## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies, like AT&T, that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who want to give up their expensive cable TV packages and watch TV online. == I am one of those users. ==

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead — just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Please do not allow the take over of the open internet; small businesses will suffer.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**City/State/Zip:** Deerfield Beach, Florida 33441

**Company Complaining About:** AT&T

---

## **Description**

We recently received an indication that AT&T would be charging us \$10 per 50GB of data over 300GB of internet usage per month, with the option for unlimited internet for an extra \$30 a month on top of our bill.

Further, they do not show your internet bandwidth usage anywhere on their site.

The plan we have was already labelled "unlimited" when we signed up.

How is this legal? Something must be done to stop the squandering of internet. Until the US government wakes up and makes internet a utility, we have no other options but AT&T and Comcast, BOTH have internet usage caps, which is ridiculous.

Please help us, we both work from home here and rely on stable internet without data caps for an insane price. What good is 25MB/sec internet if we can't even use the speeds provided?

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Also our internet service has been terrible for the past month so I'm mad about that too.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 974816 - BendBroadband Data Caps & New Bundle Policy**

**Date:** 5/12/2016 3:17:46 PM

**City/State/Zip:** Terrebonne, Oregon 97760

**Company Complaining About:** Tds

---

## **Description**

Bend broadband has for a long time had data caps for it's consumer internet "broadband" service. Despite it's abysmal consumer ratings the service is our only broadband option. Unfortunately they have data caps that inhibit my work and leisure.

However my complaint isn't simply about data caps. It is that they now offer "unlimited internet", but they are requiring bundled television service to have unlimited data for consumers. I find this appalling and it should be illegal. If you are offering internet service to consumers requiring them to have tv to not have data caps is ridiculous and a clear anticompetitive practice against streaming services like netflix or just people who don't watch television but are data-intensive consumers like people who work in bioinformatics or any big data field.

Finally similar to the issues with set top boxes, they also don't allow consumers to buy a separate docsis 3.0 cable modem to get top tier (300mbps) service. A obviously dubious proposition since companies like TWC, COMCAST and others allow and help support third-party cable modems, rather than paying absurd prices for sub-standard modems.

I'm unaware of current regulations on this matter, however if there is any thing that can be done to make this fair for people who don't want television service but do want unlimited high-speed broadband internet service.

**Company Complaining About:** Comcast

---

## **Description**

Hello! I'm a Comcast customer and I want to express that I stand with Net Neutrality advocates on the following letter:

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** T Mobile

---

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Comcast has a 300gb monthly data cap in my market. Once over, you are charged every 50gb. This is a practice of questionable ethics already, however, I should always be able to see where my data usage is. It could even be on a five to fifteen delay. When I check and the only thing is said is pending update this is criminal.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. In fact, with cord-cutters leaving traditional cable behind there is actually less congestion in the cable lines than ever before! Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

The provision of data caps on internet is mindbogglingly archaic. Due to the way the internet works (via a relay system operating on the order of milliseconds), it's data rate and not total data which needs to be provisioned.

Nevertheless, it's within Comcast's legal right to implement this system. What it is NOT within Comcast's legal rights is to impose these data caps selectively. This is a clear and flagrant violation of net neutrality, imposing restrictions on content by bulk action. Like a company town of one hundred years ago, Comcast demands that out-of-town purchases pay 'shipping' from which company store purchases are exempt. Please address this underhanded and monopolistic practice clearly and publicly. Thank you.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

It's time to stop the fraud.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. ## **Description**

It's time to stop the fraud.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

We've been through this dance over and over and I'm starting to get sick of it. Net Neutrality is fine as it is, but let me paint a dark future for you. It's a future where 99% of the population is broke, no money or anything. No will be able to pay for all these high priced services and then what?

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 977188 - Comcast's "Data Usage Plan"****Date:** 5/13/2016 2:58:41 PM**City/State/Zip:** Wrentham, Massachusetts 02093**Company Complaining About:** Comcast

---

**Description**

To whom it may concern,

Comcast's "Data Usage Plan" will be arbitrarily expensive for consumers and will stifle competition with Internet Video providers. Over 80% of American house holds use broadband internet. Comcast's limit, 300Gb per month, is not an arbitrary cap, it is set that low because Comcast knows that data usage rates across the country are on the rise, and that with an archaic usage model the threshold for charging penalty rates is lowered across the board.

