to. Also this method of Data cap goes against open neutrality and third if they are going to charge for going over 300gb of usage, shouldn't we be charge based on the actual usage then? what about if we only use 10gb and not 350gb, are we getting credit back? This is a abuse tactic by Comcast to prevent users to use an alternative method of tv such as netflix, hulu, HBO one, etc since they are the only provider in my area that offer broadband access.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Date: 2/26/2016 7:20:33 PM

City/State/Zip: Plymouth, Michigan 48170

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Date: 2/26/2016 8:18:02 PM

City/State/Zip: Orangeburg, New York 10962

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

At least let me pay for faster speeds with no cap but no...

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

Ticket: # 836615 - Residential Internet Data caps - Mediacom**Date:** 2/27/2016 11:18:22 AM**City/State/Zip:** Lewes, Delaware 19958**Company Complaining About:** Mediacom

Description

I cut the cable cord about two years ago. My family uses Netflix, Hulu and Amazon streaming. I also have children who play internet games and Xbox live. In the last few months we have constantly been dealing with overage charges courtesy of Internet caps. My last bill featured 1000 GB in overage and a hefty \$200 overage charge. They claim they are being forced to do this because of the demands of heavier Internet usage. I think they are trying to make up lost revenue on overpriced cable. I have no desire to have cable. I prefer streaming video. Data caps are basically punishing people who choose a different way. Not to mention trying to force people into giving up services like Netflix and Xbox live or other online gaming. I'm not opposed to different packages for heavier users vs light users. However, usage based billing doesn't seem like the right way to do that. It seems like a way for them to take advantage and overcharge consumers and make it harder for competitors like Netflix. I agree with many others that the FCC should investigate the practice of data caps. There has to be a better way!

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 837801 - Comcast's 300GB cap

Date: 2/28/2016 3:46:38 PM

City/State/Zip: Homestead, Florida 33030

Company Complaining About: Comcast

Description

I have been a Comcast customer for sometime now and I would think that members would be treated fairly and be giving discounts, deals etc. If not the least would be that there plan stay the same or there isn't any vomplain. I have the performance package with blast! Not cable tv or voice plan just internet and I pay 65 dollars a month and I am extremely happy with that plan. I am not all happy or think it is fair that all of sudden I have to pay 30 dollars extra for the same exact plan I have now or be charged a crazy amount for surpassing my data cap which just came into play. In one month my house used about 600 GB luckily I have 3 months free of overage charge. But as you can see it is about \$60 extra if I don't pay \$30 more a month for unlimited. The only option a customer that has been with Comcast for years has is to pay more??? I don't get that at all. They offer me a double play package that comes with cable tv and cable internet and they raise the cap to 350 and I get a few channels, which I don't even know if those channels will have any of the stations of the series I watch on my Netflix and hulu account. They don't offer a list of channels before I choose if I want the package. On top of that I have a stay at home wife who loves binge watching shoes and puts cartoons on for my daughter who is 16 months old and attention span is not long so commercials from a cable television will make her lose focus quicker. I love the ease of Netflix and hulu being on my PS4, smart TV, and cellphones, also tablet. I am not gonna be using cable TV at all so I Don't see the need to pay 20 dollars more for cable TV and 50 GB more which I will probably still pass. I really just want to know what are my options? Other internet providers either don't offer anything near the speed of xfinity on my area, if at all provide internet in my area. I am really happy with my 125 Mbps and do no see why I have to pay more when I am fine the way it is now. I forgot to add that I was told that the 300 GB was actUALLY part of Comcast now officially. I used to think it was a trail or something, I don't know if this is valid because I didn't ask for the Comcast agents name. All I want is my performance with blast! Package to stay at \$65 a month unlimited and \$10 for a modem rental. I am asking a customer who has been with Comcast for a while.

Ticket: # 837254 - Comcast sudden data caps and the deceptive practices they inherited

Date: 2/27/2016 7:54:25 PM

City/State/Zip: Shreveport, Louisiana 71118

Company Complaining About: Comcast

Description

Dear Sir or Madam,

I am a Comcast customer in Shreveport, LA. I have no other option for high-speed internet. They recently sent me a letter stating that they would be implementing a 300 GB a month data cap on Dec 1. Overages will be charged at 10\$ per block of 50 GB over the 300 GB limit. This will not be prorated or rolled over per month if I don't use the entirety of the 50 GB block; meaning even a 1 byte overage will result in a 10\$ charge. These overage charges are not based on the time the usage occurs, suggesting that they are not tied to network congestion or management problems. In fact, no reason was given in the letter as to why these caps and charges are being implemented. I will now have to pay an extra 35\$ a month to retain the unlimited data service I have been receiving. This is a forced change that I have no way to contest or reconcile. Even more concerning, the letter states that they will be sending an "in-browser" notification when you reach certain thresholds of the data cap. It is my understanding that Comcast would be forcing me to install a browser plugin to receive this message, or use packet injection. The possible use of packet injection raises large privacy and security concerns for me, as any of the data I send or receive may be intercepted and / or modified. All of this goes against the principles of net neutrality and having a free and open internet. The way the data caps and overage charges are being implemented amounts to extortion of the consumer. Thank-you for taking the time to investigate this matter.

Sincerely,

(b) (6)

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

As a small Web site owner, I count on an open Title II Internet in order to have equal access by visitors to my Web site. I should not be put at a disadvantage because I cannot come up with the bribe money ISPs are demanding from me in order to keep me from being in the "slow lane". This is exactly what Net Neutrality as a policy should enforce: Fair and equal access to and from all parties on the Internet. Under these new schemes that ISPs are devising to create new ways of cheating to get around Net Neutrality rules, I and my Web site are being victimized and extorted.

It is time that the FCC step up and enforce its regulations against these greedy predators in order to ensure an open and neutral Internet. Please stop these scoundrels from subverting the law of the land.

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

Ticket: # 838218 - Comcast Data Caps

Date: 2/28/2016 9:47:46 PM

City/State/Zip: Miami, Florida 33194

Company Complaining About: Comcast

Description

Comcast is "triallying" a 300 GB monthly data cap on consumers. The thing that's wrong with this is in this age, the internet is used for just about everything and people burn through 300 GB of data well before the month is over. The money they're charging for going over is \$40 for me to pay extra. Not only is this infuriating, half of the time the connection drops. Comcast are a bunch of corporate moneybags who can't get enough of screwing their customers over.

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 838253 - XXX XXXXXXXXXX's complaint re: Comcast, Verizon, AT&T and T-Mobile behavior

Date: 2/28/2016 10:14:02 PM

City/State/Zip: Santa Monica, California 90404

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. [Ticket: # 838272 - Comcast Data Caps](#)

Date: 2/28/2016 10:31:51 PM

City/State/Zip: Burlington, Vermont 05401

Company Complaining About: Comcast

Description

Comcast has expanded their data caps to more areas. Thankfully not in my area yet but this needs to stop. Data caps don't help the network, they just stifle infrastructure updates and make customers pay more for crappy service. There is no need for data caps to exist because that's not how the internet or any network works.

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Ticket: # 838358 - Data Cap on Cable One Internet**Date:** 2/29/2016 1:05:41 AM**City/State/Zip:** Chubbuck, Idaho 83202**Company Complaining About:** Cable One

Description

Cable One internet imposes a data cap each month of 300gb on it's \$55.00/month, 100mbps download speed account. If you go over this limit more than 3 times, you are automatically bumped to a higher tier, along with a higher price of service. Recently, Cable one increased speeds from 50mbps to 100mbps, but did not raise the monthly cap. This means that netflix, youtube, and other video providers now have much more bandwidth to use. That means that they will automatically select the higher resolutions for videos, causing the customer to use more data and hit their cap faster. This is why many customers don't change their internet usage habits, but are now going over caps and being forced to higher tiers and higher prices. These higher prices are not what was agreed upon in the original contract, and it is absurd for Cable One to impose data caps like this. They call them "guidelines", but for all intents and purposes, they are simply caps and a way to force customers to higher rates.

Date: 2/29/2016 2:50:30 AM

City/State/Zip: Keokuk, Iowa 52632

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Dear FCC:

Last year you took a stand for open internet, which benefited millions of Americans. As expected, ISPs are attempting to sidestep your rules on net neutrality. I'm referring to Comcast's discriminatory data caps, AT&T's and Verizon's fees for data cap exemptions, and T-Mobile's extravagant technical demands of video providers for data cap exemptions, as well as its downgrading of video across the board, which result in lengthy waits during loading/buffering. These ISP programs impede access to websites that refuse or simply can't afford to meet the new requirements.

Data caps and exemptions, as used by these providers, appear designed to discourage broadband Internet use, rather than to manage congestion. In particular, they target users who'd rather give up their expensive cable TV packages and watch online.

Please protect consumers from these tiered practices that violate net neutrality.

The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 838427 - XXXX XXXXXXX's complaint re: Comcast, Verizon, AT&T and T-Mobile behavior](#)

Date: 2/29/2016 3:33:35 AM

City/State/Zip: Chicago, Illinois 60647

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. Ticket: # 839972 - Broadband data caps

Date: 2/29/2016 6:39:09 PM

City/State/Zip: Mauldin, South Carolina 29662

Company Complaining About: AT&T

Description

FCC,

Comcast, Time Warner, & soon to be AT&T are introducing data caps on home broadband that could easily be used up in minutes on high-speed plans, and that have huge overage fees. I understand why data caps are needed on mobile internet so they can limit tower usage, but for home there is no reason that this should happen. Not only that, but their own services (aka TV and on-demand) are exempted from these caps. This is a violation of Net Neutrality. Please tell these ISPs that what they are doing is unnecessarily wrong, and they should stop or face you. Thanks for your protection of the Internet. Sincerely, (b) [REDACTED]

Suddenlink communications has begun enforcing crazy low data caps in my area. Doing damage to my way of life and forcing me into a "business plan" just to be able to use the internet at a normal rate. Please help

Ticket: # 840667 - Throttling connection

Date: 3/1/2016 1:43:38 AM

City/State/Zip: Greenville, Illinois 62246

Company Complaining About: Ruralcomm

Description

I am having my connection throttled during the hours of 5:00 P.M. and 10:00 P.M.

The connection being throttled goes to various sites with a video player. None of these videos are more than 480p, as 1.5 Mb/s is far too slow to go 720p, even with YouTube's HTML5 Video.

These sites include YouTube and various video sharing sites (thevideo.me, allmyvideos, etc). YouTube is throttled the most. I am incapable of watching a video as it loads, as YouTube is set up to do, during the hours between 5 and 10 P.M. I have no issues any other time of the day.

They may claim it to be due to controlling during peak hours. *If* that were the case, why has it started in the last week, instead of continuously happening for the last several years? There has never been any overloads of any kind.

They may say that it's not throttling at all, that's just when peak usage is and you're just suffering because everyone else is using up the bandwidth at the same time. While I would not put it past them to not be competent enough for this to happen, the fact is that it is completely untrue. I know this for several reasons.

First and foremost, if that were true, it would have been, as stated above, happening for the last several years. Not suddenly in the last week.

Second, I have heard directly from various residents near by that they are switching to the other WISP as it expands. A lot of those residents are within range of the Ruralcomm towers/repeaters/etc.

Finally, their own site states, and I quote: "Does Rural Comm limit how much I can download or upload? Rural Comm does not limit how much you download or upload. Rural Comm only limits the speed of your package. Unlike most satellite Internet providers, we do not have the "fair use policies" which slow you down dramatically once you download or upload a certain amount."

Perhaps this refers to them not having a data cap. But what do ISPs do when a data cap is reached? They throttle. How interesting that I am being limited despite their public claim that they don't do that. (Source: <http://www.ruralcomminternet.com/faq/>)

IF they are throttling to "help traffic" during peak hours for customers using already sickeningly low bandwidth and speed, why do they not simply upgrade rather than risk being caught throttling and it costing them far more to deal with legal issues and whatever else results from being caught?

