Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

I am including this excerpt from FFTF's (Fight for the Future) original document because it sums my opinions almost entirely. These companies, including Comcast, are manipulating the Law to allow themselves to take advantage of the customers that they are supposed to provide service too. Allowing these kinds of archaic policies contributes to a state of monopolization that will always and ever hurt the American People.

Please take a stand for me, and the American public and stop these companies from take advantage of US.

Very Respectfully,

(b) (6)

Date: 5/9/2016 11:49:53 AM

City/State/Zip: Irving, Texas 75063

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Comcast routinely throttles internet connections and refuses to honor its advertised speeds. Never are customers allowed access to the published speeds available.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: AT&T

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

I have been a Tmobile customer for over a decade. I support a free and open internet where a bit is treated as a bit regardless of its source. Where content competes equally on fair ground for consumers attention. Not where arbitrary caps and lanes create false market forces to channel and limit consumer choice.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Company Complaining About: Comcast

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: T Mobile

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

My bill for the family is over \$500 a month. This is totally insane! But with the increased need for internet we wind up coming against our cap and our bill will be going up. I can't earn enough to keep the internet but yet the internet is required by our jobs so what are we supposed to do? These caps are ridiculous! Internet, TV, and Telephone should be considered essential for national security and ridiculously CHEAP or free NOT costing us more than we can earn at our jobs!!

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Company Complaining About: Verizon

Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Description

Hello FCC. I'm just writing to: 1) thank you for your position on net neutrality and 2) express my concern that the big players are breaking the rules anyway -- in the case of ATT (my provider) by making it possible for outside entities to bypass data caps by passing ATT money. Which of course creates a form of the two tier system they wanted.

I originally thought of net neutrality as bandwidth *speed* only, but ATT et al. have figured out that they can maintain speed neutrality without allowing data quantity neutrality. Clever.

In any event, please stay on the case and update the regs so they cannot not violate the spirit of the law.

And by the way -- I have been very impressed (and surprised) to see that your chairman is *not* a dingo.

Thanks for your help on this issue.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

The FCC Open Internet Rules (net neutrality rules) are extremely important to me. I urge you to protect them.

Most Americans only have one choice for true high speed Internet access: our local cable company. Cable companies (and wireless carriers) are actively lobbying Congress and the FCC for the power to:

- \* Block sites and apps, to charge them "access fees"
- \* Slow sites and apps to a crawl, to establish paid "fast lanes" (normal speed) and slow lanes (artificially low speeds)
- \* Impose arbitrarily low data caps, so they can charge sites to escape those caps, or privilege their own services ("zero rating")

They're doing it so they can use their monopoly power to stand between me and the sites I want to access, extorting money from us both. I'll be forced to pay more to access the sites I want, and sites will have to pay a kind of protection money to every major cable company or wireless carrier—just to continue working properly! The FCC's Open Internet Rules are the only thing standing in their way.

I'm sending this to letter to my two senators, my representative, the White House, and the FCC. First, to the FCC: don't interfere with my ability to access what I want on the Internet, or with websites' ability to reach me. You should leave the existing rules in place, and enforce them.

To my senators: you have the power to stop FCC Chair Ajit Pai from abusing the rules by refusing to vote for his reconfirmation. I expect you to use that power. Pai, a former Verizon employee, has made it clear he intends to gut the rules to please his former employer and other major carriers, despite overwhelming support for the rules from voters in both parties. I urge you publicly oppose Pai's confirmation on these grounds.

To the White House: Ajit Pai, a former Verizon employee, is acting in the interests of his former employer, not the American people. America deserves better. Appoint an FCC Chair who will protect the economic miracle that is the Internet from media monopolies like AT&T, Time Warner Cable, and Comcast/NBC/Universal.

To my representative: please publicly oppose Ajit Pai's plan to oppose the rules, and do everything you can to persuade the Senate and the White House to oppose Pai's nomination.

I would be happy to speak more with anyone on your staff about the rules and why they're so important to me. Please notify me of any opportunities to meet with you or your staff.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

I believe that the internet providers should be broken up, separating content from the service provision. The service should be regulated as a utility.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

The Net should be a public resource with each and every site having equal accessibility.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

Absolutely not!

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost ).

We cannot have a functioning democracy without access to information.