This will not benefit consumers and will only line the pockets of a company that already makes record profits every year. Despite the rising costs for service every year Comcast's products offer fewer and fewer features that were once expected to be part of the basic product model, Unlimited broadband internet is now impossible to get without paying exorbitant fees, or not at all. In Wrentham, Massachusetts my house hold pays for the second highest internet service from Comcast, the "Blast!" service comes with 150mps and and a 214GB data cap for \$82.95. The only possible upgrade that Comcast offers in this area is a plan that offers a 2000mps connection for \$299.95, even this under this plan "An XFINITY Internet Data Usage Plan may apply." Not only that, but at less than \$4000 dollars a month in average wages, this price jump is much higher than the average American household can manage. There is no reasonable product that bridges this gap, and as a "High Volume" costumer our household is being squeezed unfairly between these options. In our town we have 3 options for internet service, Comcast, Verizon, and Dish. This is not what I would call a vibrant market place, as a consumer these monopolies have limited our choices, forcing us to pick a company that is only marginally better than the competition, but really not better at all. We have no real option to vote with our dollar, because while I am complaining about Comcast right now, these other companies have different problems, but not fewer problems.

Besides the \$300 dollar a month plan there are only three dataplans available to current Comcast subscribers, a \$69.95 plan, a \$79.95 plan and an \$82.95. These choices do not make it easy on a household that is struggling, in fact when you notice the difference between plans at this tier is a mere \$13, an 18.58% difference between top and bottom, it becomes obvious there is no real choice at all. Compare this to the difference between the 150mps plan and the 2000mps plan, \$299.95 includes 261.60% the price of the \$82.95 plan. No house can go without internet anymore than a house can survive without water. The internet is not a luxury it is the most necessary utility in 2016, but we pay luxury prices for it.

Two versions of penalty fees have been rolled out by Verizon at this point a 35\$ unlimited usage fee, which is only available in two locations in the country, and \$10 per 50gb plan for going over the data cap, available in 15 states. Which plan do you think they are going to take national first?

I would like to point out that this pricing scheme creates a price gap very similar to the Medicare gap where people below the threshold receive diminished services while those above are treated with basic human decency.

It is especially hard to make educated decisions about what products Comcast has available because when trying to examine other bundle options the website is structured in a way that produces infinite loops and no real information unless you are trying to upgrade. They make it easy for you to spend more money, but impossible to be informed and downgrade your service through the website, I believe this kind of behavior is shady at best and perhaps fraudulent or criminal at worst.

Furthermore, limiting a household's bandwidth like this makes it much harder to compete with Comcast on an entrepreneurial level. This model makes it more difficult for a household to switch from cable to streaming services in a way that seems specifically designed to stop "Cord Cutting". Comcast's traditional cable model can not keep up with the innovations of contemporary media companies like Google's Youtube, Netflix, or Hulu. As a "Cord Cutter" your bandwidth is likely to go up when you change your viewing habits to streaming internet video, these are the same people that Comcast labels "High volume users" Comcast says, "If you use more you should pay more" and they argue that the internet should be a metered service similar to water or electricity, but Comcast does not follow logic of that model to the "If you use less you should pay less" side of the argument. Comcast is targeting high volume users because they cord cut and do not pay for Comcast's Cable service, this is exactly what passing consumer friendly Net Neutrality laws is supposed to prevent.

Please take a look at these Articles if you would like more information on the position I am advocating, I have also uploaded images showing the internet pricing schemes from Comcast's own website:

<http://arstechnica.com/business/2015/12/comcast-admits-data-cap-meter-blunder-charges-wrong-customer-for-overage/>

<http://bgr.com/2015/11/19/comcast-data-cap-2015-bad-for-us-all/>

<http://blog.credit.com/2015/12/comcast-data-caps-cost-this-consumer-90-a-month-extra-133292/>

Please keep in mind that Comcast acknowledges these caps are not necessary:

<http://www.extremetech.com/internet/217716-comcast-now-charging-for-data-in-15-states-acknowledges-caps-arent-necessary>

Please Protect consumers from Comcast's monopolistic practices, every year we pay more and get less, updating the cable menus system to look more like Netflix (the X1 system) should not count as a new product or deserve higher prices.