IF they are throttling to "help traffic" during peak hours for customers using already sickeningly low bandwidth and speed, why are they not limiting other things like downloads and browsing as well?

Why do they need to hold back low quality 480p HTML5 video, which is already efficiently compressed, stable, and secure?

Ruralcomm is unwilling to upgrade their equipment. I have called several times about other issues and was given excuses as to the cause (eg. "It may be that more are getting on and it is slowing things down. There is absolutely nothing we can do about it. You're just going to have to deal with it or wait."). I never call them about issues anymore due to the constant excuses and rude treatment. Therefore I have not called about the throttling. The chances are high that I would get some excuse because to them their customers are country bumpkins. An admission to the throttling would be a glorious miracle.

The connection is already a very slow rate of 1.5 Mb/s. I have packet loss 24/7 (11% over a 5 min interval). If needed, I can provide live proof of throttling by using my router's real-time bandwidth meter to show that I'm being throttled.

I fear this my go nowhere and I will continue to be throttled and be disliked even more by Ruralcomm (not that I care about that last part). If there is anything else I can provide or do, please let me know and I will do whatever is required.

Ticket: # 850425 - Suddenlink Communications Data Cap**Date:** 3/6/2016 10:30:56 PM**City/State/Zip:** Bullhead City, Arizona 86442**Company Complaining About:** Sudden Link

Description

I believe that Suddenlink Communications in Arizona is prohibiting the reasonable use of the internet services they provide without incurring excessive fees relating to how much internet is being used. They advertise "unlimited internet" access through local advertisement but use data caps on all residential accounts. They have monopolized many areas of Arizona and using what they claim as excessive internet usage to incur fees they claim is to help better support the use of major internet users. Except this concept clearly doesn't work as they claim is the reason they incur the charges in the first place. No matter how much internet a customer uses a month, charging more for using it doesn't suddenly create better access to other users who don't use as much. This is an attempt at extortion and monopolization without healthy competition for fair pricing and services for local residents of the Arizona state including Mohave County. Suddenlink has made a clear violation of the US Antitrust law, abuse of pricing for its services without fair competition, limiting internet usage and access to it without fair treatment based upon individual differential situations. Suddenlink is extorting its customers to make up for its failing cable services due to usage of other alternative sources of entertainment that require the use of infrastructure services like internet through Suddenlink (example: Netflix, Hulu). It seeks to punish its customers for using a fair and legal competitor. Due to the growing need for internet connection and better performance of its services, companies that offer DSL rather than cable do not qualify as a clear and equal or fair competitor to Suddenlink Communications, thus creating a monopolization over qualifying fast internet services in the areas in which it conducts business. This is also a clear attempt to find a loophole around the net neutrality laws that were created to protect the openness of the internet. Data caps only hurt internet economies and attempt to limit competitors. This affects small and large businesses alike because consumers are now being prevented from using other companies (Example: Netflix, Hulu) services as they are allowed and as the consumer sees fit.

Ticket: # 843754 - Comcast Data Cap

Date: 3/2/2016 3:44:50 PM

City/State/Zip: Canton, Georgia 30114

Company Complaining About: Comcast

Description

I filled a complaint 3 months ago regarding Comcast's unfair "data usage plan." I stated how I was explicitly told that the plan was only temporary and would be going away soon. It's still in place. When I filled the first complaint, I received a voicemail from Comcast's customer security team at 6 o'clock at night. I tried calling them back 11 times over a 1 week period. Nobody ever picked up. Since I'm just outside the serviceable area for google fiber I'm stuck with Comcast. Since I'm stuck, I'm either forced to pay an extra \$35 a month for unlimited data or ration my internet usage. It's a lose lose situation and I'm beyond frustrated. The attached image is from a Comcast employee who uses Reddit. It explains the ins and outs with how to deal with people like me who understand that data caps are money grabs and have nothing to do with "traffic congestion."

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 844412 - Cable One data limits are not reasonable and should not be allowed

Date: 3/2/2016 6:57:53 PM

City/State/Zip: Eagle, Idaho 83616

Company Complaining About: Cable One

Description

My Internet service Provider Cable One imposes a seemingly arbitrary data cap on accounts based on the provided speed. If I were to actually use the internet at the provided speeds, I would overrun my data limit in a few short days. I do not feel it appropriate for a family using less than 10% over the data limit arbitrarily decided on by the ISP to be forced to have internet costs increased 50% to cover this small amount of data use. We are not cord cutters, but do watch netflix a few nights a week. We do subscribe to a full cable plan from our provider, and this small amount of data usage is going to force our monthly costs for internet and cable television over the 200\$ a month amount. I request that you force internet providers to remove data limits. From the research I have done, it does not appear that the backbone providers they use for uplinks charge them more for more traffic, they are just using this as an easy money grab to increase rates for consumers. I am barely exceeding my cap, it is not likely our small amount of usage causes any congestion issues for the provider. In my previous house I lived in about a year ago, there were multiple issues with Cable One not being able to provide the services they sold due to oversubscription or over selling of the services. At no time when I complained many times about that was a refund or adjustment offered.

Company Complaining About: Sudden Link

Description

Myself and several of my friends and colleagues have recently been subjected to the new data caps that Sudden Link Communications has begun imposing. We have noticed that our internet usage amounts have spiked after changing to higher data rate plans, despite the fact that we have continued with our normal habits. Sudden Link advised all of us to "pay for a higher plan and get a higher data cap" which some of us did and again, noticed that our regular usage spiked dramatically despite similar usage. One of us has a Baracuda Firewall that is now monitoring upstream/downstream through that connection and it is reporting far less usage than Sudden Link does. It would seem this company either has some kind of flaw in their ability to measure usage or they are willfully deceiving customers in order to goad them into buying a larger plan.

Date: 3/3/2016 2:39:13 PM

City/State/Zip: Boise, Idaho 83709

Company Complaining About: Cable One

Description

Cable one advertises double the speed without double the cost, recently due to their data cap, I was forced into an upgrade to a higher data speed package with a higher data cap (data caps should be against open internet laws btw). I went from a 100mbps internet at 64\$ a month including a modem rental of 8\$ to a package that was 143\$ a month including a 8\$ modem rental for 200mbps and 750gb per month. Unless I don't know how to do math that is more than double the cost for double the speed. Also on the Cable one website they advertsie that Customer Satisfaction is their number one priority yet no matter how many times I have told them I am not happy with the service they provided me over the phone they refuse to find a situation that will alleviate some of my angst. The failure to notify me about the reinstatement of data caps after they have previously removed all data caps I was a customer when they reinstated them resulted in me breaking my data caps, that by my own tracking I was using 300-350gb of data not the 500-700 that they have claimed. Theri data tracking system is flawed their advertisements are outright lies and the statements that customer satisfaction matters to them is a lie I have never been satisfied with my service I just deal with it because they are the only reliable broadband provider in my area.

Ticket: # 1020628 - XXXXXXX XXXXXXXXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:42:36 PM

City/State/Zip: Saint Paul, Minnesota 55109

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Date: 3/3/2016 4:43:50 PM

City/State/Zip: Key West, Florida 33040

Company Complaining About: Comcast

Description

"Public Knowledge" has filed a complaint with the FCC over net neutrality and other issues with Comcast, some of the same issues I sent to the FCC on December 17, 2015, FCC complaint 710987, (with a follow-up complaint 814134 because Comcast seriously delayed sending me a copy of their response to the FCC which should have been sent to me at the same time). The "Public Knowledge" complaint states: "The complaint says the zero-rated service doesn't gel with the FCC's Open Internet rules and also violates Comcast's NBCUniversal merger commitments." Comcast's reply was finally sent to me on 02/17/2016, and the FCC has this document in my ticket number 710987. Some items addressed in my complaint (which was discounted by Comcast) are raised in the Public Knowledge complaint, and these items of improper, if not illegal, practices need to be more carefully reviewed by the FCC. Comcast customers are being overcharged, cheated, bamboozled, by Comcast's schemes to increase revenue to cover the loss of revenue due to customers' downgrading and/or deleting parts of Comcast's various services, and the recent addition of Comcast's "Stream TV" and DATA CAPS.

Following is the "Public Knowledge" information as it appears in the March 3, 2016 issue of "Fierce Cable."

Comcast's Stream TV draws FCC complaint over net neutrality, NBCUniversal merger conditions

March 3, 2016 | By Ben Munson

Public Knowledge has filed a complaint with the FCC over Comcast (NASDAQ: CMCSA) excluding its Stream TV OTT service from its customers' data caps. The complaint says the zero-rated service doesn't gel with the FCC's Open Internet rules and also violates Comcast's NBCUniversal merger commitments.

Public Knowledge calls Stream TV's zero-rating practice "illegal" regardless of whether the service is classified as a non-broadband, specialized or MVPD service. The complaint also alleges that Comcast is creating an "artificially low usage cap" by making the service unlimited and that it would cost much more than Stream's \$15 monthly rate to pay both \$35 for unlimited Internet access to Comcast and subscription fees to services like Netflix (NASDAQ: NFLX) and Hulu.

In addition to running afoul of net neutrality rules, Public Knowledge says Comcast's zero-rated service violates NBCUniversal merger conditions set by the FCC and Justice Department, requiring Comcast to count traffic from competing video services the same as it counts its own so the MSO doesn't "unfairly disadvantage online video."

Public Knowledge urged the FCC to stop the Comcast from zero-rating Stream and offered up potential solutions to Open Internet concerns with the practice.

"Because Comcast's illegal behavior would harm the video marketplace and viewers, we've asked the FCC to stop it. For example, Comcast could eliminate its broadband cap and return to unlimited plans, or Comcast's customers -- and not Comcast -- could select which services to exempt from metering. We urge the FCC to take quick action to protect consumers and competition in the emerging online video marketplace."

Comcast reiterated that Stream TV is a cable service delivered over the MSO's private, managed network and is subject to all the regulations that apply to its other cable TV services such as franchise fees, PEG requirements, closed-captioning, and emergency alerts.

"Just as when addressing similar issues in the past, Public Knowledge doesn't have the facts straight. Our Stream TV cable package does not go over the Internet, so it can't possibly violate a condition which only applies to Internet content. Customers do not access Stream TV through their broadband service. Period. Public Knowledge saying so over and over does not make it so. The bottom line is that Stream TV doesn't violate any FCC or DOJ requirement from our NBCUniversal deal, just as the complaints they filed over three years ago which the FCC declined to take action on did not," Comcast said in a statement.

Controversy of zero-rated services has extended beyond the traditional pay-TV business. T-Mobile's (NYSE:TMUS) Binge On feature, which allows its mobile subscribers to stream video from numerous OVD services without counting against their data caps, has been called out for seemingly flying in the face of the Open Internet rules. Likewise, Verizon's (NYSE: VZ) plan to zero-rate its OTT service Go90 for its mobile subscribers through its FreeBee sponsored data program, has drawn critical responses. Verizon CFO Fran Shammo confirmed that Go90 will be taken off Verizon subscribers' data meter beginning this week.

Date: 3/14/2016 6:07:04 PM

City/State/Zip: Littleton, Colorado 80128

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 1020630 - XXXXXX XXXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:42:50 PM

City/State/Zip: Yorba Linda, California 92886

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 848358 - Being charged for consuming content, net neutrality violation

Date: 3/4/2016 4:56:07 PM

City/State/Zip: Atlanta, Georgia 30360

Company Complaining About: Comcast

Description

I'm being charged for "going over" a 300 GB data soft cap. For every 50 GB over 300, they're automatically charging \$10. This is a problem in several aspects.

- 1) I don't believe the data metering is accurate. I've been monitoring my data usage, and from my router's metering, I don't believe I'm even hitting the 300GB cap. My last bill had an extra \$20 charge for going over 300GB and using two 50 GB blocks.
- 2) By limiting my usage by enforcing a soft cap, comcast is effectively blocking access to content in favor of other products they offer (expanded cable packages, for example). I believe this is a tactic by comcast to try and get users into using their on demand service and away from better online video content services (netflix, youtube, hulu, etc.). The core principle of net neutrality is that ISPs should not show favor to content, and by limiting bandwidth they are basically saying I cannot access the content I would like to without paying exorbitant fees.
- 3) This is absolutely not a fair price for data. This is price gouging, and it's absurd.