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

Everyone loses.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

**Ticket: # 967692 - Armstrong Cable Data Caps**

**Date:** 5/9/2016 6:07:13 PM

**City/State/Zip:** Sarver, Pennsylvania 16055

**Company Complaining About:** Armstrong Cable

---

## **Description**

Armstrong Cable of western Pennsylvania puts a 300GB data cap on all of their users claiming that a normal household only uses about 35GB of data per billing period. I can use that amount in less than a day. With things like Netflix, Amazon Prime Video, Youtube, online gaming, etc, this 300GB data cap is hit or exceeded nearly monthly. Its to the point that I have to constantly monitor the usage to not be charged extra.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

Both my brother-in-law and my son have small businesses that need access.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

The FCC should have an open, public process to decide where and how to enforce these rules. Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. Why is Comcast now offering faster internet service for a higher price? I set up this account to have high speed internet.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## **Description**

Greetings and salutations,

I have spent the past year and a half studying in Australia where all Internet Service Providers and cell phone companies utilize data caps as a matter of fact. One of the things that I have been looking forward to most about coming home is no longer having to deal with these restrictions and having access to the unilateral high-speed internet for all websites that I was accustomed to when I left the country. I am dismayed to learn that AT&T is attempting to implement a system that is so close to the one I want to leave behind.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Greetings and salutations,

I have been studying in Australia for the past year and a half, living with ISPs and phone companies that impose data caps and limit internet speeds as a matter of course. One of the aspects of returning home that I have been looking forward to the most is being able to escape from under this frustrating and extremely expensive system. I am dismayed to hear that Comcast is attempting to circumnavigate Net Neutrality and institute rules very similar to those which I want very much to leave behind when I return home. I can only hope that this complaint, along with many others like it, will be able to force you to listen to the concerns of the general public and reconsider this path.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Complaints for Verizon & AT&T.

Tracfone and Net10, the 2 largest pre-paid phone services for the poor are both utilizing Verizon (for tracfone SIM cards only) and AT&T (net10 sim cards only). WHY and is it legal for those companies to LIE TO MY FACE when I ask over the phone if they are the same company. Pretty sure Tracfone owns Net10. Why won't they tell the truth? Is it legal for customer service reps to lie to customers about their products??

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

We pay \$80/m for 75mbps from Comcast. We are FULLY aware the bandwidth drops to 15mbps when we are not using Xfinity streaming. That requires us to continually refresh Xfinity streaming services to keep our PAID bandwidth up to 60mbps, still not even what we pay for. Our small business struggles for this!! AND they also LIE to you over the phone about anything and everything, including why the internet speeds up when you use their streaming media ONLY!!!!

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Date:** 5/10/2016 12:47:24 AM

**City/State/Zip:** Port Townsend, Washington 98368

**Company Complaining About:** T Mobile

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, , they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As a Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

P.S. I'm a consumer of AT&T of my own choice. I file this complaint expecting my carrier, AT&T, to fully comply with Net Neutrality. I truly, honestly do.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

Please, stop allowing these companies to undermine your own rules and don't let them have more power than they will EVER deserve. Not only could this have detrimental effects on the entire interweb, but the economy itself as well, and these companies will have a choke hold so great everything will become a boring bitter experience just because companies want more money. When will it ever stop? They already provide poor service to customers and make their service expensive enough.

Don't let the companies win. your supposed to protect the customer, not let the companies force them into chains.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Company Complaining About:** AT&T

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

I am STRONGLY opposed to data caps.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Comcast needs to be regulated as a common carrier and prevented from tampering with the flow of or the amount of data crossing the Internet. Most of us have no choice about using them as an ISP: they are a de facto monopoly and consistently abuse that power in every way they can.

I live less than a mile from one of their main offices and their bandwidth is almost always lower than advertised. Any time they are asked to improve it they threaten me with enormous fees for providing the service I am already paying for. There is a reason that they are THE most hated company in America.

Allowing companies like Comcast to dominate the Internet is why we have significantly worse service than even tiny countries like Estonia and South Korea.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

I was a government employee during the 1980's, so I saw how fast the internet expanded to fill U.S Government business.

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. ## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year, after overwhelming expressions of public support, the FCC protected the open Internet by passing strong Net Neutrality rules. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet. The FCC needs to do its job and enforce the rules.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

[Ticket: # 970625 - AT&T using Data caps to force customers to subscribe to U-VerseTV or DIRECTV](#)

**Date:** 5/10/2016 6:42:44 PM

**City/State/Zip:** Indianapolis, Indiana 46254

**Company Complaining About:** AT&T

---

## **Description**

On May 23rd 2016, AT&T will begin enforcing data caps for its internet-only customers. Cord-cutters, such as myself, depend on the internet to provide the entertainment that I cannot get on broadcast networks. This data cap can be avoided if I subscribe to one of AT&T's TV services (U-VerseTV or DIRECTV), or be paying an extra \$30 monthly fee. There are no assurances that the method AT&T will use is accurate.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

AT&T is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so AT&T created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in AT&T's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for AT&T to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay AT&T to be zero-rated (who then must pass that cost onto me).