Here is Comcast's official FAQ on the issue:

<http://customer.xfinity.com/help-and-support/internet/data-usage-trials-exceed-usage>

Thank you for taking the time to read this, I believe the FCC can protect consumers from telecom abuses, but it requires standing up to these companies and VOCAL debate on the news, CSPAN, and the Internet to educate people on the issues.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

The data cap profit scheme by Comcast is unjust as it doesn't cost them any more money when people use more data. It also doesn't clog the network as they have. Just because I live in Dade, Broward, or the Florida Keys means I have to pay more for the same amount of data used anywhere else in Florida.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T's enforcement of data caps begins on May 23 of this year. According to AT&T this data cap is only applicable to their internet-only customers. AT&T has released statements to customers telling them that they can avoid this data cap by signing up for television service through AT&T or DirecTV. In fact, AT&T makes it clear that the data caps DO NOT APPLY to their television customers. In effect, AT&T has told customers to either sign up for their television service, or be penalized monetarily by AT&T for using another company's services (be it data consumed via Netflix, Hulu, SonyVue, Roku, Amazon Fire, etc). This is the very definition of antitrust and is 100% illegal.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Date:** 5/13/2016 8:02:50 PM

**City/State/Zip:** Sherman Oaks, California 91411

**Company Complaining About:** AT&T

---

## **Description**

We received a postcard from AT&T today stating that we will be subject to a new data cap on our home U-Verse connection. They say they will wave it if we pay for cable TV.

We feel that this is clearly an attempt by AT&T to prioritize their own paid TV and video services over streaming competitors like Netflix or Amazon, which in our view, goes against net neutrality regulations, trying to strong arm us into subscribing to more of their paid services.

In the interest of all AT&T Uverse internet consumers, we ask that you please investigate, and put an end to such blackmail tactics.

Sincerely,

(b) (6)

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Company Complaining About:** AT&T

---

## **Description**

AT&T has issued a mass mailer transcribed below that imposes data caps on internet in violation of FCC regulations of Net Neutrality regarding unfair and illegal practices in limiting bandwidth usage of customers who consistently and legally consume television and media using the internet. In this mailer they neither describe what the data cap is nor how long or what the grace period is. Their internet usage links are equally as devoid of information. When I called to address this issue, AT&T attempted to sell me U-Verse and DIRECTV products and would not answer any questions regarding the data cap other than it is 250GB/month and that they would "email if you reach 65% of your data cap." When transferred to a specialist, they indicated that it would be raised "to 300GB or 600GB per month." Direct quotes from customer service representative. The CSR could not tell me which. Regardless of the number, a cap is a cap and it is a violation of net neutrality. IF they can cap it at 600GB then why not 10GB. This data capping is illegal, this is wrong, and this is NOT net neutrality - this is simply another AT&T scam to stay afloat in digital services. The customer service representative also said "we checked with the FCC and they approved this data-cap before we sent it out" -- direct quote from CSR. I asked what was their reasoning and why did they approve this and he said, "I can't tell you that but rest assured the FCC approved this."  
"We don't have the specific response, this was allowed by FCC, if you want to validate this you can contact the FCC to validate this."

Transcription of mailer:

"Updates to Internet usage allowances

Beginning on May 23, 2016, we will be increasing the U-verse(r) Internet data allowance for many customers. After a grace period, and as our agreement provides, there's a \$10 charge for each 50GB of data you use over the allowance amount. The maximum overage charge will be \$100/mo. If you choose to bundle your U-verse Internet with DIRECTV(r) or U-verse TV you will be provided an unlimited Internet data allowance with a \$30 value at no additional charge, as a benefit of bundling. Or if you choose, an unlimited allowance is available for purchase as an optional bolt-on to your Internet service for an additional \$30/mo.

After May 23, 2016, log in to you account at [att.com/myatt](http://att.com/myatt) to find helpful tools to view your data usage. Questions? Go to [att.com/internet-usage](http://att.com/internet-usage).

Thank you for being a loyal U-verse customer,

AT&T"

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

As we've progressed through our technological capabilities, the trend has always been towards freer, open, distributed access, which has allowed the acceleration of innovation. It's a positive feedback loop, you see. If you place a bottleneck on one end of the loop, it retards the progress of the entire loop. ISPs, therefore, are shooting themselves in the foot with their short sighted profit incentive because with access to data, somebody somewhere will develop a revolutionary technology that will drive down the cost of providing bandwidth, which will increase the profit margins far more than a tiered offering. Knowledge is a public good, and should be treated and protected like one. You wouldn't put restrictions on how many minutes one is allowed to spend in a public library, would you? That would be ludicrous! Instead, you recognize the effort that one is putting in to try and better themselves and you subsidize that activity because you know it is good for everybody. Why should access to the internet be any different? Yes, I understand that increased bandwidth requires greater infrastructure, which of course has a cost imposed upon it, but I'm sure the ISPs already have this cost baked into their revenue structure and the motive for data caps are greed, rather than sustainability. However, it is not morally or legally defensible for a company to harm it's citizens in it's quest for a greater profit margin. The flint water crisis is an example of such treachery. I argue that the data caps are the same because they stunt the intellectual growth of the citizens. How is one supposed to reconcile the presidential initiative to increase broadband access to every household in America while these data caps are preventing those, especially in the more economically disadvantaged regions, from accessing that same broadband?