Please help, I feel trapped. I have no other options to high speed ISP at my home, so I'm stuck with this terrible company and this ridiculous, indefensible data cap policy.

I would like to see these data cap fees removed now and not be charged in the future. Thank you

Ticket: # 1020631 - XXXX XXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:43:00 PM

City/State/Zip: Atlanta, Georgia 30312

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 852523 - Consistently not meeting speed, throttling of netflix, and data caps.

Date: 3/7/2016 11:43:40 PM

City/State/Zip: Ridgecrest, California 93555

Company Complaining About: Mediacom

Description

I pay for 100mbps with my only cable company. I get on average 60mbps. Netflix specifically is clearly being throttled to less than 2mbps. My coworkers, which are also on the same provider, the only provider in the area noticed the issue days ago, and has been attempting to go through their support and they have been giving him the run-around. Resetting and rebooting his modem as an excuse to get him off the phone. Enough is enough, they are abusing their power of being the only provider in the area, and not upgrading the capacity to meet demand (if that's the actual cause).

Attached is a screenshot of my network meter, downloading from kernel.org mirror (a really fast connection.) Available speeds only at 40mbps, when I pay for 100mbps. Netflix is considerably slower, limiting my speed prevents me access to netflix quality and bandwidth I PAY FOR!

I have a monthly data cap of 1tb a month. $100000/2592000$ (1tb in mb/1month in seconds) = 0.38mb/s to a cap, this is way below the description of "broadband" or "high speed" internet (@ 20mbps). Instant speeds are not the only measure of bandwidth. This is not net neutral!

[Ticket: # 852662 - Suddenlink data cap](#)

Date: 3/8/2016 9:40:44 AM

City/State/Zip: Winterville, North Carolina 28590

Company Complaining About: Sudden Link

Description

Why is Suddenlink allowed to impose data caps when they do not incur any costs for the data? If I use more electricity, someone has to generate that electricity. If I download more data from Netflix, Amazon, Hulu or anyone else, Suddenlink does not incur any costs for that. They are just the conduit to the internet where I get my data. They are imposing an unfair tariff on my data. This is a scam by the industry and in my humble opinion - Unfair.

Ticket: # 853143 - Comcast Data Caps

Date: 3/8/2016 1:34:38 PM

City/State/Zip: Appling, Georgia 30802

Company Complaining About: Comcast

Description

Comcast data caps are fundamentally, ethically wrong in areas where they hold an Internet monopoly. Even though their data cap program has been promoted as a "trial", they provide no channel for direct customer feedback on the plan! The only way for customers to register their rejection and displeasure with this scheme is to contact government entities, such as the FCC. This plan is effectively set up as a way to unethically extract more money from users who are kept from making any meaningful complaint to the company. Consequently, Comcast can tell their shareholders that customer reaction is "neutral." This is unethical business practice in the extreme because Comcast gives customers no way to easily register their approval or disapproval of the trial program.

[Ticket: # 853778 - Armstrong Monopoly - Data Cap](#)

Date: 3/8/2016 3:49:06 PM

City/State/Zip: Butler, Pennsylvania 16001

Company Complaining About: Armstrong Cable

Description

Internet companies are using their area monopolies to force users to be subject to their data cap. In the case of armstrong, the limit is very small and according to my linux router, it is not even close to accurate at monitoring my usage. This is fraud at a minimum. The internet is now a utility that people need to learn, work and live. It needs regulation.

[Ticket: # 1020654 - XXXXX XXXXX's complaint re: ISP Zero Rating](#)

Date: 6/6/2016 4:48:09 PM

City/State/Zip: Portage, Wisconsin 53901

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 862153 - XXXX XXXXXX's complaint re: Comcast, Verizon, AT&T and T-Mobile behavior](#)

Date: 3/14/2016 6:45:46 PM

City/State/Zip: West Roxbury, Massachusetts 02132

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Ticket: # 1020451 - XXXXX XXXXXXXXXXXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:05:08 PM

City/State/Zip: Fremont, California 94555

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Ticket: # 857232 - Unfair Practices?

Date: 3/9/2016 11:55:42 PM

City/State/Zip: Decatur, Illinois 62526

Company Complaining About: Comcast

Description

Alright, so I am moving into the address listed on the 18th. Comcast's xfinity is the only company that provides the internet speeds I require for streaming and gaming. While I was setting up service I asked if they had a data cap, they said yes and that it was 300gb. I asked if there was a plan that included unlimited data. They put me on hold and told me that the unlimited data plan was unavailable in my area.

After digging around I learned that not only do they have unlimited data plans at additional costs in other areas, but they also have unlimited data in other areas for free.

I feel as if I am being discriminated against as a resident of my area. This practice seems very unfair and serving as a method to promote their television services, which I do not want or need.

I have a netflix account and a hulu account. I stream on several devices in my home, and at any one time my wife, my daughter, my son, and I could be watching four different things.

Furthermore, we are a family of gamers - both through LAN and online multiplayer (such as MMOS). A game installation can run anywhere from a couple hundred megabytes to dozens of gigabytes. Not to mention how many of our games receive updates every day.

We use Steam (by Valve) to acquire and play our games. Which is an online platform.

It can not, nor should it be legal for them to not provide me with the same service they provide to other areas - the unlimited data.

It shouldn't be legal for them to have limited data plans at all. In this day and age, where data is coming in larger and larger packets, it isn't feasible. It isn't fair to those whom stream or game through the internet.

This is purely conjecture, but I imagine they want it this way in order to lessen streaming so more people will buy their television services.

I applied to their service anyways. Not because I wanted to, every bit of me wanted to say "no thank you", but as I mentioned, they are the only provider with the speeds I need.

If our government doesn't protect us from these faulty practices, who will? What recourse will I have when I am charged ten dollars every fifty gigabytes I go over the data cap? There are no other providers I can go to instead of Comcast.

Date: 3/10/2016 11:07:31 AM

City/State/Zip: Hialeah, Florida 33012

Company Complaining About: Comcast

Description

Comcast has issued a data cap that has caught us by surprise. They have imposed since September of last year (2015) a 300 GB cap that seems more like a money gouge than anything else. Even though we pay for 3 services with this company, we utilize the internet more so than the other two (phone, cable) Comcast is blacklisting their customers who are subscribers to streaming services by imposing this cap. They are also surreptitiously circumventing net neutrality laws by offering competing services that do not count against the cap, services which they own. Comcast also says that 90% of users will now be affected, but in my household we have no heavy users, yet we have gone over the cap every month except for one. The FCC must step in and correct this situation.

Date: 3/10/2016 6:12:36 PM

City/State/Zip: Edisto Island, South Carolina 29438

Company Complaining About: Comcast

Description

I am now having to pay overages to Comcast for utilizing more than 300GB of data in a month. The reasons their customer support gives me do not add up nor make ANY sense. Downloading a few games a month (as I am an avid computer gamer) can be 40-60GB alone. I also choose to consume most video media through my Internet connection. They also violate Net Neutrality by offering me their Streaming TV service (for an additional fee) that won't count against my data cap, YET my Netflix does. There is no other non-capped data provider in my region, I am forced to do business with Comcast. Data caps need to GO AWAY permanently.

Ticket: # 1020511 - XXXXXXX XXXXXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:17:12 PM

City/State/Zip: Staten Island, New York 10304

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 859204 - Comcast data caps

Date: 3/10/2016 10:19:33 PM

City/State/Zip: Johns Creek, Georgia 30022

Company Complaining About: Comcast

Description

Two complaints:

1) Comcast arbitrary data caps - this is just a naked money grab that limits customers' ability to fully utilize competing services like Netflix, iTunes, or Roku for streaming video content.

2) Despite charging additional fees for data over the cap, Comcast provides no tools for determining which devices and/or applications are using data so that customers can manage their monthly data use. Without such tools, customers are completely unable to figure out how to reduce usage. Lack of a tool also prevents customers from double-checking the usage that Comcast claims and bills for.

Ticket: # 859391 - Data Cap on Home Broadband Internet**Date:** 3/11/2016 2:23:49 AM**City/State/Zip:** Aurora, Colorado 80017**Company Complaining About:** Comcast

Description

Hello,

Would like to add my thoughts to the growing list of concerns with companies such as Comcast and their push towards revenue rather than service. As such they are attempting to impose data caps on customers for home broadband with no notion that it will increase service capability, availability or quality. The entire plan is to increase revenue for the company by enforcing a cap on data usage and forcing home users to monitor their data usage when its not required nor warranted.

As such in my household I do not, nor will not pay for services such as bundled TV or other provided services over cable. My internet connection provides the necessary capabilities for this currently. As is seen I and other like me are being implicitly penalized as Comcast is losing money on TV subscriptions which are dropping, and thus they impose a unnecessary and entirely unnecessary "fine" on their customers for that usage.

I would have already moved to a new service had there been other viable options for high speed access in my area. As it sits Comcast owns a monopoly on many of the high-speed data lines in the area and ensures that other companies that wish to provide those services have to do so at a high premium, or they refuse use of those lines and ensure these companies quality diminishes. Century Link being an alternative in my area, but its service quality (due in part to the technology) is entirely subpar.

The direct result of this monopoly of service in areas is allowing the Comcast corporation to impose these cash-grab service exceptions on their customers with no possibility for the customer to voice their opinion through cancellation or migration to another service. I would imagine in most other service industries this would be considered something the government would look into as a legal monopoly case that needs court review, but I can't say why that hasn't happened thus far with Comcast.

In short, Comcast is forcing a revenue increase through a false pretense with a "data usage cap", which in reality this is simply a way to line investor pockets and increase quarterly earning reports. And while this would only be bad on the false pretenses, its also detrimental that they are standing on their own customer's backs and forcing those customers to pay more, while knowing they have no other options.

Ticket: # 859401 - Comcast attempting to impose data caps!

Date: 3/11/2016 2:50:25 AM

City/State/Zip: Englewood, Colorado 80112

Company Complaining About: Comcast

Description

Comcast is trying to make a cash grab at standard home users by attempting to put data caps for standard home users. The cap listed on my account, though not currently enforced, is 250GB! All I do is watch Netflix and remote into my work to work from home at night. I have used 110GB of my "data cap" in only 11 days! This type of system should not be allowed if we wish to grow as a country internet wise. Many other countries seem to already understand this and have much faster internet speeds. Japan has 5GB/s services for less than \$50 per month. Comcast has no excuse for their ridiculous internet plans and thanks to their owning of all the fiber, we have NO OPTIONS but to be Comcast customers.

Ticket: # 859414 - Data cap

Date: 3/11/2016 4:46:40 AM

City/State/Zip: Doraville, Georgia 30340

Company Complaining About: Comcast

Description

I received a notification e-mail from Comcast about my account being close to reaching a limit of 300 GB. I have not been informed about it or not been told about it by a Comcast representative who I was signing up for an account with. The "data meter" on the website never worked until this month and I've received a notification that I only have 29 GB of data left, however, the meter on the website tells a different story. It says I have used 259 GB. I find both inaccurate, since I do keep track of my traffic using my Wi-Fi router and all traffic goes through the Wi-Fi router.

According to my Wi-Fi routers traffic manager I have used 267.71 GB which I believe to be accurate. However, in the e-mail Comcast tells me that I have used 271 GB , and on their website it tells me that I've used 259 GB. Not only I have not been informed on being limited how much data I can use by the representative who signed me up, but also I am being misinformed about how much data I have used. I do not believe that it is by any means right to not disclose that my account will have a data limit and then charge me for going over the limit I have never been aware of or misinform me about how much data I have used. Seeing how inaccurate their meter is I wonder if it is ever accurate or if I will be overcharged in the future without even approaching the data cap I have not been informed of.