As an AT&T customer, I don't want AT&T to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate AT&T for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: AT&T hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by AT&T. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## **Description**

I received a flier in my mail, and on my account, explaining that come May 23rd, 2016, less than 30 days from the date of receipt, that AT&T will suddenly begin enforcing Internet data "allowances" for customers. As someone who works from home nearly 100% of the time over the Internet, and who has chosen to use multimedia services over the Internet, I feel that this sudden change is a bait and switch. The options to add on unlimited data, or bundling TV service to get unlimited data usage are essentially extortion. I live in an area with very little competition for high speed internet, and these types of data caps are anti-competitive to other means of digital entertainment.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Comcast is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Comcast has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Comcast's caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Comcast messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Comcast by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Comcast has admitted that its caps have nothing to do with managing congestion. Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## **Description**

We haven't changed our internet usage that drastically other than cutting our cable and just using Netflix. We use roughly the same amount of data every day so how it is that is very SO much? Even so does it make sense to have a data cap that doesn't take into account the amount of Internet people actually use nowadays, or having a cap at all with such severe penalties. If we were to pay the overage we would be paying an extra \$100-\$200 bucks minimum. We already pay a decent amount to have internet access it's thievery to impose these data cap overages unless we pay more on top of what we already pay for internet. There is also no other way for me to see how much data we're using other than what Comcast claims I use.

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Longview Cable (WEHCO Video, Inc.) is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules prevent ISPs from picking winners and losers online by slowing down some websites and applications while speeding up others. But now Longview Cable (WEHCO Video, Inc.) has found another way to pick winners and losers: it applies arbitrary data caps, but exempts its own video content while counting all competing video services toward those caps. This is a textbook case of an ISP abusing its power for its own competitive advantage. In addition, Longview Cable (WEHCO Video, Inc.) caps favor its own traditional cable service by discouraging customers from cutting the cord.

I don't want Longview Cable (WEHCO Video, Inc.) messing with my choice of video services by privileging its own content and punishing the rest. That hurts me, and it hurts the online video services I might use if they compete with Longview Cable (WEHCO Video, Inc.) by offering better price, quality and selection.

There's no legitimate reason for data caps to exist at all. Other Cable companies have admitted that its caps have nothing to do with managing congestion. Moreover, Longview Cable (WEHCO Video, Inc.) is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Longview Cable (WEHCO Video, Inc.) customer, I should be able to choose freely whether I want to subscribe to Longview Cable's (WEHCO Video, Inc.) traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Longview Cable (WEHCO Video, Inc.) is interfering with these choices.

Altogether, these practices prove what we've always known: Longview Cable (WEHCO Video, Inc.) hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Longview Cable (WEHCO Video, Inc.). Meanwhile, Congress should encourage

the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

T-Mobile is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The FCC rules say that ISPs can't be gatekeepers online. T-Mobile exempts the content of select video providers from customers' data caps as part of its Binge On program, but only if those video providers meet T-Mobile's substantial technical requirements. This makes it difficult for many start-ups, small players, and non-commercial speakers to join. These exemptions are available for video only, so T-Mobile is favoring some kinds of uses over others.

Not only that, T-Mobile is downgrading all video across its network just to pull off the plan, breaking video on the sites of many independent creators and small services by forcing viewers to sit through the infamous "spinning wheel of death" as videos load or buffer. After coming under fire for this controversy, T-Mobile gave video sites a way to opt out, but they still have to meet specific technical requirements to do that.

These requirements are a ridiculous and unsustainable burden for small sites, and the idea of requiring special deals to access customers flies in the face of the FCC's net neutrality rules. Imagine an Internet where small websites had to enter into technical conversations with every single cellphone company in the world, just to make sure their videos were not interfered with!

Altogether, these practices prove what we've always known: T-Mobile hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by T-Mobile. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

## Description

This past year the FCC protected the open Internet by passing strong Net Neutrality rules after listening to the millions of Americans who spoke out. We hoped that would resolve the issue. Unfortunately, the phone and cable companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a real, and serious threat to the open Internet.

Verizon is breaking the rules, and the FCC needs to put a stop to it. Also, this decision must not be made behind closed doors. The FCC's process to decide where and how to enforce these rules must needs be both open, and public.