Do not allow ISPs to impose data caps. They are harmful to every stakeholder involved and this slippery slope will lead to the degradation of our society.

Good Afternoon,

I am writing today to complain about the new ATT Data Cap policy and extorting their customers into buying home TV service. I was never told that there would be a data cap applied to my 1Gbs service from ATT during ordering or instillation ( it is probably burred somewhere in the terms of service in the really tiny fine print). They are going to offer an "unlimited" plan for an extra \$30/mo unless you pay for DirecTV or ATT Uverse TV, which is an example of pure extortion. I currently use Playstation Vue, Netflix, Hulu, Amazon, and OTA programming for my entertainment needs, and do not want, nor need ATT's TV service. With the continued accelerated growth in 4K and HDR streaming, the practice of data caps on home internet service seems unethical and immoral. Also, they didn't start to implement this until after the DirecTV merger, which makes me wonder if they had this planned all along but did not want to implement it before the merger was approved by the Justice Dept. Data caps on home internet connections are stifling competition of competing OTT streaming services like Playstation Vue or Sling TV. Please make this stop if you have the power. The powerless consumers are getting beat up by the Internet monopolies on a daily basis.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

We need to maintain transparency!

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Comcast is trying to circumvent FCC rules and adopt what many companies around the world already outlaw. Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

We are current customers of Comcast with Internet and TV services. In an attempt to lower our monthly bill for TV services we tried the new PlayStation Vue TV service switching our 3 TVs over to PlayStation Vue compatible devices. Within the period of a week Comcast reported that we had already used over 200GB of our allotted data cap, forcing us to immediately cancel the service or be forced to pay extra for the additional data usage. This is also becoming a concern for our media streaming services like Netflix where we now have to set limits on it usage. In addition to that our household has a deaf individual who relies on Video Chat/Conferencing as a means of communication that we now have to limit and monitor to stay within their defined usage caps.

## Description

We all know that an ISP functions as a communication utility. Just as we would rebel if our electric utility failed to provide impartial electric service (giving our lights favored treatment over our washing machines, for instance), we object to any ISP favoring some websites and applications over others.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Data caps are simply a way to internet companies such as at&t and Comcast to bill customers more for giving less, and to create ensure that you can not use streaming services such as Netflix and YouTube without going over your data cap. That practice is not good for us or for that country, plus it takes away people's ability to access their own internet forcing them to cut down internet usages. I hope that you will take action and force companies to get rid of their data caps to ensure quick and easy access to the internet.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

**Ticket: # 980551 - XXXXXX XXXXXXXXXXXXX's complaint re: ISP Zero Rating**

**Date:** 5/16/2016 1:45:27 PM

**City/State/Zip:** Trenton, Michigan 48183

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As a Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 980440 - XXXXXX XXXXXXXX's complaint re: ISP Zero Rating**

**Date:** 5/16/2016 1:18:27 PM

**City/State/Zip:** Detroit, Michigan 48217

**Company Complaining About:** Comcast

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 980597 - Internet being capped with trial data usage policy](#)

**Date:** 5/16/2016 2:01:06 PM

**City/State/Zip:** Miami, Florida 33187

**Company Complaining About:** Comcast

---

## **Description**

Hello,

I signed up for Comcast internet and now they are trying some data usage trial and limiting my internet usage. This is completely wrong as I was never charged this before or informed of this in advance. They charge for more for higher speeds, but now all speeds have some imaginary data cap policy. This should be illegal as they are abusing their monopoly power by charging for speed -and- data usage. I was never informed of these charges in advance and now I am going to have to disconnect my service as I cannot afford these charges.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

The internet in a democracy should not be undemocratic or make it harder for people to participate in democracy via the internet. In a democracy, civil rights are protected over corporate profits, not the other way around. Verizon needs to get their act together with regard to their customers as well as their employees, instead of being bullies fixated on the bottom line.