Date: 3/15/2016 11:28:42 AM

City/State/Zip: Lacey, Washington 98503

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 859543 - Please ban zero-rate schemes](#)

Date: 3/11/2016 10:13:47 AM

City/State/Zip: Dover, New Hampshire 03820

Company Complaining About: Comcast

Description

Comcast, AT&T, T-Mobile and others are trying to work around net neutrality rules passed by the FCC last year using so-called zero-rate schemes that allow users to bypass data caps for certain services that pay these telecoms a partnering fee. For example: if Netflix partners with T-Mobile then Netflix usage is fast and unlimited on that network, but YouTube would be slow and count towards data caps.

This is a blatant test to see if the FCC will enforce the law. Please ban zero-rating to protect an open internet. Free speech is at risk.

Ticket: # 1020512 - XXXXXX XXXXXXXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:17:13 PM

City/State/Zip: Tampa, Florida 33611

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 861984 - Comcast Unfair Business Practices With Price Gouging Tactics

Date: 3/14/2016 5:09:48 PM

City/State/Zip: Knoxville, Tennessee 37024

Company Complaining About: Comcast

Description

Over the course of eight years, I have considered myself to be a LOYAL customer of Comcast. During this period of time, my bill was nearly always paid in full and on time. The service, despite a few minor down times and flaws, has been fairly decent and the Internet has been moderately fast. Unfortunately, this has all traveled downhill very quickly. Approximately two years ago, Comcast began data caps once more. Previously, I felt that I could browse the Internet, watch Amazon Video and watching YouTube, as I desired. Now, this is no longer a possibility. I am severely limited in my ability to use the Internet and was even forced to cut out Amazon Prime services, due to the excessive bandwidth usage. Of course, Comcast offers no real way to monitor this usage other than an inefficient application, which simply provides the user with a number and nothing else.

Not only is Comcast shattering the concept of the "open Internet", but also their incompetency has proven itself time and again. They're also cramming my bill with nickels, pennies and dollars each month! Previously, my bill was approximately \$90 dollars and I had television, Internet and telephone. The bill remained right around \$90 from month to month. Life was great, but not anymore. After my promotion period came to an end, the bill shot up to \$150 per month. I got sick and tired of calling Comcast Customer Service every 5-6 months, in order to enroll in their loyalty program once more.

Instead, I decided that I would make permanent and long-term changes, by cutting off the services, which I no longer used. Below, I will walk you through my billing period for approximately a year.

With Promotion

Comcast used to have a Loyalty Department, which provided customers with lower prices for re-initiating their contracts. I have attached two bills from 5/6/2015 and 6/6/2015. Both provide me with the same price of \$91.21. This was reasonable, since I was receiving three services, TV, Internet and Voice. I would also note the \$3.25 Broadcast TV Fee, which has now shot up to \$5. Again, this is a common tactic of Comcast and perfectly exemplifies their attempt to nickel and dime their customers to death. The 7/6/2015 bill, which has been attached, is the one that reflects the total, without the promotional price.

The price climbed over \$60 and results in me taking action and cutting off the telephone. For two months, the bill remained the same at \$153. On the 8/6/2015 bill, Comcast was revamping their billing system and upgrading. During this time, we were unable to pay online and were specifically told to wait, until the upgrades were made. So, we did and were hit with a late fee, despite being told we wouldn't be.

Changing My Service

After this, I decided to change my service. I didn't need telephone and also decided to cut down on the television. This is visible on the 9/6/2015 bill, which comes in much cheaper. The bill remained at

approximately \$84 for 10/6/2015. I was entirely fine with this, since the bill was lower and I was still receiving a few television channels. Still, the majority of the channels I did get, despite HBO, could have been obtained for free via an over-the-air antenna.

The following month, Bill Date: 11/6/2015, my bill had already shot up \$4 to \$88. Surprisingly, this remained the same for the next bill on 12/6/2015. Of course, it wasn't going to sit idle for long. The Broadcast TV Fee was increased in January and my bill once again shot up over \$90, as reflected in bill 1/6/2016. In order to cut the bill even lower, I decided to invest in a Modem, so I could remove the \$10 monthly Modem Rental Fee.

I bought a modem and returned it to Comcast on January the 5th. I will have the receipt and will attach it as part of this email. Unfortunately, Comcast kept the fee on my bill and I have been forced to contact them approximately 5 times to fix this problem. This is evident in the bill for 2/6/2016. Now, I did manage to get this removed for the 3/6/2016 bill, but problems are still present. Despite the removal, the bill has not decreased at all. Instead, it remains at \$88! And the Modem Rental Fee has been removed for January and February, but remains for March To April. This is reflected in the final attached bill.

Current Progress

I would also like to say that I have taken additional steps to lower my bill. Just today, March 14, 2016, I shut off my television. I was told this would drop my bill to a little under \$80, which certainly isn't much at all. Now, I am stuck with an Internet service for \$80, when I previously had all three services for \$90. I do not want all three services and refuse to enroll in yet another contract. Plus, I am no longer able to utilize my \$80 Internet to fullest, because I am afraid of exceeding the bandwidth limits and being hit with even more costly fees!

I am aware that I could pay \$30 additional per month to eliminate the data cap, but that would put my bill up to \$110 per month for Internet alone! Despite the removal of the Modem Rental fee, I am certain it will return and Comcast is also in the process of charging \$10 for their television boxes. I have returned mine, but I would not be surprised to find the \$10 fee on my upcoming bills.

My Dilemma

Sadly, I am a hardworking, paying customer and Comcast doesn't care about me. If I were on welfare or food stamps, I could probably obtain the service for free. However, I refuse to accept handouts and pride myself in paying for my own services, but enough is enough. \$70 a month for Internet would be fine, as long as it was fast and UNLIMITED! \$120 for Internet, when I was paying \$90 for three services, is inconceivable and outrageous. Comcast needs to be put to a stop, as they're beginning to hinder the consumer's ability to access to the Internet and the enormous wealth of content available.

Now, I lie asleep at night and worry about my bandwidth slowly creeping up higher and higher, despite it not being utilized. Yet, HostGator and such companies can offer unfiltered and unlimited bandwidth for unlimited domains. This is undoubtedly a bait and switch by Comcast, but no one seems to care. This letter and the enclosed information has and will be sent to various entities and individuals in hopes of finding a caring soul, who will actually do something about this travesty. Lord knows the consumer doesn't have the capital to enter into a legal battle with Comcast, so someone needs to step up and defend us!

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 862026 - Comcast Data Caps**Date:** 3/14/2016 5:33:54 PM**City/State/Zip:** Lynchburg, Virginia 24503**Company Complaining About:** Comcast

Description

This is in regards to Comcast implementing data caps across the country. Currently, in my town, my account shows a cap of a mere 250 GB, but it's "suspended". However, Comcast is currently lifting suspensions across the country and charging people to access data, just because they can. They've already admitted it has nothing to do with congestion, it's simply a way to make more money by putting arbitrary restrictions on people. In my town, Comcast is the only high-speed internet provider in most of the city. In some areas, you can get DSL, but it is limited to 3MB down, which is too slow for any modern media. There are wireless services, but many of them are slow, have high latency, and far worse data caps (such as 10 GB). Obviously you aren't going to be streaming many HD movies with a 10 GB limit, or downloading any homework videos or video games. To boot, Comcast seems to have lowered the "suspended" limit. At one point, I'm sure the limit was either 300 GB or 350 GB, but now it's a mere 250. With 4K streaming right around the corner, and video game downloads clocking in at 40-60 GB these days, that limit will be eaten up in days. Obviously, since there is no competition, I have nowhere else to take my "business", when the day comes that they start charging me for going over the tiny 250 GB limit. This is a scheme to put limits in place ahead of more and more competition such as Playstation Vue, Sling TV, Hulu, etc., as Comcast attempts to overcharge people that have cut cable or satellite TV, since they have a monopoly on high-speed internet in many places. In 5-10 years, 250 GB will most likely be looked at as we now look at 250 MB, but since they put these limits in place ahead of time, they can try and claim "it's always been this way, so why not pay \$200 for the 'unlimited' plan" (prediction of Comcast CSR on the phone in 5 years).

Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on

the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

City/State/Zip: West Jordan, Utah 84088

Company Complaining About: Comcast, Verizon, At&t And T-mobile

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. Ticket: # 1020513 - XXXXXXX XXXXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:17:24 PM

City/State/Zip: Minneapolis, Minnesota 55414

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Ticket: # 863679 - Data Caps and Speed Throttling

Date: 3/16/2016 4:55:23 AM

City/State/Zip: Southaven, Mississippi 38671

Company Complaining About: Comcast

Description

I pay for the highest speed internet available in my area, which is through Comcast. I'm now being charged for going over their "data cap". Why should I be penalized for already paying them exorbitant amounts of money? If I want high-speed internet, I have no choice but to go with Comcast and get charged "overage fees". Especially when I don't even get the speeds I pay for. (a 20Mbps difference on a good day.)

Ticket: # 863680 - Non-response to previous complaint

Date: 3/16/2016 6:18:30 AM

City/State/Zip: Knoxville, Tennessee 37919

Company Complaining About: Comcast

Description

Comcast did not respond to my previous complaint in writing. I complained that they are violating net neutrality laws because their video streaming service does not count towards the data cap that they are enforcing in my area while their competitors in the video streaming service do. This gives them an unfair advantage over their competitors and it's bad for consumers because I can't pick the best streaming service available. If I do, then I'll go over the data cap and have to pay Comcast a fee.

Comcast responded by phone and claimed that their video streaming service does not travel over the open internet, and therefore does not need to follow net neutrality rules. I pointed out that they have a browser based service that does, and they told me that service does count towards bandwidth usage. However, in my own test it does not appear to count towards bandwidth usage. They ended the call by stating that they would send me a written response, but they never did.

Ticket: # 863771 - Xfinity/Comcast Monopoly

Date: 3/16/2016 10:09:16 AM

City/State/Zip: Pembroke Pines, Florida 33025

Company Complaining About: Comcast

Description

Comcast has now placed a data cap on usage. Any data usage over 300GB will be charged an additional \$10 per 50GB. In addition, the base cost of my service has been increasing slowly. We purchased unlimited internet usage for a set cost, or at least this is the service we were told we would receive. Although we did not sign a contract with Comcast, this does not give them the right to sell a service that does not in fact exist. How do you pay for a buffet and once you begin to eat are told that you only have access to half the buffet? So then you are not selling a buffet right? I do not understand how it can be legal to completely change the terms of a service at will. For those customers who purchased unlimited internet service at a given speed, the service should be just that until the consumer terminates. Comcast does offer bundles which cost more and include cable that we do not need. I can be charged an additional \$10 per 50GB per overage. They also offer unlimited internet for an additional \$35 dollars a month. I do not understand, this is the service I already purchased! Essentially, Comcast is forcing customers to enter a contract or pay what they want in one way or another. When Comcast told me that the service I was paying for was unlimited internet, it was meaningless. This is because they can price or change service as they choose, forcing the customer to pay. I am sure that Comcast has spent a lot of time and effort to research GB usage. It is obvious that customers use just over 300GB per month, again forcing customers to pay. How can this be legal? Please, please do something to stop Comcast from gouging consumers.

Ticket: # 1020604 - XXXXXX XXXXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:38:44 PM

City/State/Zip: Mascot, Tennessee 37806

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

(b) (6)

Ticket: # 1020606 - XXXXX XXXXXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:38:51 PM

City/State/Zip: Sarasota, Florida 34243

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Ticket: # 864686 - Comcast Data Cap

Date: 3/16/2016 9:23:49 PM

City/State/Zip: Coconut Creek, Florida 33066

Company Complaining About: Comcast

Description

Comcast is slowly introducing data caps, which are meant to create revenue from those individuals who are only subscribing to their internet service. They are charging \$10 for every 50 gigabytes. How they value a gigabyte like that of electricity is not a common complementary measure. This is a new masked threat to net neutrality and should be investigated. Comcast also intends to introduce its own Streaming service, which would be exempt from its own data cap. This is a direct violation of the recently passed Net Neutrality law. With limited alternatives, due to approved mergers and such, consumers are becoming victims to illegal schemes.