ISPs can't charge websites, and apps to be in the fast lane according to the Open Internet rules, so Verizon decided circumvent the rule by creating a different toll: they're implementing caps customers data and then charging websites and apps to be exempted from those data caps, and calling it "zero-rated." Not suprisingly, the data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have, and neither do millions of other Americans.

These programs also creates incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites, and applications to pay up. These programs ultimately hurt Internet regular users like you, and me who have less data to use on the websites, and apps we really want, or need to use.

These plans unfairly impede my use of the applications, and websites of my choice by funneling me, and other internet users toward their own sites, or those with deep pockets, and creating blockades for those who can't afford the toll, or refuse to pay it. They are effectively bullying us for using sites that don't pay the toll, and cause a hike in the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto us).

As a Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer have the chance to compete with equal footing. That would hurt our economy, and their attempts to hide their negotiations with the FCC hurt our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Service providers, Verizon most definitely included, hate the FCC's Net Neutrality rules and are doing everything they can to get around them. In the long run, everyone loses, whether we're on, or off the Internet... all the except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated, and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon, et al. Meanwhile, Congress should encourage the FCC to make these companies follow the rules, and not of interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

## Description

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Verizon. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Moreover, Comcast is limiting Internet use with data caps while charging a monthly fee for customers to get out from under those caps. This discourages broadband Internet use overall, and especially "cord-cutting" by users who'd rather give up their expensive cable TV packages and watch TV online.

As a Comcast customer, I should be able to choose freely whether I want to subscribe to Comcast's traditional cable service or whether I want to watch video online instead— just as I should be able to choose which online video I want to watch. Comcast is interfering with these choices.

Altogether, these practices prove what we've always known: Comcast hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.

These plans need to be investigated and stopped. It's the FCC's job to protect consumers from these kinds of abuses by Comcast. Meanwhile, Congress should encourage the FCC to do its job and make these companies follow the rules, not interfere with the FCC's power to regulate.

Note: for privacy reasons, rather than providing my personal phone number, I'm providing the number of an advocacy group. If you'd like to contact me about my complaint, please do so via email.

**Ticket: # 971226 - XXXXXXXX XXXXXXXX's complaint re: ISP Zero Rating**

**Date:** 5/11/2016 1:35:03 AM

**City/State/Zip:** Adrian, Michigan 49221

**Company Complaining About:** Verizon

---

## **Description**

Last year the FCC protected the open Internet by passing strong Net Neutrality rules in response to the millions of people who spoke out. But now the same cable and phone companies that fought so hard to destroy Net Neutrality are creating harmful new schemes that pose a serious threat to the open Internet.

Verizon is breaking the rules, and the FCC should put a stop to it. Furthermore, this decision should not be made behind closed doors. The FCC should have an open, public process to decide where and how to enforce these rules.

The Open Internet rules say that ISPs can't charge websites and apps to be in the fast lane, so Verizon created another toll: they're charging websites and apps to be exempted from customers' data caps. Data shows that users find zero-rated content more attractive than content that counts against their caps. Thus, if web companies want to compete with those who pay, they'll need to enroll - for a fee - in Verizon's sponsored data program. This creates a new toll for data traveling on the Internet and racks up charges for websites, applications, and content providers. Startups, small companies, and non-commercial speakers may face huge barriers if they can't afford to pay new tolls and no longer have their fair shot at reaching people online. That's not the kind of Internet I want to have.

These programs also create perverse incentives for Verizon to keep data caps low: The lower the caps, the more pressure on websites to pay up. Thus, these programs ultimately hurt Internet users like me who have less data to use on the apps they really want to use.

Finally, these plans distort my ability to use the applications of my choice by pushing me and other Internet users toward sites with deep pockets and away from those who can't afford the toll or don't want to pay it. They effectively punish me for using sites that don't pay the toll and unfairly raise the costs of the services that pay Verizon to be zero-rated (who then must pass that cost onto me).

As an Verizon customer, I don't want Verizon to turn the Internet into a place where those without a lot of money can no longer compete on an equal footing. That would hurt our economy and our democracy. I request that the FCC investigate Verizon for using this zero rating scheme to skirt the Open Internet rules.

Altogether, these practices prove what we've always known: Verizon hates the FCC's Net Neutrality rules and is doing everything it can to get around them. In the long run, everyone on the Internet loses -- except carriers in the middle that get to impose data caps, charge tolls, and act as gatekeepers.