Their programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet

loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Comcast instituted a data cap of 300GB in my area. They have an option for unlimited data for \$35 extra a month. When I signed up for this option on the 16th, they told me it that it wouldn't go into effect until the 1st of the next month. I need to have unlimited data this month but they said it wouldn't take effect until the next month.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As a Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

## **Description**

First, let me begin by saying I am including a prepared letter, but it speaks for me. I am tired of being held hostage by the archaic operations of Comcast through non-competitive market practices. I have no choice in cable providers in a progressive City and that is wrong. I have antiquated equipment, poor service exorbitant prices and a "we don't care" attitude from Comcast. I'm tired of being held hostage by big cable, which needs to go the way of big telephone. The world wants to move forward, fast, freely, with choices, affordability and options. The Internet belongs to humanity, as does the information it openly carries.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast involved with deciding my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead—just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet

loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email. I am at your disposal for conversation, Debate, or argument-if required.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

I am a freelance writer. The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 982104 - Data Cap (Comcast Residential Internet)****Date:** 5/17/2016 1:15:20 AM**City/State/Zip:** Huntsville, Alabama 35806**Company Complaining About:** Comcast

---

**Description**

After moving into a new apartment almost a year ago now, our only option for internet/tv was Comcast for the new address. Since we don't watch much television, we decided to cut the cord and just get internet. At no time during the ordering process for the plan, nor during the installation was I made aware that there even was a data cap for my location. It was only into that first month when we approached the cap, that we got a warning message advising we were near the 300GB cap. After looking up the penalties at \$10 per additional 50GB was I fully aware of the situation. In the ensuing months, I monitored my bills to check for overage charges. Even though we had overages in the majority of months, we weren't additionally charged, so I let the issue go.

This past month, we were charged an additional \$20 for overage, the first time we've been charged. Since the cap is unfairly low, it feels like we're getting grifted now each time the warning messages pop up to deliver the bad news. These data caps make cord cutting nigh on impossible in our digital age unless one plans to do a lot of book reading. Please inform Comcast they have yet another unhappy customer. If WOW! expands their reach to my complex, I will be switching .

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Date:** 5/17/2016 9:52:42 AM

**City/State/Zip:** Washington, District Of Columbia 20010

**Company Complaining About:** Comcast

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

**Ticket: # 982852 - ATT data Cap**

**Date:** 5/17/2016 12:30:09 PM

**City/State/Zip:** Johns Island, South Carolina 29455

**Company Complaining About:** AT&T

---

## **Description**

I believe ATT is abusing the Net neutrality act, and just being a bad player to the consumer. They are introducing a data cap to our plan starting May 23 in an attempt to charge me more money as a punishment for not using there tv service. If I use there TV service I am allowed to have unlimited internet. I use the internet for my TV service and use over the air tv. I have no need for there tv service but I need internet service, it is the gate way to everything I do. I have heard that ATT is working on deals with providers to allow for streaming with out using data plans. This deal is all around bad for the consumers, and a way to grab money in devious ways. The real issue is that data usage will go up over time as more content is added to the internet. These data caps will probably not keep up. Cell phone data is an example of this, people started to use WIFI for there needs. We have not experienced speed issues in my area as ATT is saying is necessitating the need for these data caps. ATT will be limiting my access to content provided on the interment which completes with there tv services.

In conclusions I think this is a bad deal and a movement which the industry is looking to take advantage of a consumer need. Please help!

**Ticket: # 982972 - XXXXX XXXXXXXXXX 's complaint re: ISP Zero Rating**

**Date:** 5/17/2016 1:00:01 PM

**City/State/Zip:** Cary, North Carolina 27511

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 983283 - XXXXXX XXXXXXX's complaint re: ISP Zero Rating**

**Date:** 5/17/2016 2:31:12 PM

**City/State/Zip:** Prescott, Arizona 86305

**Company Complaining About:** Comcast

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Date:** 5/17/2016 1:38:05 PM

**City/State/Zip:** East Orange, New Jersey 07018

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. [Ticket: # 983115 - Data caps from Comcast.](#)

**Date:** 5/17/2016 1:38:17 PM

**City/State/Zip:** Chattanooga, Tennessee 37412

**Company Complaining About:** Comcast

---

## **Description**

Comcast had placed data caps on internet. There is no logical reason to add data caps. We pay a fee to gain access to the Internet and there is no reason to have data caps. It is unfair to the consumer and is all about greed. These caps were supposed to be on a trial period and they are STILL going on. How long does trial period last? It has been almost 2 years with these data caps. They are using data caps to get around net neutrality laws and we should not have to pay extra for unlimited data. It puts a heavy burden on people who can barely afford it. I want to cut cable and go with a streaming service and Comcast wants to make up that money by using data caps to supplement that list income.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.