Ticket: # 865763 - Undisclosed data capping

Date: 3/17/2016 9:08:42 PM

City/State/Zip: Valley Bend, West Virginia 26293

Company Complaining About: Sudden Link

Description

With ads consuming 40 to 50% of the data per month the data capping that suddenlink enforces is flat out disgusting . There needs to be an option for flat rate like it has been for the last 25 years. my bill for the month is already around 200 dollars, where does it end, human blood is cheaper than there data. Also i live in an area where there is no other option for me so this is a monopoly. I thought monopolies are illegal in the U.S. Suddenlink is an internet service provider they are not suppose to control the internet, they are suppose to provide it. The least they could do is have a real time data usage monitor.

This way you might have an idea what you are using with less chance of going over there very low data limit.

[Ticket: # 865985 - Comcast Data policy/ Cap](#)

Date: 3/18/2016 10:02:35 AM

City/State/Zip: Greeneville, Tennessee 37743

Company Complaining About: Comcast

Description

Comcast monitors and charges us for a soft data cap. For every 50GB we consume over the 300GB allotment we pay a fee of \$10. Their billing cycle runs from the 1st to the 30th of each month. However, every month they grossly overestimate the usage on our account.

As of writing this (the 18th of the month) they currently place us at 312GB of 300GB (according to their online meter). However, our FreeBSD router tracks the total data used (outgoing or incoming) on WAN and only reports a total of ~207.054GB (183.731GB DL / 20.323GB UL) consumed in the same time period. There appears to be a huge discrepancy between what Comcast reports and what is actually being consumed.

I assume there is a difference between what is recorded on our end and what is recorded by Comcast, but the difference is too large to be considered normal and it has been consistently overestimated in the past year. We're effectively being charged for something we're not committing. PLEASE do something. We have no one to protect us!"

[Ticket: # 866364 - Preserve Net Neutrality](#)

Date: 3/18/2016 12:31:45 PM

City/State/Zip: Pendleton, Oregon 97801

Company Complaining About: Charter

Description

The Big Carriers, Charter, T-Mobile, ATT and more, are attempting to circumvent recent FCC rules ensuring Net Neutrality via the use of "data caps," placing such caps at a very low level so as to hinder access to small sites and award higher levels to businesses which can afford to pay them large fees. This policy clearly violates at least the spirit of the FCC rules and certainly, directly harms small businesses such as mine by limiting access to our web presence. Please stop these violations of your rules and the harm to the majority of those present on the web. Thanks for all you do!

Ticket: # 866756 - Internet Data Cap is restrictive and anti-competitive**Date:** 3/18/2016 2:45:35 PM**City/State/Zip:** Mount Pleasant, South Carolina 29464**Company Complaining About:** Comcast

Description

I have internet only service from Comcast in the Charleston, SC area. Comcast has instituted a 300GB per month data cap where each additional 50GB is charged at a rate of \$10. Comcast offers a package allowing video streaming that does not count against the cap and TV customers have video programming traveling over the exact same wires as the internet which also does not count against the data cap. I have neither of these services, but my streaming of any audio or video programming is logged against my data cap since it is not "Comcast video". This heavily privileges the video programming sold by Comcast over competing video services. Internet "Data" is not a finite resource like food or water. No one person or group of people could "consume" all the data. Put another way, "data" is never going to run out, so imposing a limit on the amount a household can use is perverse and abusive in this day and age. I do understand the concept of Network Congestion, and understand the use of bandwidth tiers where consumers pay more for more bandwidth. However Comcast's implementation of their own streaming video service demonstrates that network congestion is not a concern to them and there are numerous articles stating that data caps have nothing to do with network congestion.

We have four family members who each utilize services like Netflix, YouTube, and SlingTV to watch media, and this data cap severely restricts our use of these services to the point where it is not worth it to pay for them. Ignoring any other internet usage, less than 2 hours of video programming a day for each member of our household would easily exceed the data cap. In addition the internet usage meter provided on Comcast's "My Account" website is never working/available to allow me to see if I am in danger of exceeding the cap, nor is there a way for the average consumer to know if comcast's meter is accurate.

In conclusion the data cap of 300gb per month is arbitrarily low and it's implementation is anti-competitive, anti-innovation, and anti- Net Neutrality opposing the fair playing field intended by the FCC. Please enact legislation or regulations to Ban Internet Data Caps and "Overage" Charges.

Ticket: # 881864 - On Data Caps.

Date: 3/28/2016 7:38:44 PM

City/State/Zip: Tucson, Arizona 85742

Company Complaining About: Comcast

Description

Comcast continues to ignore common practices when throttling, or billing for overage data. Mobile carriers that offer limited data plans with overage fees, for example, provide far more details as to data usage over time, so that issues with a device, application, or service can be identified. Comcast, provides nothing but an "aggregate report of data usage," nested deep within their account management pages. To add insult to injury, Comcast provides no information on "courtesy data overages" on their mobile/responsive website.

Comcast has also not clarified if internet augmented devices, such as their "X1 Entertainment Platform" bypasses this data cap for it's on-demand, content discovery, and reliance on an active internet connection to function.

I recently was forced to move my remote work to a 20 minute freeway commute to a co-working space, simply to avoid these overage fees from data caps. As a remote-based developer and tech startup founder, I am appalled by Comcast's misleading advertisements of its "high speed internet service" as a means to support home based entrepreneurs and internet based startup employees, as Comcast has threatened many times after learning I was a "remote worker" that they would terminate my service, if I did not upgrade to the 3x in cost "Business Class" (that turned out not to be available at my address). Furthermore, after moving my work to an office, and the removal of two roommates, my data usage is apparently increasing month-over-month, even with fewer devices, humans operating these devices, and router restrictions on daily usage.

Additionally, Comcast provides notifications of reaching, and overutilization of resources in the form of MITM attacks, packet injection, or DNS redirection on the client side. For example, when visiting a website over HTTPS, and a website that utilizes HSTS, and utilizing Google's Public DNS servers, I still receive intermodal messages of alerts and service messages from Comcast. In order to deliver these messages, Comcast must be ignoring my DNS service preference at the modem (which I own and brought to the service), router (again, I own this), and device level (laptop, desktop, IPTV devices, gaming systems, and mobile devices are affected), and to inject content over HTTPS/HSTS, posing as a MITM attacker. This is a huge disregard of privacy and security, as the same method in which Comcast is doing this to "alert" me, an attacker within their network or infrastructure could do the same.

When asked about data caps, Comcast's offices in Tucson stick to the "to reduce network congestion, and penalize high data usage offenders," yet refuse to acknowledge how the arbitrary limit per service package is determined, or to provide detailed reports on usage.

As a customer forced by the internet utility monopoly supported by the United States government, I am left with no option but to refute these outdated, insecure practices, and wait patiently for either my municipality to provide a truly open utility, or a third-party to offer the effect of competition in my situation. As such, I request that the FCC fulfill its duty to citizens affected by draconian practices and

abuses from monopolization, provide support or action against Comcast and its business units operating in Pima County, AZ.

Ticket: # 867639 - Armstrong Data Cap

Date: 3/18/2016 10:27:02 PM

City/State/Zip: Boardman, Ohio 44512

Company Complaining About: Armstrong

Description

Armstrong's home internet data cap is ridiculous. They're forcing customers to pay overages for data & it was once advertised as unlimited. Why should we pay overages for data at home? Cell phone companies have already capped their data and often use people's home wifi service as a sense of relief to the customer. If that sense of relief isn't unlimited, what relief is it? Cable companies have already created an oligopoly that we are forced to deal with, and now a data cap too?

Ticket: # 867685 - Sneak Attack: Data Caps and Zero Rating

Date: 3/19/2016 12:09:17 AM

City/State/Zip: Chicago, Illinois 60649

Company Complaining About: Comcast

Description

Last year your agency protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating new schemes that are just as harmful to the open Internet and its users.

The Open Internet rules say that ISPs can't pick winners and losers online by slowing down some apps while speeding up others, so Comcast found another way to pick winners and losers. Comcast exempts its own video app from customers' data caps, while counting all competing services toward those caps – a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

The rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T and Verizon created a new toll: they're charging websites and apps to be exempted from customers' data caps. The lower the caps, the more pressure on websites to pay up. These plans distort user choice, pushing people toward sites with deep pockets and away from those who can't afford the toll.

Finally, the rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if they meet its substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others. Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer.

In every case, sites that have not made special relationships with the ISP now face new barriers to reaching Internet users. These practices distort competition, stifle innovation, limit user choice, and drive up prices.

In many cases, there's no legitimate reason for data caps to exist at all. Comcast is limiting Internet use with data caps, but allowing its own video app a free pass. But the company has admitted that its caps have nothing to do with managing congestion. They simply discourage broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch online.

Altogether, these practices prove what we've always known: these companies hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses. Meanwhile, Congress should encourage the FCC to do its job.

Note: for privacy reasons, rather than providing my personal phone number below, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email. I'm going to be a Comcast customer soon and I refuse to allow my Internet be slow by any means by them. They and other companies have violated Net neutrality rules and they should be punished severely for lying to their customers and being more than dishonest.

Ticket: # 868863 - Comcast Data Caps

Date: 3/20/2016 6:04:58 PM

City/State/Zip: Atlanta, Georgia 30339

Company Complaining About: Comcast

Description

Comcast is constantly using pop up's in my browser and emailing me about hitting a "data cap." They are going to charge me for utilizing the internet in a way that they aren't used to seeing people use. The internet should be a utility that everyone should be able to take advantage of, not just people who are able to pay more because they use more of a product. I feel that they are throttling my bandwidth because I am going over the "datacap."

Ticket: # 869057 - Comcast Data Cap

Date: 3/20/2016 11:20:43 PM

City/State/Zip: Fort Lauderdale, Florida 33308

Company Complaining About: Comcast

Description

I have been a comcast customer for nearly three years, entirely because they are the only internet provider in my area. They have a monopoly, and I am unable to choose any other provider for reasonable internet. I sometimes work from home, which requires me to use VPN, which can be expensive on broadband. Today (3/20) they said I have used 90% of my internet data (270 out of 300gb). It is entirely unfair, as I have never agreed to a data cap, as comcast just decided to enforce it for no apparent reason. This is an anti-competitive practice that is unfair to us consumers, who expect internet to be provided to us. I pay for 75mbps internet which, at their current cap, means that I can blow through their cap in just 8 hours. I consider this to be false advertisement as while I am offered 75mbps, I can't really use it as I would hit my cap in a third of a day. I believe the FCC should penalize Comcast for what amounts to extortion with their internet, as I can "pay" \$35 extra to get rid of the cap. Somehow, magically, they don't have issues with congestion if I pay an extra \$35. This data cap needs to be done away with immediately. It is a money grab by a monopoly in my area, and I just have to take it as I have no other choices for broadband internet.

Ticket: # 869085 - Cox Cable Data Caps

Date: 3/21/2016 12:03:34 AM

City/State/Zip: Olmsted Twp, Ohio 44138

Company Complaining About: Cox

Description

Cox cable recently implemented data caps on its internet service. These caps infringe on my ability to utilize competing services for television content and are a blatant attempt to force me to utilize their content for television. If I chose to utilize their television content, the data caps do not apply. This appears to be forcing a customer to only utilize one provider of segmented services offered by the cable company. These monopoly practices are unfair to the consumer and the openness of the Internet.

Ticket: # 869185 - SNEAK ATTACK ON NET NEUTRALITY

Date: 3/21/2016 8:35:02 AM

City/State/Zip: Fort Collins, Colorado 80524

Company Complaining About: T Mobile

Description

With the introduction of "zero rating" content and retention of data caps from AT&T, T-Mobile, Verizon and Comcast, I find the behavior these companies to be contemptuous of the FCC ruling on net neutrality. Internet fast lanes were clearly forbidden and this law clearly violated. I ask the FCC to take action to outlaw "zero rating" practices, and other such attempts to bypass net neutrality.

Ticket: # 869549 - Comcast Xfinity Data Cap

Date: 3/21/2016 12:06:11 PM

City/State/Zip: Cordova, Tennessee 38016

Company Complaining About: Comcast

Description

Just received notification of data cap being implemented my ISP (Comcast Memphis) Xfinity. I believe that this is new 300 GB data cap is an unlawful business practice. Comcast used my download speed to 75 MB only to implement a data cap to be able to charge me more. What about net neutrality I can not wait until there is more compition . FCC do your job and put a stop to the pricing practices being imposed by a Monopoly like comcast.

Thanks a lot, (b) (6)

[Ticket: # 870201 - Data Caps](#)

Date: 3/21/2016 3:42:10 PM

City/State/Zip: Lawrenceville, Georgia 30043

Company Complaining About: Comcast

Description

It is unfair that users in Georgia are unfairly being targeted by Comcast's data caps. This stifles streaming TV and other online services. I want this 300GB cap gone.

Ticket: # 871046 - Comcast Data Caps**Date:** 3/21/2016 9:43:16 PM**City/State/Zip:** Augusta, Georgia 30909**Company Complaining About:** Comcast

Description

Comcast has imposed a data cap in my area within the last year or so. Even though my household is consistent in its internet usage, my data reading from Comcast is completely inconsistent. Nothing has changed about the way my two-person household uses the data, yet we randomly go over the allotted data for the month. We supposedly used the 3 "courtesy overages" over the last year. Last month (Feb 2016) we supposedly went over twice our allowance for data, and this month (March 2016) we have supposedly gone over data cap by 60 GB on the 21st. These amounts are outrageous for how we use our internet. I have put in calls to tech support, billing, security assurance, and yet no one can over me answers or relief. Tech support and security assurance suggested that my WIFI must be hacked and I should change my password, but will not offer any relief from the \$90 (and counting) it is costing me. Billing sent me to security assurance again, who again, offered nothing. Tech support refused to do any trouble-shooting of my connection or modem, stating that 'experience says it must be a hacker.' While that may be the problem, they refuse to look into it further and refuse to offer financial relief. (My WIFI password has been changed, waiting to see of the data usage becomes consistent again). With this lack of consistent data monitoring, Comcast should not be allowed to charge me for 'overage data.' Comcast should not have been allowed to implement data caps on existing customers in the first place, as the practice is simply shameful and down-right unethical.

Ticket: # 871117 - Data cap

Date: 3/21/2016 11:03:16 PM

City/State/Zip: Tucson, Arizona 85719

Company Complaining About: Comcast

Description

It was never explicitly disclosed to me that I would be subject to a data cap. There was not explicit notice or constructive notice given to me regarding the internet data cap. Rather, I had to inquire as to why I was billed nearly twice the amount that I agreed to pay because my household went over the data cap that I was never informed of. When I called Comcast to inquire about the additional charges, I told them that I would either like to terminate my service and pay the full amount owed or pay the amount that I had originally agreed to. I was told to call one of the many departments that I had already talked to about this problem. When the representative and myself got off of the phone, my internet services were discontinued after I was explicitly told that I would be given an additional week to figure out my situation and make the payment. I continually told the Comcast representatives that I either wanted to pay the balance on my account in full and terminate my service or correct the issue, which would have been a removal of the cap, and continue to pay the agreed monthly rate. I was told that Comcast could not remove the data cap because it was either the federal mandate or regulated by state statute. Please correct this issue.

[Ticket: # 871258 - Data cap](#)

City/State/Zip: Brunswick, Maine 04011

Company Complaining About: Comcast

Description

Comcast has imposed a data cap of 300gb on its internet customers, with no way to monitor your data usage, and no option

To upgrade to an unlimited plan. They simply charge extra when you go over 300gb. Without a way to monitor your data usage, they should not be able to penalize customers when they go over Comcast arbitrary data cap.

Ticket: # 873349 - Comcast/Xfinity Data Caps on internet usage

Date: 3/22/2016 10:28:54 PM

City/State/Zip: Collierville, Tennessee 38017

Company Complaining About: Comcast

Description

I believe that 300GB Datacap that Comcast has imposed is wrong. my family is now severely limited in what it can do because of this. I was staying at a steady 200GB average for internet usage, and in the past 2 months, Comcast states that my usage has skyrocketed to 350GB/month. I called about an unlimited Data use package and was denied, even thou i'm willing to pay an extra fee for it. The reason given was that it is not available in my area, when their website directly states that it is. In my apartment complex, Comcast has a monopoly over internet providers and will not allow competitors in here, so i am stuck with this. Comcast needs to get rid of this Data cap. Internet is no longer a luxury. It is a necessity. how am i supposed to tell my 9yo son that he cannot use the internet for homework since Comcast says we are limited monthly.

Company Complaining About: Comcast

Description

I live in the suburbs of Atlanta, GA and I am opposed to Comcast's 300 GB data cap and the charging of extra data after that cap has been reached. This is an attack on Net Neutrality and Comcast is making money where they can considering data casts and delivery costs have consistently gone down.

Ticket: # 876092 - Armstrong cable data caps

Date: 3/24/2016 1:32:16 PM

City/State/Zip: Medina, Ohio 44256

Company Complaining About: Armstrong Cable

Description

Over the last two years Armstrong, my only option in Medina, OH, has abused their monopoly status to do all of the following:

1. Raise bills consistently every 6 months by at least \$5 to \$10.
2. Imposed low data caps (200 Gb a month) that have skyrocketed the price for cord cutters, home offices, and other common high bandwidth users.
3. Eliminated QAM broadcasts and forced all consumers to RENT their boxes at inflated prices.

These have limited our options, made our costs skyrocket, and without competition, there is no hope for intervention by third parties. The low data caps in particular are an impediment to the further utilization of online services. As a worker in the IT field, this is a growing problem that needs to be resolved. These are clearly tactics being used by a dying industry to maintain their high profit margins through underhanded means rather than evolving to meet the needs of their customers, and because of the municipal monopoly they have, we literally have NO OPTIONS.

[Ticket: # 877276 - Suddenlink](#)

Date: 3/24/2016 10:36:01 PM

City/State/Zip: Pineville, Louisiana 71360

Company Complaining About: Sudden Link

Description

Suddenlink has a data cap on usage which I believe is ridiculous on top of that they don't even offer a unlimited data plan for their service. They have a monopoly on most areas and they are just forcing people to get their high Internet and cable. I believe it is wrong to cap data and charge people seeing how it's not a resource.

Ticket: # 877494 - data caps

Date: 3/25/2016 8:46:09 AM

City/State/Zip: Jacksboro, Tennessee 37757

Company Complaining About: Comcast

Description

I want to complain about comcast's data caps. I believe it provides an unfair restriction of customers' ability to watch the video sources of their choice. If I watch pay per view movies on comcast, it doesn't count against the 300GB a month quota. If I watch something on Netflix, Hulu or some other service, that does count against the quota. This gives comcast what in my opinion is an unfair advantage against their competitors.

This is also an unfair advantage against Comcast's competitors for phone service. I use a magicjack which uses my internet connection. Thus, my phone calls count against that 300GB quota.

Also a complaint about this form. It asks for my phone number. I gave it the 10 digits and the form tells me the number is invalid.

Ticket: # 877751 - Data

Date: 3/25/2016 11:50:08 AM

City/State/Zip: Dunwoody, Georgia 30338

Company Complaining About: Comcast

Description

I signed up to for Comcast Internet Service. However, upon using the Comcast's website to sign-up for the service, I did not see any clear indication that my service would have data cap of 300GB per month. Comcast needs to make it front and center that the internet service you are signing up for has a data cap and it amount of the data cap. The website is certainly misleading and false advertisement. The contract should be clear absolute and unequivocal.

[Ticket: # 878356 - Comcast data usage](#)

Date: 3/25/2016 3:22:12 PM

City/State/Zip: Plantation., Florida 33317

Company Complaining About: Comcast

Description

Comcast data usage rates are an outrage and a danger to Internet freedom and innovation. They have done nothing to lower the cost on those that use less Internet and penalize those that use more than they deem acceptable. This is a scam, a reach for more money, and does nothing but hurt customs. Worse than this, it limits the freedom of the Internet which in turn ruins the innovation, invention, thought sharing and free thinking the Internet has provided for so many years. This issue needs to be dealt with immediately. Data caps cannot exist and are an infringement of free open Internet.

Ticket: # 878989 - Data caps should not be allowed on home internet

Date: 3/25/2016 11:35:59 PM

City/State/Zip: North Augusta, South Carolina 29841

Company Complaining About: Comcast

Description

I go to online school and rely on the internet. Not only this, but we have 6-7 people in our house that constantly use the internet. Comcast introduced this data cap of 300GB after we signed a contract with them having been under the impression of unlimited internet. We never got a notice from Comcast that these data "trials" as they call it were introduced. My education relies on the internet. If I can't have my legally required education, me and my mother will likely be contacted by a truant officer. How would we explain to him/her that I can't go to school because our internet provider limits our internet use? At my school, internet and computer problems are no excuse, no exceptions. If I don't get my work done, I'll be contacted by my school asking why I haven't done any school work in some time. We don't have any other options for internet either. At&t DSL is the only other option, but there are two problems with that. It's not fast enough for my school to be done, and they also have a data limit. I understand why DSL based internet services have a limit. Phone lines get congested, that's reasonable. We signed a 2 year agreement, which we the account payers are not able to modify but Comcast can change anything if they feel like it, because we thought it was unlimited internet. It was when we signed up but it is no longer unlimited. I now have to be very conservative, excuse me, my family has to be very conservative of internet usage so I can go to school like required by law.

Ticket: # 879187 - Comcast 300GB cap

Date: 3/26/2016 12:07:24 PM

City/State/Zip: Fort Lauderdale, Florida 33304

Company Complaining About: Comcast

Description

Dear FCC,

As I'm sure you are aware, Comcast has recently begun enforcing a 300Gb data cap on a great part of it's customer base. I find this change extremely concerning as I see no reason other companies won't start following suit. Natural monopolies, limited options, and shady contracts make it difficult or impossible for myself and many others to reasonably switch to another provider.

I'm asking you to do everything in your power to stop this trend before it starts. The internet is not just a luxury anymore - it is a critical part of many people's lives. As we've seen with cell phone data, once caps are in place, it is a race to the bottom to offer ever more limited data at ever increasing prices.

Regards,

(b) (6)

Comcast threatened to charge my family if we go over their data cap. Data caps go against net neutrality rules.

Ticket: # 879718 - Data Cap

Date: 3/27/2016 7:50:59 AM

City/State/Zip: Atlanta, Georgia 30318

Company Complaining About: Comcast

Description

I would like to formally complain about the Comcast Data Cap. One month ago, after our cable bill with Comcast had crept up toward the ridiculous \$250/month mark mostly for 500+ channels we would not care to watch, we cut (or more accurately, shaved) the "cord." We had to keep Comcast as our ISP because for some reason, anti-trust laws don't apply to cable providers and we had no other reasonable option. AT&T/UVerse cannot match the speed and Google Fiber is not yet here.

We are now 26 days into our first month of streaming and Comcast is alerting me that I have exceeded my "data cap". I did not know I had a "data cap". I will now be charged \$10 per 50GB block of extra bandwidth I consume, whether I actually consume the full 50 GB or not.

Data caps are unfair and threaten net neutrality. Streaming content is the future of media. Please act now to prohibit unfair "data caps."

And if you forward this to Comcast, I will be investigating UVerse tomorrow and patiently await the arrival of Google Fiber so I can say goodbye to your

Ticket: # 879934 - Prevent Data Caps - or insure that ISP's who want to implement them do not also provide Television Services

Date: 3/27/2016 7:18:27 PM

City/State/Zip: West Park, Florida 33023

Company Complaining About: Comcast

Description

Users currently have little or no competition for internet service providers. When the provider is also a cable company, then imposing a data cap is that company's attempt to discourage people from cutting the cable TV service in favor of better choices, better quality internet streaming. Funny how Comcast's Cable TV service or their streaming TV does not affect the "data cap." Since the beginning of franchises, people have not had the ability to choose their internet or cable TV providers. Now that the competition has found a way to bridge that gap and people are flocking to the better service, Comcast finds itself having to make up the difference in lost profits. Rather than compete on the same ground, they are using their franchise status and monopoly to bully people into submission. Stop the data caps, or impose the same caps on all services, including Cable TV.

Ticket: # 880359 - comcast now charging data cap usage for internet

Date: 3/28/2016 11:10:10 AM

City/State/Zip: West Miami, Florida 33155

Company Complaining About: Comcast

Description

i signed up for Comcast data and cable package in September 2015.

i have been a customer of Comcast, unfortunately the only provider in the area with horrific service, for 4 years now. when i renewed my contract in September 2015, i did not sign a internet package with a maximum usage or data cap.

this is ridiculous, particularly how i came to realize i now have to pay for an overage when it was not on the contract. they are just trying to make up for lost revenues from people cutting the cord, but charging more money to those who actually use the service like i do. this is extortion. should be banned.

Ticket: # 881298 - Comcast Data Allowance/Cap

Date: 3/28/2016 4:22:08 PM

City/State/Zip: Woodstock, Georgia 30188

Company Complaining About: Comcast

Description

I live in Atlanta, GA and have the unfortunate task of having Comcast. We were required to have a data cap of 300 GB per month and to get it removed cost another \$35 a month. Unfortunately we have been a victim of a bait and switch and were 'mistakenly' given a 600 GB allowance just for it to be taken away. I have been on chats and phone calls with Comcast who admitted that the 600 GB was a mistake and I am now stuck on the 300 GB plan. The issue is that I work from home and my VPN requires a lot of bandwidth.

Ticket: # 888023 - Data Caps

Date: 3/31/2016 3:06:53 PM

City/State/Zip: Forney, Texas 75126

Company Complaining About: Sudden Link

Description

I'm writing to the FCC today to place in question the business practices of 'Suddenlink' and their policy on data caps.

Data itself is not a limited resource, all data within the internet is a direct copy of its source. The only additional costs to data is the energy required to deliver it to the end destination which in consumer terms is in the order of a fraction of a cent per gigabyte.

The excuse 'To protect the health of the network' is a complete lie and is willfully preying on the ignorance of their customers who in general do not have an understanding of network infrastructure.

To properly combat the 'Health of the network' bandwidth must be throttled so every user may receive and equal or the agreed upon amount when the service was installed. It stands that if bandwidth is not being throttled and they are charging users for exceeding data caps they are gouging customers for more money.

This is in violation of the 2010 Open Internet Order as they do not give customers a reasonable amount of data and charge them \$10.00 for going over and an additional \$10.00 for 50 GB of data.

Recently the FCC has taken center stage in advocating and enforcing fair practice and procedures for the consumer. I'm very impressed with Tom Wheeler and his aggressive stance against the cable industry and sincerely hope he can help others in my situation.

[Ticket: # 883877 - Data Caps](#)

Date: 3/29/2016 5:48:23 PM

City/State/Zip: Germantown, Tennessee 38138

Company Complaining About: AT&T

Description

AT&T has announced that they are going to be using enforcing data caps with the sole purpose of fighting Internet TV such as Netflix and Amazon Prime. Other ISPs such as Comcast have been doing this as well and the FCC needs to take action to protect consumers, especially those who don't have a choice for truly open broadband.

Ticket: # 883929 - COMCAST'S 300GB DATA CAP

Date: 3/29/2016 6:07:47 PM

City/State/Zip: Pembroke Pines, Florida 33026

Company Complaining About: Comcast

Description

Comcast's 300GB Data cap is absurd. Just now we the people are getting charged for how much "data" we use? Why didn't they start doing this from the beginning? That's because there's not such thing as a "data cap" they're just counting how much you use and slapping a bullshit price tag on it. In this day and age being punished for "going over" 300GB of data on a home network is RIDICULOUS, nothing but a MONEY GRABBING SCHEME. Have comcast REVOKE this evil business policy they have.

[Ticket: # 884426 - data cap](#)

Date: 3/29/2016 11:43:22 PM

City/State/Zip: Knoxville, Tennessee 37921

Company Complaining About: Comcast

Description

It appears my ISO Comcast has added the Knoxville area to their 300gb data cap. The Comcast meter shows that we have exceeded this new 300gb cap but the meter only router shows I have yet to hit the 250 mark. Not only is the data cap being only used in select markets an unfair business practice, but the way it is measured is inaccurate.

Ticket: # 927932 - Data Caps (Comcast and AT&T)**Date:** 4/22/2016 12:10:54 PM**City/State/Zip:** Chicago, Illinois 60640**Company Complaining About:** Comcast

Description

Hi - I live in Chicago, and I'm moving into a condo in Andersonville (the 60640 zip code). With a building built in 1924, my only options for internet access are AT&T and Comcast. I called every other ISP in the city but Comcast and AT&T are the only available options. Comcast and AT&T have similar offerings but Comcast's service is a little faster so I decided to go with them, only to learn that both Comcast & AT&T enforce a data cap and there's no way around it.

As someone who doesn't use a cable plan, internet is how I receive all of my media. I stream via Netflix and Hulu, and I have Amazon Prime. But, Comcast & AT&T are direct competitors of my preferred content providers because in addition to providing access they also have their own media which they push through bundling and other deals. And now, in addition to pushing their own content through bundling, they're disincentivizing the use of alternate content providers by capping the amount of data I can use in a month.

This seems like it should be illegal. If the ISP has a conflict of interest regarding the access they provide, particularly when there's a monopoly or duopoly, there should be regulation regarding how they treat their customers. We have some of the slowest internet in the developed world at the highest cost to consumers. Please do something about this. I shouldn't have to pay \$50-\$60 a month (minimum!) for mediocre service because my ISP wants to block my access to its non-ISP competitors. When I called in, they said that Chicago residents don't have the option to buy out of the data cap "yet" and that's unfair - not only am I restricted to a 300GB data cap that I can't buy out of, but I am only being restricted because of the lack of competition among access providers and a distinct dearth of regulation.

I know that I'm considered lucky - I live in a major metropolitan area with more than one ISP provider. But the two major ISPs available are so similar it's like they're colluding. They both have content to protect, and they both have the same competitors. Data caps on home internet have nothing to do with making super-users pay and everything to do with steering cord cutters "back into the fold" of cable tv. Regardless of what ISPs say the purpose of data caps are, the end result is that consumers pay while ISPs continue to make billions in profit on their old copper wire infrastructure. Basic internet access has become a necessity and it should be regulated as such. #BanTheCap

Ticket: # 884488 - Comcast Xfinity Data Caps**Date:** 3/30/2016 2:58:03 AM**City/State/Zip:** Hialeah, Florida 33015**Company Complaining About:** Comcast

Description

I personally believe that their implementation of a 300GB data cap on a 75mbps/10mbps connection to be completely nonsensical as that means I can only fully use what I am paying for roughly 8 hours a month, but one I still find tolerable as I am not what one would call a "cord cutter" and therefore not subject to using my data allowance in exchange for the majority of my media entertainment.

My issue with Comcast Xfinity stems from their deceptive practice of measuring their data caps. Their "My Data Usage" meter has been unavailable for my use since September 2015, a couple of weeks after I first activated my service. I have taken to monitoring my own bandwidth usage on the WAN as to not fall victim to their arbitrary data cap.

The "My Data Usage" just suddenly became available to me 7-8 months after activating my service and I suddenly find myself over their data cap even with my meticulous monitoring and rationing of internet traffic. This deceptive practice of making their bandwidth tracker unavailable for several months at a time should be investigated as they are trapping their customers into going over their data cap and therefore being subject to their \$10 per 50GB overage fee.

Please investigate as to why an average customer's method of monitoring their usage is unavailable for several months at a time when going over the data cap results in an automatic \$10 charge per 50GB of data?

Ticket: # 885003 - U-Verse Data Caps

Date: 3/30/2016 11:49:58 AM

City/State/Zip: Shreveport, Louisiana 71104

Company Complaining About: AT&T

Description

Starting May 30th, AT&T will be enforcing data caps on U-Verse internet customers in my area. These caps are anti-competitive, and discriminate against internet-only (or internet and voice) customers who do not purchase cable. Currently, AT&T will grant unlimited data (no cap) for an extra \$30/month or if one purchases a cable package. For a customer such as myself, who does not watch enough TV to warrant purchasing cable but streams content via internet, this new measure is punitive and extortionate. Data is not a finite resource, like energy or water, and the cost to transmit over the internet is continually dropping. This is simply a money grab by AT&T, an attempt to recoup lost cable revenue by punishing those who cut the cord.

[Ticket: # 886189 - Cable One - Data cap](#)

Date: 3/30/2016 5:26:43 PM

City/State/Zip: Idaho Falls, Idaho 83404

Company Complaining About: Cable One

Description

Cable One has switched all of the users in my area to a plan with data caps. The cap is easily reached over the course of a month, even with every-day use not involving lots of video streaming. There was no cap when I signed up (advertised as unlimited,) and I had no choice to opt-out of the updated service plan with the cap.

Ticket: # 886220 - Data Cap

Date: 3/30/2016 5:37:53 PM

City/State/Zip: Miami, Florida 33172

Company Complaining About: Comcast

Description

We haven't changed our internet usage that drastically other than cutting our cable and just using Netflix . Even so does it make sense to have a data cap that doesn't take into account the amount of Internet people actually use nowadays, or having a cap at all with such severe penalties? If we were to pay the overage we would be paying an extra \$100-\$200 bucks minimum. This is such absurd. A hundred dollars just to have internet is the stupidest thing I've heard in my life. Even from month to month the difference in usage is crazy. We tend to have the same habits. How can I know they are just making these numbers up? Am I just supposed to take their word for it and pay more in internet than I do in utilities? This severely limits people in having internet access.

Ticket: # 886402 - DATA CAPS

Date: 3/30/2016 6:55:44 PM

City/State/Zip: Atlanta, Georgia 30305

Company Complaining About: Comcast

Description

Comcast enforces the same data caps for all internet packages that they offer. For example, a 10Mbps is the same as 105Mbps. Here is the problem if you have a high-speed internet(I have 105Mbps) automatically your usage of data will increase, so sitting the same data caps for everybody is not fair. I called Comcast to increase my data cap, but they said they can not, and the only way to have unlimited data is to pay 35 dollars extra.

I don't want unlimited data I need them to increase my data cap.

Thanx

Ticket: # 886754 - Data Caps Should Not be Applied to Residential Internet

Date: 3/30/2016 10:28:58 PM

City/State/Zip: Powell, Tennessee 37849

Company Complaining About: Comcast

Description

It seems like many Cable/DSL/Fiber providers are jumping on bandwagon of adding data caps. Many of them being unreasonably low at 250 - 300 GB and preventing people from using there internet the way they like.

As a Comcast customer, not that I have a choice, I believe there intentions are solely based upon competing with online media forcing people to watch video with their cable service.

Please don't let data caps spread to being common place, it hurts consumers and providers of digital media.

Ticket: # 886914 - Data cap notice from AT&T

Date: 3/31/2016 8:13:03 AM

City/State/Zip: Fort Worth, Texas 76179

Company Complaining About: AT&T

Description

I was browsing my AT&T account usage today and had an alert from them on data usage for my home internet. They are now capping your home internet data allowance for the speed I have at 600GB. I feel this is unfair as it basically means you have no choice but to have television service through them as if you are trying to cut the cord on cable which I was considering you now CANT. AT&T like other tv and internet providers charge what I feel is an outrageous amount for their service. My "promotional" period is about up and my costs monthly will balloon from \$90 up to about \$165. I was planning on canceling my tv and using internet based TV services because they cost less but with data cap on the amount I can use every month that it impossible now. I feel like this makes me stuck with them. I live in a brand new subdivision and they are our only TV and internet provider which also isn't fair in my opinion. This is something that needs to be addressed. Oh and I forgot to mention after three months of going over the 600GB allowance they charge you \$10 for each additional 50GB of data you use. In the end I feel this basically comes down to a net neutrality issue. They have no place to charge you or limit your access to the internet or control the amount of data you use at home through their service. This is unconstitutional in my opinion.

[Ticket: # 887311 - AT&T Data Cap](#)

Date: 3/31/2016 11:56:43 AM

City/State/Zip: Dallas, Texas 75243

Company Complaining About: AT&T

Description

Starting on May 23rd, AT&T will be enforcing a data cap on it's home internet service. It currently offers no way on their site to monitor internet usage. It offers unlimited internet usage if I subscribe to their TV service.

Do not allow these telecommunication companies to price gouge based on created data caps.

Ticket: # 904376 - Internet Usage Caps and Fees

Date: 4/10/2016 12:18:24 PM

City/State/Zip: St Louis, Missouri 63123

Company Complaining About: AT&T

Description

AT&T has announced they will begin enforcing data caps for their home-based services, while "graciously" raising their cap limits. They are part of a growing trend of Internet providers who are effectively punishing their customers.

They clearly state on their site the data caps. But the problem lies in a few places:

1. The site currently shows me no usage data so I can't make an informed decision on what I should do. I haven't ever been able to check, in fact. It just says no data is available. So now I'm in a position where, I won't know my usage until probably MUCH closer to the May 23 enforcement date. So if I use more than the 600GB my plan allows I have to choose to pay the extra \$10 per 50GB or \$30 for unlimited data cap per month.
2. They clearly state that if you have TV service with your internet service you get unlimited data. This, to me, clearly indicates that this enforcement and data cap is clearly meant to target people who chose to use other, better services for their entertainment needs (Netflix, PlayStation Vue, HULU, YouTube, Twitch, and so many others). While this isn't throttling, it's definitely against the customers ability to choose the service they want to use.

I work from home almost exclusively, my wife and I get most of our entertainment digitally. We just chose to cancel our TV service because it was too expensive and provided channels we didn't care about and streaming services provide greater choices. Now all of sudden I have to pay more to keep using the same service I've had. All the while not knowing what my usage will be.

Nevermind that I am in an apartment complex and can only have AT&T for Internet unless I want to rely on Cellular services.

This decision not only makes me have to rethink my data usage and the services that I want to use but ALSO SIGNIFICANTLY affects where I will be able to live as well.

If I didn't have to rely on Internet for my job and for most of my entertainment I'd just cancel my service. But with today's world that's practically impossible as a member of the IT community.

Here is a link to the page I referenced that indicates the change and the "exceptions"

Ticket: # 889196 - Suddenlink Offering Unlimited Data in Select Markets**Date:** 4/1/2016 9:31:03 AM**City/State/Zip:** Spring Hill, Kansas 66083**Company Complaining About:** Sudden Link

Description

Starting April 1st, 2016 Suddenlink Communications started offering unlimited data on their internet services but only in select markets that have speeds of 100Mb or higher. I contacted SL customer service on April 1st and inquired if we are eligible even though 50Mbps is the highest tier offered, I was told no and there was no timeline on when or if this would ever be offered in our Area. I feel as if this is a discriminatory business practice because we pay for extra data upwards of \$20 per month for 150Gb while other Suddenlink customers will now enjoy unlimited data for less than \$10 per month. We are a small town on the edge of the Kansas City Metro which has Google fiber who offers unlimited data. The poor service and data caps that Suddenlink offers in our Area is a drain on our community and impacts the city's ability to draw new residents into the community. I thought I saw a bright spot in this service provider by them offering unlimited data but was very disappointed to find out this offer was not for everyone.

Ticket: # 891120 - AT&T Data Usage Caps for home broadband

Date: 4/2/2016 11:02:01 AM

City/State/Zip: Pewaukee, Wisconsin 53072

Company Complaining About: AT&T

Description

AT&T let me sign up for a year long contract two days before they announced these data caps. Now I face an ETF to get out of something that wasn't disclosed to me at the time I agreed to the contract. Furthermore, customers were told in a press release, not an email for existing customers - though they manage to send me multiple emails a day advertising their other products. In addition - their tool to measure home data usage doesn't become active until the caps do on 5/23, and there is NO WAY for the average customer to know that the measurements AT&T provides are accurate. They're not independently verified. Finally - these data caps don't apply to AT & T UVerse TV customers - which feels like a terrible strongarm tactic to pressure customers into buying their TV service.

Ticket: # 933009 - Charter purchasing TWC

Date: 4/26/2016 1:16:28 AM

City/State/Zip: Lexington, Kentucky 40509

Company Complaining About: Time Warner

Description

TWC sucks. I've reported multiple issues with my service in KY with them already. Now competition will decline more. It is obvious that Charter wants to increase speeds to get people to rely on video streaming so that they can eventually use data caps to artificially create profit from their network.

See their public statement: "Charter Communications has bid more than \$88 billion to buy its larger rival, Time Warner Cable, and a smaller competitor called Bright House Networks — and it's closing in on the required regulatory approval from federal authorities." "The agency said Charter agreed that for seven years it will not impose data caps on users and will abide by so-called net neutrality rules, even if the rules are overturned in a separate federal appeals court case."

This is completely unacceptable. There should never be data caps or a lack of net neutrality. The issue of net neutrality should not even be a debate. The issue of introducing a penalty to cord-cutters should be unacceptable to the FCC.

The issue of lack of competition, quality of service, data caps, and the misaligned motives of telecom conglomerates selling bundled services of TV and internet is the future of America's internet service. My ISP, like many others, will be punishing people for using the internet for content instead of TV, by charging them more via data caps. This will be a more apparent issue when more content is 1080p60 or 4k.

These concerns will not improve with Charter acquiring TWC. Charter will have less incentive to improve their network infrastructure. No customer or government will be able to stop Charter from exploiting the vital service of video streaming to Kentuckians. This will hurt both education, business, and consumers, who need significant data usage in their daily routines.

Until this time, TWC had never announced data caps for the KY area. Now the merger has instantly brought this issue to the foreground of the debate. Please do not approve this deal. It hurts consumers. Please protect consumers.

[Ticket: # 892248 - Data Caps](#)

City/State/Zip: Chattanooga, Tennessee 37405

Company Complaining About: Comcast

Description

This year, Comcast began enforcing a 300GB monthly data cap in Chattanooga without warning. Comcast is using fines and increasing the price of all plans to punish those that increasingly rely on internet data. We are college students who are fully dependent on internet access, and can not afford to pay even more to use a service which we are already paying for.

Ticket: # 893901 - Data Caps AT&T for broadband internet

Date: 4/4/2016 5:27:07 PM

City/State/Zip: Peoria, Illinois 61615

Company Complaining About: AT&T

Description

I am concerned with the acceptance of data caps by the FCC. After hearing about how Comcast has a major discrepancy between what user actually uses and what Comcast claims, I think will be another issue that AT&T will also be having. I think you guys should be obligated to step in and do something to prevent companies from price gouging its customers by fictitious allegations regarding data usage .

Ticket: # 1020658 - XXXX XXXXXXXXXXXXX's complaint re: ISP Zero Rating

Date: 6/6/2016 4:48:40 PM

City/State/Zip: Phoenix, Arizona 85022

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Sudden Link

Description

Suddenlink has been extorting it's customers. I have experienced "over-estimated" data usage with no explanation. They charge extra if you go over three times, and when I told them we didn't go over, they said they just won't charge because it isn't our third time. They have done this twice! I asked if they could remove that from the account record and they refused! They said if we continue to, perhaps we should pay more and increase our data cap. They never advertised data caps either. They increased our bill after a year, not telling us t was a promotion. It feels as if they are trying to bully us into a more expensive plan! This isn't a small scale issue either. Also, they have only removed data caps for the more expensive plans! The over usage charge is \$50! This is madness!

Ticket: # 897837 - Data Cap and Price Fixing**Date:** 4/6/2016 2:02:32 PM**City/State/Zip:** Dacula, Georgia 30019**Company Complaining About:** Comcast

Description

I have recently tried to purchase services from Comcast in Dacula GA. The sales representative did not disclose that there would be a monthly data cap on our account during our conversation. I found out after the services had been connected and their technician was installing a security system. I confronted their accounting and sales team about the issue and their only offer was to pay more to remove the cap. I opted to look for another provider that will not only offer an unlimited service, as it should be, but came to realize something remarkable. After looking around at available service providers it has come to my attention that all have a fairly similar price and have adapted a "Data Cap" for their plans. This is something that I have only seen on mobile network plans. Furthermore, Comcast "owns" the cables in my neighborhood which makes it impossible to acquire services from any of their competitors. It seems like the area that I currently live in monopolized by one single corporation. This is something I believe I read about in school; Price Fixing, Tying, and monopolizing territories. I believe that all these practices are illegal and set an unfair opportunity for customers to acquire services in an open/free market environment.

Ticket: # 898207 - AT&T Enforcing Data Caps on Home Internet

Date: 4/6/2016 3:47:49 PM

City/State/Zip: Fairborn, Ohio 45324

Company Complaining About: AT&T

Description

I live in the Dayton, Ohio area and have AT&T Uverse as a home internet provider. On April 6th I received the attached email from AT&T stating that they are going to start enforcing data caps on internet usage. I feel that this is a violation of the agreement that AT&T and I have and a violation of Net Neutrality.

Internet plans are sold in bandwidth tiers, not usage. The limited resource when it comes to internet connections is not data usage, but bandwidth. They are artificially imposing a cap on service for no good reason. Based on the context of the letter they are only doing this to increase profits, as they will offer an unlimited data usage plan if I pay more for it or if I add television service to create a bundle package. They are strong arming me into paying more for a service I already have at no additional cost to them.

In this day and age Internet access is required for a plethora of reasons. Personally I need it for my job, it is how I pay bills, and it is my primary source of entertainment at home. Someone without internet access is severely handicapped now. How can anybody be expected to be a productive member of society if they are not providing fair access to a resource everyone needs.

In short, AT&T is implementing data caps on my home internet service. They are trying to get me to pay more for a service we have already agreed on, it is an artificial limit on the resource they provide, and Internet is a required to be a productive member of society today. What AT&T is doing is in poor taste and should be illegal. They do not have the best interests of their customers at heart and the FCC should classify internet service as a utility and prevent providers from artificially limiting the resource that is the internet.

Ticket: # 898353 - ATT Enforcing Data Caps on Broadband Internet

Date: 4/6/2016 4:24:59 PM

City/State/Zip: The Woodlands, Texas 77375

Company Complaining About: AT&T

Description

I received an email today from AT&T that they are 'increasing the cap on my broadband usage', to this point I was unaware of such a cap on broadband, fiber to the home internet. It seems they are making moves to expand such caps as a method to punish people who do not bundle their video service in with their data service (in the email, they state that if I bundle their DirectTV service with my data plan, I will receive 'unlimited data, a \$30 value, for no additional charge').

These data caps, which have no effect on mitigating 'congestion', coupled with special anti-competitive insider offers, flies in the face of net neutrality, and to re-state, such offers are blatantly anti-competitive in nature and will destroy the open-internet as we know it if not addressed.

I have attached a PDF copy of the email I received for reference.

Ticket: # 898462 - AT&T Data Cap Implementation

Date: 4/6/2016 4:56:41 PM

City/State/Zip: Sacramento, California 95827

Company Complaining About: AT&T

Description

AT&T just informed me that as of May 23, 2016, a data cap will be applied to my internet usage. Although they have not specified how much data I use, or the limit with which they plan to impose, it's obvious that they will roll out something similar to the caps that Comcast has already imposed upon their customers. This is both unreasonable, and unnecessary in 2016. It's unnecessary because AT&T allows their customers to "bypass" this cap if you pay them more money (\$30) AND pay to sign up for their TV service. My current contract says nothing about future data caps or any other type of metering.
